The meeting on April 7 marked the twentieth anniversary of the founding of the union, and it was made the occasion for a most fitting tribute from the members to their International President, Mr. Timothy Healy. Mr. Healy was recently elected a member of the Public Ownership Committee of Twenty-one, appointed by The National Civic Federation to investigate the operation of public utilities here and abroad. The members of this committee sail for London on May 22. As a practical form of congratulation upon his appointment and appreciation of his wise guidance and long-continued service on behalf of the union, the members presented Mr. Healy with a purse of $1,000 for his personal use while abroad. The address of presentation was made by Mr. John N. Parsons, ex-President of the National Association of Letter Carriers.

Replying to Mr. Parsons's address Mr. Healy said: "It is not the first time that you have shown your appreciation of the little that I have done in the interests of all of you and of our organization. I want to say that I fully appreciate your good will more than I can tell you—far more than the money. I shall continue to do the best that I can, not only for the Eccentric Firemen's Association of New York but for the firemen in Canada and in British Columbia who have honored me by electing me without opposition as their International President. There are some people in this city and in this country who will tell you that a labor organization is a dangerous institution. We can refute that statement by our appearance here to-night. I want to say that a labor organization that is governed by the desire to better the condition of its members and is trying to make the wives and children of the members better is not a dangerous organization. Such an organization as ours is one that will build up citizenship for the protection of our American institutions and make future generations better than they are to-day.

"I should like to say a word about that great organization, the National Civic Federation, which has honored me and the Eccentric Firemen's Association by selecting me as one of the commission to inquire into industrial conditions. That great organization is a friend of the oppressed and downtrodden, no matter what it may be called by people who do not believe in it. It is an organization for the purpose of bringing together people in different walks of life, and there is no better proof of what I say than the fact that Mr. August Belmont is in one of the boxes here to-night. If Mr. Belmont and the other gentlemen of the Civic Federation who are with him did not have the interests of your organization and the interests of labor at heart I do not think that they would have come here. If Mr. Belmont had wanted to see an entertainment he would have gone to his box at the Metropolitan Opera House or to one of the Broadway theaters.

"The National Civic Federation has a great mission to accomplish. If I did not believe that honestly I would not be a member of it. If it were not that I had to be at this entertainment to-night I should be out in Chicago taking part in the investigation by its Commission on Public Ownership, and I would have the same voice in the workings of that commission that anybody else would have. The commission is made up of men in various callings and walks of life who will study the conditions of labor and of public utilities."

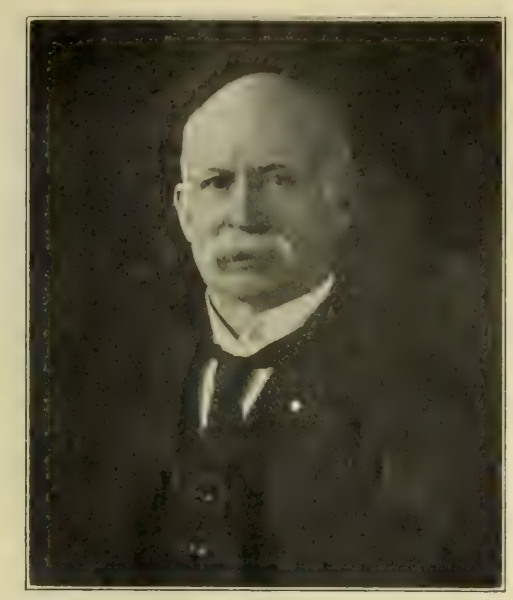
"WELFARE WORK" DISCUSSED BY EMPLOYERS AND EMPLOYES.

(*Continued from page 7*)

and filthy all around—just a little hole under the ground. On account of the work that these men have to do, handling coal, perspiring as they do, they have to make a complete change of their clothing when they are going to work and when they are getting off. But usually no place is provided outside of the boiler room where the clothes may be changed or the street clothes kept in cleanliness during working hours. If a man has any distance to go it will take him an hour to get to his place of work, change his clothes and get ready to jump in to relieve his partner. When he is relieved, after working twelve hours, it takes another hour for him to get home. Sometimes the other fellow does not get in to relieve him when his twelve hours are up and he has to stay and work twenty-four hours. We have hundreds of poor, unfortunate men in this city working those long hours for $1.50 a day. Large corporations and the big hotels in this city have not raised the wages of their stationary firemen, except in a few instances, since the plants were built twelve, fifteen or eighteen years ago. I am sure you will bear with me in the statement that the men who could get along on $2.25 or $2.50 a day eighteen years ago would find it hard to do so to-day, because the living expenses have gone up thirty five to forty per cent. Very often the salary they are getting is not sufficient to keep

clothing on their families. We do not make unreasonable demands, but are trying to establish the three-dollar scale. We hear a great deal about the advantages of a young man. I want to tell you gentlemen if you start to give the young American citizen an advantage you have got to give his father sufficient wages to clothe him and feed him and send him to school and give him a common school education."

The Chairman: The man who thinks that a fireman is not an artist, if he is a good fireman, makes a big mistake—as big a mistake as if he should say that the man who puts shades and lights on a picture is not an artist. The manner of a man's firing—whether he fires with the desire to get the best results out of a pound of coal, or whether he does it in a desultory way—makes a difference, a very considerable saving. But I want to say right here that The Civic Federation is just the place to come and present these cases. (Applause.) It is a fact that there is a great deal of injustice going on, and whether we can regulate it or not is a question of how much zeal we have in our work. We have with us to-night Mr. Thomas B. Lavey, of the Iron Molders' Conference Board, who will treat the subject of "Consideration for the Physical Comfort of Molders."



Mr. Lavey said in part:

"The main complaint of the molders has been and is to-day against the conditions under which they work. Owing to the peculiarities of the trade of molding, due to the excessive hard work in constructing the mold, which first necessitates ramming it into shape and then changing to the finishing with the most delicate tool, the molder goes from the one extreme of perspiring freely, in the first operation of active exercise, to shivering with cold during the finishing of the job. This is due to the conditions of many of the foundries where in the winter the doors are kept open from five to ten and often as long as fifteen minutes while refuse is being carted away, sand is being brought in and flasks removed. The open doors permit the cold drafts to penetrate every part of the shop. The molder who is compelled to work with as little clothing on as possible suffers from these drafts, which often result in colds and serious illness. We have demonstrated the serious effects of this, not only by our actual experience, but by the fact that our organization, which is the Iron Molders' Union, has paid out in the last ten years $1,777,000 to members who are on the sick list, and two-thirds of this is put out between the months of December and the last of March—an awful statement to make. Many of the shops are without glass in the windows and their owners seem to be satisfied to have boards placed in these openings which only partly prevent the drafts. A further objection to the boards is the obstruction of the light which the workmen should have for the proper performance of their tasks. A good deal of this I do not attribute entirely to the owner or the manufacturer. I blame it sometimes on the foremen, who neglect to notify the proper official and have repairs made.

"In one shop there is plenty of light and good ventilation. There are air pipes for the purpose of throwing hot air in the winter and for throwing cool air in the summer through the foundry. These pipes are so arranged that the air is distributed in a way to prevent drafts. The cool air coming in contact with the damp ground makes it the most comfortable foundry in New York in the summer. There are only a few foundries in this vicinity where there are steam pipes. There should be steam heat in the winter, because the men have to work with just as little clothing on as possible. Even where there are fires during the week, they are usually allowed to go out over Sunday,

TIMOTHY HEALY.

JOHN S. HUYLER.

and on Monday it is just as cold in the shop as it is out of doors. I know of one shop in Brooklyn which used to be an old barn, but which has recently been fixed up by putting in windows and closing the doors and having the place heated, so that now it is one of the nicest shops in that vicinity. So it is evident that these old places can be made comfortable. The reason I speak of this is because of the feeling that the men have after such improvements are installed. It doesn't make any difference how men feel otherwise, but when there is an attempt made to bring out a condition in the foundry which is going to benefit and make the men more comfortable, there is a feeling of gratitude in the heart of every man who works in that foundry. (Applause.)

"Now I have in mind one of the finest shops, where the windows are all in good condition, and there is heat in the foundry, but it might surprise you to learn that 110 men are employed and that there is no place for them to hang their clothes.

"Very few shops in this district have lockers—I mean within a radius of thirty-five or fifty miles of the city hall. In some cases an ordinary soap box is used for that purpose. On my way home from work I have frequently known a stir to be created among the passengers on the cars who thought someone was on fire, so thoroughly had the core smoke penetrated the clothes I wore.

"Every one who knows anything about foundries realizes that during the cast, when the melted metal is distributed, there is plenty of heat. The heat is so great that every particle of the men's clothing becomes moistened and often wet with perspiration. In that condition the men often leave the shop for home, after putting on their overcoats which have hung on the damp wall all day.

"They should have places in which to bathe and put on dry clothing. Those who are charged with the responsibility of the care of men, must make their condition such that the robust man to whom we point with pride as the ideal mechanic, the protector of our institutions at all times, must not be superseded by a generation whose standard will be largely traceable to our lack of interest in their welfare."

The Chairman: Now we will have a few words from Mr. Orrin S. Goan, of the National Biscuit Company on "How We Found Space for Welfare Work."

Mr. Goan: We began what we might call our welfare work by thoroughly renovating and rearranging all the dressing rooms. We tore out old lockers, put in shelves for hats, hooks for clothing, and benches with shelves under them for shoes. Then we painted everything thoroughly even to the walls; and, we have continued to paint them every year since, both for the appearance of cheerfulness as well as for cleanliness.

"We also made a plan by which any of our girls could take baths during work hours by arranging with the forewomen in charge of their departments. To show how well these bath-rooms have been appreciated, I may state that out of about eight hundred girls employed in the factory, there have frequently been over fifty baths taken in a day during the hot weather. We naturally followed this up by putting in shower baths for our men. These were placed in the dressing rooms so that a man upon leaving his work could strip off, take a bath and immediately get into his regular clothing. Let me emphasize the importance of having all these things convenient for the help. They should not be required to wash in one place and dress in another. Facilities which are not conveniently arranged may as well not be provided at all.

"About this time we decided to have a restaurant in order to supply our people with good food at low prices. We took some space from another department, put in a small gas stove, a steam soup kettle, urns for coffee and tea, hired a cook and made a start. Our people took kindly to the plan and in a very short time we were obliged to increase our facilities. Our prices we have endeavored to keep on a cost basis. In fact, they have been a little below cost as the restaurant loses a little—but not enough to be a serious consideration.

"These things we consider of prime importance to the health of our people; and, it is a matter of fact that while many of our people work in places where it is very warm in the summer, we have had very few heat prostrations for several seasons past, whereas previously there were sometimes as many as eight or ten in a single day. We attribute this improvement in the general condition of our help to their ability to get proper food at our restaurant and to improved ventilation.

"In due course we decided to make our dining room somewhat more attractive and table linen was introduced, also better dishes. With the table linen came the necessity for a laundry which was soon established. We then took up the question of supplying our men and women with working uniforms. In consideration of their supplying themselves with these uniforms we do all the repairing as well as the laundry work.

"We now come to our roof pavilions and club room. After eating, some men like to smoke, so it naturally followed after the establishment of our restaurant that we should provide a smoking pavilion on the roof. This pavilion, which is about thirty feet square, is provided with seats and covered with a canvas awning. It overlooks the river and is a most delightful place for a rest after the noon-day lunch. After having the benefit of the roof pavilion one summer the advent of cold weather created a demand for some place to smoke inside the building. The demand was met by the establishment of a club room for our men and boys. As we wanted to do as much for the girls as for the men, we provided for them a little roof garden also, near the tower which contains the sewing room. Of course, neither of these pavilions will accommodate anything like our full force, but we find that some employes will go one day and others another so that there is usually room for as many as may wish to go. Of the things which have contributed most to the comfort of our employes, next to the restaurant and laundry, I should place our emergency room. In this room we attend to our sick and injured. It is now in charge of a trained nurse, and we have also a capable man who is very useful in cases of serious accident. By an arrangement with the New York Hospital, any injured employes whom we may send there receive immediate attention. In such cases the expense is borne by the company. Adjoining our emergency room we have a reading room which also serves as a rest room for the women. Among other things it contains a circulating library, which is a branch of the New York City Public Library, arrangements for the same having been made through the kindly assistance of the Welfare Department.

"In addition to the list thus far enumerated, we have recently put into operation a systematic fire drill, which we feel certain will prevent any panic in case we should be so unfortunate as to have a fire. We have also arranged for the women employed on the upper floors of the building to have elevator service. We have, moreover, made a great effort to keep the entire place clean and pleasant by painting and whitewashing the walls and woodwork, hanging pictures and putting window boxes and hanging baskets of plants in the hallways.

"Now a word about the expense. Omitting the restaurant and laundry equipment, as those are 'going' departments, I should estimate that a thousand dollars would cover all that has been invested. This amount represents

THOMAS B. LAVEY.

about one cent a week for each employe for one year and leaves no room, therefore, in our case for the thought that welfare work is done in lieu of wages. This is a very important point and it is also a reason why this work should be done in a modest and unpretentious way. Intelligent employes are likely to assume that if a firm can afford to spend money lavishly in this way, it can afford to pay more wages—and naturally, what working people want above all other things is good wages and more wages. But, granted the wages are just and the hours reasonable, a firm may well expend a few extra dollars and a little time and thought on the comfort and happiness of its employes. Let there be no mercenary motive. Virtue and kindness are their own reward. A good name is always valuable in business as in private life and a reputation for good treatment of working people still tend to attract a desirable class of help."

After the address of Mr. Goan, the following letter was read from the Hon. William McAdoo, who was expected to speak, but was detained at home on account of illness:

"The station houses and the prisons connected therewith in a large number of the precincts of Greater New York are a positive disgrace to the city. Many of the buildings used as station houses and prisons are very old and have been allowed to run down and are in a very bad condition. As a rule the prisons are unsanitary, poorly ventilated, and without modern improvements. In some instances they are heated by stoves in the winter which give out a poisonous coal gas. They are at all seasons of the year damp, gloomy, forbidding, and incapable of being kept thoroughly clean. In winter when the windows are closed and the heat turned on, and the prison filled, some of the prisoners being drunk and incapable of taking care of themselves, the air is poisonous. Many of them are so situated that in summer it is impossible to get fresh air in any quantity into them. The cells in the present Police Headquarters have officially been adjudicated as the worst in the city. It is shocking to reflect that a great city like this has allowed such a place to exist so long. In the administration of justice innocent persons are often arrested, and in more than one instance citizens otherwise decent and reputable have been incarcerated for trivial offences which at the best will result in but a small fine. In the meantime they have suffered the fearful degradation of being locked up in one of these black and filthy holes.

The prisons to be erected should be well ventilated, have modern plumbing facilities, and, above all, should be so constructed as to be capable of being thoroughly washed and hosed and lighted with electricity. In many of the station houses the men sleep in over-crowded quarters, the beds being so close that in some instances they have to crawl over each other to reach them. In some of these buildings the dormitories are old and the walls have sunken, so that the windows are never thoroughly closed. They are freezingly cold in winter, and being unprotected from the sun during the day, are heated like ovens in the summer. In the older station houses there is no proper provision made for heating and ventilating them. The waiting rooms, in which the men spend many hours while on reserve, are as a general rule, dingy, dirty, uncomfortable, noisy, and in every way unattractive. In nearly all of the station houses will be found an insufficient number of chairs for the men to sit on. The common sight is an old rickety table and a few old worn-out chairs, dirty and soiled walls, blackened ceilings and a rough board floor, saturated and stained with years of use. The doormen, as a general rule, do their very best with these houses, but they do not have sufficient assistance, and even if there were a large number of cleaners it would not materially affect the general bad conditions. There are no proper bathing facilities for the men. In the Army and Navy the shower bath is universally used; tubs are dangerous and out of date. Well tiled bath rooms which would admit half a dozen or a dozen men at a time ought to be provided with hot and cold showers. The bedsteads are some of them fifty years old, and are very uncomfortable and of a primitive type. Except that they are higher up, the dormitories are sometimes not much better than the prisons.

The Police Surgeons as a body have condemned a great many of these houses in an elaborate report giving the details in full; the Health authorities have inveighed against them; the Fire Department has protested against the danger to life; humanitarians, philanthropists, State investigators, and leading newspapers have implored the city to do something. My experience with the city authorities in this respect is not encouraging. Last year they cut down the appropriation for keeping these wretched and tumble-down barracks in somewhat decent order. Many of them need painting and cleaning; some of them have panes out of the windows and it is difficult to get the money to replace them. In some cases the city has really no station house at all for the men, but houses them in stables as in the case of the Sheepfold in Central Park. The best part of that building is given to the horses, and the part where the horses could not be put with safety to their health is turned over to the men. A great sewer opening is within three feet of where the men have to eat their meals. That the police in New York look so healthy, and are in the main a well-conditioned body of men, is owing to the fact that they spend so much of their time in the open air and are compelled to take exercise. The mounted men, for instance, in Central Park, would probably all have been dead long ago from the sewer gas which pours into the horse barn where they have to spend their time when not in the saddle but for the fact that they get so much fresh air and healthy exercise when on active duty. They thrive just as sailors do at sea who stand the horrors of the fo'castle because they have to spend most of their lives on the deck where the air is the best. Were it not for this the sick list of the police would be appalling. The city authorities have either got to face the question squarely or let the whole thing get worse and worse. You can get votes by building a schoolhouse—a very proper thing to do—but there doesn't seem to be many votes in building a station house; hence some of these people seem to be entirely indifferent. I have appealed in writing and in person constantly since I went to the Police Department, but I never found any response.

It will probably cost two or three million dollars to tear down and reconstruct a number of the station houses and renovate and in some instances radically change the character of the others. A smaller sum would make a beginning. The expenditure of this money could go on, however, over a period of years, but the plan ought to be a systematic one. All of the station houses should be constructed on the same general plan. It is a criminal waste of the city's money to have a lot of architects drawing different sets of plans, some of them perfectly grotesque and foolish. The station house should have a distinctive, individual character so that you would know at once what it was intended for. This is the practice of governments in Europe with regard to public buildings of this kind. The station house should be as distinctive as the green lamp in front of it.

The Mayor should appoint a commission at once, of which of course the Police Commissioner should be one, to consider this very important subject. A sanitary engineer, a police officer, a doctor, an architect of the highest character and professional standing, and a practical builder should also be on the commission.

I am very much pleased that the Civic Federation has taken this matter up. It is entirely in line with your work. The city is the employer and it should treat the employe decently, certainly in a half-civilized way at least. If the Federation will investigate this subject they will find that I have not only not exaggerated the conditions, but that I have rather understated them. If I had had the opportunity I would have been glad to have presented to your body fuller details from the official findings with reference to these filthy and broken-down places. Believe me,

Very sincerely yours,

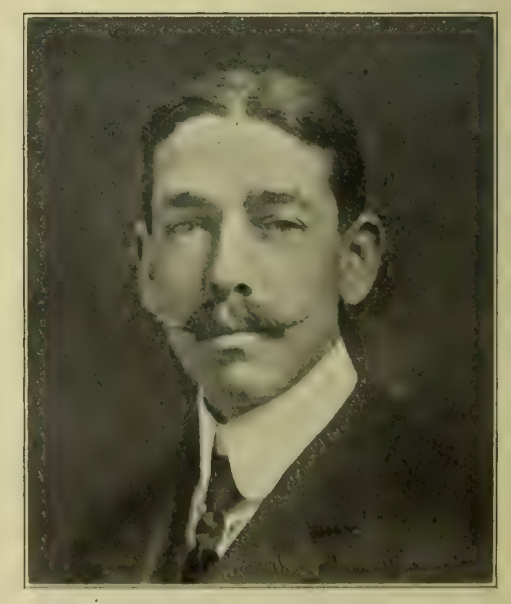
William McAdoo.

The Chairman: We have with us to-night a gentleman who will now tell you something about "How New York Cares for its Institutional Employes"—Mr. Homer Folks, President of the New York City Visiting Committee of the State Charities Aid Association.

Mr. Folks: I am especially pleased that the Civic Federation has taken up for consideration the condition of the employes of the city. When we have thought and spoken of Welfare Work hitherto we have almost always had in mind the employes of factories and workshops carried on as private business affairs; but there are two very important reasons why we should primarily consider the employes of the city in our talk about Welfare Work. The first is that the city is by far the largest employer of labor in the city of New York. The employes of the city of New York already number, in round numbers, fifty thousand. No single employer in the city of New York employs any such number of people. Probably the largest group of employers—those operating the traction companies—employ perhaps some twenty-two thousand people. And the second reason why we, as citizens and as a Civic Federation, should interest ourselves in the city employes, is the fact that in so doing we are looking after our own business, for when the city employs, we employ. Each one of us is a constituent part of this city, a voting and contributing member of this corporation, and if the city does badly and fails in its duty by its employes, you and I, each one of us, must share in that responsibility.

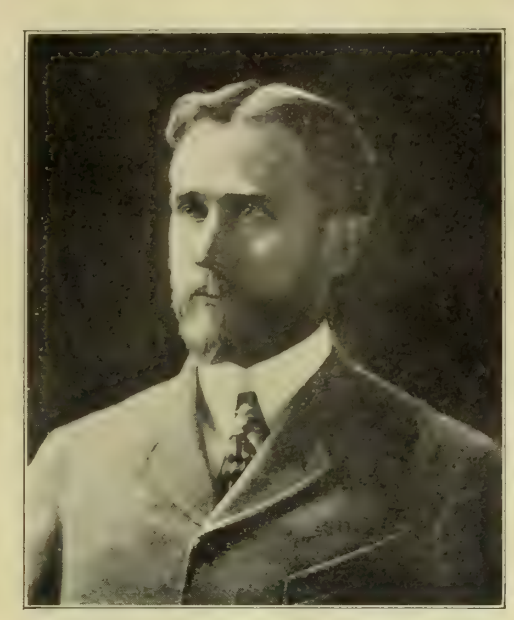
(While delivering the rest of his address, Mr. Folks exhibited a number of stereopticon views.)

As an employer the City of New York, through its Department of Public Charities, ranges from fair to indescribably bad. Probably in no other branch or department of the city government are such wretchedly inadequate salaries paid as in the city's hospitals and other institutions. It is not so many years ago that prisoners were employed in large numbers in these institutions, and the Department is still in the transitional stage from prison labor to adequately remunerated labor.



In most of these institutions the city provides board and lodgings for its employes, and pays them very low salaries. The munificent salaries of $12, $15, and $18 a month are not at all uncommon. It is true that some of the employes receiving these salaries are ex-prisoners, and that a much larger number are ex-patients, and some are both ex-patients and ex-prisoners,

HON. WILLIAM McADOO.



ORRIN S. GOAN.

HOMER FOLKS.

ANDREW HELLTHALER.

CHARLES P. NEILL.

EDWARD GOULD.

at the city is not starting them on the road to independence by employing them at salaries which would hardly provide decent clothing.

The city provides board and lodgings such as they re. A few years ago the lodgings were, almost without exception, just about as bad as they could possibly :. Herded together in unventilated, dilapidated, unsanitary, cheerless buildings, with practically none of ne creature comforts of life, it was little wonder that ese employes soon entered once more the ranks of ther prisoners or patients. Progress has been made some directions. During the administration of Mayor Low a very comfortable dormitory was erected or the male employes of the City Hospital, in place f a wooden rookery which had formerly housed them. his dormitory provides a well-lighted and comfortable ining room, a good-sized room for reading, smoking, ames, etc., a considerable number of individual rooms, nd two well lighted, well equipped dormitories. At ne Kings County Hospital a large kitchen and dining om building was erected, providing well lighted, well quipped dining rooms for the various grades of emloyes, so situated that food can be served quickly, asily, and reasonably attractive.

There has been little progress, however, during the ast two years beyond the consideration of plans. At ne Metropolitan Hospital on Blackwell's Island the uarters for employes are so bad that I can hardly escribe them before this audience. Imagine a large ery low ceilinged dormitory, immediately under the oof of a four-story hospital building, with ceilings so ow that there are no windows at the sides, the only light oming in through skylights; accessible by only one mall winding stairway (the building non-fireproof); ithout a closet or other toilet arrangement of any ort; unbearably hot in summer, always dark and disal—a fire trap—such is the dormitory for female emloyes at the Metropolitan Hospital on Blackwell's sland. There is a similar dormitory for men. In adition, a large number of the men sleep in a one-story ooden shed, condemned more than a decade ago as nfit for occupancy, in which the plumbing is archaic, ne sanitary conditions hopelessly bad, and the sleeping ooms overcrowded. On Randall's Island you will find large number of male employes sleeping in a prison uilding, occupying cells constructed years ago for prisners, but used for the past decade as sleeping quarters or some of the employes of this great city.

I am glad to say that the present Commissioner of Charities is fully alive to the needs of the Department, nd that there is every reason to believe that effective easures will be taken for the remedy of these conditions in the very near future.

THE CHAIRMAN: We will now hear from Mr. Edward Gould, President of the Teamsters' Joint Council, New York City, who will say "A Word for the Teamsters."

MR. GOULD: It has occurred to me that there must ave been a mistake in getting the word "teamster" onnected with some other craft or industry at this neeting, because I had always been under the impresion that a teamster amounted to nothing—I was told t so often. There is one hardship in particular that eamsters are subject to, and that hardship is insufficient time to get acquainted with their own families. They work such long hours not infrequently that they an meet themselves going to work in the morning when they are coming home at night. (Laughter.)

In speaking to several of our more liberal employers hat have large teaming interests, they have not infrequently told us or told our representatives that it is a modern impossibility to give better conditions to the teamsters; that the competition is so keen and the other fellow works them under such conditions, that no matter how well he might feel inclined, the business would not warrant it. Quite a number of you gentlemen will remember seeing policemen on our mail wagons some short time ago, and possibly the teamster might be harshly criticised that he should put the business people to the inconvenience of not receiving their mail as promptly as they did at other times; and I would like to place the teamster right, as this is the first time in the City of New York when any cognizance has been given to the teamster.

We made several visits to the representatives of the company that moves the mail in the City of New York and asked them for a conference, to see if we could not bring about some slightly better conditions for the teamsters, who were then working fourteen hours a day, some of them for the paltry sum of $1.25 remuneration for fourteen hours work a day and seven days in the week. The manager of the company was from Missouri (Laughter)—he had to be shown. We evoked the sympathy of the Civic Federation. Some of the officers brought about a conference, and I want to say that the teamster was willing to concede many things in the shape of minimizing some of the demands regarding increase in wages.

There are several large trucking interests in the City of New York where a teamster reports for work at five o'clock in the morning, and gets through in the evening at seven or half-past seven o'clock. When he leaves the home in the morning, his children are asleep in bed, and when he goes home at night his children are asleep. Is it any wonder that they refer to their father as "that man who hangs around the house here occasionally?"

We want to bring about a condition where employers can improve the conditions of the teamster, without putting themselves out of business or without bringing a hardship upon them, and I contend that can be brought about, if the employers want to do it.

We have a second reform that is very much needed in the City of New York. A remark made by our Chairman reminds me of it—consideration. The teamster doesn't make long speeches—he is abrupt, very abrupt sometimes, and he is not very complimentary in his language, and if I should forget myself at this time, I hope you will pardon me, because I am not long off the team. (Applause.)

And as you are well aware, we have truckmen in the City of New York that have found out from bitter experience that it takes an artisan to drive a truck and it takes a teamster to load and unload a truck, and why don't they get more consideration in our community? You are dependent upon the teamster to take the earth out of the cellar where your home is built. You are dependent on the teamster to move the stone and material to build your home, and when you have it built, you are dependent on the teamster to carry the necessaries of life and the comforts of life as well; because the private coachman is a teamster, and he brings a great deal of comfort to the homes of some of our more fortunate friends along Fifth avenue. If to-morrow morning the coal teamsters of the City of New York were to go on strike, and the produce teamsters were to go on a strike—those are only two small spokes that make up the wheel of the teamsters in this city—you cannot imagine what a serious inconvenience it would be. Many of our large office buildings cannot carry a forty-eight-hour supply of coal; many of our large hotels cannot carry a forty-eight-hour supply of coal, and none of our homes have more than twelve hours' provisions. Before you could get 5,000 men into the City of New York to man those trucks, under the most favorable circumstances, we have no conception of the hardship that a teamsters' strike would entail. Our newspapers speak from time to time of a general teamsters' strike the same as if it were going to a football game or going to a race-track. I hope we will never see the day in the City of New York when we will have a general teamsters' strike. (Applause.)

I believe that a great good could be accomplished, if there was some literature printed and distributed among our various teamsters' organizations. It could teach them to be courteous to each other; it could teach them that the fellow with the light load should give the right of way to the fellow with the heavy load. (Applause.) And I want to say that we have need for that consideration as much on Fifth avenue, where we have horses that only do two or three hours' work a day, as we have on West street, where horses work ten or fifteen hours a day and drag four or five or six tons of merchandise for the same length of time.

Third, and not least, we need better sanitary conditions in the City of New York for our teamsters. We want to abate the evil of the necessity of frequenting saloons from time to time (Applause), during our working hours. I feel that the teamster plays just as prominent a part in our city as any other workman does, and I believe that if he does he is deserving of the same consideration (Applause). It would not cost very much money to have some accommodations placed in various parts of the city in a sanitary way that would not compel our men to frequent saloons. (Applause.) I believe, as I heard a clergyman once say, that going to church is a habit. I think it is a good one. And we should get the teamster to cultivate the habit of staying out of the saloon—and I pride myself with the feeling that he doesn't frequent it any more than any other man. But if we do not get encouragement from the men that feel they are so much to the teamster, what can you expect of them?

In conclusion, I heard mention made of libraries. I would like to know what opportunity a teamster has who works thirteen and fourteen hours a day to go to a library.

We have formed a beneficial feature in most of our local unions in this City of New York, and I want to say that our dues compare favorably with any other fraternal organization. In the last two years our organization has paid out over $60,000 in sick and death benefits (Applause), notwithstanding the fact that it has only been in operation two years, one of the local unions alone having paid out over $15,000; and I want to say, in conclusion, that no teamster, a member of our organization, has ever entered the Potter's Field. (Applause.)

THE CHAIRMAN: I am greatly interested in the teamsters as I have a great deal to do with them. I have teamsters that have been with me twenty years, and I wouldn't part with them for any men that I ever saw. They are good teamsters and they take a pride in their work. It is just as honorable to be a good teamster as it is to be a good banker or a good merchant. A man should be good at his calling, whatever that calling may be.

We have with us this evening, Hon. Charles P. Neill, United States Commissioner of Labor, who will tell you "Why the Public is Interested in Sanitary Workrooms."

Mr. Neill: To sum up in a very few words the reason why the public is interested in sanitary workrooms, and in every other form of welfare work that makes for the health and comfort of the workers, I might say that it is because the public has a very vital interest in the question of the cost of production. We are all familiar, very familiar, with this term. The employer and the manufacturer know what it means, and they naturally and properly keep a close watch on it—for on this depends much of the success of their enterprises. But this aspect of cost is measured in dollars, and it does not represent by any means the entire cost of production. There is a further element in this cost, and that is the social cost, or in other words, what the production of any given thing represents to society. This social cost, gentlemen, cannot be expressed in terms of dollars; it is expressed in terms of sweat, it is expressed in terms of fatigue, it is expressed in terms of pain, and lastly, as we have heard to-night, in too many cases it is expressed in terms of ruined health and even in loss of human life.

I recall now a single industry, which I need not name, in which the death rate alone—leaving out even accidents that maim or disable workers permanently—is so high that taking thirty years as the term of the working life in that industry, a man has less than one chance in six of escaping a violent death.

This represents one aspect of the social cost of production. In the same way, accident, disease, the dwarfed bodies or the stunted minds of overworked children, and all the evils and misery summed up in the term "sweatshop"—these represent other aspects of the social cost of production. These represent the cost that society pays for the product it consumes.

Now it seems to me that society ought to be as careful and as anxious to reduce its cost of production, this human cost of production, as the manufacturer is to reduce his cost; and it is not difficult to determine what in the long run will be the attitude of any body of workers toward a society which remains indifferent and apathetic while this health cost and life cost run up to exorbitant limits.

We have heard it stated here to-night that there are men working twelve hours and sometimes even fourteen hours a day down under the sidewalks of this city in a temperature of 120 or 140 degrees, for $1.25 or $1.50 a day. If you let them feel that their health and their strength, their opportunity for enjoyment and for home life are a matter of no concern to society at large, can you blame them if they feel no sense of loyalty to a society which permits such things, and in their resentment against it ally themselves at last with radical movements which look to a social overturning?

It seems to me then that society should be very much interested in how the employer takes care of his workers, and in seeing that no class of workers shall be allowed to feel that the people for whom they toil are indifferent to the conditions under which they do their work. (Applause.)

In the last analysis, the public is the real employer. The men who are hired by the person or firm whom we ordinarily denominate the employer, are after all working for that public which consumes their product or enjoys the result of their services. They are the ones for whom the worker is really working, and in this sense they may be said to be the employers.

As I heard that statement about the conditions of work of the firemen in some of the hotels of this city, I must confess I felt personally uncomfortable, and I said to myself that I trust that this room which has been so pleasant and comfortable for all of us to-night is not being kept warm by a man who is putting in his fourteenth hour of work and earning perhaps only $1.25. For after all, that man down in the boiler room is working for you and for me, and we should be interested in the conditions under which he does his work. He himself, may think he is working for this hotel, but at bottom he is not—he is working for us; for this evening, at least, we are as a matter of fact his employers. We, at least in part, are paying his wages just as we are paying the wages for this evening's work of the cook who prepared this excellent dinner and of the men who have served it so well at the table. Of course the hotel proprietor will actually hand the money over to these various workers—but after all isn't he really in the position of the man who collects their wage from us and pays it over to them—perhaps, he doesn't pay them all he collects. (Laughter and Applause.) The public, therefore, has a very direct interest in every form of welfare and betterment work. And I might suggest in conclusion that those of us who believe in the existing social order and wish to maintain it, should realize that by remaining indifferent to the human element in the cost of production, by ignoring this question of the social cost of the things we [illegible] ample humbling object lessons and arguments ready to hand for every apostle of [illegible]m or any other *ism* that aims to supplant the [illegible]

[illegible] The Civic Federation, I think, with great forethought and consideration brought into the organization the "public" that it might participate [illegible] conditions that are [illegible] There are the employer and the employe[illegible] the public that pays the bill, and [illegible] the great interested party, and I feel that we are wisely organized—more wisely, perhaps, than we thought when we first came together as a body of men. Now, we have with us a gentleman who will respond to another toast, "What Should Be Done to Provide Ventilation," Mr. Andrew Hellthaler, of the Metal Polishers and Architectural Bronze Workers.

Mr. Hellthaler: I speak for an industry in which the death rate—the enormous death rate directly due to consumption and lung trouble is 98 per cent., 80 per cent. of which occurs before the men reach the age of 40 years. That is the condition of the metal polishers to-day. While it is not generally so considered, these facts are ready for proof at any time a committee will visit our international headquarters and see the death claims as they have been paid in years past. My only idea in this matter is that the average manufacturer, considering that the work is so dirty—and I am frank to admit, being a polisher myself, that I believe it is one of the filthiest occupations a man can work at—the manufacturer seeing the men in that filthy condition, naturally picks out the filthiest corner in the factory and throws the polisher in there and keeps him there. I speak from experience which dates directly to the first of this year, and I myself say that I was employed in a factory where there were 65 men

DR. THOMAS DARLINGTON.

on one floor with only six windows for ventilation. Remember, gentlemen, that these six windows for ventilation are not the same as six windows would be here, where there is no dust-producing machinery, where there are no acid fumes floating through the air. These six windows would probably be all right, were there no fumes or dust, but in a polishing room it is one incessant stream of dust from 7.30 to 5 o'clock at night. There are laws on our statute books which provide for exhaust fans to take away the dust from all polishing lathes. In a great many cases these fans are kept in operation, but in a great many others they are not. In many cases they are there so that when the factory inspector comes around the manufacturer can show him that he is complying with the law. The manufacturers' reason why these machines are not running is that they are very fast speeding machines; but everyone who knows anything concerning machinery knows that high speed machinery takes considerable power, so that in order to lessen the expense, the exhaust fans are shut down. If they are not shut down, they are allowed to get in such a dilapidated state that they are not of any use to the men working there. In most factories where metal polishing is done, acids form a principal part of the work. The polisher polishes the plain part, and the part that is chased is dipped in acid to clean it. The fumes of the acid circulate through the factory, and sometimes they are stifling. Now, we want to get as much natural ventilation as we possibly can in all the factories, but we want still more than the natural ventilation. Improved machinery makes it possible to draw all the obnoxious fumes out of the factory. We should have exhaust fans taking the fumes out of the top of the windows and allowing the natural air to come in. I have seen in the factory that I have just left, which was as large as this room, the fumes of the acid and dust so thick that I could not distinguish the people at the further end. When you see the handsome toilet sets and tea sets in the shop windows, you little realize the number of lives that the production of these things has cost; yet the conditions to-day, so far as ventilation and the obnoxious fumes of acid are concerned, are worse in the silver factory than in the cheap brass factory, although the conditions in the latter are miserable. I am deeply interested in the question of tuberculosis, and I only hope that the Welfare committee will take the matter up. I am at their disposal to give them any information they may want and I will go so far as to take them into any factory to verify my statements.

In conclusion, I wish to say that consumption is so prevalent in our industry that the Brooklyn Central Labor Union has bought a plot of ground at Patchogue Long Island, for which it has paid $1,600, and which is to be devoted to nothing but the curing of this disease. This amount was donated by workingmen and the ministers of Brooklyn have guaranteed to put upon this plot of ground a building to cost $50,000. Some of the ministers have suggested that if the industry really costs such an enormous price of human life, it should be cut out altogether. Of course, we do not take that view. What I wish to suggest is that if the ministers and the workingmen are interested in this matter I see no reason why the Welfare committee of the Civic Federation should not be likewise. I thank you. (Applause.)

Following the address by Mr. Hellthaler, the Chairman introduced Mr. August Belmont, President of The National Civic Federation.

Mr. Belmont said in part:

"My interest in the subject which you have before you to-night is such as to cause me to disregard my doctor's injunction not to come out. Before leaving, I want to say to you that this subject has occupied the minds of the management of the Interborough Company for some time. It is fair to say that, as an operating corporation, the Interborough will be but two years old next April, having begun the operation of the elevated roads on the 1st of April a year ago, and opened the Subway for operation on the 27th of October the past year—a year ago last October.

"A complete method of insurance was worked out on lines similar to those mentioned by Mr. Vreeland in connection with the Pennsylvania Railroad. The plan was submitted to our men; but for reasons of their own, it was rejected. Taking that as a basis, and attracted by the success of Mr. Vreeland's management of the welfare department of his corporation, our officers have given that subject a great deal of attention, and have conferred—and did confer before there was any idea of our interests becoming identical—with a view to establishing much the same system and improving it by co-operation. We are only waiting for the return of our vice-president, Mr. Bryan, who was obliged to absent himself for a month on account of his health, and then we purpose to put into operation as soon as possible our own Welfare Department.

"In addition to this, it may have escaped your attention that the new corporation proposes to interest itself to a very large extent, and with the subscription of a substantial sum, in a suburban homes movement, the idea being that it may promote, through that agency, the comfortable housing of such of its men as may wish to avail themselves of it. That is in line also with our ideas of Welfare work.

"Thanking you very much for your attention, gentlemen, I bid you good-night." (Applause.)

Following Mr. Belmont's speech, a number of stereopticon views were shown illustrating the needs and accomplishments of Welfare work. As amplifying a point touched upon by one of the speakers the following statement by Mr. Jess P. Larimer of the Bridge and Structural Iron Workers' Association will prove of interest:

"There has never been any effort looking to the interest of the first trades that are employed in the erection of buildings and in such structural iron work as bridges and viaducts, where no other mechanics are employed. The other trades are in a measure looked after, inasmuch as a building generally has taken some definite shape before they are long at work, and a room can be set aside within the structure for storing their street clothes in the day and their gloves and overalls at night. Wage-earners in the iron industry would be grateful to your worthy organization if you would get some of the largest contractors to supply us with portable rooms in which to store our street hats and coats in the day time and our gloves and overalls at night. This is our first need, as our clothing is constantly stolen. Second, a wash room with sanitary toilet accommodations; and third, an emergency hospital room."

Referring to the working conditions of the city's employes an important offer was made by Dr. Thomas Darlington of the Health Department. He expressed his willingness and desire to co-operate in every way with committees of the Federation in providing better working conditions for the employes of the city. He urged continued agitation of this great work and said that his department would be only too glad to be informed of unsatisfactory conditions anywhere in the city; that, if such information were given, he would use, as head of the department, every effort to improve the working conditions of the city's employes.

As a result of the discussion of the evening the following resolution was adopted:

Resolved, That the Civic Federation of New York appoint a committee on Welfare Work, to be composed of employers, labor representatives, and representatives of the general public, to co-operate with the Welfare Department of The National Civic Federation, and that this committee on Welfare Work be requested to appoint sub-committees to give consideration to improving conditions of employes of the city and in the different trades in this vicinity.

THE PROGRESS OF WELFARE WORK.

EMPLOYERS' INTEREST IN IMPROVING WORKING CONDITIONS THROUGHOUT THE COUNTRY.

IT is most gratifying to note the constantly increasing personal interest of large employers throughout the country in making practical improvements in the conditions under which their employes work. As an evidence of the widespread interest in this work, and particularly in the progress which is being made by the Welfare Department of The National Civic Federation, it may be noted that within the past few weeks four important meetings have been held, one at Boston, one at Lynn, Mass., and two at Washington, D. C., at which addresses were made referring particularly to the results accomplished and to the methods of the Welfare Department.

At the meeting in Boston, which occurred on February 7, the work of the department was explained to the members of the National Association of Wool Manufacturers at their annual banquet at the Hotel Somerset. More than 200 members listened with much interest to an illustrated lecture by Miss Gertrude Beeks, the Secretary of the department, and at Lynn, Mass., on February 9, the subject was presented at the Oxford Club, the audience including well-known business men and manufacturers.

In Washington two meetings were held at the invitation of Representative and Mrs. Joseph Weeks Babcock, of Wisconsin. Representative Babcock presided at both meetings, and during the two evenings interesting addresses were made by Senator W. A. Clark, of Montana, a member of the Executive Committee of the Welfare Department, on the general work of The National Civic Federation as an introduction to the particular subject of Welfare Work; by Gen. George H. Harries, of the Washington Railway and Electric Company, a member of the Welfare Department, on what his company is doing for the benefit of its employes; by H. H. Vreeland, Chairman of the Welfare Department, on his own experience in Welfare Work, particularly in connection with the New York City Railway Company, and by Miss Gertrude Beeks, who illustrated her paper with a most interesting collection of stereopticon views.

Mr. Vreeland said in part:

"As Chairman of the Welfare Department of The National Civic Federation, I desire to express by appreciation of the opportunity of presenting its work to such a representative gathering.

"First, permit me to give you a brief historical review of the formation of the department. Its organization was authorized for the reason that it was believed that the efforts of The National Civic Federation to better the relations between employers and employes would be materially aided by the promotion of what is called 'Welfare Work.'

"Our first step was to call a meeting at the Hotel Waldorf in New York of representative employers of labor in the eastern and middle sections of the United

MRS. JOSEPH WEEKS BABCOCK.

States. To our great surprise there was an immediate response from many large employers. It developed that it was the first time that employers who were giving especial consideration to the welfare of their employes had been brought together. Each one had an idea that his Welfare Work was an individual effort in his particular locality, and was surprised to find that a great deal of this work was being done throughout the United States."

Mr. Vreeland went on to say that it had been found of especial value to employers to bring about conferences for the interchange of experiences; to discuss the question at public meetings; to arrange conferences of the Welfare Workers themselves, and to have assistance given when asked by employers. While it may seem odd that the men successful in business should require assistance in introducing Welfare Work, it should be recalled that this is a day of specialization, and that those who have had practical experience in installing Welfare Work are best qualified to give advice. Furthermore, many employers would introduce Welfare Work into their establishments were it not for the time and trouble needed for its organization.

H. H. VREELAND.

"An employer who is noted among his employes for fair dealing," continued Mr. Vreeland, "need have no fear of introducing Welfare Work, after a careful study of conditions has been made. That is, after recognizing that the first needs of employes are steady work, an equitable wage, and hours as short as competitive conditions will permit, the employer may successfully install Welfare Work if proper attention is given to its introduction. All our investigations of failures in this line have shown us conclusively that a just and fair policy of dealing with labor must be the foundation for all Welfare Work. With that foundation, it may be emphatically stated that employes will welcome all such efforts to provide for their welfare."

"Thirty years ago, as a brakeman on a steam railway, I was away from home, forced to live in such boarding houses as the railroad terminals and my wages would afford. There was absolutely no place for me in the evenings where it was warm except the saloon and the pool room. My knowledge of the homelessness of the average railroad employe led me to the establishment of club rooms for the men employed on the street railways in New York City. A large percentage of the 15,000 men employed by the company of which I am President live in boarding houses; many are from the country. The club rooms I established include an auditorium where monthly entertainments are given, a library, a pool room and a physician's office. They were used immediately and extensively, and a chance visitor will find the rooms filled every night in the week. Keeping in mind my own early struggles to gain information and to get the requisite books to read, I determined that, if fortune favored me and I attained a position where I had sufficient control of money and the friendship of those who were interested in the property, I would provide facilities of the character of which I felt the need. The books in the library were not only widely read by the men, but, in many instances, were taken home to be read in the men's families. Another feature of the work is the relief association which provides assistance for the men in case of illness or accident, a pension in old age, and, at the time of death, a fund for burial.

"The success of our work is due to the fact that nothing but illness has ever kept me from the platform of that organization on Saturday night monthly nine months in the year since the society was organized with thirty men in 1893. While a paid Welfare Secretary is necessary to supervise the activities, the participation of the employer is essential to success."

In presenting the general situation in Welfare Work Miss Beeks exhibited views showing what many employers have done in providing for the physical comfort of workers, for recreation, in supplying educational opportunities and in the housing of labor.

"Where ventilation has been given especial consideration, the air is changed completely in the work rooms every fifteen minutes. In the foundry, where the pipes which are used in the winter for heating serve to bring in the cool air in the summer, great comfort is afforded the molders.

"In a rolling mill, galvanized iron pipes carry the fresh air to the faces of the men occupied at the rolls. Previously, in very hot weather, the men were frequently overcome, and sometimes it was necessary to shut down the entire mill, the workmen thereby losing their wages and the company the product of their work. Since the installation of the ventilation system not a single hour's time has been lost because of excessive heat."

"The value of the emergency hospital has been evidenced by the testimony of an employer, who said, 'Our hospital has been a preventive instead of an emergency room as we had anticipated. Instead of patronizing it now and then, the men use it continually. Previously when a man injured his hand he was satisfied to put a piece of waste on it. Blood poisoning followed and he would be laid up for a few days. Now every injury receives immediate attention, and the men are not obliged to lay off for slight accidents.

"Women who have been overcome are frequently able to return to work after resting for an hour or receiving treatment in the emergency hospital."

Reference was made to the effort of an employer to raise the moral tone of a town by providing a social hall. The company furnished pool rooms and bowling alleys in such an attractive manner, and conducted them on such a high plane, that private enterprises in the town were obliged to follow their standard.

Speaking of the homes rented and sold to employes and of the willingness to take advantage of the opportunities offered for better living conditions, the speaker said: "Rents for unskilled laborers in several mill towns, from $7.50 to $10 a month, including bath and furnace, are within the reach of wages of the tenants, and yet give a return upon the investment. Very fine tenements have been provided for skilled laborers at from $16 to $22.

"Cash prizes are offered for the best kept premises and for the best gardens. This has had a salutary effect upon the tenants. When one man received recognition in the form of a prize, his neighbor, who had not previously thought of improving his place, was stimulated to do so, not only because of the desire for a prize, but because he took pride in having his premises look as well as the neighbors'.

Miss Beeks did not confine herself to the workingman's conditions while he is in his prime of useful-

HON. JOSEPH WEEKS BABCOCK.

ness. She exhibited the portrait of a man eighty years of age at work in a shop, and asked the question: "Is it better to pension or give him light work?"

"Many employers have inaugurated systems for supplying funds for employes in illness and old age. The advantage of relief systems for employes was stated to be the assurance of prompt relief in case of illness or accident. The old plan of 'passing around the hat' was apt to work hardship on the employes contributing and did not always reach those in distress.

(*Continued on page* 16)

THE FACTS OF PUBLIC OWNERSHIP.

ANALYSIS OF THE PLAN AND SCOPE OF THE WORK UNDERTAKEN BY THE COMMISSION ON INVESTIGATION.

BY EDWARD A. MOFFETT, SECRETARY PUBLIC OWNERSHIP COMMISSION.

AS has been pointed out in previous issues of the REVIEW the great work to be accomplished by the Commission on Public Ownership and Operation which was called together under the auspices of The National Civic Federation, is to undertake a thorough and absolutely impartial investigation of all the facts connected with these important questions here and abroad and to present the facts to the public as a practical and efficient aid to the solution of the perplexing problem of public ownership.

Schedules relating to the four subjects to be investigated—Gas, Water, Electric Lighting and Power, and Street Railways—have already been formulated by a sub-committee consisting of:

Frank J. Goodnow (chairman), Columbia University;

Walton Clark, third vice-president United Gas Improvement Company, Philadelphia;

Edward W. Bemis, superintendent water-works, Cleveland;

J. W. Sullivan, editor official journal United Garment Workers, New York;

Milo R. Maltbie, former editor *Municipal Affairs*, New York.

Of this committee two were considered to be in favor of public ownership, two opposed and one neutral. As the duties of this sub-committee involved not only the preparation of the all-important schedules upon which the investigation is to be based, but also the general plan of procedure, the advisability of such representation is apparent.

The best possible idea of the scope, impartiality and thoroughness of the investigation would be given by the presentation in full of all the schedules made up by the committee.

To reproduce in full, however, even one schedule dealing with but one of the four subjects would require more than a single issue of the REVIEW. As the general divisions are the same in each schedule an analysis of the schedule relating to Street Railways will indicate the broad scientific lines upon which the investigation is to be conducted. Such an analysis shows that the investigation of each subject—Gas, Electric Lighting and Power, Water and Street Railways—falls under several general heads, as follows:

(*a*) Historical and General;
(*b*) Supervision of Municipalities;
(*c*) Public Supervision of Private Companies;
(*d*) Franchises of Private Companies;
(*e*) Organization;
(*f*) Political Conditions;
(*g*) Labor;
(*h*) Character of Service and Plant;
(*i*) Financial Matters;
(*j*) Capital Stock and Bonds;
(*k*) Assets;
(*l*) Liabilities;
(*m*) Receipts;
(*n*) Expenses;
(*o*) Profit and Loss.

HISTORICAL AND GENERAL.

Under this head questions are asked intended to trace the history of the particular plant, the dates of adopting special features, and other matters that may assist in reviewing its development. The general sentiment in relation to the present system of ownership and operation, and the attitude of the press, are inquired into. The current objections, if any, to the present system; the degree of interest taken by the citizens in the management; whether or not there have ever been competing companies, and whether there is competition now—all these questions are made subjects of inquiry.

Whether or not private companies have consolidated, with dates and methods required, is a phase that is taken care of by a considerable group of questions.

SUPERVISION OF MUNICIPALITIES.

This separation of the subject deals with the power of municipalities to construct their own street railways without purchasing existing private systems; also whether or not they may condemn private systems under the right of eminent domain. An entire group of questions is devoted to this aspect. The power of the particular city in the matter of raising funds for any such undertaking is then inquired into. In this connection are asked the following questions:

What is the limitation upon the city's taxing power for municipal street railways?

What is the limitation upon the general taxing power of the city?

What is the limitation upon the city's power to incur debt for municipal street railways?

What is the limitation upon the general power of the city to incur debt?

State fully step by step the procedure which MUST be followed and the requirements which MUST be met before the city may construct or acquire a plant; also source of each provision, whether State constitution, statute or ordinance. Note particularly requirements as to initiation of proposal, special action by city authorities before its adoption, mayoralty veto, referendum, publicity, making of appropriations, bond issues, and approval of scheme by courts or State authorities.

Then follow questions on statutory provisions relating to fares and transfers, character and quality of service (method of traction, type of cars, speed, headway, etc.), extensions and general improvements, performance of public work by contract or otherwise, salaries and wages, hours of labor, pensions to employees, strikes and citizenship of employees.

PUBLIC SUPERVISION OF PRIVATE COMPANIES.

This line of the inquiry opens with questions designed to bring out the features of the incorporation of the particular company, with special reference to powers and limitations. As in the case of municipal systems, statutory provisions are examined in detail. A description of defects in remedies and penalties in this relation is also required.

The next questions concretely show the searching nature of the investigation in a most important phase:

What powers of supervision over the construction and operation of the plants of private companies does the city possess?

What provision has the city made for the exercise of its powers of supervision?

How frequently and with what efficiency does the city exercise its powers of supervision?

What provisions have been found impossible of enforcement, and why?

Information concerning taxes paid to State and to local authorities is the object of a considerable number of questions; these conclude with:

Is the company subject to assessment for local improvements?

Are such assessments actually levied?

FRANCHISES OF PRIVATE COMPANIES.

The power of the municipality to grant franchises is here inquired into in detail. Then follow questions to define the legal provisions delimiting the powers of the city as to the insertion of clauses in franchise (a) regarding streets company may utilize; (b) nature of plant and equipment; (c) construction of extensions; (d) adoption of improvements and new processes; (e) duration of grants; (f) forfeiture of franchises; (g) time, method and acquisition of system by city; (h) disposition of plant thus acquired; (i) fares to be charged and transfers to be given; (j) character and quality of service; (k) right of city to regulate operation; (l) taxation; (m) compensation for franchises; (n) paving of streets, etc.; (o) issuance of stocks and bonds; (p) returns to public authorities; (q) transfer of franchise to third parties; (r) labor clauses, and regarding minor features.

Information is then sought to show what penalties and means of enforcing such provisions have been provided, and whether or not they are effective.

The date of issue of each existing franchise, by what authority granted, whether exclusive or competitive, the period for which it has been granted, and approximate mileage of streets conceded—this information is likewise required. Each franchise is further examined in detail, and a full and clear statement of conditions upon which forfeiture may be declared and its possible acquisition by the city, is particularly required. Has the municipality experienced difficulty in forcing companies to live up to the terms of their franchise? is the next inquiry; and this embraces inquiries into the reasons for the difficulty, in case it exists.

The questions that follow trace existing private companies to their very inception, and relate to a most important phase of the investigation. They are:

How much deliberation has usually been given in the granting or renewal of franchises?

Has the exercise of the franchise granting power been attended with public scandal, and if so, in what respects?

How much publicity has usually accompanied the granting or renewal of franchises?

By whom are franchise grants usually drafted?

ORGANIZATION.

The principal questions under this division are intended to bring out how and upon whom the responsibility is placed for the proper maintenance of particular municipal systems; whether or not the authority is divided; how the persons in positions of control are selected and to what extent, if any, political considerations enter into their appointment, and whether or not members of the governing body have technical knowledge. These questions are also designed to determine whether the head of the engineering service is an engineer by profession, and if so, what scope he is allowed in the exercise of his duties, to what extent these duties are executive; and whether or not political considerations affect his appointment or his tenure of office.

It is particularly asked whether or not the office h fills changes with each change in the city administra tion.

The remaining questions under this head are frame to ascertain to what extent politics may affect the num ber of employes at any given period; the average lengt of service; the system of promotion, and whether poli tics influence the selection or dismissal of wage-earners

POLITICAL CONDITIONS.

In the questions set down under this head the mai object is to ascertain in what measure employes hav sought to organize, openly or secretly, their politica strength for the purpose of influencing the condition of their employment, or of exercising similar influenc upon city elections; also whether candidates for offic have made promises of better wages, etc.

To what extent employes are active in party work is also inquired into; and whether or not they are ex pected or required to pay political assessments. The question is also asked as to what evidence there is "o the influence of private companies upon the nomination and election of members of the franchise-granting and franchise-controlling authorities."

This division concludes with a series of inquiries designed to show to what extent, in the case of municipally owned systems, free transportation is given, under what regulations, and the possible abuses of this privilege.

LABOR.

Under this important head the opening inquiries seek to ascertain what, if any, significant relations exist between increases of the working force and elections; the wages, maximum and minimum, paid each class of labor; the legal and actual number of hours per diem; pay for overtime, and provisions for sick leave and vacations and holidays with pay. Then follow inquiries in relation to prizes offered for faithful service, profit sharing, and to a possible system of pensions for aged or infirm employes. It is also asked whether or not the employes have local benefit associations and if the funds of these are contributed to by the municipality or company. The question of who makes the payment for badges and uniforms, is inquired into; also the matter of surety bonds and premiums on same; likewise what efforts have been made to provide clubhouses, libraries, toilet facilities, etc.; the frequency and regularity of pay days, the place and manner of payment, and by whom and how wages are fixed.

The succeeding questions relate to the contentedness of the employes, and the answers are to indicate in what manner and to what extent the employes have a part in determining the conditions of employment. These questions are:

Were union rates observed?

If there were trade agreements, state them.

Was there any form of collective bargaining?

Has there ever been any concerted action among employes to have wages raised or hours shortened? Describe.

Were the employes organized in unions?

Was the "closed shop" or "open shop" policy in force?

Was the municipality or company opposed to organized labor?

Has there ever been a strike on the system? If so, describe fully.

How were labor disputes settled?

Were the laws relating to health, employer's liability, and contract labor observed?

Were there any printed or written instructions to employes? If so, enclose copies.

The concluding questions of this division of the subject require a statement of the number of persons, employes and others, killed during the past year; also the statistics with regard to persons injured, and the record of law suits on this account.

CHARACTER OF SERVICE AND PLANT.

The questions that comprise this part of the schedule refer first to those parts of the particular system, municipal or private, that generate and transmit power. The initial inquiries are necessarily of a most technical nature. They seek to determine the general capacity and comparative economy of what is called the power plant.

Then follow questions designed to ascertain the number of lines of the different companies, under and above ground, their types, special features and dates of installation; the number of cars in active service and their character, whether open or vestibuled; the types of fenders and motors; their lighting and heating. Information as to mileage and track data generally is sought, as also information in relation to paving obligations.

Then follow questions intended to obtain a fair appraisal of the particular plant.

Under the sub-division "Traffic," which is the next phase considered, are taken up questions relating to the total number of fare and transfer passengers; the hours at which cars carrying passengers, etc., are run.

Next come inquiries showing the comparison, if there be such, between the legal maximum speed and the actual; headway schedules; the number of transfer points; and whether waiting rooms are provided at such places.

Then follow:

Were passengers kept waiting at points of stopping because cars were run too infrequently?
Were passengers often obliged to stand in cars?
Were the cars crowded?
Were extra cars run during rush hours?
Were the facilities ample to meet the demands of the public at all times?
What types of cars were used?
Were the cars kept clean and well painted?
Were the cars well lighted and ventilated?
Were the cars well heated in cold weather?
Were the guide boards on the cars easily read and plain?
If advertising space was let, state to what extent both inside and outside of cars.
Was service supplied twenty-four hours in the day?
If for part only, how many hours each day?
Are there any engineering tests or experiments being carried on?
Were there frequent complaints about interruption of service?
Has the street railway service ever been completely or partially cut off? Describe instances.

In addition to seeking information as to extension of lines, how extensions are brought about, and particularly the policy of the company (or municipality) in this regard, the questions following go into the matter of street work. On this subject some of the questions asked are:

Were open trenches and obstructions properly guarded?
Is there an up-to-date map showing the location and nature of all street mains and fixtures?

The purchase of supplies by municipally owned lines is next inquired into. The opening questions here relate to the responsibility for the placing of orders, and for the checking of materials purchased. Among the principal questions are the following:

Were contracts advertised?
How did prices compare with those paid by private companies?
Were the dealers supplying materials connected with the city, county or State government?
In practice, did the manager get the types and makes of things he asked for, or was he forced to take something else?

As a general summing up of the questions thus far propounded there appears under the sub-head, "General Matters," a number of inquiries of such manifest importance that they are given without change of any kind. They are:

Is the system adequately equipped to handle the business?
Is the equipment of modern and efficient type?
Is it in good condition?
Will it be necessary to make extensive repairs or alterations in the near future?
Is the plant kept in clean and neat condition?
Are the works adequately ventilated?
Are the pits, shafts and machinery properly guarded?
Are the offices for payments, complaints and other business conveniently located?
Were passengers' complaints promptly and efficiently attended to?
If any parks or other places of amusement are owned or operated by the company, state what and give size, cost and number of visitors annually.
Is there a system of badging or uniforming the employes so that they may be known to the public?
Is the general morale and discipline of the employes good, bad or indifferent?
Are the employes who meet the public polite and attentive?
Are they neatly dressed?
Do the various departments work in harmony? Is there friction or jealousy, and does one department shirk work, leaving it to be done by another?
Is there an adequate system of telephones?
Are the works and offices properly watched at night?
Is there any system of inspection to prevent workmen of other companies or city departments from injuring the underground structures?
Was there a drafting room maintained?
What system was in vogue to take care of the tools distributed to employes?
Were the different classes of workmen equipped with proper tools? Were the tools kept in order?

FINANCIAL MATTERS.

The inquiry into all of the four subjects under investigation ends with a critical examination of matters falling under this head. The professional accountants engaged in this department of the work are under strict orders to exercise the fullest care and are given special instructions as to the scope and bearings of the principal questions.

Capital stock and bonds, assets, liabilities, receipts, expenses, and profit and loss—each of these elements is made the subject of exhaustive inquiry.

Among the detailed questions in this category are those relating to the reduction or increase of fares, to what manner and to what extent the employes have a the proper charging, in the case of municipally owned systems, of each item of expense to the proper account, with particular regard to services rendered by officers of the city government; the keeping of the accounts of the particular plant independent from all others and from the general accounts of the city; the rate of interest paid by the city as compared with the rate paid by private public service companies; the canceling of liabilities, and payment of interest on bonds.

It is also asked whether or not the plant was run at a loss; and if so, how the deficit was met. The manner of auditing is likewise a subject of inquiry, and also a minute examination is to be made of how each issue of stock was disposed of. The schedules end with a résumé intended to show the balance to profit and loss.

As stated above, the schedule of the investigation of Street Railways is typical of the schedules arranged for the investigation of the three other subjects under consideration—Gas, Electric Lighting and Power, and Water; so that even in the brief résumé here given the reader may get a clear idea of the thoroughness with which the work is being carried on. While it is important that thoroughness of the technical side of the investigation should be shown, it is of no less importance that the experts chosen to conduct that side should be named and the manner of their selection indicated.

These authorities were engaged by the sub-committee previously spoken of, and in each instance the choice was unanimous. They are:

Gas—Alfred E. Forstall, New York; J. R. Klump, Germantown, Pa.; Fred C. Burnett, Toronto, Canada.

Electric—C. E. Phelps, Jr., Baltimore Md.; Theo. Stebbins, Columbus, Ohio; Alton D. Adams, Worcester, Mass.

Street Railways—Norman McD. Crawford, Hartford, Conn.*

Water—Dabney E. Maury, Peoria, Ill.

Accountants—Marwick, Mitchell & Co., New York; Robt. C. James, Wallingford, Pa.

With regard to the actual work already done, a number of American cities have been visited and considerable data has been collected. The work in this country will continue until May 22, when fifteen members of the Commission will sail for London. By that time it is expected that a large part of the technical work in Great Britain and Ireland will have been accomplished. For more than a month past preliminary work has been in progress, under the supervision of Messrs. M. E. Ingalls, Milo R. Maltbie, J. W. Sullivan, and Albert E. Winchester, members of the Commission.

After spending six or eight weeks reviewing the work of the experts, the members of the Commission abroad will return and complete its examination of American plants and finally make its report to the whole Commission.

* Other experts in this line are now being engaged in England.

THE INVESTIGATING COMMISSION IN ENGLAND.

The following cablegram to the "New York Tribune," refers to the work of the Public Ownership Commission of The National Civic Federation, which is now extending its investigation to England:

London, March 10, 1906.

The National Civic Federation of the United States has sent a body of engineers and accountants across the Atlantic to make an exhaustive study of the practical operations of municipal ownership. The commission, headed by Mr. W. J. Clark, Mr. Milo R. Maltbie, Mr. J. W. Sullivan and Messrs. Klump and James has already broken ground in London for systematic work, and within a fortnight will be making a survey of municipal socialism in Glasgow, London, Manchester, Birmingham, Leeds, Liverpool, Sheffield and other large centers of population. As Mr. Maltbie explains the matter, the investigation has been undertaken as a combination movement by interests opposed to municipal ownership and by converts to the progressive policies. Capitalists alarmed by the results of recent local elections in America and politicians and reformers attracted by the scope and spirit of the new municipal activities in England have agreed to unite in an effort to obtain precise information respecting the financial and mechanical achievements of British municipalities as good government clubs. So the commission of engineers and accountants has been empowered to ascertain the facts in an impartial spirit and to report upon them to the National Civic Federation. The commission will be strengthened by new members, and, as its expenses are met by liberal contributions, it will employ additional experts and will be occupied for several months in a thorough examination of the conditions of local government in the most enterprising British towns. The final report can hardly fail to be of exceptional value. Dr. Albert Shaw was the first American writer to direct attention to the trend of collectivism in British towns; but his book was written a decade ago, and there has been subsequently an enormous enlargement of municipal operations. The American Consul at Hull, Mr. Walter C. Hamm, and other members of the consular service have written excellent reports on these municipal activities; and many journalists and magazine writers have contributed freely to the literature of the subject. An investigation by experts uninfluenced by previous bias or prejudice will be of great utility in informing and enlightening American opinion on a matter of supreme importance.

Mr. Maltbie and his associates will not lack prompters, if they are anxious to have cues behind the scenes. There is a powerful association of English capitalists, economists and taxpayers, which has been conducting a vigorous campaign against municipal socialism and has received the support of "The Times." There is also an organized body of representative municipal councillors, which holds an annual congress and brings the town corporations into working relations for mutual benefit. There is "The Municipal Journal," whose former conductor, Mr. Robert Donald, is now the editor of "The Daily Chronicle," and the municipal reformers have in it a most intelligent advocate and capable organ. The Progressive members of the London County Council are municipal socialists; and Mr. John Burns, president of the Local Government Board, has been one of the ablest champions of the new principles of collective responsibilities and investments for the common good. The commission can hear in London all that can be said in favor of the new policies and against them; but if I have correctly understood Mr. Maltbie's explanations it will not be influenced by these special pleadings, but will visit the provincial cities and with the assistance of its own experts ascertain how municipal trading in its various forms is operating, how much it costs in local taxation and what profit, if any, there is from it for the reduction of rates. This method of procedure is one which will be heartily commended by all fair-minded investigators.

NEW OFFICERS OF THE NATIONAL CIVIC FEDERATION.

At the annual meeting of the Executive Committee of The National Civic Federation held at the Park Avenue Hotel on March 26, the following officers were elected for the ensuing year:

August Belmont, *President.*
Samuel Gompers, *First Vice-President.*
Oscar S. Straus, *Second Vice-President.*
Isaac N. Seligman, *Treasurer.*
Hon. Seth Low, *Chairman Conciliation Committee.*
Francis L. Robbins and John Mitchell, *Chairmen Trade Agreement Committee.*
Charles A. Moore, *Chairman Welfare Department.*
Ralph M. Easley, *Chairman Executive Council.*
Samuel B. Donnelly, *Secretary.*

In the election of officers only two changes were made from last year. Isaac N. Seligman and Charles A. Moore were newly elected respectively as Treasurer and as Chairman of the Welfare Department.

In resigning as Chairman of this Department, Mr. Vreeland sent the following letter. Mr. Vreeland's resignation was accepted and a vote of thanks was tendered him for his faithful services as Chairman of the Department.

New York, March 23, 1906.

August Belmont, Esq.,
President National Civic Federation.

My Dear Sir:—Commencing with the organization of the Welfare Department of The National Civic Federation, I have been its Chairman. At the time I was requested to accept the Chairmanship, I advised the Committee that my duties and responsibilities were such that I could not with justice to my business and personal interests accept any additional responsibilities, but in the interest of organization of this Department on lines with which I was more familiar than others, I agreed to accept such responsibilities, and have continued to do so up to the present time to the best of my ability.

The recent developments in connection with the business interests which I represent have increased my duties and responsibilities, and I therefore must request the Executive Officers of The National Civic Federation to relieve me of the duties devolving upon the Chairman of the Welfare Department, and ask that my resignation be accepted, to take effect upon the election of my successor at the annual meeting to be held in New York City on March 26th, 1906.

I shall always be very glad to give to the Department the benefit of my counsel and advice.

With assurances of my support and loyalty to yourself and those associated with you in this important work, I remain, Very truly yours,

(Signed) H. H. Vreeland.

Apart from the election of officers the most important business transacted at the meeting was the appointment of a Committee of Five on by-laws and constitution. This committee was appointed as a result of the suggestion contained in the annual report of the Chairman of the Executive Council to the effect that a consideration of this subject is necessary in order to meet the change in conditions since the adoption of the constitution and by-laws now in force and to keep pace with the enlarged scope of the Federation. This committee, as appointed by President Belmont, consists of Hon. Franklin MacVeagh, Samuel Gompers, Hon. Oscar S. Straus, Rev. Dr. Thomas R. Slicer and Ralph M. Easley, Chairman of the Executive Council. Mr. Easley's report, offering the suggestion which resulted in the formation of this committee and outlining some of the work of The National Civic Federation during the year, follows:

During the past year, The National Civic Federation, in addition to its industrial work, has taken up three new subjects, namely: Public Ownership, Immigration, and Primary Election and Ballot Reform. As the subject of Public Ownership is taken up elsewhere in this issue of the Review the reference to it in this report is here omitted.

DEPARTMENT OF IMMIGRATION.

A Department on Immigration was organized at the request of the National Conference on Immigration held in New York City under the auspices of the Federation, December 6-8, 1905. That Conference was attended by six hundred delegates appointed by the governors of forty States, mayors of large cities, and leading commercial, agricultural, labor, manufacturers, economic, ecclesiastical and educational organizations.

The membership of the new Department is made up of representatives of all those organizations, making a total of one hundred and fifty. A meeting will soon be held for the purpose of organizing and outlining the scope of the Department. The importance of this subject cannot be overestimated. It is claimed that a million immigrants came to this country last year; and the proper distribution and the making of American

citizens out of this alien influx is a problem calling for the best efforts of our public-spirited citizens. If the South and West need these immigrants, which are over-crowding the cities, one of the practical problems before the new Department will be their proper distribution. Other important subjects for investigation will be Selection and Restriction of white immigrants and the Enforcement of the Chinese Exclusion Acts.

DEPARTMENT OF PRIMARY ELECTIONS AND BALLOT REFORM.

At the National Conference on Primary Elections and Ballot Reform, held under the auspices of the Federation in New York, March 6 and 7, a resolution was unanimously passed, requesting this body to organize a Department to give consideration to that subject. The Conference was very representative. It was attended by delegates from all parts of the country, appointed by Congressmen, Mayors, and municipal and political reform bodies, representing various shades of political opinion. No more important work could be undertaken by our organization than to help secure clean government, whether national, State or municipal.

CONCILIATION DEPARTMENT.

The work of the Conciliation Department the past year has been confined almost entirely to bringing about conferences, at the request of one side or the other, where there were threatened industrial disturbances. The requests have come from twenty-two States and cover almost every branch of industry. About three-fourths of the Conferences have resulted successfully. In some cases they have been secured without much difficulty, simply by getting the right persons to work toward that end. But, in many other cases, a great deal of patience and tact was required by members of the Department. One advantage resulting from the enlargement of the scope of the Federation has been that members of other Departments were available in different cities to help when necessary.

Within the last month, seven very interesting cases have come to the Department. One was a threatened tie-up on a large elevated railway in a near-by city. The representative of the employes called at headquarters and stated that unless he could secure a conference within twenty-four hours, his men would strike. It was necessary to reach both the chairman of the executive board and the president of the railway, through members of our organization. When the matter was laid before them, they expressed surprise that the trouble had progressed so far without their knowledge. They granted the conference, and the difficulty was amicably adjusted. Both sides wrote to the Department, expressing their thanks for its efforts, but marked their letters confidential.

It is thus kind of quiet, delicate work that has proved most effective. Were these cases to be made public, such action would be resented by the parties interested.

WELFARE DEPARTMENT.

The Welfare Department has made great progress the past year. Its membership now numbers over two hundred employers, each one being committed to the policy of bettering the conditions under which his employes work or live. The progress of the work of the Welfare Department is treated at length elsewhere in this issue.

In pursuing this phase of our work the great problem of child labor and of bettering the conditions under which women work, presents itself to the Welfare Department. It is proposed that the Department shall take up those two subjects, and make investigations, either in co-operation with existing organizations, or independently, as may be deemed wise.

INDUSTRIAL ECONOMICS DEPARTMENT.

The Industrial Economics Department, organized a year ago, held one general meeting at which was discussed the question of Individual Liberty. The Department has mapped out a promising programme for the ensuing year.

The non-union versus the union or, what is commonly called the "open and closed shop controversy"; the injunction; the boycott; and the hours of labor are among the subjects that will be studied.

Some new problems confront us in the open and closed shop controversy, which has become acute in nearly every industry where the employes are organized. It was rare for a union to strike two years ago to secure what it termed the "union shop." To-day the demand for the union shop is the cause of numerous strikes. It is claimed that the reason for this change in policy is that, while, several years ago, the open shop meant a non-discriminating one—that is to say, one in which the union and non-union men were given identical treatment—now the open shop practically means a non-union shop. The unions present much testimony to show that there are numerous employers' organizations whose members, while publicly declaring that they will treat union and non-union men alike, are practically forcing every union man out of their employ. It will be true, then, in fighting for what it calls the union-shop, the union is only endeavoring to preserve its existence.

It will be the duty of the Industrial Economics Department to investigate this subject and present all the facts to the public.

On the question of the injunction, organized labor claims that the courts are lending themselves to the employers by issuing temporary injunctions at crucial moments during strikes, and that although upon a later hearing the injunctions are dismissed they have, in the meantime, served the purpose of the employers to break the strikes. If labor has the right to strike, and no one will deny that proposition, and if the courts are thus made allies of the cause of the employers, it is certainly a serious matter. If it be found true that the injunction is thus abused, the committee investigating this subject will be expected to recommend how the abuse may be corrected without destroying the general principle of the injunction.

Other questions that will naturally come before this Department are: "The Union Label," "Restriction of Output," "The Limitation of Apprentices," "The Minimum Wage," "Piece Work," "Trade Agreements," and "Compulsory Arbitration."

THE CIVIC FEDERATION OF BOSTON.

Following this report Mr. Hayes Robbins, of the Civic Federation of Boston, outlined some of the results of the work of the organization during the year in New England. Mr. Robbins said in part:

The New England Federation organized for business one year ago, with an Executive Committee of 21. This was later increased to 30, and in January last to 42. It was my feeling from the start that we ought to have a definite body of members at large, who should be entitled to attend and vote at our meetings, and feel that they were not merely invited guests, but were officially a part of the work, having some personal concern in its progress and success, and expressly committed to its principles. This last provision was made our basis of membership. We have no financial test; any dues large enough to maintain the work would exclude a large number of our members whose affiliation and influence we desire for other than financial reasons.

It was not an easy matter to pick out the people we wanted as members in the three groups composing the Federation. After a year's campaign, however, we have to-day 547 members, scattered all over the New England States; 239 being employers, 183 representatives of the public, and 125 representatives of labor. Our files of acceptances give us a fairly good index of the strength of sentiment among the broadly representative men of the section, favorable to reasonable methods of industrial dealing.

The fact that our labor membership is smaller than that of the employers is due to the greater difficulty of learning who the influential men are in the large territory covered, but the labor list is steadily growing. The prevailing labor sentiment toward the movement was registered in the emphatic resolutions of endorsement passed unanimously by the Boston Central Labor Union last May, and by the Massachusetts State Branch of the American Federation of Labor last October.

We have also a Conciliation Committee of 15, headed by two of the most capable men in New England for this kind of work—Mr. Louis D. Brandeis and Judge Warren A. Reed, who was formerly Chairman of the State Board of Arbitration, which is perhaps the most effective board in the country, and which was never more so than under his administration.

We are also building up a department of Organization and Education, numbering thus far 41 members, in 32 cities and towns. These members furnish our special points of contact with local situations, and in joining this committee they agreed to give us local information when necessary, and names of people who ought to be interested in the movement.

In the past fourteen months we have had to deal with 24 cases of industrial disagreement, and have taken part in negotiations to prevent trouble where it seemed likely to follow the failure to adjust differences. Details of these cases are on file, but we do not make them public. The difficulty has not been solved in every case by any means, but it may be said of practically all of them that either the trouble has been adjusted or the issue dropped; or, progress has been made toward a possible adjustment after further developments; or, an unforeseen indirect benefit in some co-related matter has grown out of the negotiations; or, the parties have been brought into relations under which the probability of similar friction in the future is materially lessened. President Tuttle testified at our last annual meeting that there never had been a time within his knowledge when there was so little strife or threat of strife within the borders of New England as at present, and expressed the belief that to no one thing was more of that condition due than to the influence this movement has been exerting.

We have held two public meetings, one in April, 1905, and the other in January last. At the latter, our first vice-president, Frank H. McCarthy, of the Cigar Makers' Union, presided, although Mr. Tuttle arrived in time to pronounce the benediction. Governor Guild and his immediate predecessor, ex-Governor Douglas, were both present and spoke; the question of Hours of Labor was discussed by Alfred Mosely, Marcus M. Marks, James Duncan, James P. Archibald, and Louis D. Brandeis. At our meeting of last April we discussed Trade Agreements, Mr. Tuttle presiding, the speakers being Mr. Belmont, Mr. Gompers, William H. Pfahler and John F. Tobin.

We are now forming a new Committee on Workshop Improvement, to rouse interest in that portion of Welfare Work which deals with conditions affecting the health and comfort of employes within the factory or store. Our chairman for that work is Frederick P. Fish, president of the American Telephone and Telegraph Company, and while the members of the Committee proper will be employers, we are forming an advisory board composed of a few selected employers, labor representatives and technical experts, whose advice and help we think will be valuable. The first two lines of work we expect to take up are, enlisting the co-operation of both employers and employes in applying to workshop conditions certain very sane, practical measures that are being successfully promoted by the Society for the Relief and Control of Tuberculosis; and, in another direction, endeavoring to secure better enforcement of the present sanitary regulations of workshops, helping to promote a wider knowledge of what these regulations are, and if possible, getting increased facilities and help for the State police, who are charged with this work.

We have a small office for headquarters, and a considerable amount of current literature and reports on file, bearing on all phases of the industrial situation; this material is pretty fully covered in an Information Index which is consulted more or less by students and others making special study of these subjects.

We have no regular publication, but have issued four special bulletins dealing with various features of our work. Through the courtesy of The National Civic Federation, all of our members receive the Civic Federation Review. In some cases we have supplied speakers for outside meetings, and we are especially fortunate in having within reach for such purposes a number of good, practical, fair-minded men who understand the subject and know how to discuss it. We expect to send a fraternal delegate, by invitation, to the State Convention of the Maine Federation of Labor next June.

Among the men who have been most useful to the work are, first of all, our President, Mr. Lucius Tuttle, President of the Boston & Maine Railroad, than whom no man in New England holds a higher place in public confidence and esteem. His status with working men is fairly reflected, without exaggeration, in the statement which is typical, by one of the conductors on that railroad who wrote us that he was proud to belong to anything presided over by a man who is loved by 25,000 whose labor he directs. Mr. Tuttle's influence and cordial personal co-operation from the beginning have been a tower of strength to us. Then we have Mr. Brandeis and Judge Reed, already referred to; Charles H. Taylor, Jr., of the *Globe*, one of the first organizers of the work there, its first Secretary, and Treasurer for a year; John Mason Little, our present Treasurer; Frederick P. Fish, Major Henry L. Higginson, Senator Crane, Bishop Lawrence and a loyal group of exceptionally able labor representatives, including Frank H. McCarthy and Henry Abrahams, of the Cigar Makers; Frank K. Foster and Park Mitchell, of the Typographical Union; John Golden, of the United Textile Workers; John F. Tobin, of the Boot and Shoe Workers; James Duncan, First Vice-President of the American Federation of Labor; D. D. Driscoll, of the Horse Shoers, and Colin Cameron, of the Carpenters.

THE PROGRESS OF WELFARE WORK.

(*Continued from page* 13)

"Some of the objections of laboring men to insurance plans have been met by progressive employers, who have arranged to return at least a portion of the dues contributed by employes when they leave the service of the company. When a man has been employed from fifteen to twenty years by one company, and has contributed during that period to the relief fund, he may have placed therein all his savings which he can ill afford to lose when his years of usefulness are near an end. A number of employers have abandoned the obnoxious clause which binds the laborer who belongs to the relief society to release the company from legal liability in case of a serious accident.

"There is a growing tendency among employers to encourage thrift by establishing savings funds. It is difficult for employes to patronize the public savings banks, which are open only during working hours, and, furthermore, it does not appeal to a man to spend 10 cents car fare for the sake of reaching a bank where he may deposit 10 cents.

"Employers who have inaugurated a system of lending money to employes in times of stress have discovered a means of eliminating the 'money shark' from their institutions."

On the general topic of the widely growing interest in Welfare Work attention should be called to the action just taken by The Civic Federation of New England in appointing a sub-committee on workship improvement comprising five officers and an advisory board of thirty-five. Frederick P. Fish, of the American Telephone and Telegraph Company, is the Chairman of the committee and its object is to promote practical interest in the improvement of such working conditions as affect the health, comfort and convenience of employes in factories, stores and other places where labor is performed.

The National Civic Federation Review

Vol. II. No. 10 NEW YORK, JULY—AUGUST, 1906 Ten Cents

PUBLIC OWNERSHIP COMMISSION IN EUROPE.

VALUE OF THE INVESTIGATING COMMITTEE'S WORK EMPHASIZED AT THE DINNER OF THE NEW YORK CIVIC FEDERATION.

HAVING practically completed, for the greater part, their study of conditions in the more important American cities as affecting the ownership of such public utilities as gas, water, electric lighting and power, and street railways, members of the Investigating Committee of The Commission on Public Ownership and Operation sailed from New York May 22 on the "Caronia" and are now in Great Britain in the midst of a thorough examination of the facts to be found there bearing upon the various phases of their subject.

The Committee's itinerary during the month of June included Dublin, where the street railway system was investigated; Glasgow, where tramway, electric lighting and gas undertakings were examined; Newcastle, where gas and two electric plants were selected for study; Sheffield, Leicester and Birmingham, where examinations of gas works were made; Liverpool's tramway and electric light undertakings; Manchester's tramway, gas and electric light establishments, and London, where the Committee is now studying tramway, gas, and electric light undertakings, including a trip to examine Bristol tramways, if convenient. The Committee reached London on June 22, where it is to remain until the adjournment of its sessions in England. Headquarters have been established at 9 Arundel Street, Strand, London, in charge of Messrs. Maltbie and Sullivan.

Cable dispatches from Great Britain reporting the progress of the Committee's investigation state that in Glasgow both the "municipalists" and the "anti-municipalists" in the committee are generally impressed with the compactness and perfection of the Glasgow street railway system. At the banquet to the Committee given by the Glasgow Corporation on June 2, Baillie Alexander, in proposing a toast to The National Civic Federation, asked that the statement that the Glasgow people did not have to pay taxes be contradicted. They paid taxes, he said, but these were more than compensated for by the cheapness of the various public services. Mr. Moffet of Indiana replied that he hoped America would be able to produce such disinterested city councillors as Glasgow had. They had in The Civic Federation a nucleus of this high type. Mr. Parsons of Boston, in proposing a toast to the Corporation of Glasgow, said it was largely a question of civilization. Boston had tried municipal printing and the experiment was not a great success.

Following the Committee's examination of the Glasgow gas enterprises, Chairman Ingalls was quoted in a cable dispatch as saying that he had been much impressed with the success of municipal ownership in Glasgow and thought the same results could be achieved in America if the right kind of citizens would enter public life. He said: "We have the right kind of citizens, but they all seem to be too busy to take part in the affairs of city government." Of the undertakings he had seen in Glasgow he put the tramways easily first, then the gas supply and, last, the electrical supply system. Mr. Parsons said that the facts that had been ascertained in Glasgow would help them greatly to arrive at a decision whether America had the proper conditions for successful municipalization.

At a banquet given by the Glasgow Corporation on June 4, the members of the Committee expressed themselves as delighted by the cordiality of their reception. Prof. Goodnow said that whether or not the members of the Committee were advocates or opponents of municipal ownership or merely perchers on the fence it was a great pleasure to see what Glasgow had done. The advocates of municipal ownership had come to strengthen their arguments, their opponents had come in a vain endeavor to find weakness and those perched on the fence had come merely to ascertain the truth. The Americans, he added, were credited with suffering with swelled head. For himself, since coming to Glasgow, his head had become considerably smaller.

What has impressed all the members of the

Upper Row (from left to right)—John R. Commons, F. J. McNulty, W. J. Clark, Ralph M. Easley, Talcott Williams.
Lower Row (from left to right)—John H. Gray, Walton Clark, Frank J. Goodnow, Frank Parsons, Edward A. Moffett.

MEMBERS OF THE INVESTIGATING COMMITTEE OF THE PUBLIC OWNERSHIP COMMISSION.

Committee is the remarkably high character of the men constituting municipal governments in Great Britain, who devote as much attention to municipal affairs as men in the United States devote to their private business. At a luncheon tendered to the members of the Committee on June 11 by the city government of Manchester was a councillor who has been a member of the government for twenty-nine years and who retired from business in order to devote all his time and energies to the affairs of the city. The members of the Investigating Committee express appreciation of the kindness and courtesy displayed by everybody with whom they are brought in contact. All the municipal officers and the owners of private concerns show readiness to give them all the facts and figures they desire.

In addition to the Committee's investigation of European cities, an extended examination of municipal conditions has been in progress for some months in the cities of this country, including Chicago, Philadelphia, Pittsburg, Indianapolis, Fort Wayne, Wheeling, Richmond, Allegheny City, South Norwalk, Atlanta, and Norfolk. These investigations of the different cities in Europe and America are being conducted with the sole purpose of collecting the facts—facts that are basal and comparable—as to the ownership of public utilities, and not for the purpose of formulating an opinion as to the wisdom or unwisdom of the action of the various municipalities in adoping the plan of ownership to which each at present adheres.

Various phases of the value and significance of this work of the Commission were emphasized at the New York Civic Federation's dinner to the Commission's Committee on Investigation held at the Park Avenue Hotel on May 21. Hon. Oscar S. Straus presided. Speeches were made by Mr. Straus, Professor Frank J. Goodnow of Columbia University; Dr. Albert Shaw, editor of the *Review of Reviews;* Hon. W. J. Gaynor, of the Supreme Court of New York; Mr. August Belmont, President of the National Civic Federation; Mr. Philip Kelly, of the Theatrical Protective Union; Dr. Talcott Williams, of the Philadelphia *Press;* Mr. Walton Clark, Third Vice-President of the United Gas Improvement Company, Philadelphia; Professor Frank Parsons, President of the National Public Ownership League, Boston; and Mr. Horace E. Deming, Chairman of the Executive Committee of the National Municipal League, New York.

PRIVATE INITIATIVE ON PUBLIC QUESTIONS.

Banquet Address of Hon. Oscar S. Straus, Vice-President National Civic Federation.

THERE is no surer index of a nation's decay than when a people become indifferent to their own welfare, and shift individual responsibility to governmental control. Just as there is a limit to the sphere of individual action in a body politic, so there is a limit to governmental duties.

The very fact that in this country so much work of a public nature is done by private initiative, by private individuals, and by so-called semi-public bodies, is the best evidence that our body politic is sound and healthy. I do not mean to intimate that in this country we are free from the corrupting influences of selfish greed; on the contrary, the crop is plentiful, but so is the vigilance of the upright citizens who are continually on the alert, and wield the scythe with stalwart arms, and fearlessly lop off the deleterious weeds which spring up in the night and grow afield.

In no country in the world has so much been left to private initiative, not only industrially, but even to a greater extent in the benevolent and philanthropic fields. The very fact that in this country the people from the earliest times have been accustomed not to rely upon the State for the support of their religious establishments, has had a large influence in broadening the scope of individual activities and responsibilities. Much work that in the old world was left to government, national and municipal, has, in this country, been initiated, fostered and supported by private individuals. This has developed its good as well as its detrimental sides. Many of our public works in city, state and nation have been undertaken by individuals, often in advance of the need of a people. Often this has proved speculative and hazardous, and often the results have proved marvelously remunerative. This extraordinary enterprise has paved the way to our rapid commercial development, and expedited the movement of our population from the Atlantic to the Pacific, and from Maine to Mexico.

The so-called "unearned increment," if I may borrow a phrase, has grown more and more valuable with the growth of the population of our cities, and it is becoming more and more a serious question to what extent that "unearned increment" should be, and can safely be utilized so as to profit the municipality or State which has a right to hold these valuable franchises in trust for all the people. The question arises, can these franchises be made to return greater advantages to the people if held, developed, and operated in common, or, if held in common and developed and operated by private individuals, or non-governmental bodies.

Many experiments along these lines have been made, some in this country, but more in the greater European cities. The National Civic Federation has taken up the consideration of this subject so far as it applies to public ownership and operation of public utilities in municipalities, confining its investigations specifically to passenger transportation, whether by elevated, surface, or underground systems; to the supply of water, gas, and electricity. For this purpose it has invited men competent, as scientific experts of practical experience, and accountants, to study the subject in all its phases both here and abroad. These men are highly qualified by capacity and experience to make the investigation. Some of these men have large interests in, and represent private ownership, and some of them are pronounced advocates of public ownership and public operation. All sides of this question are fairly represented, so that the investigations will be from all sides, and in no case one-sided. The men who have undertaken this subject deserve to be commended for their public spirit, and we are assembled on the eve of their departure for Europe to extend to them our unstinted appreciation for their commendable public spirit in undertaking this important investigation.

The Committee, consisting of twenty-one members, have already made some investigations in this country, and on their return those investigations will be continued, and a full report covering the entire subject will be laid before the public, with such recommendations as they may be able to agree upon—in any event, the facts as they find them will be presented in detail.

In addition to the economic aspect of the question, there is even a more important side, the comparative effect that public ownership and public operation, as contrasted with private ownership and private operation, has upon our body politic.

We are not blind to the fact that the government of our municipalities is often inefficient and corrupt. Some of them have been a disgrace to our free institutions, and evidence is not lacking that a large share of responsibility for these unfortunate conditions is due to the corrupt influences of private ownership in the securing and in the controlling of public utilities. On the other hand, it is claimed by some of our leading writers both here and abroad, that in a democracy few things are more to be feared than a great increase in the number of those who are in the direct employ of the State or the municipality. Lecky says: "The temptation of the representatives to use public money and public works as a means of electioneering, and the temptation of the electors to use their political power as a means of obtaining trade advantages for themselves, will soon become irresistible, and the floodgates of corruption will be open. . . . Public works are in this respect far more dangerous under a democratic government than under a despotism."

On the other hand, it is claimed by other writers of equally high standing that public ownership and operation carries home to every one the importance of good government, and arrays on its side the strong classes in a community which otherwise would be indifferent, and that municipal government improves as its duties are enlarged.

With these general and preliminary observations, I will call upon the gentlemen who represent the several sides of this question, to address you. These addresses will be entirely informal but, therefore, none the less acceptable.

METHODS OF THE OWNERSHIP COMMISSION.

Professor Goodnow, of Columbia University, Describes the Methods of the Investigating Committee.

SOME time ago I received by the same mail two books on municipal ownership in Great Britain. If one read one of them he could hardly fail to reach the conclusion that the assumption by the British authorities as to the ownership and operation of municipal public utilities was a great success. If upon the other hand, he, by chance, took up the other book, he did not have to go further than a perusal of its table of contents to see that municipal activity along these lines was, in the eyes of the author, a conspicuous failure. In some respects it is true; the conclusions reached by these writers were due to the fact that where disadvantages had to be balanced against advantages, one gave a greater weight to an acknowledged advantage or disadvantage than the other. To that extent the different results reached were due to an honest and perfectly natural difference of opinion. But still, making due allowance for these reasons, for the difference in the final result reached, one could not put these books down without feeling strongly that "some one had blundered." One almost had a suspicion that some one had committed a more heinous offense than a blunder.

Now, this blundering, or worse than blundering, has been, I think, characteristic of most of the literature on the subject of municipal ownership which has as yet appeared. At any rate, this characteristic of the existing literature has been the one which has been most markedly apparent to him who, not blinded by prejudice nor disqualified by interest, has honestly and earnestly attempted to get at the truth. And it was, as I understand it, the purpose of The National Civic Federation in its establishment of the Commission which has entrusted to us the investigation of this most important subject to do what it could to make future blunders less easy and future misrepresentations, if I may so call it, more easy of detection.

The question naturally presents itself, What are the methods which have been adopted to attain the desired end? In answer to this question, I may say, those responsible for the management of The National Civic Federation laid down one fundamental rule which those of us who have been most active in the work of investigation have had continually before us. That rule was that we were to ascertain facts. The adoption of this rule prevented, in the first place, this Commission from meeting and after argument and discussion coming to a determination that, in its opinion, municipal ownership and operation of any specific public utility under the conditions existing in the average American city was better or worse than private management. For the opinions of this Commission, however valuable they may be, are not facts.

We are confined to facts. Now, what are facts? What are the facts of municipal ownership? Not knowing much about the facts of municipal ownership except that, like other facts, they were, presumably, stubborn things, the first thing which we did in order to do the work committed to us was to devise methods by which these facts might be ascertained. We determined that they could be ascertained only through the examination of specific plants and, inasmuch as the means at our disposal were limited, by the examination of selected plants. Now, some municipal and some private plants had a general reputation of being successful. Some, on the other hand, were reputed to be unsuccessful. If we should choose all the alleged successful municipal plants and should set them off against the alleged unsuccessful private plants, or *vice versa,* we should certainly obtain a conclusion of facts—choice facts, they might be called.

But such a method of ascertaining facts we had certainly to avoid. I should not have said we had to avoid this. All necessity for avoiding it was removed by the wise action of The National Civic Federation, which so constituted the Commission that almost every shade of opinion and almost every interest or prejudice was represented on it as well as on the smaller committees which have had the burden of superintending the work of investigation. The result was that when it came to choosing the particular plants to be examined, opportunity was open for making any objection which could be made to a selection, because of the fact that it was unrepresentative or incomparable with other selections. Indeed, the places selected have been selected as the result of unanimous action on the part of the committees in charge of the work. It was in this way, then, that the attempt has been made to secure a fair selection of the places from which our facts were to be ascertained.

After the places to be examined had been selected, the question presented itself as to what things we should look for in these places. We soon found that these things might be grouped under one of four heads: (1) Character of service; (2) Financial results; (3) Political conditions; (4) Social conditions, particularly labor conditions.

Having determined that what we wished was to be found under one of these heads, we had to decide how we would actually get at the facts. We very soon determined that we must have for this purpose men who by education were qualified to do the work, and we therefore selected four classes of experts, viz.: engineers, accountants, those acquainted with labor conditions and those who by training and experience were able most easily to get information with regard to other social and political conditions. In the choice of these gentlemen we have been most fortunate. We did not select any one who was not accepted without objection by every member of our sub-committee. We endeavored, furthermore, to get absolutely the best men available, and we found in these gentlemen a willingness, when they learned of the paucity of our resources, to forego a part of the charges which they usually made for work of this sort. The experts whom we have selected have been engaged, some in England and some in this country, in acquiring the information desired, which will be submitted to the members of the committee before they are called upon to state their conclusions.

This is about all I can say upon our work. I would that I could say more, but the conditions which we have been called upon to examine have been so complex, the records, particularly of the municipalities which have been examined, have been kept in such shape, that it has been exceedingly difficult for us to get the information that we have desired. The result has been that it has been impossible to finish the work in this country as soon as was expected. It will have to be taken up again on our return from Great Britain. The work on the other side, as I understand, has made much more satisfactory progress. This has been due partly to the fact that the information desired has been more easily obtainable on account of the longer experience which municipalities have had in the management of public utilities, partly to the greater detail in which the records of their work, in accordance with the provisions of law, have been kept, and partly to the fact that the investigation has been supervised by two of our number who have been able to give their entire time to the

work. Thanks to the indefatigable exertions of Messrs. Maltbie and Sullivan and the gentlemen who have assisted them, so much has been done that we hope the committee will be able to reach conclusions as to the relative advantages of municipal and private ownership in Great Britain after having gone over the field in the time which has by our plans been allotted for this purpose.

OWNERSHIP OF PUBLIC SERVICE CORPORATIONS.

Judge Gaynor, of the New York Supreme Court, Discusses Modern Tendencies.

I HARDLY know what may be appropriate for me to say on an occasion like this; in fact, I feel that bringing any ideas here at all where ideas are the stock in trade, where everybody has ideas, is like bringing coals to Newcastle, where they have more coals than they know what to do with. I feel that I am speaking to philosophers, to men who are considering public subjects seriously, to men who thus far have been of great value to the community.

I think that I may say of this Federation that it has done much in being able to bring together such men as Mr. Belmont on the one side, representing what he represents, and Mr. Gompers on the other, representing what he represents, and that, if The Civic Federation has not made them hail-fellows-well-met, it has disposed them to sit down and discuss soberly important matters between them, and it has thereby accomplished a very great deal for the community. If it had done nothing else it would have done a great deal. Most of the friction in the community on topics which this Federation discusses from time to time on political, industrial and economic subjects, on the topics involving labor and capital and the antagonism between them, arises out of misunderstandings on one side or the other. and from the fact that those representing each side of the subject in this country up to a very recent time have not met together for a discussion with each other; and they could not come to an understanding with each other in any other manner. I say this illustrates the value of The Civic Federation's usefulness to the community in thus being able to bring together these diverse elements.

This Federation is accomplishing a very great deal, and I deem it fortunate that it has now taken up the great subject of public utilities, as to whether or not they shall be owned by the community or by individuals. I deem it fortunate that you have appointed a committee to consider this subject, for the understanding which this committee arrives at will in time be the understanding of this Federation, and that means that it will ultimately become the understanding of the entire community. If this committee can bring in a statement of the facts—not of words, not of rhetoric, but of facts such as we are all so much indebted to Mr. Shaw for in the past—and these facts are presented here and understood by this body, I have no doubt that your final understanding of the matter will "slop over" and become the understanding of the whole community. All great movements spread in that way. If a great masterpiece is produced by an artist some one comes in and sees the work and he perceives that it is a masterpiece, and there is only one person in the world who perceives it. Then he brings in another and he sees it, and so on until at last perhaps twelve persons have seen it and understood it, and their understanding finally prevails and in time becomes the judgment and understanding of all mankind. Now, as to the matter we have in hand, it will be the same way with this committee, so that what they finally ascertain will become the view of the entire country.

The agitation in this country for municipal ownership, and to some extent for municipal management as well, of public service corporations has arisen, in my judgment, out of no hostility toward private management or private capital. We owe much to private management, and it is still a question whether the best service may not be obtained from private enterprise. Private management may in some respects be able to teach us many lessons. But the agitation for municipal ownership has arisen, on the contrary, wholly from the franchises of these public service corporations being overcapitalized or watered, as Mr. Straus has expressed it in his opening address. The community cannot look on this without first a feeling of uneasiness, and then of hostility, and then of open resentment and finally of action against the doubling and trebling over and over of the capital put into these corporations, all of which represents nothing except a perpetual tax by the corporations on the community. We have just seen the corporations in this city bind themselves together in a hard and fast agreement for 999 years on a basis of grossly excessive capitalization, representing the repeated overcapitalization of the constituent companies. Dear me, think of our standing that thing for 999 years! Nine years is more like it. These great gifts, these franchises that are nothing but licenses from the people, are made a drain on the community, by having bonds and stocks issued on them and doubled up, year after year, in all our cities and on our steam railroads as well, until the sum has become colossal enough—I will even say it even in this presence—dishonest enough to shock the moral sense of the people of this country. There is the seed of this hostility, this feeling toward these corporations.

We have just had a great debate in Washington concerning our national railways. There is no resentment in Washington against capital, but there is hostility to the franchises for these public utilities being made a perpetual tax on the people, as though the recipients had the right to do as they pleased with them. What are the railroads but our public highways! They are as much our public highways as the dirt roads which run alongside of them. The public mind has now come to the understanding of this, and you can't rid the public mind of it. The building of these roads was turned over to private individuals, and the trouble is, not that we have any hostility to capital, but that those who have these gifts have come somehow to understand that they own them for their own profit first and for the public second.

It is a horrible crime for the public highways to carry the freight of one man or group of men at half or any lesser rate than that charged to others, to the aggrandizement of one man or set of men and the destruction of another. Go back to the days of toll gates. What do you think would happen if one man were allowed to drive his cattle on the hoof or his teams through for one-half what another man paid? They would tear down the toll gate; and that is what will happen ultimately to these railroad abuses; the people will tear them down. They will do this peacefully if they can, forcibly if they must. There is nothing more certain than that the people have come to the conclusion that this thing will no longer be tolerated either on the highways of the nation or the highways of the city. They demand that the roads shall be managed for the aggrandizement of no individuals, but for the welfare of all. Highways from the twilight of history have always been built and managed by Government. But from 1840 to 1850 when the iron roads came in some governments for some reasons turned the building and operation of them over to individuals. This was the first time in history that public highways were turned over to the management of private individuals, barring the few toll roads that existed. But nevertheless they were made public highways by government; they were licensed as such, to remain as such. What we call a franchise, for the sake of a better word, was given to the corporations to build and manage them as public highways. I need not say to you that government can take private property only for governmental purposes. This great governmental power of taking private property for public use was given and could be given to these corporations only on the theory that they were engaged in a governmental service or function in carrying passengers or freight which, so long as we know history, was a matter regulated or controlled by government.

And I want to invoke a blessing on the man who, as President of the United States, has seen this great question as you would see it through that pane of glass; who has held it up for the country when no political parties dared to make it an issue; who has forced it before Congress and fought for a final issue in spite of all the abuse and recriminations that have been heaped upon him. Not that I think this law will cure all the ills, but the moral feeling of the people is expressed in it.

When this committee comes back from Europe with the cold facts of the experience of Europe—which is a long experience and where municipal ownership and operation is no new thing, and where it has been solved already—I say, when they get back with their report luminous with facts, and you and I are made familiar with their findings, then your opinion will speedily become the opinion of this whole country. In that way they will accomplish a great good, and I am glad to be here to-night to wish them godspeed.

A LABOR VIEW OF THE COMMISSION.

Philip Kelly, of the Theatrical Protective Union, Views the Commission from the Standpoint of Organized Labor.

AS an after-dinner speaker I am a complete failure, which you will discover before I have finished. I hope, however, that when this Committee returns that I will be one of those who will meet them and extend to them a welcoming hand. If their report is entirely satisfactory it will make a very important chapter in the history of this country. If their report is satisfactory to the people, well and good, but if not, they can rest assured that they will be placed on the gridiron and toasted and roasted to perfection.

Gentlemen, the question of municipal ownership is up. There is no use in denying it. It is discussed in the "L" cars, in the subway and on the surface lines. People discuss it going to church and coming home from church. There are thousands of people in this city and in this country who have not yet made up their minds as to whether it would be a benefit to the people or not to have municipal ownership and operation. Now, as far as the idea has any bearing on the workingman is concerned, I do not think they need have any fear. Even municipal ownership would not be a complete cure for all the ills that the workingman suffers from at this time. The employes of the Government are not better paid than those of private concerns. The letter carrier in this city works fourteen hours a day, although the law says that ten hours shall constitute a day's work. But they shift them around and the result is they work fourteen hours. I do not know but what I would prefer to work for a private individual or firm rather than for the United States Government under present conditions. I do not think that municipal ownership could affect the labor organizations one way or the other. They are well able to take care of themselves. If they should decide in favor of municipal ownership I believe it would be accomplished in a very short time. But up to the present time, however, no great labor organization has expressed itself positively. It is true that individuals connected with the organizations have expressed themselves for and against the proposition. A lot will, of course, depend upon the report of this committee when it returns from England and Ireland.

Some people say that it would be a dangerous thing if the Government were to have a large number of employes. Is that a fact? I presume that statement is intended to mean that if the Government employs thousands of people in the Civil Service it would become so strong that it could not be turned out of office. Now, England has more employes than any other country in the world, and yet in no other country in the world are some of the governments so short-lived. The Conservative party has been kicked out of power in a relatively short time and the Unionist party lasted only one month. The idea of municipal ownership has some brilliant advocates.

I believe that the only great bodies in this country that have not taken a stand on this question are the labor organizations. But the question is up. The Commission, when it brings back its report, will find that such report will be discussed in the labor organizations throughout the country, and a great deal will depend upon the kind of a report they bring back. I have the utmost confidence in the men who have been appointed on this Commission; they are capable, brilliant, fearless and honest. I know the labor men on the Commission. They are good, straightforward men. The labor men will know that the report our brothers on the Commission bring back will be worth our study and confidence.

THE REMARKS OF PRESIDENT BELMONT.

Head of The National Civic Federation Officially Explains the Commission.

GENTLEMEN, it was my intention, and it was in fact my duty, to be away from New York at this time, but I set everything aside in order to be with you to-night to have an opportunity of saying a few words with regard to this Commission. The gentlemen who have already spoken to you have confirmed what I intended to say, which was that The Civic Federation's purpose was not to obtain an opinion on the question of municipal ownership, but realizing that the subject was before the people, that it was one that was beginning to be discussed, that ultimately it would be the subject of discussion on the stump during our political campaign, and that it vitally concerned the two elements this Federation has striven to bring together, it desired, if possible, to obtain for the public a text-book on the question. I knew all this would probably be said to you, but from the fact that I am the representative of one of the largest traction systems in the country, if not the largest, I thought that I would like to tell you that myself, because it had nothing whatever to do with my personal interest. At a meeting of the Committee I stated that if the results of this investigation furnished an argument for the acquisition by the municipality of the properties which I have been elected to manage, that that would not deter me. On the contrary, as a citizen I welcome a correct interpretation of this subject. As President of the Federation, it was my duty to try to bring about a proper interpretation of the subject.

I did not expect when I came here this evening that any argument would be advanced on that subject. I do not think that it would be delicate on my part to answer those arguments that have been advanced. I could and I should very much like to do so. I would like very much to have these gentlemen who have preceded me this evening and who have based their arguments on certain alleged facts, to seek those facts as zealously as will this Commission. But I want to repudiate in the most unqualified language the insinuation that I manage or that my associates manage these corporations in any other spirit than that of honesty or of correct purpose, and with any other view than that of complying with every letter of the law. But I do think that every corporation and that every corporate manager is entitled to be heard in court first, and that his action should be tested after the verdict of the court and not before. You know to what I refer and therefore it will not be necessary for me to repeat it, and I am sorry that I have to make this statement.

So anxious was this organization that the report should be absolutely impartial that it took every step to free the Commission from any possible relationship to the Federation other than that it should lean upon the Federation for its expenses. The Federation has directed it in no sense excepting to ask that it ascertain facts on the lines laid down by the Federation. That is all they have asked. They have chosen their own Committee and whatever the result of their work it will bear no hall mark of any special interest and least of all has there been any effort to create an argument against municipal ownership of public utilities, and more particularly of transportation. It would have been more than indelicate for me to have promoted any such movement if its object was other than that which Professor Goodnow has stated to you. That is why I wanted to be here to-night, because it has been insinuated by those who desire to discredit this Committee that there was a purpose to dictate to it. I thank you.

SELECTION OF THE COMMISSION APPROVED.

Dr. Talcott Williams, of the Philadelphia "Press," Commends the Manner of Appointment.

I HAVE been in doubt since I received the notice of my appointment. I do not belong to the college professor class. I am not a capitalist; but I am a Philadelphian. Perhaps this accounts for the reason of my selection as a speaker to-night. In our city we had a government which left nothing to be desired in the way of fraud. We found out that at our elections there were 70,000 fraudulent votes cast; we knew that it was impossible to stop the white slave traffic; we saw our franchises being sold right and left; we stood all that. But there came a May morning about a year ago when it was announced that our gas bills were to be increased, and we arose as one man and demanded reform. The returns of the election showed on that occasion that there were 110,000 voters who were eager for reform. The reform ticket was elected, and we at last began to conduct our own government. At last, it may be said, that we have a reform movement in Philadelphia. Previously we had tried everything. We owned our own gas works and we liked the proposition so little that we gave them up. Then the company we gave them to we liked so little that we decided to take them back.

Gentlemen, I understand that the purpose for which we are gathered here this evening is to wish this Commission godspeed on the eve of its sailing, and to express the hope that it will bring back with it the facts. As has been said by the speakers who have preceded me, it is not a question of private ownership; it is not a question of whether this method or that method is slightly more economical in the governing of a city—it is at bottom a question as to whether at any particular period of our history we would not be happier and healthier by a full consideration of the problems affecting the operation of our public utilities, and a determination to solve those problems in the best light obtainable.

I think this Committee has been selected with admirable judgment. In France a committee selected for such an investigation would necessarily have been drawn from the personnel of the existing party in power. A report from such a commission would, in all probability, have been biased and colored to suit the wishes of the party in power. In Germany a royal commission would have made a report that would have been pleasing to the head of the nation. I submit that this Commission in its method of appointment and investigation has been better constituted than it would have been possible to constitute a similar committee in any other country.

We know that in the preparation of this report and that in its submission to the public it is not so much a question of whether taxes should be raised or lowered, but it is more a question as to what is the best solution for giving the people in our great cities an increase in the number of rooms in which the average family is compelled to live; what will give the greatest amount of pure water in the cities, the most efficient form of lighting, and the best kind of transportation facilities. Some compromise. some middle course, may be necessary, but that, I submit, is the main consideration to be sought.

VIEWS OF JOHN DeWITT WARNER.

Among the letters of regret received from invited guests who were unable to attend the banquet was the following:

NEW YORK, May 16, 1906.

Mr. James P. Archibald, Secretary, Committee on Arrangements, 281 Fourth Avenue, New York.

DEAR MR. ARCHIBALD: Acknowledging your note with invitation to dinner to be given to the Public Ownership Commission on the 21st instant on the eve of its sailing, I regret that a prior engagement must make me very late, and more probably deprive me entirely of the pleasure of being with you.

I believe The Civic Federation has taken no other step so important as that in which this Commission has been appointed; that it can do no greater service than fully to inform our people of the experience of others in this matter; and that the success with which it does this, and the acceptance by our people of its report as a clear and impartial view is likely long to be its best hold on public confidence.

Sincerely,

(Signed) JOHN DEWITT WARNER.

PERSONNEL OF THE COMMITTEE.

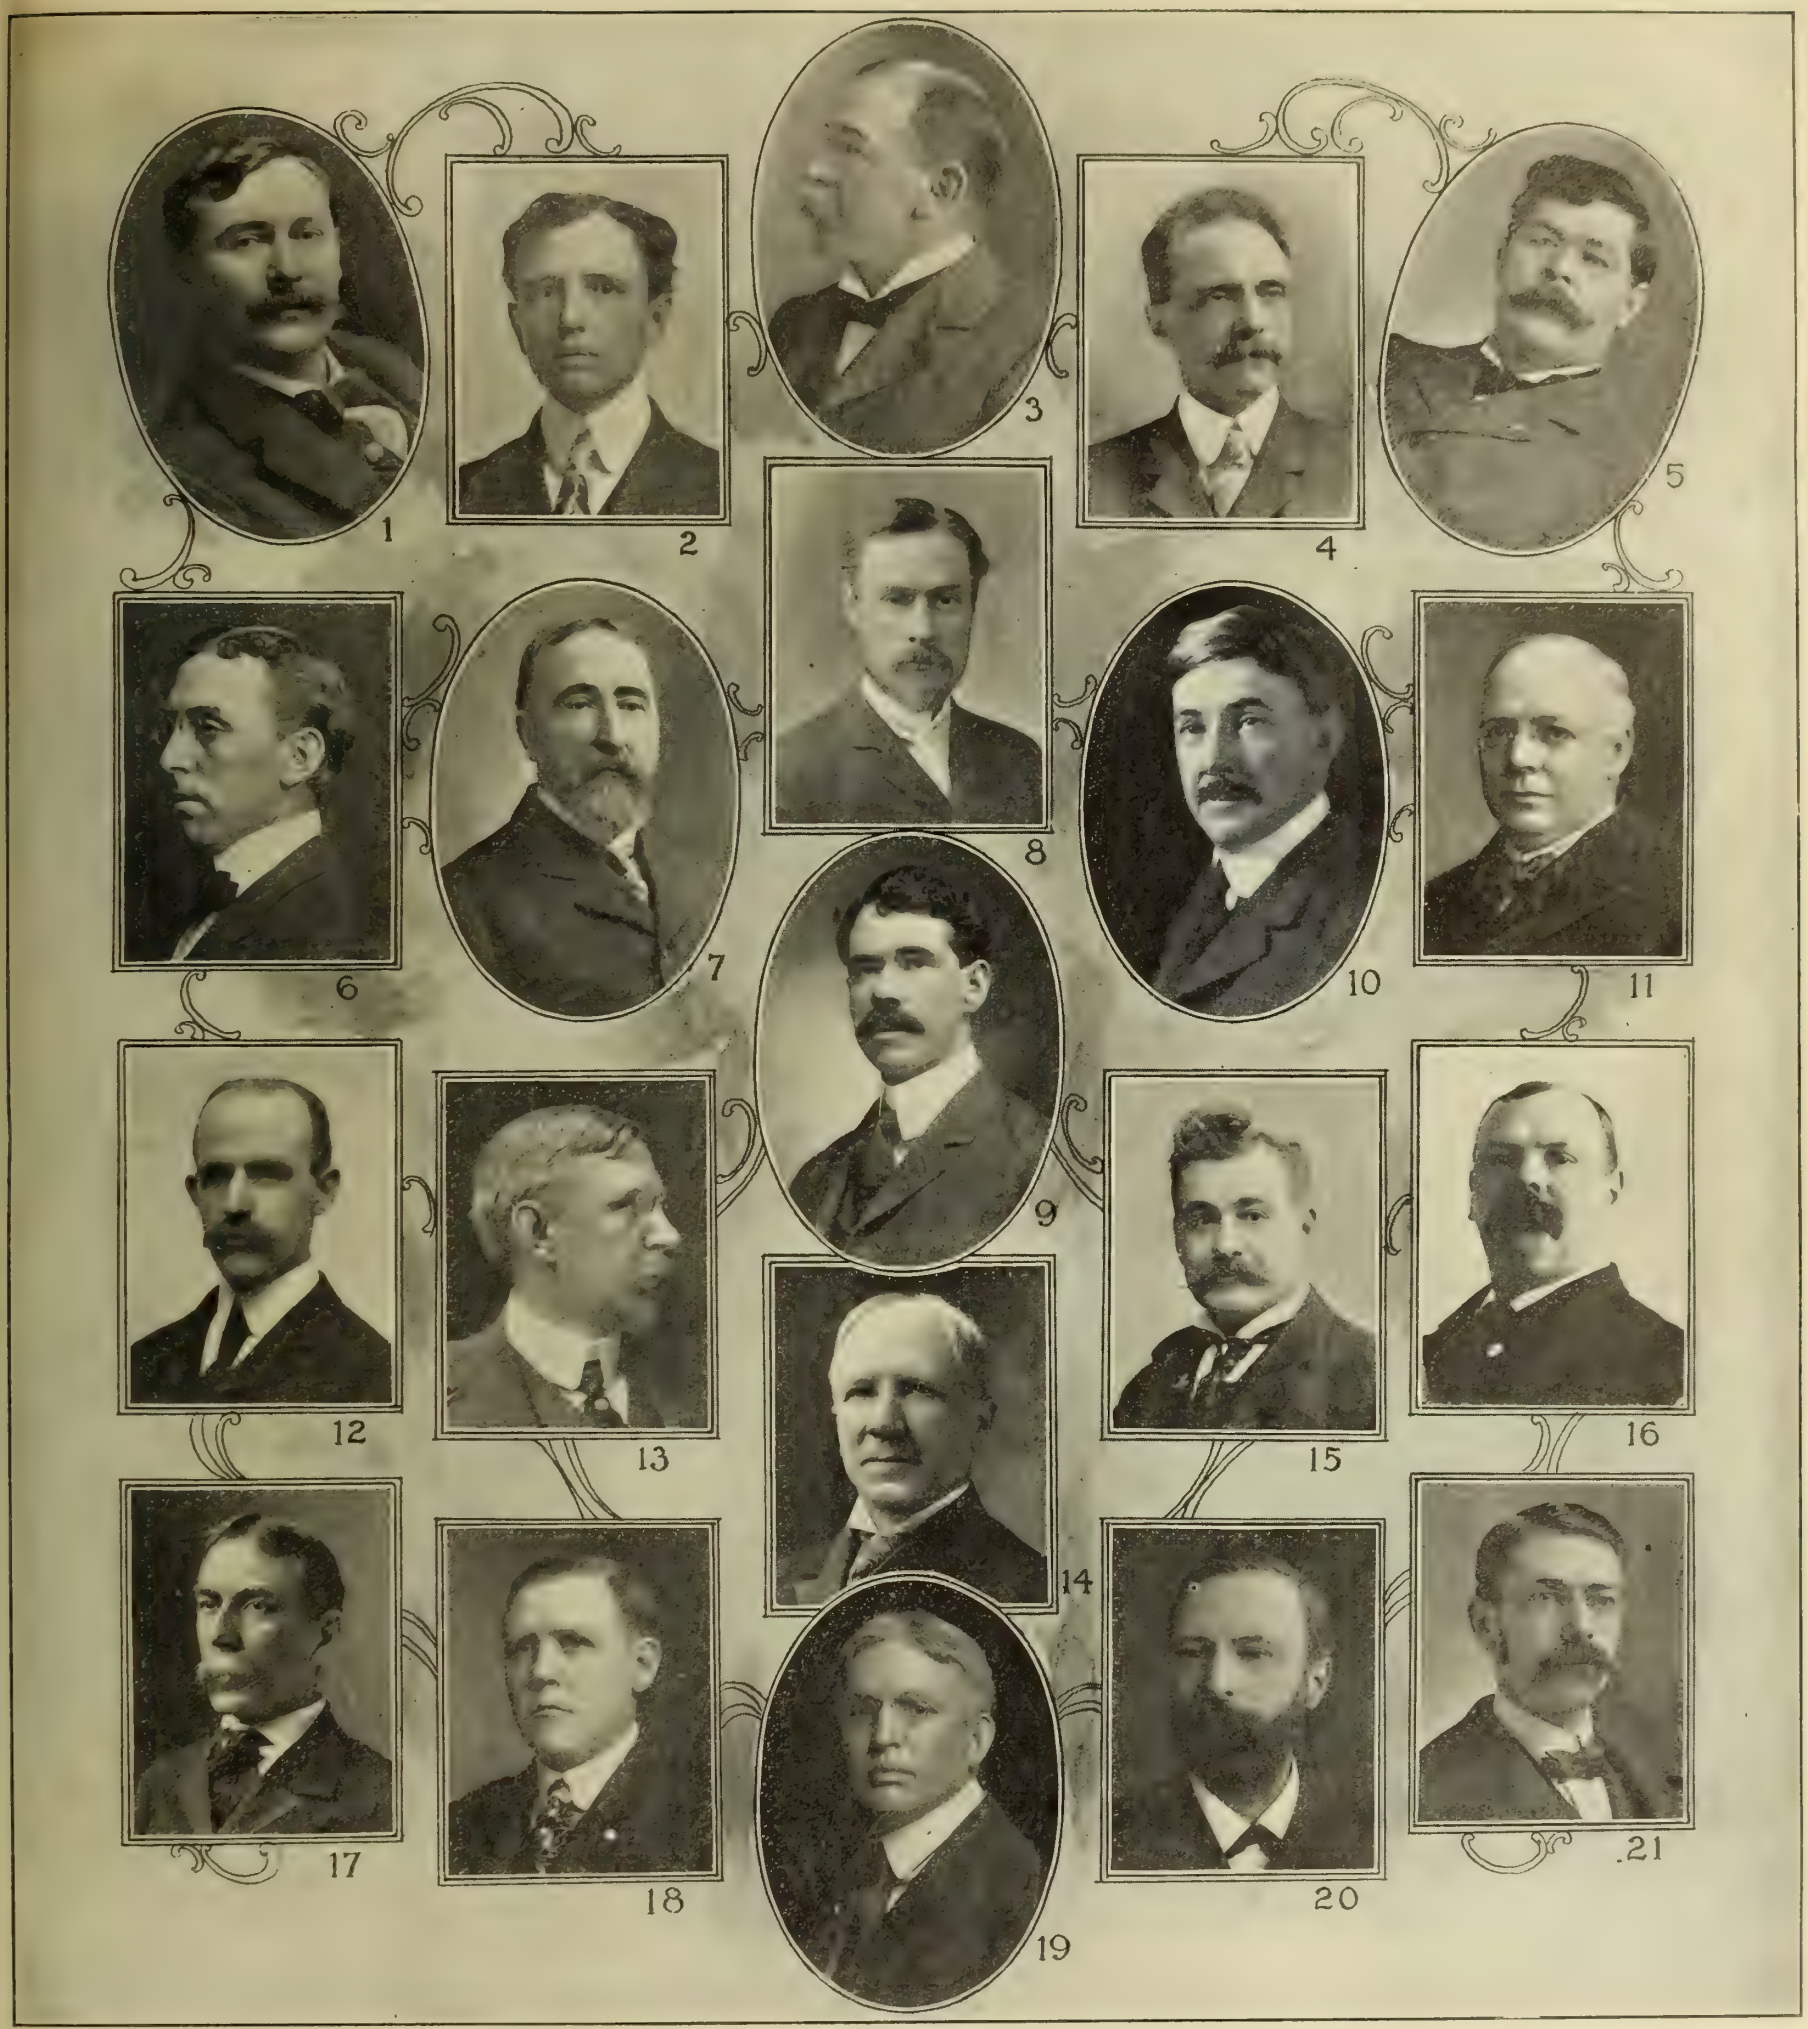
The Fifteen Members of the Committee on Investigation Now in Europe Studying Conditions There.

MELVILLE EZRA INGALLS is chairman of the Cleveland, Cincinnati, Chicago and St. Louis Railroad Company, popularly known as the Big Four. He was educated at Bridgeton Academy and Bowdoin College, and was graduated from the Harvard Law School in 1863. He practiced law first at Gray, Me., but soon removed to Boston. A member of the Massachusetts Senate in 1867. First as president (1870) and a year later as receiver of the Indianapolis, Cincinnati and Lafayette Railroad, Mr. Ingalls conducted this company from a bankrupt condition, with aid of reorganization in 1873 and 1880, and put its successor, the Cincinnati, Indianapolis, St. Louis and Chicago, upon a sound footing, consolidating it with other roads into the Cleveland, Cincinnati, Chicago and St. Louis Railroad. From October 1, 1888, until February, 1900, Mr. Ingalls served as president of the Chesapeake and Ohio Railroad. In the Presidential campaign of 1900 he was one of the leaders of the sound money division of the Democratic party. He is president of the Merchants' National Bank of Cincinnati. In 1903 Mr. Ingalls was Democratic candidate for mayor of Cincinnati. In 1905 he served as chairman of the investigating committee of the Equitable Life Assurance Society.

JOHN ROGERS COMMONS is professor of political economy in the University of Wisconsin. He graduated at Oberlin College in 1888, studied at Johns Hopkins University, 1888-90, became professor of sociology in Oberlin College in 1892, Indiana University in 1893 and in 1895 in Syracuse University, resigning in 1899 to become director of the Bureau of Economic Research. He has served as an expert agent for the United States Industrial Commission and as assistant secretary of The National Civic Federation. Professor Commons is the author of "The Distribution of Wealth," "Social Reform and the Church," "Proportional Representation," "Regulation and Restriction of Output by Employers and Unions," "Trade Unions and Labor Problems," etc.

CHARLES L. EDGAR is president of the Edison Electric and Illuminating Company, Boston, Mass. He graduated from Rutgers College with the degree of bachelor of arts in 1882 and later pursued a post-graduate course in electricity at the same college, receiving the degree of master of arts in 1885 and that of electrical engineer in 1887. Soon after leaving college he became associated with the parent Edison company—the Edison Electric Light Company of New York—and remained with this company until 1887, when he went to Boston. He was chief engineer of the New York Edison Company, resigning to become general superintendent of the Boston Edison Company, which was organized in 1886. Mr. Edgar became in turn, general manager, vice-president and president, which latter office he has held for the last five years. Besides being president of the Edison Electric Illuminating Company, Mr. Edgar is president of the Boston Electric Company, the Somerville Electric Light Company, the Woburn Light, Heat and Power Company, the Newton and Watertown Gas Light Company and other central station companies. These companies are closely associated, and supply gas and electricity to Boston and adjacent towns. For three terms Mr. Edgar was president of the Association of Edison Illuminating Companies. He is president of the Massachusetts Electric Lighting Association, chairman of the Boston branch of the American Institute of Electrical Engineers, and was vice-president of the National Electric Light Association in 1890. At the time of his election to the presidency of the National Electric Light Association in May, 1903, he was first vice-president of that organization.

TIMOTHY HEALY has been active in the labor movement for the past twenty years. Was Master Workman of Local Assembly, 6780 Knights of Labor (Eccentric Association of Firemen, New York City) for several years. Represented the stationary firemen of that city in District Assembly 49 K. of L. and the Central Federated Union. Represented the Knights of Labor of New York City in several conventions of the general assembly of the Knights of Labor, and was president of the Knights of Labor of New York State for two years. For the past ten years Mr. Healy represented the stationary firemen of New York City in the conventions of the State Workingmen's Federation, and was elected and served as a member of the Legislative Committee of the Federation. He was elected president of the International Brotherhood of Stationary Firemen in 1903, re-elected in 1904 for a term of two years, and represented the organization in several conventions of the American Federation of Labor. Mr. Healy was largely instrumental in having placed on the statute books of New York a law compelling the licensing of stationary firemen in the City of New York, and is also credited with getting an eight-hour work-day and better conditions generally for a greater portion of the stationary firemen of New York City.



FRANK JOHNSON GOODNOW, professor of administrative law and municipal science in Columbia University since 1883, was graduated from Amherst College in 1879, from the Columbia Law School in 1882, and studied also at the Paris Ecole Libre des Sciences Politiques, at Berlin University. He is a recognized authority on municipal, administrative and constitutional law. Among his published works are: "Municipal Home Rule," "Comparative Administrative Law," "Municipal Problems," "Politics and Administration," "City Government in the United States," etc.

WALTON CLARK is Third Vice-President of the United Gas Improvement Company, Philadelphia. At the age of seventeen years he entered the employ of the New Orleans Gas Light Company, where he continued in various capacities connected with the manufacturing and distributing work until the fall of 1883, when, for a few months, he was connected with the United Gas Improvement Company, working for it in the erection of the gas plant at Pensacola, Florida. He returned to the New Orleans company in the spring of 1884, continuing with them until the fall of 1885, when he entered the service of the Jefferson City (Louisiana) Gas Company, performing the duties of superintendent of that company for about a year. Mr. Clark then removed to Chicago, and was connected for a short time with the United Coal and Oil Gas Company, of New York, the owners of the Hanlon-Leadly patents. In the fall of 1887 he entered the employ of the Kansas City Gas Light and Coke Company, and about eight months later accepted the position of assistant general superintendent of the United Gas Improvement Company, becoming general superintendent, and in 1904 being elected third vice-president. He is also president of the Equitable Illuminating Gas Light Company of Philadelphia, vice-president of the Rhode Island Company, and is officially connected with a number of large gas, electric and street railroad properties. He is a past president of the American Gas Light Association, a director of the Western Gas Association, and director of Franklin Institute of Philadelphia; member of New England Association of Gas Engineers, Pacific Coast Gas Association, the American Society of Mechanical Engineers, the Engineering Club of Philadelphia, member of the Board of Trustees of the Pennsylvania Military Academy and the Chestnut Hill Academy.

J. W. SULLIVAN, until recently Editor of *The Weekly Bulletin of the Clothing Trades,* has been prominently identified with the labor movement in this country during the past twenty years, most of the time serving in different capacities on the editorial staff of labor papers. He is a member of the Typographical Union. From 1892-95 Mr. Sullivan was general lecturer for the American Federation of Labor on the Initiative and Referendum; has served as a delegate to State and national conventions of the American Federation of Labor, and in 1896 was fraternal delegate of the Federation to the British Trades Union Congress at Edinburgh, and affiliated delegate to the International Co-operative Congress at Paris. He was prominent in the United Labor Party campaigns of 1886-7. Mr. Sullivan is the author of "Working People's Rights," "Direct Legislation," "The Trades Union Movement in America," etc.

MILO ROY MALTBIE is assistant secretary of the Art Commission of the City of New York, and a franchise expert. He was educated in the public schools, Upper Iowa University, Northwestern University and Columbia University, in which latter he received the degree of Ph.D. in 1897. He was University Fellow in Administrative Law at Columbia University, 1895-7, professor of mathematics and economics in Mount Morris College, Illinois, 1893-5; secretary of the Reform Club Committee on City Affairs, 1897-1902; editor of *Municipal Affairs*, 1897-1903, and lecturer in various institutions. He spent the summer of 1899 investigating municipal conditions in Europe for the Reform Club, and in 1903 traveled extensively over northwestern Europe for the Art Commission. Among the many committees of which he is a member the principal ones are the Merchants' Association Committee upon Water Supply, National Municipal League Committee upon Uniform Municipal Statistics, Municipal Art Society Committee upon Street Fixtures, Constitutional Home Rule Committee (secretary), etc. Dr. Maltbie has written frequently upon municipal and economic topics, and is now editing a series of books upon municipal problems for the Macmillan Company.

WILLIAM J. CLARK is foreign manager of the General Electric Company, New York City. He served from 1879 to 1887 as postmaster at Birmingham, Conn., during which time he was frequently called upon by the Post Office Department to act as Post Office inspector. In this capacity he made many important investigations, among them the Star Route frauds, frauds in the Brooklyn Post Office, the famous mail robbery of the Chicago and St. Louis Post Office route in 1886,

THE INVESTIGATING COMMITTEE OF THE COMMISSION ON PUBLIC OWNERSHIP AND OPERATION.

21. Albert E. Winchester

the Jersey City Post Office burglary, and a number of other cases of a similar character. In 1886 Mr. Clark began his street railway career by securing a charter to build a street railway connecting Ansonia, Derby and Birmingham, Conn. The following year he contracted with the Vandepoel Electric Company for the equipment of this line, the first of its kind in New England. This enterprise suggested the reorganization of the Vandepoel Company, and negotiations were conducted, culminating in the sale of the Vandepoel patents to the Thomson-Houston Company. Mr. Clark became connected with this concern in 1888 as general agent of the railway department. He remained in this position until the General Electric Company was formed by the consolidation of the Thomson-Houston and Edison General Electric Companies in 1892, subsequently becoming general manager of the railway department. Later he became general manager of the foreign department, which position he now holds. In the early nineties he effected a reorganization of the British Thomson-Houston Company. He held the title of managing director of this company until the completion of his work, when he returned to the United States. During the present year he has been appointed manager of the General Electric Company's traction department, the recent organization of which has been under his supervision. Mr. Clark was appointed United States Government delegate to the International Railway Congress held at Washington in May, 1905. He is president of the Perforated Music Roll Company of New York and a director in several important concerns. Mr. Clark is also the author of several books, including "Commercial Cuba," published in 1898.

F. J. McNULTY is president of the International Brotherhood of Electrical Workers, with headquarters at Washington, D. C.

FRANK PARSONS is president of the National Public Ownership League, Boston, Mass. He was graduated from Cornell University in 1873; later studied law and was admitted to the bar in Boston. In 1892 he was appointed lecturer on law at Boston University. From 1897 to 1900 he was professor of history and political science at the Kansas Agricultural College, and in 1900 became professor of political science at Ruskin College, Trenton, Mo. He has also been dean of the university extension department there, and has lectured for the University Extension Association of Chicago. In 1901-2 Professor Parsons was an expert witness before the United States Industrial Commission on the public ownership of railroads, telephones and telegraph. Professor Parsons has made a special study of railway systems and co-operative institutions throughout Europe and America. His publications include: "The World's Best Books," "Our Country's Need," "The Drift of Our Time," "Rational Money," "The New Political Economy," "The Power of the Ideal," "The City for the People," "Direct Legislation," "The Bondage of Cities," "The Story of New Zealand," etc. He is an earnest advocate of the public ownership of monopolies.

ALBERT E. WINCHESTER is general superintendent of the electric works of the city of South Norwalk, Conn.

EDWARD WEBSTER BEMIS, superintendent of the Cleveland, O., waterworks, graduated from Amherst College in 1880; was a pioneer lecturer in the University Extension System, 1887-8; professor of economics and history, Vanderbilt University, 1889-92; associate professor of economics, University of Chicago, 1892-5, and statistician of the Illinois Bureau of Labor Statistics. In 1897 he became professor of economic science in the Kansas State Agricultural College and later director of the department of municipal monopolies of the Bureau of Economic Research, New York. His published works comprise: "History of Co-operation in the United States," "Municipal Ownership of Gas Works in the United States," "Municipal Monopolies," "Local Government for the South and Southwest," and numerous papers and articles on municipal government, monopolies, etc.

JOHN HENRY GRAY has been professor of political and social science in Northwestern University since 1892. He was educated in the public schools at the Illinois State Normal University, was graduated from Harvard University in 1887 and in 1892 received the degree of Ph.D. from Halle University, Germany. Studied also at Paris, Vienna and Berlin. Professor Gray was instructor in political economy at Harvard in 1887-9; chairman of the World Congress Auxiliary on political science in connection with the Columbian Exposition, Chicago, 1893; chairman of the Municipal Commission of the Civic Federation of Chicago, 1894-6; vice-president of the American Economic Association; expert agent of the United States Department of Labor, 1902-3, to investigate restrictions of output in Great Britain; in 1902 represented United States Commissioner of Labor at International Co-operative Congress, Manchester, England, the United States at International Congress on insurance of laboring men, Vusseldorf, Germany, and at International Congress of Commerce and Industry, Ostend, Belgium. Professor Gray is the author of many papers in economic publications, especially in reference to gas supplies.

EDWARD A. MOFFETT, secretary to the Commission on Public Ownership and Operation, has been identified with the labor movement in the United States through membership in the Bricklayers' and Masons' Union of America, and for a number of years has been editor of the union's official journal, the *Bricklayer and Mason*. He was one of the two experts in welfare work furnished to the Isthmian Canal Commission by the Welfare Department of The National Civic Federation to investigate the needs and opportunities on the Isthmus of Panama, and to make recommendations for the recreation of the workers engaged in canal construction, as well as to arrange to have carried into effect the plans adopted.

THE GENERAL FEDERATION OF WOMEN'S CLUBS.

SIGNIFICANCE OF ITS RECENT CONVENTION AND IMPORTANCE OF THE PROBLEMS UPON WHICH ACTION WAS TAKEN.

By Helen Varick Boswell.

THE General Federation of Women's Clubs recently in convention at St. Paul is a strong organization. It holds in its membership women belonging to every profession and calling; it represents the brains and the hearts of America's womanhood. The Secretary of the Federation in her report very pertinently asked: "Is there anything in reason that 800,000 earnest and persistent women could not accomplish in the United States, if they set about it with determination?"

It is precisely because they are beginning to unify and use concerted action upon certain measures that the public is taking notice of so mighty a force, that public men have to reckon with it, and that legislators are waking up to the fact that they want this power with them and not against them. It is very obvious that many Senators and Congressmen are keeping tab on what the Federation women are doing. The President of the United States sent the Convention a telegram relative to one of its pet measures—the preservation of Niagara Falls—in which he says: "I cordially agree with your hope for the immediate passage of the bill, and trust that the clubs will do all in their power to secure favorable action thereon by Congress."

The Convention took action, vigorous and immediate action, on the Pure Food Bill, telegraphing many Senators and Congressmen, of whom the members were constituents, that the Convention desired the votes of their representatives in favor of the bill. Many telegrams in reply were received, pledging the votes of those same representatives. It is doubtless a matter of much gratification to the women that several of the measures so strenuously advocated by them have become law. Other measures, which hold over until next session because of stress of business in the closing hours of Congress, will be pushed vigorously by the clubs belonging to the General Federation, which proposes to neither slumber nor sleep until every effort has been made to accomplish what it has pledged itself to do.

In addition to the stand on legislative matters already mentioned, the Convention put itself on record as favoring the eight-hour day for women workers, and pledged its efforts to obtain State laws to that end, as well as to work for Civil Service Reform.

The General Federation stands for much that is good. It is naturally a force in moulding public opinion, and has strong influence in crystallizing that public opinion into legislative action. There are times when perhaps, in the language of the politician, it may be "viewed with alarm" as well as "pointed at with pride" because now and then the conservative element does not bestir itself enough and the very radical element, always ready to be incendiary when occasion offers, gets too strong a hold.

The recent Convention, however, showed that the conservatives are really the large majority, for some rather lurid utterances made by certain members during the conferences on industrial questions were not received with favor, but frowned upon, and the women wanted facts, not imaginative instances.

SARAH S PLATT DECKER,
President of The Federation of Women's Clubs.

The Convention compared favorably with any great convention of political parties, and about as much politics is played—in a feminine way of course, and perhaps depending as much on plain common sense and feminine intuition as on parliamentary law, though many of the officers and members are well known parliamentarians—but as one little woman said, "parliamentary law is only the application of the excellent common sense of certain men—let women apply theirs in their own convention."

There can be no gathering of such a large number of delegates without some differences of views on certain questions. Such differences arose, but were so well handled as scarcely to cause a ripple in the Convention proper. The fine work was all done outside.

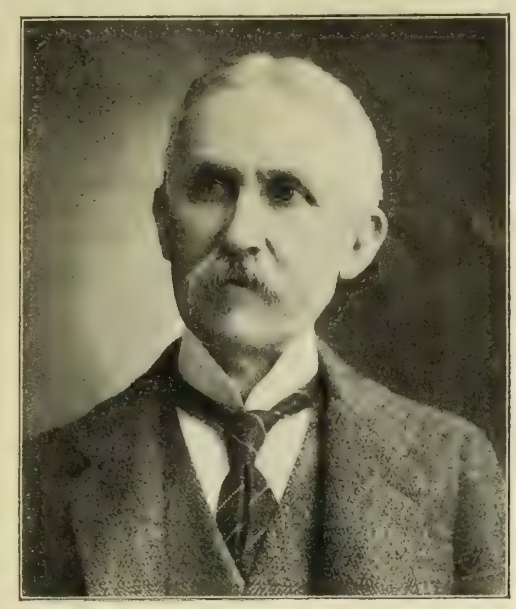
The thing that stirred the delegates above all else was the question of woman suffrage—should or should it not be allowed to come before the Convention? Several weeks prior to the meeting the industrial advisory committee had sent out to the various clubs a copy of resolutions the adoption of which would practically commit the General Federation to the cause of women's suffrage, a question which the president, Mrs. Decker, has personally pledged herself not to allow presented to the Convention.

Although Colorado (Mrs. Decker's State) is a suffrage State and her State constituency is altogether in favor of woman suffrage, it is a tribute of loyalty to Mrs. Decker and to the Federation that the Colorado women stood just as firm for the prevention of a suffrage discussion upon the floor as did the women of New York and other Eastern and Southern States. All felt that it would hurt Mrs. Decker and might disrupt the harmony of the Federation, and in spite of some misguided efforts on the part of too zealous suffragists, the matter was so well handled that it never had a chance on the Convention floor. Mrs. Decker was unanimously renominated and re-elected, and no woman ever continued in office who held more completely the organization in her hand. Two years of her rule had but whetted the appetite of her great constituency for more.

No woman could hail from Colorado and not have the political instinct, and Mrs. Decker is a true daughter of her State. Her political insight is keen and discriminating. She knows public questions; she knows the relation which her organization can and should sustain to those questions, and is watchful lest it should take an untenable position, led on perhaps by an excess of zeal for the public good which sometimes destroys more than it creates. It is Mrs. Decker's desire that unity and harmony shall prevail in the General Federation of Women's Clubs—the greatest organization of women's interests in the world.

THE IMMIGRATION DEPARTMENT ORGANIZED FOR WORK.

PROMINENT REPRESENTATIVES FROM ALL CLASSES AND SECTIONS ACCEPT MEMBERSHIP ON ITS COMMITTEES.



WHEN the National Conference on Immigration called by The National Civic Federation met in New York City last December, it was the first time in the history of the country that general attention was concentrated upon the problem of immigration. Since then the subject has been brought nearer to the people in innumerable discussions on lecture platforms, in the press and before Congress, so that to-day its growing importance to the welfare of the nation is being pressed home to the citizen. For in this development of various phases of the subject the nation is beginning to realize the meaning and true significance of the immigration problem.

Some idea as to the magnitude of this problem was presented at the National Conference on Immigration by the various speakers. It is reflected in the scope and extent of the subjects there discussed. So numerous were these subjects that it is possible here to indicate only a few of them. They include the character of immigration, assimilation of the immigrant into American national life, the necessity for further restriction, the administration of immigration laws, the distribution of aliens, the demand for immigrants, the effect of immigration upon our industrial, political and broad social life; the part played by the steamship companies, the causes of European immigration, European inspection and examination, proportion of immigrants which become criminal, insane and charitable dependents; effects of immigration upon the native birth-rate, naturalization, the selection of immigrants, Asiatic immigration, etc., etc. This enumeration but faintly indicates the far-reaching ramifications of the innumerable phases of the immigration problem, but at the same time it helps to emphasize the reasons which induced the five hundred delegates in attendance upon the National Conference on Immigration to recommend to The National Civic Federation the formation of a Department of Immigration.

It is in carrying out the formally expressed request of the National Conference, which represented all the States and numerous diversified organizations, that the Federation has established such a department. Its purpose is to undertake a thorough and painstaking investigation of the facts in regard to immigration to the United States. Those who have identified themselves with this very important work as members of the department comprise men prominent in the various walks of life in all States and sections of the country.

The meeting for the organization of the Department was held at the Park Avenue Hotel, New York City, on Friday morning, June 29, and was attended by some fifty members from all parts of the country. Mr. Ralph M. Easley, Chairman of the Executive Council of The National Civic Federation, called the meeting to order and expressed its objects, which were to pass upon the report of the Sub-Committee on Plan and Scope, and to select the officers and committees. Ex-Congressman John DeWitt Warner, of New York, presided and Rev. Dr. Joel S. Ives, of Hartford, Conn., acted as Secretary.

Dr. Leander T. Chamberlain, of New York, as Chairman of the Sub-Committee on Plan and Scope, presented the report of that body. A preliminary report had previously been communicated by mail to all the members of the Department, and some of the suggestions which had come from them were embodied in the Committee's report at the meeting. In presenting the report of this Committee, Dr. Chamberlain reviewed briefly the order of events preceding the meeting of June 29, stating that the Chairman of the Executive Council of The National Civic Federation, acting under instructions of the Federation, had called an informal meeting of the members of the Immigration Department living in the vicinity of New York City for May 4 at the Park Avenue Hotel. Thirty-two members were present, and a sub-committee was appointed to put into proper form certain suggestions concerning the different subjects to be considered by the Department. On May 24 the results of the Committee's work were communicated to all the members of the Department. It was also recommended that the Department meet in New York on some date between June 15 and July 1, and all members were requested to express their views with regard to the recommendations of the Committee. Not far from seventy letters were received in reply. The subjects for the various committees recommended by the sub-committee were cordially approved in these letters, and the date most favored for the general meeting of the department was found to be June 29. Accordingly on June 14 the Chairman of the Executive Council called a meeting for June 29 at 10:30 a. m., at the Park Avenue Hotel. On June 20 the sub-committee sent out its second circular letter reminding all members of the importance of the action to be taken at the meeting of June 29, and soliciting suggestions from those unable to attend, especially suggestions as to the committee on which any

FRANKLIN MacVEAGH, Chairman

member would prefer to serve. To this letter not far from fifty replies were received and the suggestions therein were carefully noted and tabulated.

Dr. Chamberlain next read the concrete results of the sub-committee's labors. The committees provided for in the report are as follows:

Committee on Basal Statistics of Immigration.—While no hard and fast limits can be prescribed for the province of this Committee, it is desired that its verified and rightly tabulated statements shall certainly include those statistical facts which are most important in themselves and most significant as basis of inference. If this Committee succeeds in doing its main work promptly, it may be able to supply to other Committees such information as will greatly aid them.

Committee on the Facts of Supply and Demand.—It is suggested that this Committee set itself primarily to showing the actual relation of immigration to the country's needs, not only as to quantity and quality of supply, but also as to localities to be supplied. Its province will include the facts concerning the sources of immigration, and the distribution of the immigrants. The investigation may well embrace both the past and the present.

Committee on Legislation and Its Enforcement.—As in the case of the Committee on immigration statistics, and on supply and demand, the Committee on Legislation and Its Enforcement will aim to ascertain and present indisputable facts. While expressions of opinion in the form of conclusions are not debarred, the great desideratum is verified, comparable facts. What further is needed in the way of legislation and administrative methods can best be inferred from such premises.

Committee on Naturalization.—The province of this committee includes the history of naturalization in the United States, the legislation which has been passed by the Congress and by the several States and the actual results which have ensued, together with an investigation of the evasions and abuses which have prevented results far more favorable.

Committee on Agencies for Advancing the Welfare of Immigrants.—The primary aim of this Committee also will be statistical—the enumeration and description of all such ameliorating agencies, with the outline of what they have accomplished, are now accomplishing, or are failing to accomplish. Here, too, the exact facts will furnish the best basis for an understanding of what remains to be done. It will be competent for the Committee to investigate agencies which profess to be for the welfare of immigrants, but in reality are shameful frauds.

The International Relations of Immigration.—This Committee will consider whatever action has been taken by other countries with reference to the emigration of their people, and will also consider whether there may not be such international agreements between this and other countries as shall promote the best interests of both the nations affected.

Committee on Oriental Immigration.—On no subject is there more need of verified statistics and authentic facts. This Committee will naturally have to deal with the history of Oriental immigration leading up to the Chinese Exclusion Act, and the effects of the same.

Committee on Finance.—Although the labor of the various Committees is gratuitous, there will still be considerable expense connected with the gathering and publication of the desired information. An adequate fund should be provided.

The officers elected by the Department are as follows:

Chairman, FRANKLIN MacVEAGH of Chicago.

Vice-Chairmen, Dr. LEANDER T. CHAMBERLAIN of New York, President of the Evangelical Alliance of the United States.

N. J. BACHELDER of Concord, N. H., Master of the National Grange.

DANIEL J. KEEFE of Detroit, President of the Longshoremen, Marine and Transportworkers' Association.

THOMAS F. PARKER of Greenville, S. C., President of the Southern Immigration Society.

THEODORE B. WILCOX of Portland, Oregon, former President of the Trans-Mississippi Congress.

L. BRADFORD PRINCE, of Santa Fe., N. M., President of the Historical Society of New Mexico.

Secretary, Dr. FRANK JULIAN WARNE of Philadelphia.

Treasurer, ISAAC N. SELIGMAN of New York.

It was also provided that there should be a State Vice-Chairman from every State, Territory, and the District of Columbia, to be selected by the Executive Committee. This Executive Committee consists of the following members:

Executive Committee.

JOHN H. HOLLIDAY, President Union Trust Company, Indianapolis.
JAMES B. ANGELL, LL.D., President University of Michigan, Ann Arbor.
CHARLES RIDGELY, Vice-President Ridgely National Bank, Springfield, Ill.
Dr. ALBERT SHAW, Editor *Review of Reviews*, New York.
SAMUEL GOMPERS, President American Federation of Labor, Washington, D. C.
JOHN M. STAHL, President Farmers' National Congress, Chicago.
SAMUEL MATHER, of Pickands, Mather and Company, Cleveland.
R. A. MITCHELL, Agent of the Dwight Manufacturing Company, Alabama City, Ala.
G. GUNBY JORDAN, President Eagle and Phenix Mills, Columbus, Ga.
Prof. HENRY C. ADAMS, University of Michigan, Ann Arbor, Mich.
JAMES R. MacCOLL, Lorraine Manufacturing Company of Pawtucket, R. I.
Rev. JOEL S. IVES, Secretary Missionary Society of Connecticut, Hartford.
JOHN DeWITT WARNER, Attorney, New York City.
TERRENCE V. POWDERLY, ex-Commissioner of Immigration, Washington, D. C.
HON. JESSE TAYLOR, Jr., Member National Council of the Junior Order United American Mechanics, Jamestown, O.
C. T. PLUNKETT, Secretary Berkshire Cotton Manufacturing Company, Adams, Mass.
Hon. JOHN W. NOBLE, ex-Secretary of the Interior, St. Louis.
Hon. CHARLES A. SCHIEREN, ex-Mayor of Brooklyn.
WARREN S. STONE, Grand Chief Brotherhood of Locomotive Engineers, Cleveland.
THEODORE MARBURG, Baltimore.
JAMES BRONSON REYNOLDS, Washington.
P. H. MORRISSEY, Grand Master Brotherhood Railroad Trainmen, Cleveland.
Prof. J. W. JENKS, Department of Political Economy Cornell University, Ithaca, N. Y.
F. D. COBURN, Secretary of Agriculture, Topeka, Kansas.
NATHAN BIJUR, Attorney, New York City.
JAMES O'CONNELL, President International Association of Machinists, Washington, D. C.
PRESCOTT F. HALL, Attorney, Boston.
JOHN HENRY SMITH, Utah.
SAMUEL SPENCER, President Southern Railway Company, New York.
Rev. THOMAS R. SLICER, Pastor All Souls' Church, New York City.
J. G. SCHONFARBER, Assistant Maryland Bureau of Statistics, Baltimore.
Rev. ADOLPH ROEDER, Orange, N. J.
S. A. HUGHES, General Immigration Agent St. Louis and San Francisco Railroad, St. Louis.
Z. P. SMITH, Editor *The American*, Raleigh, N. C.
JOHN WILLIS BAER, President Occidental College, Los Angeles, Cal.
Dr. A. J. BROWN, Secretary Presbyterian Board Foreign Missions, New York.
JOHN F. TOBIN, General President Boot and Shoe Workers' Union, Boston, Mass.
JOSEPH E. FLETCHER, President and General Manager Coronet Worsted Company, Mapleville, R. I.
H. W. FAIRBANKS, Secretary and Treasurer Sherman Cotton Mills, Dallas, Texas.
HUGH F. FOX, *New Jersey Review of Charities and Corrections*, Plainfield, N. J.
D. G. AMBLER, Jacksonville, Fla.
JAMES W. KINNEAR, Attorney, Pittsburg, Pa.
GEORGE L. SEHON, Superintendent Kentucky State Children's Home, Louisville, Ky.
J. W. SULLIVAN, Editor *Clothing Trades' Bulletin*, New York City.
L. BRADFORD PRINCE, ex-Governor of New Mexico, Santa Fé, N. M.
JOHN MITCHELL, President United Mine Workers of America, Indianapolis.
THEODORE B. WILCOX, President Portland Flouring Mills, Portland, Oregon.
JOSHUA STRANGE, President State Farmers' Congress of Indiana, Marion, Ind.
THEODORS AHRENS, Capitalist, Louisville, Ky.
Judge NORMAN J. KITRELL, Houston, Texas.

The membership of the various committees, as reported by the Committee on Nominations and accepted by the meeting, follows:

Committee on Basal Statistics.

Dr. WALTER F. WILLCOX, Department of Political Economy and Statistics, Cornell University, Ithaca, N. Y.
Hon. ROBERT WATCHORN, Commissioner of Immigration, Ellis Island, N. Y.
NATHAN BIJUR, Attorney, New York.
Dr. LEANDER T. CHAMBERLAIN, President of the Evangelical Alliance of the United States, New York.
FRED W. ATKINSON, Ph.D., President Polytechnic Institute, Brooklyn.
Dr. EDWARD DWIGHT EATON, ex-President Beloit College, St. Johnsbury, Vt.
Prof. HENRY W. FARNAM, Yale University, New Haven, Conn.
JAMES J. STORROW, Boston.
Prof. GEORGE GRAFTON WILSON, Brown University, Providence, R. I.
Dr. J. H. HOLLANDER, Department Political Economy, Johns Hopkins University, Baltimore.
ANTHONY HIGGINS, Attorney, Wilmington, Del.
Rev. JOEL S. IVES, Secretary Missionary Society of Connecticut, Hartford, Conn.
J. W. SULLIVAN, Editor *Clothing Trades' Bulletin*, New York City.
Hon. CHARLES A. SCHIEREN, New York.
Dr. ALBERT SHAW, Editor *Review of Reviews*, New York.
JAMES SPEYER, Banker, New York.
P. H. MORRISSEY, Grand Master Brotherhood Railroad Trainmen, Cleveland, Ohio.
Prof. EDWARD A. STEINER, Iowa College, Grinnell, Iowa.
HORACE WHITE, First Vice-President American Economic Association, New York.
CHARLES F. PIDGIN, Chief Bureau of Statistics of Labor, Boston.
CYRUS L. SULZBERGER, New York.
KENYON L. BUTTERFIELD, President Rhode Island College of Agriculture and Mechanic Arts, Kingston, R. I.
F. L. MAXWELL, Mound, La.
Dr. WATSON L. PHILLIPS, Clergyman, New Haven, Conn.

Committee on Supply and Demand.

Hon. CHARLES S. HAMLIN, Attorney, Boston.
Hon. EDWIN R. GERBER, Mayor, Reading, Pa.
ELIOT NORTON, Attorney, New York.
W. F. MASSEY, Editor *The Practical Farmer*, Philadelphia.
MAX MITCHELL, Superintendent Federation of Jewish Charities, Boston.

Dr. LEANDER T. CHAMBERLAIN, First Vice-Chairman

ALEXANDER E. CASE, Attorney, Marion, Kansas.
T. K. BRUNER, Secretary North Carolina Department of Agriculture, Raleigh, N. C.
THOMAS F. PARKER, President Southern Immigration Society, Greenville, S. C.
WILLIAM D. MAHON, President Amalgamated Association of Street Railway Employes of America, Detroit, Mich.
FERDINAND STRAUSS, President Leopold Morse Company, Boston.
THOMAS W. SLOCUM, New York.
S. A. HUGHES, General Immigration Agent of the St. Louis and San Francisco Railroad Company, St. Louis.
B. A. LARGER, General Secretary United Garment Workers of America, New York City.
SAMUEL SPENCER, President Southern Railway, New York.
J. G. SCHONFARBER, Bureau of Statistics and Information, Baltimore.
WARREN S. STONE, Grand Chief Brotherhood of Locomotive Engineers, Cleveland.
JOHN M. STAHL, President Farmers' National Congress, Chicago.
JOSHUA STRANGE, President State Farmers' Congress of Indiana, Marion, Ind.
N. J. BACHELDER, Master of the National Grange, Concord, N. H.
J. W. SULLIVAN, Editor *Clothing Trades' Bulletin*, New York City.
F. D. COBURN, Topeka, Kansas.
WILL B. POWELL, Shadeland, Pa.
Hon. WILLY TINDOLPH, Minneapolis.
JAMES J. HILL, President Great Northern Railway, St. Paul, Minn.
JOHN MITCHELL, President United Mine Workers of America, Indianapolis.
Hon. E. J. WATSON, Commissioner Department of Agriculture and Immigration of South Carolina, New York.
T. V. POWDERLY, Washington.

Legislation and Its Enforcement.

Prof. J. W. JENKS, Department of Political Economy, Cornell University, Ithaca, N. Y.
Prof. H. A. GARFIELD, Princeton University, Princeton, N. J.
PRESCOTT F. HALL, Attorney, Boston.
Hon. JESSE TAYLOR, National Council Junior Order United American Mechanics, Washington.
Rev. ADOLPH ROEDER, New Jersey State Civic Federation, Orange, N. J.

DANIEL J. KEEFE, Third Vice-Chairman

THEODORE MARBURG, Baltimore.
Hon. JOHN DEWITT WARNER, Attorney, New York.
SAMUEL GOMPERS, President American Federation of Labor, Washington.
Prof. HENRY C. EMERY, Department of Political Economy, Yale University, New Haven, Conn.
H. W. FAIRBANKS, Secretary and Treasurer Sherman Cotton Mills, Dallas, Texas.
JOSEPH LEE, Boston.
SAMUEL D. JONES, President Chamber of Commerce, Atlanta, Ga.
WILLIAM HUBER, President United Brotherhood of Carpenters and Joiners of America, Indianapolis, Ind.
G. GUNBY JORDAN, President Eagle and Phenix Mills, Columbus, Ga.

OFFICERS CHOSEN FOR THE INDUSTRIAL ECONOMICS' DEPARTMENT.

NICHOLAS MURRAY BUTLER AT ITS HEAD—LEADERS OF THOUGHT AND ACTION ARE MEMBERS OF THE EXECUTIVE COMMITTEE.

PRESIDENT BUTLER of Columbia University has been chosen by the Executive Council of The National Civic Federation to head the Department of Industrial Economics. Mr. D. L. Cease, Editor of the *Railroad Trainmen's Journal*, is its Secretary. In addition to these officers there is a general executive committee consisting of leading representatives of the large universities, of the bar, the church, capital, labor, the general public and well-known editors of the daily press and of the principal monthly periodicals and reviews. This executive committee consists of the following:

LAWRENCE F. ABBOTT, *The Outlook*, New York City.
C. L. BAINE, Editor *Shoe Workers' Journal*, Boston.
SAMUEL BOWLES, Springfield *Republican*, Springfield, Mass.
LOUIS D. BRANDEIS, Boston.
Rev. J. M. BUCKLEY, Editor *The Christian Advocate*, New York City.
J. A. CABLE, Editor Coopers' *International Journal*, Kansas City, Kans.
HOMAR D. CALL, Secretary and Treasurer Amalgamated Meat Cutters, Syracuse, N. Y.
E. E. CLARK, Editor *Railroad Conductor*, Cedar Rapids, Iowa.
Prof. JOHN R. COMMONS, Department of Political Economy, Wisconsin University, Madison, Wis.
CHARLES A. CONANT, Treasurer Morton Trust Co., New York City.
JOHN BANCROFT DEVINS, Editor New York *Observer*, New York City.
OTTO M. EIDLITZ, Chairman Board of Governors Building Trades Employers' Association, New York City.
Dr. CHARLES W. ELIOT, President Harvard University, Cambridge, Mass.
AMOS K. FISKE, *New York Journal of Commerce*, New York City.
JOHN C. FREUND, Editor *The Music Trades*, New York City.
JOHN P. FREY, Editor *Iron Molders' Journal*, Cincinnati.
RICHARD WATSON GILDER, Editor *The Century*, New York City.
CHARLES S. GLEED, Attorney, Topeka, Kans.
SAMUEL GOMPERS, American *Federationist*, Washington, D. C.
JOHN E. GREEN, Editor *Bradstreet's Journal*, New York City.
GEORGE HARVEY, Editor *North American Review*, New York City.
CLARK HOWELL, Editor Atlanta *Constitution*, Atlanta, Ga.
Most Rev. JOHN IRELAND, St. Paul, Minn.
Prof. J. W. JENKS, Professor Political Economy, Cornell University, Ithaca, N. Y.
FREDERICK N. JUDSON, St. Louis.
D. J. KEEFE, President International Longshoremen's Association, Detroit.
CHARLES W. KNAPP, St. Louis *Republic*, St. Louis.
JOHN B. LENNON, Editor *The Tailor*, Bloomington, Ill.
GEORGE C. LORIMER, Editor *Saturday Evening Post*, Philadelphia.
ST. CLAIR McKELWAY, Editor *Brooklyn Daily Eagle*.
V. EVERIT MACY, Capitalist, New York City.
WILLIAM D. MAHON, President Amalgamated Association of Street Railway Employes of America, Detroit, Mich.
BRADFORD MERRILL, Editorial Staff New York *World*.
JOHN MITCHELL, President United Mine Workers of America, Indianapolis.
C. R. MILLER, Editor New York *Times*.
EUGENE A. PHILBIN, Attorney, New York City.
ROLAND PHILLIPS, New York City.
Rt. Rev. HENRY C. POTTER, New York City.
SERENO S. PRATT, Editor *Wall Street Journal*, New York City.
EDWARD ROSEWATER, Editor *The Bee*, Omaha, Neb.
S. M. SEXTON, Editor *United Mine Workers' Journal*, Indianapolis.
Dr. ALBERT SHAW, Editor *Review of Reviews*, New York City.
JAMES SPEYER, New York City.
Prof. F. W. TAUSSIG, Department Political Economy, Harvard University, Cambridge, Mass.
BENJAMIN IDE WHEELER, President University of California.
TALCOTT WILLIAMS, Philadelphia *Press*.
CARROLL D. WRIGHT, President Clark College, Worcester, Mass.
O. R. YOUNG, Editor *International Steam Engineer*, New York City.

The program and scope of the work for the Department is to be outlined by a sub-committee consisting of Nicholas Murray Butler as Chairman; D. L. Cease as Secretary; Dr. Albert Shaw, James Speyer, Eugene A. Philbin, Dr. J. M. Buckley, Talcott Williams, Prof. Henry W. Farnam, S. M. Sexton, S. S. Pratt, V. Everit Macy, John Greene, and J. W. Sullivan.

The breadth of view and impartiality with which the Department is to approach its investigation of the broad field before it is reflected in the notable address delivered by President Butler, the head of the new Department, at the recent commencement exercises of Columbia University. President Butler said:

"A spirit of unrest is abroad, not only in our own land, but in other lands as well. So far as this unrest has an intellectual foundation, it appears to be the conviction that the eighteenth century formulas and axioms upon which our social and political fabric is so largely built do not work as they were expected to work. So far as this unrest has an economic foundation, it appears to be dissatisfaction with actual and possible rewards for industry. So far as it has a political foundation, it appears to be a perception of easily demonstrated inequalities of power and influence and of an equally easily demonstrated inequality of benefits from Governmental policies.

NICHOLAS MURRAY BUTLER, Chairman

"That this unrest has been and is being used by ambitious men for their own selfish ends and for gain by journalistic builders of emotional bonfires is certainly true; but it will not do to dismiss this spirit of unrest with a sneer on that account.

"It has passed far beyond the bounds of the dreamers and visionaries, the violent-minded and the naturally destructive. Men accustomed to honest reflections and themselves possessed of property, always the sheet anchor of conservatism, have come under its influence. Policies that not long ago were dismissed as too extreme for serious discussion are now soberly examined with reference to their immediate practicability. What has brought about this change?

D. L. CEASE, Secretary

"An answer is not far to seek. An increasing number of men have come to distrust the capacity of society as now organized to protect itself against the freebooters who exist in it. An increasing number of men believe and assert that law and justice are powerless before greed and cunning, and they are the more ready to listen to advocacy of any measure or policy, however novel or revolutionary, that promises relief. Their imaginations, too, cannot help being affected by the appalling sight, so often called to our attention of late, of that moral morgue wherein are exposed the shrivelled souls and ruined reputations of those who have lost in the never-ending struggle between selfishness and service that goes on in the human breast.

"The first duty of the trained and educated mind when it faces conditions such as these and must take a definite and responsible attitude toward them, is not to lose its balance, its poise, its self-control. It is worth while to look back at the majestic figure of Lincoln, crowned now with immortality's laurel, tranquil amid far angrier seas than ours.

"Not much is to be gained by passionate denunciation of principles and men, if there is no clear perception of where the difficulty lies and of what it is that is to be remedied. A first step, then, is an analysis of the conditions complained of and their genesis. I lay particular emphasis upon their genesis, for most rebuilders of society are singularly neglectful of history. Their lip service of evolution does not often carry them to the point of considering our present institutions—social, economic, political—as evolved, and, therefore, as having the weight of years of human experience behind them.

"Looking back over a thousand years or more, it is plain that civilized man has traveled far. An examination of his progress will show, I think, that it rests mainly upon three principles, gradually evolved and erected into institutions: Civil and industrial liberty, private property, and the inviolability of contract. Upon these as a cornerstone rests what we know to-day as civilized human society. That our society has its evils, terrible and dangerous, cannot be denied. That greed for gain holds an appalling number of men in its grasp and that the moral tone of large business undertakings is painfully low are only too evident. But it is quite too rash a conclusion to infer that society must be destroyed and its cornerstone displaced before those evils can be remedied. It may be true—and I think it is—that the difficulty is not so much with the tried and tested principles upon which society rests as with the honesty and intelligence with which those principles are worked. The abounding prosperity of our country with its untold opportunities for material success, the loosening of the hold of some of the old religious and ethical sanctions of conduct, and the weakening of parental control and discipline, have united to place upon American character a burden which in too many instances it has not been able to bear."

The same general topic was touched upon in the address delivered by President Butler to the students of Columbia University at the opening of the last college year. He said:

"Just now the American people are receiving some painful lessons in practical ethics. They are having brought home to them with severe emphasis the distinction between character and reputation. A man's true character, it abundantly appears, may be quite in conflict with his reputation, which is the public estimate of him. Of late we have been watching reputations melt away like snow before the sun; and the sun in this case is mere publicity. Men who for years have been trusted implicitly by their fellows and so placed in positions of honor and grave responsibility are seen to be mere reckless speculators with the money of others and petty pilferers of the savings of the poor and needy. With all this shameful story spread before us, it takes some courage to follow Emerson's advice not to bark against the bad, but rather to chant the beauty of the good.

"Put bluntly, the situation which confronts Americans to-day is due to lack of moral principle. New statutes may be needed, but statutes will not put moral principle where it does not exist. The greed for gain and the greed for power have blinded men to the time-old distinction between right and wrong. Both among business men and at the bar are to be found advisors, counted shrewd and successful, who have substituted the penal code for the moral law as the standard of conduct. Right and wrong have given way to the subtler distinction between legal, not-illegal and illegal; or better, perhaps, between honest, law-honest and dishonest. This new triumph of mind over morals is bad enough in itself; but when in addition its exponents secure material gain and professional prosperity, it becomes a menace to our integrity as a people."

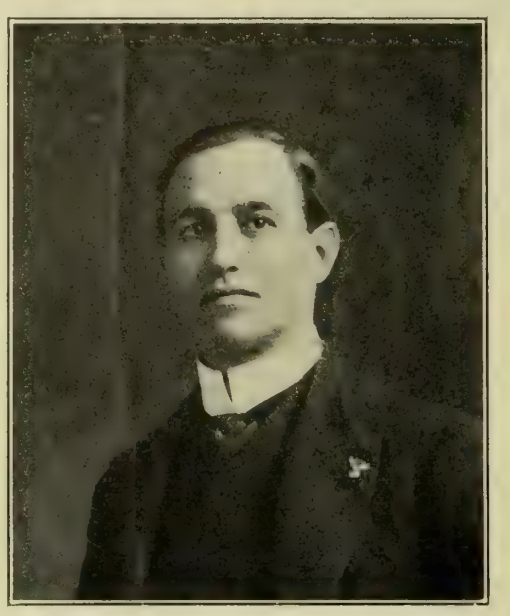
It will be the effort of the Department by means of national conferences and through careful and impartial investigations to throw light on some of the important present-day problems—social, political, and industrial—by giving to the public a sane and unbiased statement of actual conditions. It is believed that such a plan, by presenting the opinions and experiences of authorities and experts on all sides of the problems to be considered, will go far to enlighten public opinion and to assist in arriving at a decision based upon the merits of each case rather than upon *ex parte* argument or presentation. A definite program on plan and scope will be announced later.

THE TRADE AGREEMENT IN FIVE GREAT INDUSTRIES.

ITS PRESENT STATUS IN THE COAL FIELDS, ON THE GREAT LAKES, IN THE IRON AND STEEL INDUSTRY, ON STREET RAILWAYS, AND IN THE FALL RIVER COTTON MILLS.

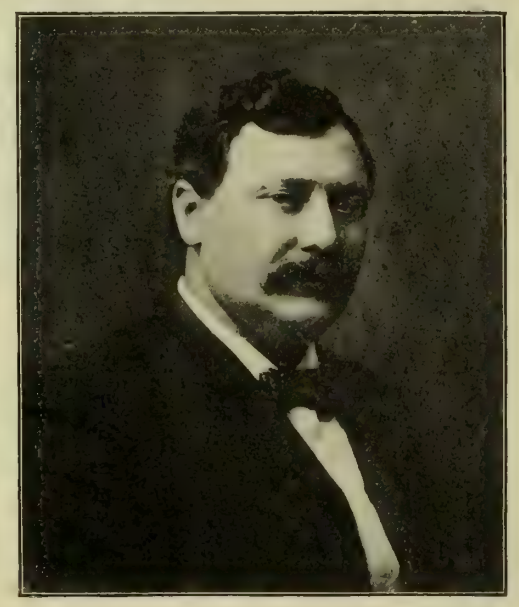
SOME indication of the value of the trade agreement is shown by recent developments in five important industries of the country—in the coal fields, in the iron and steel industry, on street railways, in the various occupations along the Great Lakes, and among employers and employes of the Fall River cotton mills. These recent events would seem to strengthen the belief of students of industrial conditions that the trade agreement is the only practical present-day method for averting industrial wars. It is true, of course, that the trade agreement machinery is by no means perfect, but it is the only rational method which human ingenuity has devised for regulating the relations between employers and employes. While the progress of events may at some future day bring forth something better, the present hope of the nation for working out some kind of harmonious relations between labor and capital must depend upon this trade agreement machinery.

One of the most important events of recent years tending to emphasize the great value of this conference method of settling differences between capital and labor is the outcome of the negotiations between the anthracite mine workers and the hard coal operators following the termination of the award of the Anthracite Coal Strike Commission. This award was made in 1903 after a five months' investigation of the general labor conditions in the three fields and following the memorable strike of 1902. It was to continue for a period of three years and this expired on March 31 last. Several months previous to its expiration the mine workers and operators held several conferences with the object of arranging some mutually satisfactory basis for a continuance of their working relations. No agreement was reached, however, before the expiration of the Commission's award, and, in consequence, the officials of the United Mine Workers of America ordered a temporary suspension of work in the hard coal fields.. This suspension was brought to a close by an agreement entered into in New York City on May 6 between the representatives of employers and employes in the hard coal industry.



This agreement provides for a continuance until March 31, 1909, of the award of the Anthracite Coal Strike Commission of 1902 and of any action which has since been taken pursuant thereto either by the Board of Conciliation, which the award created, or otherwise. The Board of Conciliation is continued with three operators and three mine workers as members, and with provision for an umpire in case of a disagreement among the members. Work was resumed in the three hard coal fields on Thursday, May 10, after a suspension continuing through forty days.

As to the trade agreement in the soft coal fields, it will be recalled that for several months preceding March 31 two meetings were held of the Interstate Joint Conference of the central competitive territory, including western Pennsylvania, Ohio, Indiana, and Illinois, and that these finally adjourned the latter part of March without employers and employes in this industry being able to enter into a working agreement for the scale year following April 1. Prior to the adjournment of the last session of the convention leading operators of the western Pennsylvania district consented to grant the compromise wage increase demand of the union officials and, in consequence, for the first time since 1898, a separate agreement without the sanction of the Interstate Joint Conference was entered into in that district. Since then officials of the United Mine Workers of America and representatives of the various operators' associations in Ohio, Indiana, and Illinois have been carrying on numerous conferences in each State for the purpose of renewing the district agreement. In all of these States the mine workers have made concessions as to the conditions of employment, and the operators have restored the wage scale of 1903, which latter carries with it an increase of about five and one-half per cent in wages over those paid the past two years. This, in general, is the agreement signed by western Pennsylvania operators, and such provisions have now been adopted in the agreements signed in the other coal producing States excepting parts of Ohio and the central Pennsylvania district where the suspension at this writing continues. Thus the officials of the United Mine Workers of America have practically brought to a termination the suspension of coal mining inaugurated in twelve of the coal producing States of the country on April 1, including the four States of the central competitive soft coal fields (western Pennsylvania, Ohio, Indiana, and Illinois), and the States in the Southwest territory, which latter comprise Missouri, Kansas, Arkansas, Indian Territory, and Texas. In all the States approximately 200,000 mine workers have been idle the greater part of the time since April 1.



Advocates of the trade agreement method of agreeing upon wages and conditions of employment were very much discouraged when it was finally announced last March that the Interstate Joint Conference of the middle western coal States had failed in its operation for the first time within the past eight years. So determined was the opposition of some of the operators to a renewal of an agreement which carried with it a wage increase that it all along appeared extremely doubtful if a satisfactory restoration of the principle could be effected. Throughout all the subsequent negotiations and uncertainty, however, the diplomacy of President Mitchell of the United Mine Workers has been a potent factor in keeping intact at least the district agreement. Not only has he been confronted with the determined opposition of certain groups of the employing class, but he has had to face internal dissension within his own ranks. That he has succeeded in carrying his organization through what undoubtedly has been a most critical period in its existence, the trade agreement principle, without losing irretrievably is another tribute to his proved able leadership.

This successful outcome of negotiations between the officials of the miners' union and the operators of the different coal producing States in renewing the district agreement may be regarded as a forecast of an early restoration of the Interstate Joint Conference in both the central competitive and the Southwest territory. So valuable has been this joint conference machinery to the uninterrupted prosperity of the coal interests of the country for the past eight years that it is to be hoped it will again become a potent factor in the future relations between employers and employes in this great industry.

President W. D. Mahon, of the Amalgamated Association of Street and Electric Railways of America, is another labor leader who has recently demonstrated the efficiency of the trade agreement in settling issues between employers and employes. During the past several months he has signed for his organization articles of agreement with the Old Colony Street Railway Company, the Boston and Northern Street Railway Company, and the Scranton Railway Company. Each of these agreements provides in substance that the employing company, through its proper officers, shall treat, when occasion therefor may arise, with those of their employes in their collective capacity who may for the time being be members of said association through the properly accredited officers and the committees of said several divisions, and the officers of the Amalgamated Association. The contracts also cover such questions as wages, hours of employment, suspensions, discharges, extra pay for overtime, free transportation for employes, arbitration of differences between officers of the company and its employes, and like general con-

P. J. McARDLE

JAMES TANSEY

ditions of employment. An interesting clause in the contract of the Old Colony Street Railway Company provides as follows:

> That the company will do nothing to prevent or discharge any employe from becoming or continuing to be a member of said association, and shall in no way discriminate against a member thereof because of such membership; and that said association shall not discriminate against any person in the employ of said company because of his refusal to join said association or to continue a member thereof; but if any member of said association is expelled or suspended from his membership for a violation of any of the provisions of this agreement, the company, being satisfied that said expulsion or suspension was for such reason and was justifiable, shall dismiss said employe from its service.

The agreement with the Old Colony Railway Company is for a period of four years from and after the first day of October, 1906, with provision as to a consideration and revision of the wage schedule at stated intervals. The agreement with the Boston and Northern Street Railway, which began on June 1, 1906, is also for a period of four years.

A significant feature of the agreement between the Amalgamated Association and the Scranton Railway Company is that it has been made to cover a period of ten years, its date of expiration being April, 1916, and "during that time there shall be no strike or lockout, provided, however, that on the first day of April, 1909, and on the first day of April, 1912, the question of wages and any other grievances which may be in contention shall be taken up for adjustment." The Amalgamated Association has also recently signed agreements with street railway corporations in East St. Louis, Detroit, Oakland (California), and on both elevated and surface lines of Chicago.

Following a settlement of the strike inaugurated on the Great Lakes May 1 by the International Longshoremen, Marine and Transportworkers' Association for the purpose of securing recognition for the Mates' Union, President Daniel J. Keefe of the Longshoremen's organization has succeeded in entering into agreements with the Dock Managers' Association covering wages and conditions of employment for the ensuing year. The agreement is practically a renewal of last year's wages and conditions. A significant feature of the Longshoremen's agreement with their employers is that it is not subject to ratification by a referendum of its members, it being entered into by representatives of the union who possess full power without restriction. Usually the subjects of the agreement are referred to committees of the union, representatives of the latter themselves presenting to these committees the employers' side of the case. The acceptance of the agreement is by unanimous vote based upon the previous ascertained will of a majority, the rule of the majority thus being made binding upon all members of the Association. Any matter not covered by the agreement as well as disputes as to the construction of the contract are subject to arbitration.

It is, perhaps, true to say that the Longshoremen's Association covers more territory and as many, if not more, different occupations than any other labor organization in the world. While its agreement with employers is uniform, it comprises not less than thirty-nine divisions of trade. This association was organized in 1882, and since 1895, according to its officials, the wage scale of its members has been advanced an average of sixty per cent. The organization includes tugboat captains, engineers, firemen, marine firemen, oilers, water tenders, divers, longshoremen, lumber inspectors, elevator employes, tally men, grain inspectors and others, the wages of individuals of these different classes ranging from about $2 to as high as $15 a day. This is one of the labor organizations whose trade agreement machinery has worked successfully through a period of wage reduction, the decrease having been accepted in the 1903 joint conference.

One of the many interesting phases of the operation of the trade agreement within this organization is that every member of the union is furnished with and carries in his pocket a copy of the contract entered into by his representatives.

A renewal of the agreement between the Amalgamated Association of Iron, Steel and Tin Plate Workers and the Western Bar Iron Association has been effected by President P. J. McArdle and representatives of the employers in a wage conference held at Detroit in June. The scale for the past year was practically renewed, there being but few slight changes, the employers refusing the twenty-five cent increase in wages to puddlers which was voted by the Cincinnati convention of the Amalgamated Association. The slight changes made were in regard to working conditions and customs rather than changes in the wages. The new scale became effective July 1, and attached to it is the continuous working clause. The firms composing the Western Bar Iron Association include such companies as the Shenango Iron and Steel Company, Union Rolling Mill Company, Empire Rolling Mill Company, American Car and Foundry Company, Lake Erie Iron Company, Helmbader Forge and Rolling Mill Companies, Ohio Falls Iron Company, American Rolling Mill Corporation, Vincennes Iron and Steel Company, Highland Iron and Steel Company, Fort Wayne Iron and Steel Company, Youngstown Sheet and Tube Company, and the Interstate Iron and Steel Company.

The Republic Iron and Steel Company, all of whose mills are union plants, was not represented at the Detroit conference and accordingly is not a party to the agreement entered into there, but at a conference with the officials of this company held at Pittsburg later by national representatives of the Amalgamated Association the provisions agreed to were practically those of the Detroit agreement.

President McArdle has also been successful in entering into an agreement for another year with the American Sheet and Tin Plate Company, one of the subsidiary companies of the United States Steel Corporation, covering wages and conditions of employment for sheet and tin plate mills. The wages the past year are continued. At this writing conferences are being carried on between officials of the Amalgamated Association and representatives of the independent sheet and tin plate mills.

Another great industry of the country which illustrates the operation of the trade agreement principle is that of cotton manufacturing in New England. Through negotiations between representatives of the Fall River Manufacturers' Association and President Tansey and other officials of the Textile Council, the latter representing the employes, there has been a restoration of the 1904 wage scale. It will be recalled that in July of that year a reduction in wages of twelve and one-half per cent was made, which was followed by a disastrous six months' strike. Before restoring this wage reduction last month to become effective on July 2, the Manufacturers' Association offered to guarantee to the employes a weekly dividend of five per cent, but this proposition was rejected by the five unions. It provided that until more suitable conditions exist by the cutting of the new crop of cotton, the Manufacturers' Association, beginning June 18 and continuing until October 1, 1906, would guarantee a weekly dividend of not less than five per cent on the present wage, with a further guarantee that if the margin in any one week exceeded this five per cent increase, they would pay an additional dividend upon the same terms as in the agreement of October 30, 1905.

An interesting phase of the Fall River situation is that the sliding scale scheme for wage increases has been abolished, temporarily at least. This was introduced in this industry in October, 1905, with the design of preventing a strike, which it was successful in doing, and it was hoped at the time that the principle would work there as successfully as it has operated in the anthracite industry following the establishment of the sliding scale scheme by the Anthracite Coal Strike Commission in 1903. Whether the sliding scale has been abolished for all time in the textile industry, or merely suspended, will depend on future developments.

SOCIALISM IN AMERICA—WHAT IT MEANS.

AMONG the contributions to the *New York World's* symposium on "Socialism in America—What it Means," published in the issue of that newspaper of May 8, is the following by the Editor of *The Review*, which contains a correction of the widely circulated statements attributed to the late Senator Hanna as to the dangers of Socialism:

To the Editor of *The World*:

I have received your circular letter asking for my opinion as to the meaning of Socialism in America and its relation to American institutions. I observe that it begins with the statement that six years ago Senator Hanna, then Chairman of the Republican National Committee, expressed the conviction that Socialism would be the chief political issue of 1912.

I am aware that this statement of Senator Hanna's, originally published in the Socialist papers, has been going the rounds of the press for a considerable time, notwithstanding the fact that it was often emphatically contradicted by him, and in spite of the fact that his opinion was exactly the reverse. In an interview in the Chicago *Times-Herald*, Dec. 2, 1900, Mr. Hanna, in reply to a question from a man in New York regarding the dangers of Socialism, answered:

> I am not a bit afraid of Socialism, and will tell you why. There are two things that will prevent it. One is the American school system; the other is the Roman Catholic Church. That great Church is just as much against Socialism as the Protestant churches, as I happen to know, and in the last campaign appeals to class hatred were frowned upon by the highest dignitaries and most influential men of the Catholic organization. As long as this restraining force continues to operate you need have no fear of Socialism dominating America.

In addition to the anti-Socialist forces of the Church and the schools Senator Hanna also recognized the transcendent importance of the opposition of organized labor. The Socialists themselves recognize this and are exerting every effort to "capture" the trade unions or to "smash" them.

Mr. Jack London, President of the league organized for the purpose of teaching Socialism to the young men in the colleges, forcibly states this policy when he says:

> The Socialists turn their energies on the trade-union movement. To win the trade unions is well-nigh to win the victory. Instead of antagonizing the unions, the Socialists proceed to conciliate the unions. "Let every good Socialist join the union of his trade! Bore from within and capture the trade-union movement." To-day the great labor unions are honeycombed with Socialists. At work and at play, at business meeting and at council, their insidious propaganda goes on. Night and day, tireless and unrelenting as a mortgage, they labor at their self-imposed task of undermining society.

This "boring-from-within" policy has been adopted by the Debs Socialists. The other branch of Socialists, known as the De Leonites, boldly undertake to "smash the unions" from without by open attacks, in which effort, strangely enough, they are warmly seconded by certain employers' organizations.

But what is more important than the purpose of the Socialists toward the unions is the attitude of the unions toward the Socialists. Out of 125 national organizations affiliated with the American Federation of Labor, representing 2,000,000 wage-earners, it is safe to say that not over five are controlled by Socialists, and these are crafts of comparatively small membership. The great railway brotherhoods of engineers, firemen, trainmen, conductors, etc., are every one strongly anti-Socialist.

The "boring-from-within" faction made its biggest fight to capture the American Federation of Labor in Boston in 1903. On this occasion, at the close of a masterful speech, Samuel Gompers, President of the Federation, dealt Socialism this stinging blow:

> I want to tell you Socialists that I have studied your philosophy; read your works upon economics, and not the meanest of them; studied your standard works, both in English and German—have not only read, but studied them. I have heard your orators and watched the work of your movement the world over. I have kept close watch upon your doctrines for thirty years; have been closely associated with many of you, and know how you think and what you propose. I know too what you have up your sleeve, and I want to say that I am entirely at variance with your philosophy. I declare to you I am not only at variance with your doctrines, but with your philosophy. Economically you are unsound; socially you are wrong; industrially you are an impossibility.

A vote was then taken, resulting in 2,147 for Socialism and 11,282 against. In 1904, at the annual meeting in San Francisco, the Socialists' resolution was so overwhelmingly voted down that a poll was not demanded. In 1905, at Pittsburg, the "borers-from-within" did not even propose a vote.

The De Leonite Socialists have tried all kinds of plans to "smash-the-union" from without, the latest one being to organize an independent labor body to oppose the American Federation of Labor. Neither the De Leonite policy of "smashing-from-without" nor the Debsite policy of "boring-from-within" has had any appreciable influence on the American Federation of Labor.

It is easy to take election returns and make great claims of Socialistic strength. The Socialists well understand that Mr. Debs's vote of 400,000 was a personal, not a Socialist victory. For example, the single-taxers throughout the country, who have no more use for Socialism than they have for smallpox, voted for him. That this is well recognized by Socialists any reader of their papers can readily discover. They lament that the members of their party are less than 5 per cent of the voters, or less than 250,000. One paper has been calling the attention of the party to "the States where there was the greatest increase of the Debs vote," and urging the Socialists to do their utmost "to capture those who were just voting their first vote, in order to get them really into the party."

But what is more significant than Debs's 400,000 votes as bearing on the growth of Socialism is the result of the elections last fall and this spring. In six States which elected one or more State officers last fall the vote fell far below Debs's vote in 1904. Nebraska fell from 7,412 to 3,421; Ohio from 36,260 to 17,795; Pennsylvania from 21,863 to 10,390, etc.; while in Massachusetts, where two or three years ago there were a number of Socialist mayors, to-day there are none, and the Socialist vote is speedily growing less.

The cry of Socialism is "to help the workingman." From a poll made recently by one of the leading labor journals of the men who are doing the talking and writing for Socialism it was found that nine-tenths of them were newspaper writers and men in the professions. The great mass of workingmen themselves recognize that under the regime of Socialism their "last state would be far worse than their first."

EXECUTIVE COMMITTEE

On the Part of the Public.

Grover Cleveland, ex-President of the United States, Princeton, N. J.
Andrew Carnegie, capitalist, New York City.
Cornelius N. Bliss, ex-Secretary of the Interior, New York City.
Oscar S. Straus, member of the Court of Arbitration at The Hague, New York City.
Charles W. Eliot, President Harvard University, Cambridge, Mass.
Nicholas Murray Butler, President Columbia University, New York.
Seth Low, publicist, New York City.
Archbishop John Ireland, of the Roman Catholic Church, St. Paul, Minn.
Bishop Henry C. Potter, of the Protestant Episcopal Church, New York City.
Charles J. Bonaparte, Secretary of the Navy, Washington, D. C.
David R. Francis, ex-Secretary of the Interior, St. Louis, Mo.
Isaac N. Seligman, of J. & W. Seligman & Co., New York City.
James Speyer, of Speyer & Co., New York City.
V. Everit Macy, capitalist, New York City.
Ralph M. Easley, Chairman Executive Council, New York City.

On the Part of Employers.

Henry Phipps, Director United States Steel Corporation, New York City.
August Belmont, President Interborough Rapid Transit Company, New York City.
Clarence H. Mackay, President Postal Telegraph Cable Company, New York City.
Lucius Tuttle, President Boston & Maine Railroad, Boston.
W. A. Clark, President United Verde Copper Company, Butte, Mont.
Frederick D. Underwood, President Erie Railroad Co., New York City.
Frederick P. Fish, President American Telephone and Telegraph Company, Boston.
Francis L. Robbins, President Pittsburgh Coal Company, Pittsburgh.
H. H. Vreeland, President New York City Railway Company, New York City.
Samuel Mather, of Pickands, Mather & Co., Cleveland.
Charles A. Moore, of Manning, Maxwell & Moore, New York City.
Franklin MacVeagh, of Franklin MacVeagh & Co., Chicago.
Charles H. Taylor, Jr., ex-President American Newspaper Publishers' Association, Boston.
Dan R. Hanna, of M. A. Hanna & Co., Cleveland.
Marcus M. Marks, President National Association of Clothing Manufacturers, New York City.
Otto M. Eidlitz, Chairman Board of Governors, Building Trades Employers' Association, New York City.

On the Part of Wage Earners.

Samuel Gompers, President American Federation of Labor, Washington.
John Mitchell, President United Mine Workers of America, Indianapolis.
E. E. Clark, Grand Chief Conductor, Order of Railway Conductors, Cedar Rapids, Iowa.
James Duncan, General Secretary Granite Cutters' International Association of America, Quincy, Mass.
Daniel J. Keefe, President International Longshoremen, Marine and Transport Workers' Association, Detroit, Mich.
Warren S. Stone, Grand Chief International Brotherhood of Locomotive Engineers, Cleveland.
P. H. Morrissey, Grand Master Brotherhood Railroad Trainmen, Cleveland.
William D. Mahon, President Amalgamated Association of Street Railway Employes of America, Detroit, Mich.
William J. Bowen, President Bricklayers' and Masons' International Union, Indianapolis, Ind.
J. J. Hannahan, Grand Master Brotherhood Locomotive Firemen, Peoria, Ill.
James O'Connell, President International Association of Machinists, Washington, D. C.
John F. Tobin, General President Boot and Shoe Workers' Union, Boston.
Joseph F. Valentine, President Iron Moulders' Union of North America, Cincinnati
James M. Lynch, President International Typographical Union, Indianapolis.
Denis A. Hayes, President Glass Bottle Blowers' Association of the United States and Canada, Philadelphia.
William Huber, President United Brotherhood of Carpenters and Joiners of America, Indianapolis.

The Public Ownership Commission.

The spirit in which the investigation by the Commission on Public Ownership and Operation has been conceived and brought into existence by The National Civic Federation; the personnel of the Commission; the method of its selection; and the value to the public of the work the Commission has undertaken, were emphasized in the addresses at the banquet to the Commission's Committee on Investigation given by the New York City Federation on May 21. The Commission, as is well known, has taken up the consideration of public ownership and operation of public utilities in municipalities so far as it applies specifically to passenger transportation (whether by elevated, surface, or underground systems), and to the supply of water, gas and electricity. For this purpose it has invited men, competent as scientific experts of practical experience, and accountants to study the subject in all its phases, both in this country and in Europe.

"These men," said Hon. Oscar S. Straus at the dinner to the Investigating Committee, "are highly qualified by capacity and experience to make the investigation. Some of these men have large interests in and represent private ownership, and some of them are pronounced advocates of public ownership and public operation. All views of this question are fairly represented, so that the investigation will be from all sides, and in no case one-sided." As expressing the views of organized labor, Mr. Philip Kelly, of the Theatrical Protective Union, in his address, said: "I have the utmost confidence in the men who have been appointed on this Commission; they are capable, brilliant, fearless, and honest. I know the labor men on the Commission; they are good, straightforward men. The labor men of the country will know that the report our brothers on the Commission bring back will be worth our study and confidence. I believe that the attitude of organized labor toward municipal ownership will largely be determined by the report of the Investigating Committee."

The method of selecting the Commission was endorsed by many of the speakers, this thought being expressed as follows by Dr. Talcott Williams, of the Philadelphia *Press*: "I think this Committee has been selected with admirable judgment. In France a committee selected for such an investigation would necessarily have been drawn from the personnel of the existing party in power. A report from such a Commission would, in all probability, have been biased and colored to suit the wishes of the party in power. In Germany a royal commission would have made a report that would have been pleasing to the head of the nation. I submit that this Commission, in its method of appointment and investigation, has been better constituted than it would have been possible to constitute a similar committee in any other country."

As to the value of the investigation undertaken by the Commission, all the speakers at the banquet referred at greater or less length. Hon. W. J. Gaynor, of the New York Supreme Court, said: "This Federation is accomplishing a very great deal, and I deem it fortunate that it has now taken up the great subject of public service corporations, as to whether or not they shall be operated publicly or privately. I deem it fortunate, and nothing is more certain, than that the understanding which this Committee arrives at and that which will in time be the understanding of this Federation will ultimately become the understanding of the entire country." On the same point Dr. Albert Shaw, Editor of the *Review of Reviews,* said: "This Committee can bring back information that will be very useful. It will bring back information that will inspire a zeal for changing our conditions where changes are demanded, and for further study. * * * The men of this Commission are men of very high authority. The work they will do will be of great value to the country. The Civic Federation is to be highly congratulated on having secured their services. They are as competent a body of men as could be got together anywhere in this country. * * * There are a great many ways, direct and indirect, in which the work of this Committee is bound to be of great value, and I am sure its deliberation will result in untold good to our country."

The value of the work undertaken by the Commission was also emphasized by Hon. John De Witt Warner in his letter to Secretary Archibald replying to the invitation to attend the dinner. Mr. Warner said: "I believe the Federation has taken no other step so important as that in which this Commission has been appointed; that it can do no greater service than fully to inform our people of the experience of others in this matter; and that the success with which it does this, and the acceptance by our people of its report as a clear and impartial view, is likely long to be its best hold on public confidence."

Whatever are to be the definite results of the labors of the Commission, *The Review* believes that the report which is to be made will take a place in the front rank among the powerful forces at work to determine ultimately the issue of this great national question.

Labor in Southern Cotton Mills.

Presented elsewhere in this issue is the report of the recent investigation made by Miss Gertrude Beeks, Secretary of the Welfare Department of The National Civic Federation, into the social and industrial conditions of employes of Southern cotton mills. The subjects covered are the conditions under which the operatives work, homes of employes, education of children, recreation, hours of work, and child labor.

The questions involved in the problem of child labor are presented in a most illuminating manner, the investigation revealing important phases of the subject not generally recognized. It shows that children are numerous in one of the three departments of the mills—the spinning room—but the testimony is refuted which pictures the majority of the employes as being emaciated children of five and six years. Elements contributing to child labor, as shown by Miss Beeks, are the desire of the parents, who previously employed their children upon the farms, to have them work in the mills; the extreme scarcity of labor; the difficulty of securing immigrants for the South, and the fact that in the cotton industry the individual wage is too low for the father to support the family by his labor alone. Conspicuous also among these elements must be included the absence of proper State methods of caring for orphans and paupers, and the lack of laws on compulsory education, birth registration, marriage license, and factory inspection, as well as the low age limit of the child labor laws of South Carolina and Alabama.

From the standpoint of Welfare Work, the well-lighted and well-ventilated mills afford comfortable work-places for the employes; and the employers also provide good homes at nominal rentals, recreation in a variety of forms, kindergartens and schools. In fact, their efforts to ameliorate the conditions of the employes demonstrate a realization of the moral obligation felt by the manufacturers, and credit should be accorded them not only for giving food and shelter and an industrial training to the illiterate whites of the South, but also for steadily raising, through their welfare work, the standard of citizenship.

Labors' Political Policy.

In a recent issue of the *Railway World* the statement is made, under the caption "Labor Leaders Differ About Politics," that President Gompers, of the American Federation of Labor, appeals to union men to take an active part in politics, while President Mitchell, of the United Mine Workers of America, says that to carry politics into the crafts would be to create discord and endanger the organization. The above is one illustration of the general misinterpretation which has been given to the political program of the American Federation of Labor as being the preliminary step to the launching of a national labor party. It is true the leaders of the American Federation of Labor are appealing to their followers to take an active part in politics, but not as members of a distinct and separate party. As we understand President Gompers's announcement at this stage of the movement, they intend first "to help their friends and punish their enemies" in every case where this is practicable. But in cases where they have only "a choice between enemies," if it is found expedient

they will nominate men of their own principles on independent, labor or some other ticket which will lend itself to their interests.

The political policy of the labor leaders is very similar to that of the Municipal Voters' League of Chicago, which has resulted in changing a notoriously bad city council to a fairly representative and decent body. The League only found it necessary to secure the nomination of independent candidates in a very few instances. The idea is a practicable one. It is as legitimate for organized labor to look after its interests as it is for organized employers or any other group interest to work for their own advantage. The National Manufacturers' Association, if one may judge from the literature with which its energetic secretary is bombarding the manufacturers of the country, is carrying on a political campaign along somewhat the same lines.

The Wage-cost of Miners' Suspension.

There are two general statements relative to the recent controversy in the bituminous and anthracite coal fields made by newspapers unfriendly to organized labor which are so palpably absurd that it hardly seems worth while to answer them. One is that the anthracite miners lost $12,000,000 in wages by their recent forty days' suspension. This is not true, because it is well known that in anticipation of a strike so much coal had been mined (for which extra employment the mine workers were paid) that even if there had been no suspension there would have been a lack of employment throughout the summer months totalling at least the number of days covered by the shut-down.

The other point is that the suspension in the bituminous coal fields resulted in no benefit to the unions *"because they only got a restoration of the 1903 scale."* This statement is true but the implication is false. The wage increase was a gain and a very real gain. It meant so much in dollars and cents that the operators were willing to risk a fight rather than grant it. To say that an increase in wages averaging more than five cents per ton and amounting to millions of dollars in the aggregate is not a real gain is ridiculous. A comparison of the money cost to the mine worker of the actual time lost by the suspension with the 5.8 per cent wage increase for two years makes the former amount rather insignificant. What is even more to the point, the mine workers stand to hold the restored rate indefinitely, which at once adds to the importance of the gain.

The Federation's Immigration Department.

Among the dominant forces which have been at work in the upbuilding of the American Republic none stand forth to the present generation in a brighter halo than the resultant operation on these shores of European immigration. We believe this much is conceded by all thoughtful observers of American history. But in the rapid transformations which come about in the development of a nation it is also true that those forces which at one time worked to the nation's upbuilding may operate to the destruction of some of its most prized institutions. This apprehension is held by some as to the present-day effects of alien immigration to the United States and it is finding expression in various channels, conspicuously in newspapers, magazines, and books, and in the formation of organizations having for their expressed objects the further restriction of immigration. Three of these organizations—the Immigration Restriction League, the Japanese and Korean Exclusion League, and the Junior Order United American Mechanics—are explained elsewhere in this issue. Naturally the basis of their operation is their respective interpretation of the effects of immigration.

The real effects of immigration on our industrial, political and broad social life are not easily to be ascertained. In no realm of human knowledge are the facts more elusive. But these facts are just what are absolutely necessary before there can be a correct understanding as to the right solution of such a grave problem. As long as there are disputes as to what are the facts as to immigration we cannot hope for the proper direction on this subject of the energy and ability of those public spirited citizens who strive to find the right way to the advancement of the general welfare. A striking illustration of the widely varying interpretation of the facts relating to immigration to the United States, and that, too, on a point which, it would seem, should be beyond dispute, is at hand. It relates to the character of immigration. In a circular recently issued to members of the Junior Order United American Mechanics by the Dayton Council of that organization is contained the following:

> Will we American citizens allow the Dago, the other riffraff of Southern Europe and the "Coolie" laborers who will work for a matter of nothing and live on the refuse of the cess-pool and the garbage-dump to replace American labor and take our earnings back to foreign lands, or assist more filth and vice to land on our shores? A large per cent. of immigration is made up of outcasts, criminals, anarchists, thieves and off-scourings of the earth, who are forced to leave their own land, and still are allowed to land upon American soil. Isn't it time that we begin to take measures to stop this inflow of foreign scum? Every true American, naturalized or native-born, regardless of nationality, partisan or sectarian affiliation, will answer, Yes!

In direct contrast with the above we have the following word picture from Immigration Commissioner Watchorn, of the Ellis Island immigration station at New York, which we reproduce from an interview in a recent issue of the New York *Times*:

> We cannot have too much of the right kind of immigration; we cannot have too little of the wrong kind. We are seeing to it that we get the right kind—of that I am certain. Consequently I believe that increased immigration of the kind we are admitting to our shores makes for the National weal.
>
> The prime cause of immigration is the letters foreigners in this country write to relatives and friends and to foreign newspapers. These letter writers have thrived, and they spread the news of their success abroad. The result is an influx of bright, ambitious men and women, the brawn and backbone of any country.
>
> Aliens arriving through Ellis Island last year brought with them money aggregating $938,660. Shake more than 800,000 Americans together and send them abroad, and I doubt if they would make as good, certainly no better, showing.
>
> Of the 41,412 immigrants arriving here last January, 34,363 were between the ages of fourteen and forty-four years—formative years of youth and manhood; splendid years. Of the January total 5,272 were under fourteen years of age, and only 1,837 were over forty-four years of age. So what did we get, therefore? Was it not the youth and strength and vigor and ambition of foreign lands?
>
> So far as the steamship companies are concerned I may say that they are very loath to inaugurate innovations, but sooner or later, for one reason or another, they come to our way of thinking. One very important fact that they have lately digested is that it does not pay for them to ship any old sort of an immigrant to this country. The reason why they have come to know this is that we catch the undesirable aliens at this island and make the company take them back at its own expense, plus also the cost of maintaining them while they are in this port. We sent back so many persons in this way that the steamship companies finally issued letters to their agents all over the world saying that it was absolutely useless for them to send on would-be Americans who were ailing in body or mind, or who were otherwise ineligible to land under the immigration laws of the United States. The refusal of steamship companies to carry undesirable immigrants is one of the greatest checks upon pernicious immigration that I know of. Last year, for instance, the various steamship companies refused to bring 20,000 aliens to this country, not through any deep regard for our laws, of course, but simply for their own interests, knowing that we would have sent them back even if they had brought them here.

Not only is the character of our present immigration in dispute, but also innumerable other factors which go to make up the immigration problem. There are controversies, for illustration, as to the exact percentage of immigrants which remains in New York; as to the proportion of aliens in our penal and reformatory institutions, in our almshouses, and in other ways dependent upon public and private relief; as to the ultimate effect of immigration on wages and general labor conditions; and as to the effects of immigration upon the political and broad social life of our cities, States, and even the nation itself. These and other factors of equal importance to the solution of the immigration problem must be known beyond question if we are to control and direct the immigration stream to the advancement of the general welfare. And the one essential to their correct understanding is an organization which seeks these facts, without personal interests of any kind to serve, without preconceived opinions to support, and with the sole purpose of ascertaining those facts which alone are basal and comparable.

It is in this spirit that the Immigration Department of the National Civic Federation, an account of which is presented on another page of this issue, has been organized. The work of the Department will at first be directed along the line of securing basal facts, and to this end seven distinct committees have been created to deal with statistics, supply and demand, legislation and its enforcement, naturalization, agencies for advancing the welfare of immigrants, international relations, and Oriental immigration. The work of these committees will undoubtedly be of great value to a correct understanding of the immigration problem. Possession of the facts which go to make up the immigration issue will present to the nation a starting point for working out by legislation a more satisfactory line of action than is possible at the present time.

Reformers and "Reformers."

Mrs. Martha Moore Avery, in the announcement elsewhere in this issue of the Industrial Bureau which she and Mr. David Goldstein are launching, does well to call attention to the fundamental differences between reformers who want to reform and "reformers" who want to destroy. While we may not agree with all the methods employed by some of the noted journalistic reformers of the day, we can give them credit for honest intentions to really make conditions better. But when we find that a reformer is a pronounced Karl Marx socialist, it is well to scrutinize his statements and methods, because that philosophy teaches that conditions must become worse before they can be made better. It follows, therefore, that his purpose is to make the situation "worse" as fast as possible. One noted socialist "reformer," a member of a number of organizations for ameliorating social conditions, was recently decrying charity organizations when some one said: "Suppose they are not perfect; they are the best we have. Were it not for them a great many working people would starve." Her reply was: "Let them starve. The quicker they starve the sooner will society become aroused at the intolerable conditions and hasten the revolution which will usher in the Socialist State."

Three subjects that furnish a great deal of material for socialist propagandists are tenement houses, sweatshops and child labor. In the last decade great progress has been made in all three fields, but the socialists continue to picture the conditions which existed ten and twenty years ago. It is their fixed policy never to concede progress along any line of activity. With them an isolated case is always typical. However much we may disagree with their philosophy, we must admire their energy and persistence. They manage to become identified with every organization where there is any chance of exploiting their doctrines. Frequently an organization will be found to be shaped and controlled by a group of socialists, although that group may be a very small part of the organization. The public-spirited citizens who compose the larger part of the organization and who furnish all the funds for its work, have no idea that they are being used by socialists, and that they are "rubbing elbows" with people who not only do not believe in the institutions of our country but also are working to destroy them. If the new Industrial Bureau will point out to the country just who these people are it will perform an important public service.

WELFARE WORK AND CHILD LABOR IN SOUTHERN COTTON MILLS.

COMPULSORY EDUCATION AND AUTOMATIC SPINNING MACHINERY WILL AID IN SOLVING THE PROBLEM OF CHILD LABOR.

[For the purpose of learning what manufacturers of cotton goods in the South have done to ameliorate the conditions under which their employes work and live, Miss Gertrude Beeks, Secretary of the Welfare Department of the National Civic Federation, recently visited fourteen cotton mill towns in South Carolina, Alabama and Georgia. This included an inspection of the mills as well as an investigation of the social conditions. The cotton industry having been developed to the greatest extent in South Carolina, the largest number of mills was visited in that State. Children being employed, the question of child labor was naturally involved in the inquiry. While her report shows that there are isolated cases of very young children at work, as well as too many under twelve years, the legal age in South Carolina and Alabama, credit has been given the employers for their efforts to educate the children and to secure proper legislation which would aid in abolishing the evil of child labor. The question has been handled as a broad, economic problem—clearly recognizing the industrial evolution of the South since the destitution left by the Civil War.

This is the first opportunity afforded the general reader to learn from a disinterested, practical investigator, the truth about conditions in the Southern cotton mills. Much literature has been published on this subject, frequently emanating from a source interested in creating socialistic propaganda rather than depicting facts. Miss Beeks not only frankly criticises where the employers are at fault, but also tells of their remarkable, beneficent efforts. The qualifications of Miss Beeks for undertaking such an investigation are unquestioned. Probably no other woman in this country has had as wide, practical experience in dealing with all phases of the problems connected with the employment of labor, and provision for its well-being in stores, mills, factories, mines, on railroads—and in fact wherever labor is employed.—EDITOR'S NOTE.]

By Miss GERTRUDE BEEKS.

IN reporting upon this investigation the following subjects are covered: Condition under which the operatives work; homes of operatives; education of children; recreation; hours of work; and child labor.

Half a dozen cotton mill villages may be located in one town. Each mill has its group of operatives' homes or village within close proximity. The term "operatives" means employes in cotton mills. While other mill settlements were inspected, trips through the *interiors* of mills were confined to the following eighteen:

Monaghan Mills, Greenville, S. C.
Victor Mills, Greers, S. C.
Pelzer Mills, Pelzer, S. C.
Belton Mills, Belton, S. C.
Cox Manufacturing Co., Anderson, S. C.
Brogon Mills, Anderson, S. C.
Greenwood Mills, Greenwood, S. C.
Grendel Mills, Greenwood, S. C.
Saxon Mills, Spartanburg, S. C.
Olympia Mills, Columbia, S. C.
Saxon Mills, Spartanburg, S. C.
Olympia Mills, Columbia, S. C.
Victoria Mills, Rock Hill, S. C.
Arcade Mills, Rock Hill, S. C.
Manchester Cotton Mills, Rock Hill, S. C.
Graniteville Mfg. Co., Graniteville, S. C.; near Augusta, Ga.
Dwight Mills, Alabama City, Ala.
Massachusetts Mills of Georgia, Lindale, Ga.
Exposition Mills, Atlanta, Ga.
Eagle & Phenix Mills, Columbus, Ga.

A MILL BACK YARD

Observations of the general living conditions were made at the villages of the following mills:

Spartan Mills, Spartanburg, S. C.
Drayton Mills, Spartanburg, S. C.
F. W. Poe Mfg. Co., Greenville, S. C.
Granby Mills, Columbia, S. C.
American Spinning Company, Greenville, S. C.
Bath Mills, in South Carolina, near Augusta, Ga.

FRONT YARD OLD MILL ERECTED IN 1845

Langley Mfg. Co., in South Carolina, near Augusta, Ga.

Warren Mfg. Co., in South Carolina, near Augusta, Ga.

Piedmont Mills, Piedmont, S. C.
Lorraine Mills, Gastonia, N. C.
Griffin Mills, Griffin, Ga.

In addition to those mentioned, officials of the following mills were interviewed:

Carolina Mills, Greenville, S. C.
Brandon Mills, Greenville, S. C.
Batesville Mills, Greenville, S. C.
Reedy River Mill, Greenville, S. C.
Capital City Mill, Columbia, S. C.
Richland Mills, Columbia, S. C.
Apalachia Mills, Apalachia, S. C.
Ninety-six Mills, Ninety-six, S. C.
Gluck Mills, Anderson, S. C.
Union Mills, Union, S. C.
Woodruff Mills, Spartanburg, S. C.
Fairfield Cotton Mills, Winnsboro, S. C.
Wylie Mills, Chester, S. C.

Testimony showing the same general conditions at the Avondale and Pell City in Alabama; and the Lanette, Whittier, Decatur, Muscogwe and Trion mills in Georgia, was offered by reputable persons.

MODERN MILLS WITH MONITOR AND SAW-TOOTH ROOFS

These mills are located, with a few exceptions where they are at the extreme lower end of the hilly country, in the noted Piedmont region—the highlands east of the Blue Ridge Mountains. The greatest cotton mill activity in the South is, therefore, in one of the most healthful territories in the country and where there are, usually, pleasant breezes which afford natural ventilation for mills upon the elevations. South Carolina has the greatest number of spindles. The statistics for 1904 show the leading States to be:

South Carolina.....	2,928,000	spindles
North Carolina.....	2,192,000	"
Georgia	1,475,000	"
Alabama	820,000	"

In Virginia, Tennessee, Mississippi, Maryland, Louisiana, Texas, Arkansas and Missouri there is some cotton manufacturing but comparatively little, the number of spindles in each State running from 300,000 down to 16,000.

For this investigation mills were selected not only with reference to their relative importance, but a special effort was made to inspect those toward which public attention has been particularly directed in the criticisms of sensational writers.

SPRAY FOR COOLING MILL

CONDITIONS UNDER WHICH THE OPERATIVES WORK.

In general it may be said that the mills are unusually well lighted and ventilated, heated in winter and cooled in summer. The saw-tooth roof is used to give a perfectly lighted, modern weave room, and the monitor roof, which insures better ventilation than the flat roof, is found quite often. The employers have been quick to utilize modern devices, such as the exhaust system for the removal of the lint; the cold-water spray instead of the hot-water spray in summer, to humidify the atmosphere for manufacturing purposes; and the blower system for heating in winter and cooling the air in summer. Some, who heat with hot air, use the cold-water spray both winter and summer and have proved by its use that heat is not essential to the successful manufacture of cotton goods. The aim is to keep the temperature at 70 to 75 degrees. That is probably feasible, excepting in a few old mills in the lowlands. But there and in the uplands, in exceedingly warm weather, some progressive employers have cold water sprayed on the roofs or sides of the mills exposed to the sun. The custom at one place visited is to put ice in the chamber through which the fresh air is drawn into the mill, while in another the air is passed through cool water. The claim that the operatives are more comfortable in the mills during the summer than they were when engaged in the hot sun on the farms is justifiable. The introduction of electric motors in many mills to take the place of overhead shafting and belting has aided in reducing the amount of dust in the atmosphere. The custom of having pure, cool drinking water easily accessible in the work rooms, is general. One employer was having the ribbed windows replaced with clear glass, "to please the employes because they like to look out." He supplemented the statement with "I would, too." In two mills there are splendid emergency hospital rooms, with operating tables, and even stretchers. Another mill man goes so far as to provide the trained nurse to visit all families where there is illness in the village, which materially aids in preventing the spread of contagious diseases; and one has an isolation hospital for use during epidemics. Medical attendance, at a nominal fee, is pro-

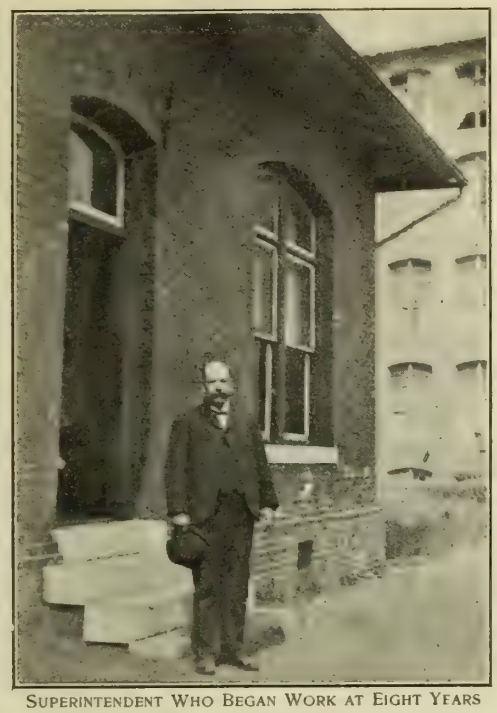
CARDING DEPARTMENT REQUIRING MEN

ded quite generally through special arrangements with ysicians.

The only points of criticism relative to negligence in oviding for the comfort of the employes in the mills e bad ventilation and poor janitor service in connec-on with the toilet arrangements, and lack of elevator rvice.



Some of the toilet rooms are in the ends of the mills d are well ventilated by windows and the exhaust stem, but others are in the centers of the mills with provision for ventilation. To explain their unclean ndition, it was claimed that the operatives, being igratory and moving constantly from one village to nother, only remain in one mill long enough to learn e first lesson in cleanliness. The feeling of discour-gement relative to the difficulty of educating what the ill men term that "rough class of people" to the roper use of such conveniences would be amusing to e employer who has had to solve the problem with nmigrant labor. It should be comparatively easy to educate the native English-speaking operatives in e southern cotton mills. But, the question of jani-r service is left to superintendents and foremen. lsewhere it has been proven that when the expense f janitor service is charged to the various depart-ents, the foremen who are required to keep down the st of manufacturing neglect their "housekeeping" uties; and that employes will not make proper use of nclean, unsanitary arrangements. When the unclean ndition of the toilet rooms, which with one excep-on was inexcusably bad, was called to their attention, veral of the mill presidents immediately undertook to nprove the method of caring for them. The system force in the excepted mill at Lindale is thorough. anitors clean the arrangements twice a day, using an ntiseptic and a liberal supply of hot soap suds. All e mills have wash *sinks* which the employes are sup-osed to use for their ablutions. Until recently such nks were regarded everywhere as modern conven-nces. It was interesting to observe that the employes

ONE FAMILY

want something better. In one mill the operatives have supplied their own individual wash basins which are in rows on the window sills in the work rooms. In another, although the employer has been thoughtful in supplying soap, as usual towels are not furnished and the operatives were observed using the manufactured product in lieu of them.

While the use of elevators to conserve the energy of employes has not become general in this country its need is greater in the cotton mills than elsewhere. The reason is that the spinning rooms, where child labor is found in the main, are usually on the top floors—frequently on the fifth. The employers claim that they have more accidents in connection with the elevators than from the operation of the machinery, but the freight elevators could be guarded so that the employes might be transported safely to the spinning rooms when going to work in the morning and at noontime. The use of the elevator should be given to all employes on the upper floors because the age limit does not exceed twelve years and no young girl between twelve and sixteen years should be obliged to climb several flights of stairs.

SUPERINTENDENT WHO BEGAN WORK AT EIGHT YEARS

At the entrance of a mill located in a large town the immense crowd of "dinner toters," who carry lunch to the members of the family employed there, indicates the need of a lunch room. In a smaller way that need was also evidenced at a mill in a large city where some of the weavers were observed eating their luncheons which were placed on the looms; and one boy was sitting in the wash sink next to the window eating his midday meal and reading a newspaper. The desirability of introducing rest rooms in the mills was made plain

A GROUP FROM THE SPINNING ROOM

when girls were found sitting upon the landings of the staircases waiting for work. But it may be generally stated that the mills visited are unusually sanitary, comfortable work places.

HOMES OF THE OPERATIVES.

In making this investigation, the criticisms of sensational writers were constantly kept in mind. One of these criticisms relates to the unsanitary homes of the operatives. The writer states:

> Each house was encircled by a wooden veranda, and the order of housekeeping described itself before the eyes, as a whisk of the broom which carried all dirt from the kitchen to the porch, and another whisk which landed it on the ground, bedecked, in consequence, with old tin cans, decaying vegetables, pieces of dirty paper, rags and chicken feathers. The outer room was a kitchen, though it might, except for the stove, have been mistaken for a hen-coop. The chickens pecked their way about the dirty floor, venturing as far even as the table upon which stood the meager remains of the noonday meal. The second and the inner room had each a bed—an unmade bed I was going to say, but, how, indeed, could a bed be made without either sheets or pillows? Two grimy counterpanes were flung in disorder across the mattresses.

WEAVING ROOM

To learn the facts relative to such statements, an incessant effort was made to see the worst as well as the best conditions. The village, universally regarded as the worst, was carefully inspected, and it cannot honestly be claimed that the homes of the operatives living there are as unhealthful as those of the inmates of the tenements in our great cities. This village, it is true, was a sad contrast to those of progressive employers who are gradually forcing the others to come up to their standard. The houses are merely clapboarded. The interiors are usually sufficiently spacious. Although the lots are not as large as elsewhere because the mill is in a good-sized town, there is ample space for ventilation. A most serious criticism is the fact that the employer in this village has not provided a general cow shed or pasture, the employes being permitted to keep the cows in their yards—and they insist upon keeping cows, also occasionally, pigs. Sometimes the live stock is directly under the bedroom window. Of course, this is unhealthful and aids in contaminating the well-water. The general aspect of the village is unsightly. The absence of paint, trees, gardens, and other elevating influences makes this village comparatively undesirable. But, while all are not model settlements, the conditions pictured in the paragraph above quoted do not exist in this or any of the other villages visited. It may be stated that generally the premises are extremely neat in the cotton mill villages, and that only in the homes of new arrivals from the primitive districts are the interiors of the cottages unclean. Many a housewife could take lessons in cleanliness from the home of the average

OPERATIVES GOING HOME TO LUNCH

Primitive Mountain Home

After Going to the Mill

mill operative. Where they still exist, the old clapboarded houses are being remodeled with weather boarding, or torn down and replaced; some of the new homes are being finished with walls of wood fibre; and where not included in the original plans, porches with railings are now being added, the employers considering that such improvements give greater comfort to their tenants.

The impossibility of gaining a correct impression of conditions by cursory observations was clearly evidenced by the following experience:

The first view of the cotton mill settlements was gained between Gastonia and Greenville, along the Southern Railway, where the homes showed the lack of paint. One of the questions asked the first mill man interviewed was why they had not learned the value of utilizing paint. He replied: "It is the custom to decorate every three years and this is the year for painting." This was shown to be the fact as the investigation was pursued for many of the homes just had been or were being painted.

The moral tone of many of the villages has been greatly improved by lighting the streets with electricity. In some instances the interiors of employes' homes are thus illuminated. Simple bath rooms with zinc tubs have been introduced in some of the houses. Some employers have gone so far as to make ice and deliver it to the homes at low prices.

Unsanitary surface wells, which have been the cause of illness in the past, have been and are being replaced by water systems, and the employers are preparing to make another important improvement, that of the sewer system, although in many villages there are excellent plans for removing the refuse weekly—for example, the pan system of Manchester. One president is expending a considerable sum upon oil each year for the marshy tracts which are gradually being drained and put under cultivation in order to make the village, unwisely located by his predecessor, more healthful.

Some of the villages are exceedingly beautiful, both as to the artistic appearance of the buildings and the landscape effects. In some cases, while the homes of the operatives are comfortable and sanitary, they are built from a stereotyped plan. One president said: "It is much easier to give a contract for the building of homes of one kind, especially when there is great haste to get the mill into operation. It is hard to give time to think of houses when one has to purchase machinery and equip the mill. Besides, it is cheaper, because a builder will take a contract for less than would be possible if he were to attempt to construct different types of houses." But in a number of villages the architecture is widely diversified and individuality is encouraged, notably at Alabama City. Ordinarily the lots are seventy-five by one hundred seventy-five feet. There are garden plots with prizes for vegetables and flowers, and one mill man is planning to erect greenhouses that the employes may keep their flowers in winter. Several of the mill villages are located in beautiful forests, and at other places employers are planting trees annually with a view of securing ample shade within a few years. In one the mud, so disagreeable in that section during the rainy season, has been obviated by the use of chert. The water immediately runs off the walks and roads thus macadamized. Still another public duty has been relegated to the employers, for the last resting place as well as the temporal home is provided by them, and in some of the villages the cemeteries add to their beauty. In one village where the mills have been in operation for twenty-four years, even former employes are permitted to bury their dead in the private cemetery.

The homes are rented by the employers to the employes at two to five dollars a month for houses of four to eight rooms. The rentals meet the cost of repairs, improvements and taxes. One man stated: "We charge rental for the homes because we think the employes respect themselves more." The rents include not only water, vegetable and flower gardens, but in some cases electric light, free cow pastures, cow sheds and pig pens. The people are very timid and will not live in the towns where the mills are located, nor will they attend the general churches. This makes it necessary for the employers to build villages surrounding the mills. Several mill presidents have equipped model tenements for the residences of the Welfare Workers which serve as examples to the operatives. Hotels or "inns," where the price of board is nominal, have been provided for the clerical forces, and, in a few cases, for unmarried operatives. In one village of 1,800 residents, 800 being operatives, the company expended $125,000 upon homes and $20,000 upon social buildings for their benefit. Here, in addition to the $2,000 which the company is taxed for educational purposes, it expends $2,000 annually.

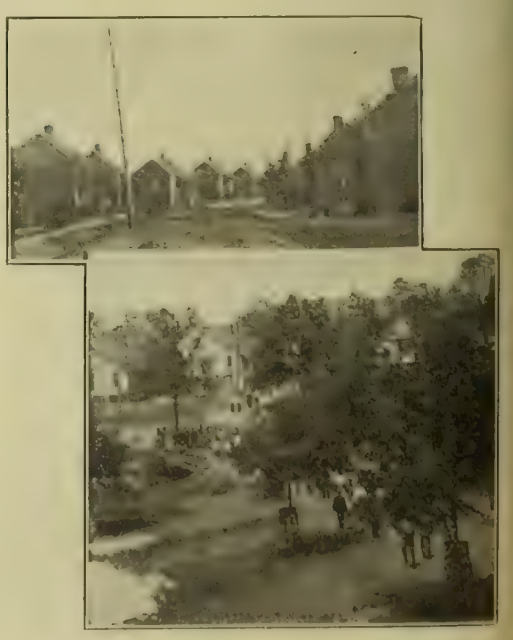
Houses Which Replaced Old Tenements

EDUCATION OF CHILDREN.



Before going into the cotton mill communities, the operatives could not be reached by civilizing influences. Through the Welfare Work of the cotton manufacturers, the children of Americans of Revolutionary ancestry, largely Tories, have been given the benefits which make for the best citizenship. Through the humane instincts of the mill owners, educational opportunities have been secured to them. These men have either assumed the function of the State by providing educational facilities or have been instrumental in securing legislation for school purposes whereby they are the largest taxpayers. Kindergartens and schools are supported in whole or in part by *all*. The public school system in the South is still in an imperfect condition, and, furthermore, State appropriations are insufficient to maintain the schools longer than four months in each year. In one village where the population is 5,000, 2,200 being operatives, 750 children are being educated at the present time by the mill owner. The salaries paid annually to the twelve instructors, including the Welfare Worker and domestic science teacher who assists her, amount to $7,000. In some other villages the mill owners pay the greatest amount of taxes to support the schools for the regular term of four months, and then, in addition, maintain them entirely at their own expense for an additional four months. In South Carolina one-half of the three-mill tax for education is applied toward schools for negroes, although they do not pay one-half of the taxes. The colored parents send their children to school more generally than the white people, partly because they are more ambitious for them and partly because there is small opportunity of securing work fo colored children.

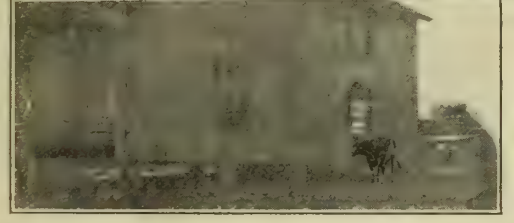
The employers erect the school buildings in the major ity of the villages, as well as th homes for the teachers. The elevat ing influence of a new kindergarte was illustrated by the good car given the modern conveniences in stalled in it. This was in pleasan contrast to the conduct of the pupil in the ordinary tenement used fo the initial experiment. One presi dent said: "When our kindergart ner began the work, the childre would throw stones at persons go ing about the village; now they tak off their hats." Frequently, half o the children will go to school for period, and then alternate with th other half later by working in th mills. The children who attend th entire school period frequently g into the mills during the summe months to permit the other childre of the family who are operatives t rest from work. For the childre who work in the mills regularl there are night classes in arithmetic reading and writing. Night classes for feminine employes afford instruction in cooking and sewing.

The overseers, who usually come up from the ranks as a rule are not sufficiently intelligent to utilize all o the modern appliances. Industrial training on a large scale will be possible within a few months at Columbus, Georgia, where the leading mill president gave a tract of land and a large sum of money to secure, as a part of the public school system, such technical training. In

Operative's Home, Parsonage and Church

Paint and Trees Absent Contrasting Village

partanburg, S. C., there is a Science Hall which was ndowed by one of the pioneer mill men now deceased. he leading mill president in South Carolina secured a et of educational stereopticon lectures furnished by he State of New York, which is loaned to the other ills in that district. These lectures are free and argely attended. All of these movements show the onstant efforts made by the mill men to elevate the peratives.



There are libraries supplied by the employers and hurches for the support of which they contribute enirely or in part; and there are well-patronized savings anks. There are other provident funds, the one most eneral being the "Burial Union." The operatives pay en cents a month and in case of death the family reeives fifty dollars. This also entitles the beneficiary to enefits as follows: At the death of a parent over sixty, 20, and a child under eight, $10. In one instance the $20 enefit paid from the fund in a Georgia mill was for the leath of a mother-in-law in Texas. The death benefit for the children, does not, as elsewhere, increase child nurder. The future value of the child as a wage earner s of greater importance to the parent than the amount of the death benefit.

RECREATION.

Included in the general effort to provide recreation for the employes there are separate social halls or auditoriums on the top floors of the school houses, theatres, roller skating rinks, gymnasiums, bowling alleys, armories for the military companies of the operatives, meeting rooms for the various lodges and employes' bands, halls for Sunday sacred concerts, athletic fields, childrens' playgrounds with gymnasium outfits, tennis courts, picnic grounds, outdoor dance pavilions and swimming pools. Of course all of the recreative activities listed are not in one village, although a majority will be found in each. One village was visited on the Saturday which opened the athletic season. The initial ball game was played by the Monaghan and the Victor teams, and the mill presidents were as much interested in the outcome as were the operatives. In one town where the employer utilized the cemented tank of water necessary for manufacturing purposes for a swimming pool during the summer season, he was, to quote his own words, "regarded by the prominent citizens as being crazy." He expended $300 in equipment, including a fence, seats, spring board and dressing rooms. The operatives are allowed the use of the swimming pool free of charge. The citizens of the town are charged ten cents for the privilege of patronizing the pool. The first receipts met the cost of three porcelain bath tubs for the employes in the mill and now they are turned into an amusement fund of the operatives, toward which they add a material amount. Another has a lake of clear mountain water covering six acres. Upon its banks is a natatorium for the employes which cost $1,500. The dance pavilion has not generally been introduced because of the extreme religious tendencies of the operatives, but it has proved a very successful and elevating source of diversion wherever it has been tried. In one village the pavilion is located in a beautiful park where moonlight picnics are frequent. The music is supplied by the employes' band. Moonlight festivals are sometimes enlivened by prize contests for the most beautiful girl, the most popular man, or the fattest baby in the village, the proceeds being used for a new carpet or organ for the church or toward some other improvement for the benefit of the employes. In another village there is a central band stand near a bubbling spring, and there are seats under the great trees where the residents may sit to listen to the music Saturday evenings. In several places tracts have been set apart for development into parks. "We limber them up Saturday nights after the week's work," said a Welfare Worker when she was showing the recreation hall used for dancing. At Pelzer, where the population is five thousand, the president stated: "Amusements are as necessary for the people as food." In certain villages the mills are shut down one day in the year for an annual picnic, and although holidays are not as numerous in this section as elsewhere, it is customary to have a Fourth of July celebration and Christmas entertainment at which the operatives and members of their families receive gifts.

General Cow Shed Provided by Employer

Live Stock Under Bedroom Window

School Children as "Dinner Toters"

HOURS OF WORK.

All the employers who were interviewed clearly demonstrated the realization of their moral obligation toward the operatives in their employ. This was further evidenced by their voluntary action in reducing the hours in South Carolina.

At present* the operatives work sixty-six hours a week. At their own request, the work is divided so that they have a twelve-hour day for five days in order to secure the Saturday half-holiday. The village rising bell is rung sometimes as early as 4 a. m. and frequently at 4:30 a. m. for the purpose of awakening the housewives to prepare breakfast for the operatives who are expected to be in the mill by six o'clock. Owing to the long hours, the operatives are too greatly fatigued evenings to avail themselves, to any extent, of the educational classes or the opportunities for recreation. This is thoroughly realized by the mill owners, and it is now proposed in the State of South Carolina to reduce the hours voluntarily. Seventy-three mill presidents determined, at a meeting in Greenville, S. C., June 5, upon a gradual reduction from sixty-six hours a week to sixty, the change to begin July 1, 1906.

CHILD LABOR.

Far too many children were found employed in the mills, but it is necessary to examine the cause before offering criticism. Until industry was organized, child labor was prevalent upon the farms. Labor for the cotton mills was recruited from the farming districts, principally the isolated regions in the mountains. It was only natural, therefore, that the parents should send their children into the mills. In the economic development of the South, remedial legislation has not kept pace with the industrial progress. Nor has public sentiment educated the parents (who have lacked opportunities for education themselves and, therefore, believe, that it is unnecessary for their offspring) to the point of sending the children to school instead of the mills.

On observing the general prosperity which has been wrought through the cotton industry the question arose as to *whether it would have been better to have left the people in pauperism and illiteracy* than to have taken them into the manufacturing districts where they could secure an industrial training *with pay* which would insure a livelihood, be uplifted by the elevating influences and secure an education for the majority of their children.

In South Carolina and Alabama child labor laws have recently been secured which provide that no children under sixteen can work in the mills at night, and none under twelve in the day time, with the exception of the child of a widow who furnishes an affidavit to the effect that the support of the child is needed. In that event a child as young as ten may work. In Georgia there is a gentlemen's agreement among the mill men which contains the same provisions.

The child labor law in South Carolina has been in existence three years. It increased the age limit gradually. During the first year under the law children were allowed to work at ten; the second year at eleven; and the third year at twelve. The twelve-year limit has been in operation only one year. To make the child labor laws precede compulsory education was to place the cart before the horse. Unfortunately, the child labor laws do not provide for factory inspection, compulsory education or truant officers. Therefore, they are practically inoperative, largely because of the extreme scarcity of labor and the competition among the mills for families. The unit of labor is the family and not the individual, and in view of the fact that there is no birth registration law, when the parents make affidavit that their children have reached the age of twelve, there is no inclination on the part of the superintendents and foremen—who are responsible for keeping the mills in operation to their fullest capacity—to doubt the truth of such statements. Even where children under twelve are allowed to work there are many idle machines, due to the scarcity of labor.

In reference to this, one superintendent in Georgia stated: "When competitors are working to get help from one mill to another, it is pretty hard to say to a man: 'You shall not work your children.' The only way to handle this question is through compulsory education which will place all the mill men upon the same basis."

Operatives' Wash Basins

At that mill it has been the custom for years to require parents to sign the following certificate when seeking employment for their children:

I hereby certify that my child.....was .....years old on the..... day of.....and that I am (or am not) dependent on his (or her) labor for a living. ..... attended school for.....months during the year preceding the date of this certificate, and can read and write.

He said: "While we did not in the past employ children shown by these certificates to be under twelve, or who appeared to us to be under twelve, I shall frankly state that we have not observed that rule since labor became so scarce."

A president in South Carolina gave the following testimony: "Six hundred and fifty children are in our schools at the present time, whereas there should be one thousand, and I want some way of having the parents keep their agreements, made with us when they take employment, to send to school all children between the ages of five and twelve. This plan has been in operation for fourteen years. But it is now impossible to force the parents to keep their agreements, for they can go elsewhere and get work so readily." An inspection of the agreements showed a large proportion signed with the parents' mark. This gave evidence of the probability that such uneducated parents would not realize the value of education for their children.

There was ample testimony to show that, before the scarcity of labor became so extreme, mill men sent families away from their villages when parents refused to send their children to school.

This South Carolina man also said: "More attention should be given to providing adequate primary schools, and funds now diverted to 'colleges,' the equivalent of the ordinary high school, could be more usefully employed for a time, and we should have compulsory education."

In another South Carolina town the most progressive mill man has for some time, in lieu of State statistics, had a census taken twice a year for the purpose of listing births and securing the ages of the children. The object is to keep at the mills the records of all the families, so that children under age may be prevented from obtaining employment.

The situation is further complicated in South Carolina by the lack of a marriage license law. Two young people who enter lightly into the marriage state may separate after the birth of several children. The husband will drift to another mill village and marry again. There is nothing left for the children of the first marriage to do but go into the mills, or the intolerable almshouses. The bigamy, due to the absence of divorce law, brings with it an attendant lessened family responsibility.

That an earnest effort is being made by the mill presidents to improve these conditions is indicated by the passage of the following resolutions, in addition to the one relative to the reduction of hours, at the important meeting previously mentioned:

> That this Conference urge upon all the cotton manufacturers of South Carolina to carefully and faithfully observe the age law limiting the employment of children to those twelve years of age and older, and forbidding the employment, except under lawful conditions, of children under twelve years of age.

* April, 1906.

A Mill President and Kindergarten Pupils

That this Conference of Cotton Manufacturers earnestly approve the passage of a compulsory school law in South Carolina to apply to all children under twelve years of age, and also recommend the enactment of a law requiring the registration of all births, and also a law requiring marriage certificate before any marriage ceremony can be performed in South Carolina.

That the Chairman of this Conference appoint a committee of seven, who shall prepare a circular letter to be printed and placed on the desk of each member of the Senate and House of Representatives of the South Carolina Legislature, urging upon them the enactment of these three laws.

In Alabama, although there are laws requiring the marriage license and birth registration, as well as the child labor law, there is no factory inspection nor compulsory education and the situation is identical with that in South Carolina. The leading mill man in the State claimed that he has a notary public in each department of the mill who requires the parents to swear to the ages of the children when they go into the mills, and he said: "If we had factory inspection, the parents could be prosecuted for perjury and locked up when they swear falsely."

In South Carolina one informant stated: "Our child labor law has given us a class of children loafing that we do not know what to do with! We sent affidavits from magistrates relative to convictions of youthful criminals who got into mischief when loafing, which enabled us to have the law passed authorizing the establishment of a State Reformatory for boys."

Conditions not as bad as depicted.

When inspecting the mills, extreme surprise was occasioned by the invariable statement of the mill men upon entering the spinning room: "Now, *this* is where the *children* are!" This frankness was entirely unexpected, as was the opportunity of free access to every department of the mills. It must be remembered that the mills visited included the ones most severely and frequently attacked.

In making observations the following criticisms of the sensational writers on the subject of child labor were constantly borne in mind:

1. Night work. The "necessity of throwing cold water in the faces of the children to keep them awake." The "wearing of underwear woven in Southern mills where tiny children are allowed to work all night long."
2. "Extreme emaciation of the children. Half starved and deformed."
3. "No child who has worked in the mill can ever learn to read and write."
4. "A child in the mill never talks to anyone."
5. "Children half naked."
6. Discipline. "Children kicked by overseers."
7. Accidents, with the claim of the "loss of fingers by hundreds of children."
8. "Children working through the noon hour."
9. Consumption. "When an autopsy is performed the lungs are found to be filled with lint."
10. "A child walks seventeen miles a day doffing."
11. "Diminutive or adjustable machinery."

These points are discussed below in the order in which they are listed.

(1.) A persistent effort was made, but without success, to find a mill running a night shift. A member of the Child Labor Committee in Georgia *"had been told by a friend who had heard from another leading woman in the State"* that water was thrown in the faces of the children during certain hours of the night at the Trion Mills. As it was not possible to go back to the Trion Mills, a letter was written to the "leading woman" requesting information on the subject, although when investigating in the vicinity of those mills it was learned that there had been no night work in that district for ten years. Her reply follows:

> I am very glad you wrote before quoting me, as your informant was mistaken. I never said anything about throwing cold water in the faces of the children at any mill, much less at the Trion Mill, one of the best regulated in the country. The information got mixed in this way: There was at one time a mill in Rome where I said I had seen a child thrown upon her bed at 10 a. m. in an exhausted sleep because of night work. That mill failed and I think the new management has better regulations.

Six Hundred Fifty Operatives' Children in Mill School

A Primary Class

School Recess

The writer who spoke of "underwear woven by tiny children at night" showed complete ignorance of the product of the Southern mills, which is largely confined to coarse sheetings and drills for Oriental countries, print cloths, fancy white goods for shirt waists, ginghams and outing flannels. There are no fine muslins, lawns or cambrics—the materials used for underwear—manufactured in that section of the country.

In South Carolina leading mill presidents stated that there *might be* some small yarn or knitting mills running at night—possibly half a dozen of the 200 mills in that State—but not a single mill man regarded night work as feasible or profitable, nor was there one operating a night shift. The picture so commonly drawn by sensationalists showing the necessity of dashing cold water in the faces of the children, indicating that to be the general condition, is absolutely false. The general testimony is to the effect that night work is not profitable because it produces too many "seconds," i. e., second-grade quality of goods, and the proportion of output is less because of the drowsiness of the help. In one town the destruction of a mill by fire threw a great many operatives into idleness. The president of another mill adopted night work for the purpose of giving those people employment, but he did not make a cent of profit.

Some of the points raised by mill men against night work were: The machinery gets tired—the particles crystallize and the belting breaks; night work is non-productive because there is so much bad work which cannot be traced to the employes at fault; the night shift leaves the machines in bad condition for the day shift and *vice versa,* because the operatives take no interest in their machines when jointly used, and all of this creates friction among the employes. When a day shift only is run, each operative is responsible for the condition of his machine. A further objection made by an employer was: "Night work is awful from the moral standpoint."

While night work may have prevailed ten years ago—and it must be remembered that the industry has been developed largely within the past ten years—as the size of the mills has been increased night work has been dropped. The leading cotton manufacturer of Alabama

After School Recess

stated that the reason some mills had it was because a man starting a new mill in a small way with only a hundred thousand dollars in the plant found it difficult to make profits and thought he would realize more out of the investment by running two shifts. The quest for mills running at night was continued up to the end of the investigation without success. It was always a question of hearsay. The scarcity of labor would render the securing of shifts for night work impossible, even if it were desired.

(2.) With reference to the claim that the children are "half-starved, deformed and extremely emaciated," that "their appealing eyes gaze at you from out their pale, bloated brows," that "the memory of faces such as theirs cling in the mind with lingering tenacity; faded masks of withered flesh," and that one "presented the appearance not of a child, but of a gaunt man shrunk to diminutive size," issue must be taken. It is true that children with rosy cheeks are not to be found in the mills, and that they are more or less pale, but there were only two children in the eighteen mills visited who could have been called thin, not in the faces, but their arms were very slight.

The pale complexion, which all mill operatives have, cannot be attributed entirely to work in the mills, but is due largely to the lack of nourishing food. Before leaving the farms, "side meat" and corn bread—a mere mixture of corn meal and water baked—and, as a luxury now and then, molasses, constituted the chief articles of food. As farmers they did well if they had twenty dollars in cash during the year for expenditures. Although their incomes increased, to them fabulously, upon going into the mills, the mother, as well as the other members of the family who could work, was so engaged. With no one to care for the home the family subsisted mostly upon cold canned foods. Domestic science teachers are employed by many of the mill men now to instruct the people how to prepare

A KINDERGARTEN CAKE WALK

properly the food. One employer said: "Our people need more than anything else some system for teaching them how to live."

One of the mill presidents in making an effort to convince a radical that the people are better off in the mill towns than they were in the isolated rural districts, took her for a trip into the mountains. His account illustrates well the conditions under which the primitive mountaineers live:

> I showed her a typical mountain family in which there were eight children. The man had a cabin of one room with no stove, four miles from school and three miles from church. The oldest child was fourteen, had been to school once, and said he knew his letters. The man had three acres and did a little farming, and sometimes hauled timber at fifty cents a day. I asked her what that family would do if the man should die. (I think you must remember that the primary thing in existence is meat and bread). She stated that the people were better off here in the good mountain air than in the mills, and I told her I thought *air was pretty thin diet.*

(3.) That "no child who has worked in a cotton mill can ever learn to read and write" was refuted by families of children where half attend school while the other half work in the mill. This testimony was procured from the children in their homes, in the schools and in the mills. Girls of eighteen to twenty-one who had worked in the mills during childhood were going to the company's night school and learning to read and write. One boy of seventeen was observed in a day school in the primary class making satisfactory progress.

SHOOTING THE CHUTES AT THE MILL KINDERGARTEN

(4.) That "a child in the mill never talks to any one" was shown to be highly absurd not only by the willingness of the children but by their ability to answer all the questions put to them.

(5.) "Children half naked!" That depends on what the term means, but in any event such a radical statement does not describe properly the condition in which the children are found. The majority of the children are stockingless and shoeless when at the mills, but are otherwise very properly clad. The children in the schools are so well dressed as to cause surprise, and when seen on the streets Sundays and holidays all the children are well attired.

(6.) That the children are "kicked and shaken by the overseers" and otherwise severely disciplined cannot be applicable to the general situation. It is always possible that there may be a brute among foremen, but the children in all the mills were exceedingly playful, undisciplined and even destructive. In several spinning rooms they were playing tag around the spinning frames, showing a lack of discipline that would not be tolerated in other districts.

(7.) The picture of the "child of eight which has just had the two larger fingers of the right hand torn from their sockets at the greater knuckles," and the statement that the accident was "but one of hundreds," led to an investigation of the accident records which showed that in one mill where there are 1,400 employes there had been but one accident in four months—a child of eleven lost the first joint of the second finger in picking waste from the gears, which a fellow worker had uncovered, in violation of the strict rules which provide that the operatives shall not clean their machines when in motion. This was pitiful, indeed, but the records showed comparatively few accidents. There is no danger of accident whatever from the part of the machinery upon which the employes are engaged in spinning. In some of the mills the gears have been covered both top and bottom so that it is absolutely impossible for the children to get their fingers caught. This should be done in all the mills, whether there are children employed or not. But it is not fair to say that there are hundreds of cases of children of eight years of age losing their fingers.

(8.) That the children work *during* but not *"through* the noon hour" might be proved in isolated cases. The automatic looms are sometimes permitted to run through the noon hour, because when the thread breaks the loom will stop and no harm can be done to the product. This, it was admitted, may tempt some of the *weavers,* generally adults, to go back into the mills after taking twenty minutes for lunch because it is piece work, although it was not observed in any mill, and several were visited at that time of day. In any event, this could not apply to the children as they work in the *spinning* room and it would not be possible to keep that machinery in operation without a full complement of operatives. There, too, the largest proportion of children are not even *spinners,* but their assistants, i.e., *doffers* who NEVER *work through an entire hour.* The children were found playing about the spinning room at the noontime, at twenty minutes past twelve, and when asked why they did not go home to lunch each replied: "I done been." The shade of the spinning room seemed to be preferable to the noonday sun. The machinery, however, was not in operation.

IN THE KINDERGARTEN VEGETABLE GARDENS

(9.) That consumption has made great inroads upon the health of the children because of the lint in the mills could not be substantiated. In one mill where there are a thousand operatives, reputable persons said that there had been one case of consumption in that village during the last year and the only other case was

KINDERGARTEN MAY POLE

five years ago. In another smaller village there was found one case of tuberculosis, that of a young girl about sixteen. Inquiries were made throughout the trip, but these were the only cases observed; and, in view of the devices for ventilating the mills, it does not seem possible that the lungs can be "imbedded in lint."

(10.) A careful calculation as to the distance which a doffer boy would be required to walk in the performance of his duties during one day, made at one of the largest mills, shows the average to be four miles, and the longest distance he could possibly travel (and he would be going out of his way to do that) to be four and one-half miles instead of the seventeen claimed by the "sensational writer." At a smaller mill the distance does not exceed six thousand sixty feet.

(11.) It has been claimed that diminutive or adjustable machinery has been manufactured expressly for the use of children in the mills. This is an absurd statement made by so-called sociological experts. The machinery in all cotton mills is the size regularly built for adults, and it is impossible that the product could be manufactured otherwise. Quite as preposterous is the statement that the "children are hidden at work in secret places." In the first place, children *were at work in plain sight* in all the mills, and in the second place the different processes of manufacture are so systematized that it would be impracticable to divide any department in order to secrete youthful operatives.

INSTANCES OF CHILD LABOR.

The main processes of manufacture in the cotton mill are carding, spinning and weaving. For the products usually manufactured in the South, the carding and other incidental operations require about one-seventh of the total number of employes, the spinning three-sevenths and the weaving three-sevenths in mills where the automatic looms are used. But there are 'exceptions to the rule" and so many complex conditions that a definite statement cannot be made with reference to the proportion of operatives in a single department. In some mills there may be one-third of the operatives in each division. The junior operatives of a mill will be found in the spinning room where they are engaged in spinning, doffing and sweeping, principally the last two operations. When the bobbins upon the spinning frame become filled with the yarn, it

is the duty of the doffers to replace them with empty bobbins. Usually this is light work, but in one mill children from ten to twelve doff in the roving room where the bobbins are very heavy. There are youthful sweepers also in the weave room. In one mill they are required to drag the bags of waste a long distance for final disposition. Many of the spinners are over twelve, but children between the ages of ten and twelve are numerous in the mills. In four of the *eighteen* mills inspected, representing a total number of fifteen thousand employes, there were observed seven cases of children undoubtedly under the age of seven years spinning, cleaning bobbins, or putting ends in the balls of yarn. Three of the cases were in one mill which is a financial failure, partly because of the old machinery; and it may be said that two, which were in another, were the only cases of very young children in that mill. The remaining two extreme cases were found in the other two mills—one in each.

The president also made the tour of the first one inspected of these two mills. He said: "Let us go to the spinning room first," and the freight elevator was used for our transportation to the top floor. When it stopped at the entrance to the spinning room, he ejaculated in a surprised tone: "Well!" Right in front of the elevator a little child, who was spinning, was climbing upon the frame to reach the broken threads for the purpose of tying them. When asked the probable age of the child, he said: "Six years." He immediately thereafter inquired of the child its age. The reply came, "Eight." Later, he took the superintendent to task for permitting the child to work. In four additional mills there were some very young children spinning,—one in one mill and a few in each of the others. It would have been impossible to secure the number of children between ten and twelve years in the mills, as it is so difficult to learn the correct ages. The effort was to get a general observation of the situation, and particularly to learn whether or not there was a tendency on the part of the mill men to employ large numbers of children as young as five, six or seven. Clearly this was found not to be the case. It was claimed that very young children are permitted to be in the mills only when the magistrate certifies that "they must work or they would starve," and that they were either orphans or children of widows. It was also generally claimed that, with the exception of orphans who absolutely required the work in order to secure a living, the young children observed in the mills "were not on the pay-roll, but had gone in to help their mothers, who were widows, or were employed after three o'clock, at the close of school, to help their sisters and brothers." Of course, this adds to the pay envelope of the mother, sister or brother helped, and thus indirectly they were on the pay-roll. The regular operatives were given when thus aided, for instance, eight sides of the machinery to operate instead of six. There are also instances where the children are required by the mothers who are operatives to be in the mill after school that they may thus care for them instead of having them in danger alone at home or on the streets.

When the State has provided no proper way to care for the poverty-stricken, it is a debatable question how far criticism should be offered for their presence in the mills. The following instances were cited by reliable persons, some of whom were and some were not identified with mill interests:

"One child of a widow who was unable to work, seven years of age, paid by a mill man to sweep, although inefficient."

"One little girl in the mill with her grandmother, otherwise she would have to go to the poorhouse, which would be unfortunate, as the almshouses here are exceedingly disagreeable."

erate soldier and his daughter in this village. We let them have one of our homes free and allow the daughter to go to the mill to work intermittently—she cannot leave the old man every day—to enable her to make enough to support them."

Another said: "I have a woman in the No. 1 card room who was left a widow. Her husband died of consumption. She asked to be permitted to have her child

Operatives Bowling

in the mill with her. It was either a question of running her out or allowing her to do this. The woman makes a good living."

Several mill men stated that there would always be some child labor, for "We will always *have to provide work for the poor*"; and that "if we did not let the children work it would be utterly impossible for some men to care for their very large families."

Operatives' Club House

Attacks should not be leveled at the cotton mills alone. Child labor on the farms, in the homes and in the mills always existed, and the condition is the same, generally speaking, to-day, although it should not be.

While there is an obligation on the part of society to render impossible the employment of children of tender age, and the age limit in the South should be higher,—certainly fourteen years—it must be remembered that the majority of the children in the mills are above the age usually pictured by writers upon the subject of child labor. Furthermore, while the spinners must work continuously during the day, the doffers work only twenty minutes out of thirty-five. Non-continuous work must be a point considered when estimating the injury of employment to the child. Very frequently the

Fourth of July Celebration

Another instance of how the mill men help to take care of the poor, although not a case of a child under age, was given as follows: "There are an old Confed-

fifteen minutes usual between doffings in the coarse goods mills are devoted to base ball outside of the mill, the floor superintendent going to the window and whistling for the doffers when needed. Where finer yarns are spun, because it takes longer to empty the bobbins, the rest periods are longer. Outside of one mill the president has a gymnasium bar for the use of the sweeper boys who are not continuously employed.

In the weave room the work is of such a nature that only adults can properly perform it. But among the fifteen thousand employes there were observed weaving in one mill two children who were probably under the age of twelve, and in another two of probably twelve years. The other main operations, in the card and picker rooms, require men.

The superintendent of one of the mills,—a fine specimen of manhood now forty years of age was once a child laborer. He began work in a cotton mill at eight, was a spinner at fourteen, and had charge of the spinning room at sixteen. As other even more successful men in the South to-day, such as merchants, doctors and bank presidents, worked in the mills when young and secured their early education in the schools supported by the mill owners, it would be just as fair to point to this superintendent who began work at eight as typical of the conditions in the cotton mills as it is to take one or half a dozen extreme instances of child labor and make them picture the general conditions. Neither would be true. That the young workers, however, do grow into responsible positions was evidenced by another superintendent who said: "We have a number of fellows who were doffers and have been promoted to high positions. Almost all of our loom fixers were weavers. Many of our boys have gone elsewhere as overseers." In this mill there were three spinners,—girls over fourteen, who had gone into the mill as young children and were the picture of health.

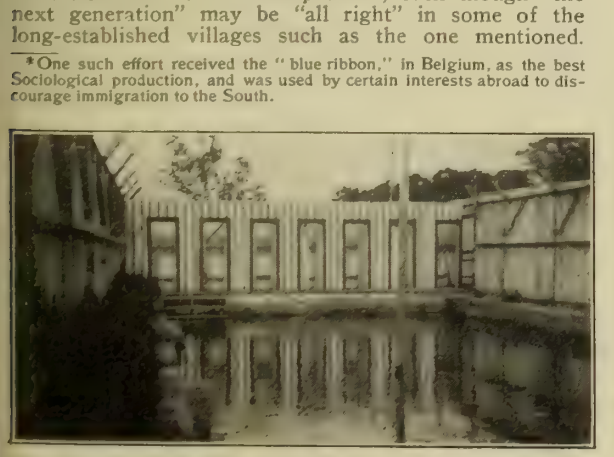
A child of twelve in the spinning room can earn more than its father in the picker room, but the wages of a single member are insufficient to support a family, which is always of good size. In one mill village an interesting family of five was visited. The oldest child was going to school and the next in age was working in the mill, but expressed a preference for school. The two alternate going to school and working. The other children are too young to work. The father is employed in the cloth room of the mill and the mother cares for the home. In another mill there was a splendid boy of fifteen years, who with his mother, another son of nine and an infant had gone to the village two years before. The boy, then thirteen, was put to work in the mill; the family got in debt $75; the nine-year-old boy would go to the agent of the mill and say: "We've nothin' t'eat." The agent took care of them and they gradually paid their debts. The boy-head of the family is pointed to with pride by the agent of the mill, who claims that he will make a head man of him.

SOME OF THE PROBLEMS INVOLVED IN CHILD LABOR.

The farming element, which constitutes the dominating influence in the legislatures, does not yet realize the necessity of providing ample taxation for schools. The resources of the several States visited would permit greater appropriations for the public welfare. Child labor legislation without compulsory education laws has proven inoperative. This is due to the unwillingness of the parents to send their children to the schools in preference to the mills. With inadequate school facilities where the child labor law has been observed, the children become demoralized in running the streets. When convicted of crime they are chained to hardened criminals, and their downward course is assured. Through the influence of club women a reformatory has recently been secured in Georgia and one is authorized in South Carolina, which will prevent the mingling of juvenile offenders and adult criminals in those two states. But until compulsory education, for which *the mill owners* have been agitating more than five years, is secured, with adequate school facilities, the argument that the children are better off in the mills where they gain self-reliance and an industrial training cannot be refuted.

While the vagrancy laws, which the mill men would be glad to see strengthened with "spikes," are practi-

cally unenforced, the tendency of fathers to live on the earnings of the children has greatly decreased, due largely to the creation of public sentiment against it. Where there are idle fathers, they are chiefly invalids or drunkards.



Child labor has been accentuated by the scarcity of labor due partly to the high price of cotton, which has lured many of the families back to the farms where they rent a few acres for a season; or one crop of cotton, which is mortgaged in advance. They are called "croppers," because as farmers they move annually, and the roving characteristic is so marked that after becoming operatives they move frequently from one mill village to another. Sometimes the employer will be enabled to hold a family by permitting it to move from house to house,—even across the street. This story was told by a jester: "The people change their abiding place so often that when a wagon stops at his door, the man with half a dozen chickens will find them already on their backs with their feet crossed to be tied."

The work people are so independent and quick to move to a mill where their young children will be employed with the other members of the family, that the temptation of the superintendent with idle machines is very great. Undoubtedly the shortage of labor inclines the superintendents to employ more children than they would otherwise. It also causes them, as one put it, to "become rascals by stealing labor from one another." The employers are trying to teach the people to become home-makers by having their living conditions as attractive as possible. One of the three presidents active in bringing about the movement for shorter hours stated: "The need for recreation is very great. At the end of the year after the people have come to the mill, they only know about twenty others in the village. By arranging time and opportunity for recreation so that they will become acquainted, we hope to secure an attachment for the village to decrease the migratory tendency."

When some of the manufacturers were asked why they did not discontinue the building of more mills than could be "manned," the reply came that they must "fill orders" and would take their chances on being able to get enough help by drawing from other mills.

The scarcity of labor is not only caused by the increase in the number of mills, but by the hesitation on the part of immigrants to enter the South. This is due partly to the sensational literature which has painted such dark and unforbidding pictures.* This literature which has been published supposedly in the interest of the children, has operated against them and actually accentuated child labor. The immigrants are further deterred by rumors relative to numerous murders and few convictions. Commissioner Watchorn states this general inclination well when he says: "Immigrants seek places of which they have heard the most favorable all-around reports." Another element contributing toward the lack of a sufficient number of operatives is the rise in wages which has enabled the women to leave the mills and become home-makers. Furthermore, it is claimed that wages have advanced thirty to fifty per cent in five years, more rapidly than have increased the needs of the people. Their needs must be increased to equal the rise in wages to get them to work steadily. Even where the premium plan of adding to the wages for regular attendance has been tried in the spinning room, it has been found ineffective. Of the total number of operatives upon the pay-roll there are always from fifteen to twenty per cent "loafing," as the people can make enough in four days to live six. One president stated that "the people are not sufficiently ambitious to care to work all the time, but as we are throwing about them elevating influences their needs are growing greater and the next generation will be all right." Naturally, the increasing of the needs of the people to the consuming power of their wages would be a slow solution of this problem, even though "the next generation" may be "all right" in some of the long-established villages such as the one mentioned.

*One such effort received the "blue ribbon," in Belgium, as the best Sociological production, and was used by certain interests abroad to discourage immigration to the South.

Swimming Pool

Operatives' Band

Several mill owners estimated that if all the operatives listed upon their pay-rolls would work day in and day out, there would be an adequate supply of labor. When asked why they did not reduce the wages to meet this "scarcity due to higher wages" and thus force the operatives to work full time, it was stated that competition among the mills for labor would not permit.

It must be remembered that wages for *individuals* in the cotton industry are low as compared with other skilled trades, both in New England and the South, and a statement with reference to the present high wages can be only relative. When the mountain people first went into the mills, although the wages were much lower than now, the total amount earned by a *family* so far exceeded its earnings upon the farm that it meant almost fabulous riches. The solution of the child labor problem through a further increase in wages would be a slow process, for the wages of the adults would have to be sufficiently high to permit them to support their families; and taking into consideration cheaper living, the wages are now apparently as high as in New England in the same line of manufacture, but there while the families work in the mills there are greater opportunities for the fathers in skilled trades outside. The Southern manufacturers also claim that they must compete in the world market—with the wages much lower in Italy, France, Germany and England, while in India they are but a small fraction of what is paid elsewhere.

Match Game between Mill Teams

If one of the solutions is immigrant labor, it will have to be *family* labor, owing to the nature of the work. The work in the spinning room, at present so largely performed by children, should be taken up by young women over fourteen; the other adult members of the family being employed in other trades outside or in different capacities in the mills, a living wage would be secured. The *individual* immigrant would not be attracted by the wages which can be paid in the South when he can go to the Northwest and secure a higher rate. Nor does he take into consideration final results due to cheaper living, but he sees the amount of wages paid by the day. Immigrants of few nationalities would mix with the native whites, and it therefore seems that they must go principally to the new mills or to the city mills, thus driving the natives into the country districts.

It was interesting to learn that the greatest scarcity of labor occurs in the spinning room where the children work. For business reasons purely, if for no others, the employers do not desire child labor because the spinning machine is the most delicate and expensive in the mill, and the higher the grade of intelligence to manipulate that machine, they claim the better will be the product and the greater the amount of output. Furthermore, the children are very destructive,—broken bobbins frequently were observed scattered upon the mill floors by the doffers. Again, the loss through wasted material caused by unskilled labor is greater in the spinning room than in the preceding processes because it is so near the finished product. To prove the economic value of older operatives, one employer, who manufactures colored goods, said: "We want children over fourteen because the younger ones cannot tell the difference between the shades." Even the sweeper boys are inefficient because of their youthfulness, and one mill president has introduced negro adults to sweep the floors, while another has substituted superannuated white men. Another said: "It is to our interest to keep the children out of the mills, for otherwise they will not grow up to be strong men." The leading mill men go so far as to say that *they do not believe children should work under the age of sixteen;* that that would be the ideal condition which they would welcome.

The scarcity of labor in the cotton mills connot be reduced by the use of negro labor. While reliable information shows that negroes are used in the tobacco factories, where they simply have to strip the tobacco leaves, and have made good locomotive firemen and yard switchmen upon the railroads, it has been proved thoroughly that they cannot be used successfully in the cotton mills. While there is no reason why negroes could not be trained to be good operatives, it has been shown that in the cotton mills they could make enough in two days to meet their needs and that they would not work the balance of the week. Furthermore, it is the characteristic of the negro to roam at night. Being drowsy, therefore, during the day, the rythm of the machinery puts him to sleep.

The child labor problem may be met partly by the invention of machinery to displace the children. A letter from the president of the Saxon mills in South Carolina, calling upon The National Civic Federation to aid in this matter is quoted here:

> If your organization can influence the Draper Company or other leaders in inventions to perfect machines to doff the spinning frames and to catch up and insert between the rolls the broken sliver, you will in my judgment be aiming straighter at the mark of the final solution of the child labor problem than any one who has yet interested themselves in it. I wish sincerely that you could put the whole influence of your organization upon an agitation of the need of automatic machinery in the spinning room where the problem is, in the judgment of many, no more difficult than has been solved in both the weaving and drawing-in rooms, and the need is far greater.

He suggested prize competitions to bring the question to the attention of inventors generally. The automatic looms and drawing-in frames are so marvelous as to be uncanny, and surely it is possible to provide for doffing by machinery, which would reduce the number of operatives required for that work. The drawing-in frame takes the place of seventeen girls, and will perform in eight minutes work that used to require about four hours.

The automatic loom, which has lessened the number of operatives required for weaving has an adjustment for supplying mechanically fresh bobbins filled with yarn when those in use have become empty. This operation is not dissimilar to the process of doffing.

One of the greatest needs is the creation of public sentiment in favor of the *modern* legislation required, which at the present time is advocated and understood principally by the employers. Generally speaking, the agitation has been promoted by well-meaning but misguided theorists who have not acquainted themselves with the conditions under which the people work or the business management and financial problems of the mills. The legislation needed in South Carolina is:

Compulsory education with provision for truant officers;

Factory inspection to strengthen the child labor law;

Amendment of the child labor law to increase the age limit from twelve to fourteen years;

Birth registration; and marriage license law.

With the exception of the last two subjects listed, the requirements are the same in Alabama, and in Georgia even the child labor law is yet to be secured.

For the present, the cotton mills are industrial training schools as well as refuges for the unfortunates. Too much praise cannot be given to the mill owners who, in spite of the unfair criticism which has been made, are not only giving food and shelter and an industrial training to the illiterate descendants of the first inhabitants of the colonies, but, through their Welfare Work, are a great civilizing influence and are steadily raising the standard of citizenship.

Dance Pavilion

TO SUPPORT TRADE UNIONISM AND OPPOSE SOCIALISM.

AN INTERVIEW WITH THE FOUNDER OF THE NEW NATIONAL BUREAU AS TO ITS ORGANIZATION AND SCOPE.

FROM recent announcements in the daily press comes the information that a new industrial bureau to uphold trade unionism and oppose Socialism has just been organized in Boston by the well-known writers and lecturers on socialism, Martha Moore Avery and David Goldstein. Mrs. Avery was formerly a socialist and one of the most ardent supporters of the doctrines of the party. For several years, beginning some fifteen years ago, she took an active part, through her writings and from the platform, in advancing socialistic propaganda. Later, convinced of the complete fallacy of socialist principles, she became an out-and-out opponent of all their doctrines. In organizing the Boston School of Political Economy, of which for some time past she has been the head and director, Mrs. Avery inaugurated the movement she had in view of opposing socialism by a broad plan of education.

Mr. Goldstein who, for a number of years, has been associated with Mrs. Avery in her educational work, also began as an ardent supporter of socialism, only later to become one of its most bitter opponents. The reasons for this change in attitude Mr. Goldstein gives as follows in the Preface to his recent book "Socialism: The Nation of Fatherless Children":

> The casual reader would, no doubt, reading in the public press the notice of my withdrawal from the Socialist party, conclude that that action was prompted by the thought of a day. Such, however, is far from the facts in the case. Having for years been interested in the study of economic principles, rather than in the acquaintance of socialist data, I naturally gave my attention, outside of propaganda proper, to acquiring a knowledge of the economic principles which socialism is alleged to rest upon. I came long ago to a realization that the mouthing of the name of Karl Marx was no guarantee of economic knowledge. Seven years ago, together with a few of the then comrades, we organized the Karl Marx class, for the study of his (Marx) work "Capital." Three years ago, having outgrown the work of the socialist master, we changed the name of the class to the Boston School of Political Economy, and took up the study of the original work of the Director, Martha Moore Avery. I know, now, that this was the point at which I began intellectually to move away from the socialist propaganda.
>
> The parting of the ways, from moral standing ground, was more abrupt. The Herron episode furnished the occasion—I resented the attitude taken by the socialist press in regard to George D. Herron's divorce and his "socialist marriage," which had disgusted me—especially for the reason that it could not be denied that he, Mr. Herron, was a socialist leader who was fast mounting to the very top of the ladder in socialist favor. It was at a public meeting held in Boston at which the then editor of the Haverhill *Social Democrat* was the speaker. After he had finished his address in praise of George D. Herron, whom he had lauded as being in power and virtue second only to Jesus Christ, in the discussion which followed, together with Martha Moore Avery and one or two others, the author gave voice to strong condemnation of the lecturer's opinions and to the general tone of the socialist movement throughout the country. It was being sharply forced upon me that that which I had so long fondly believed to be socialism was not socialism at all. It was a severe blow to me—I was cut from my moorings—I could not tell for some months to come whether it was but a personal episode or whether I must in fact regard it is the deliberate position taken in strict accord with socialist philosophy—I had thought my lifework would be given to the cause of socialism, consequently the conflict in my mind and heart was great.

Mr. Goldstein's long experience in the ranks of organized labor qualifies him to speak of socialism in its relation to the great movement of trade unionism. Through close association with socialist leaders on the platform and in "hand to hand fights upon the floor of trades unions," he became thoroughly familiar with the tactics employed by socialists in their persistent efforts to gain control of the trade union movement. He believes emphatically that there is marked evidence to show that upon economic ground the battle to sustain industrial progress will come to an issue between the American Federation of Labor and the railway brotherhoods on the one side, and the socialists' organizations on the other.

It is fortunate that two persons so well equipped as Mr. Goldstein and Mrs. Avery, are to be associated in the work of the new national Bureau to combat the dangerous and disruptive influence of socialism. When asked concerning the organization and scope of the Bureau, Mrs. Avery stated them to be as follows:

> The object of the National Bureau is the creation, collection and analysis of literature which has for its purpose the defense of national principles vs. those of socialism. The promotion and endorsement of reforms, social, commercial, financial and industrial, with the condemnation of the opposing program of revolutionists whether conducted by socialists or anarchists.
>
> Our propaganda has thus a positive and a negative aspect. The defence of the family as against the encroachments of divorce and free love, which issue, ever before us, has been recently emphasized by the Gorky incident.
>
> To defend the principle of individual responsibility, which alone safeguards the integrity of citizenship; as against the denial of free will which lies as a basic doctrine of socialism.
>
> To defend the rights of private property in capital as against the socialist demand that all industrial, commercial and financial capital shall be owned and operated by all the people collectively.
>
> To advance the interests of those trade unions who work upon the principle that the interest of capital and labor may best be promoted by trade agreements, as against the socialist demand for the abolition of the "wages-system."
>
> To inculcate those heroic virtues which come as the fruit of religion, as against the socialist-atheist psychology which is captivating the lesser man under the prospect of material ease.

Foreseeing the necessity of this undertaking the book on socialism above referred to has been published by Mrs. Avery and Mr. Goldstein. It contains quotations from more than one hundred socialists of international standing, these quotations being taken from socialist books, magazines, documents and papers "which are openly hostile to American institutions and which persistently assail those principles which lie as the foundation stones of Christian civilization." This book is receiving the endorsement of men of all classes of society. Mr. Samuel Gompers, President of the American Federation of Labor, wrote to the author as follows: "I beg to say that I have read with keenest interest your book on 'Socialism, the Nation of Fatherless Children,' and have no hesitancy in saying that the book is not only timely, but an excellent contribution to the literature on the labor question and the labor movement. It tears the mask of hypocrisy from

MARTHA MOORE AVERY

the face of those who have long pretended to be friends of the trade union movement, and yet seek its destruction or diversion to an improper purpose. I have found your book a ready reference to the many hostile utterances and action of pretended friends."

"With the Upton Sinclair frenzy at white heat," said Mrs. Avery, "and the Gorky incident not yet faded from the limelight, the time is ripe for the classification of what may be called the 'muckrakers' and for a work which should be undertaken to point out that reformers, however sensational their methods or however interested their personal motives, do not attack the foundations of Christian civilization. Within this limit, because their intention is safe, even illy advised propaganda must be ranked with the sound and sober efforts to perfect our National Institutions, which being grounded upon First Principles are acceptable to all ages.

"On the other hand, this work must show that however seriously some socialists may take themselves or their alleged science, because it is their deliberate intention to destroy what they are pleased to call the 'present system,' namely, private property, the family the State and religion, they are thus necessarily classed with others of lurid tongue and with bomb throwers. The means employed are indeed different, but Revolution is the object which they all desire.

"No right-minded man can deny the popular cry for Reform,—for something and for many things that shall improve and perfect American institutions, but the principles upon which they are grounded are sound, for God, not men, created them. But it is these principles which it is the express mission of socialism to overthrow. By its very inner constitution the Revolution must first of all strew the human path with the wreckage of faith. Faith in the morality of the individual man; faith in the sanctity of the home; faith in the honor of our native land; faith in the goodness and justice of God must give place to the 'socialist mind' to materialism, to animalism, sugar-coated with idealism. This is the debris of which socialist barricades are building. This was the socialist law, laid down in '48 when Karl Marx with the key of 'Surplus Value,' which unlocks all time and all things, explained the means to the socialist goal. I quote from Karl Marx in 'Secret Societies of Switzerland.' 'We content ourselves at present with laying the foundations of revolutions and shall have deserved well when we shall have excited the hatred and contempt for all existing institutions. We wage war against all prevailing ideas about religion, country, State and patriotism.'

"Reform or Revolution shall be the test, for a reformer though never so extravagant in his speech, does not counsel the overthrow of the existing order. The Revolutionist does.

"The Revolutionist stands against those principles which the greatest minds of all ages have held. Consequently if one would know what a socialist means he must hold the mirror up to that degenerate nature from which free-will and individual responsibility have been taken. For this cult declares that it is environment which creates morals as well as manners; that man is a *non*-moral being. So any vile means to their end may be used. August Bebel, than whom no living man is higher authority in the world-wide socialist movement, defends this policy in these words: 'We want the wounds of the body social kept in a festering condition in order to allow the class distinctions to become as acute as possible.'

"This advice is carried out! Eugene V. Debs while rolling over and over eloquent phrases calls upon American workmen to arm in defense of the working class against capitalism. Our neighbor, Canada, recently barred from her mails the socialist paper containing this effusion, but we allow the Revolution breeder to do its deadly work with a circulation of 300,000. Oppression of the weak exists and it must be righted, but is this the means and is Revolution the end?

"Evidently Mr. Upton Sinclair, the latest socialist star, is of that opinion. He tells with shocking frankness the whole story of how to win the Revolution in his book, *The Jungle*, and how it was written. Its purpose was to 'blow the top off the industrial teakettle.' We have his word for it. So long ago as 1903 in the month of May, through the columns of the *Independent*, Mr. Sinclair took the general public into his confidence as though it were his Father Confessor, with this difference, that he was not penitent. By his article entitled 'My Cause' he laid bare his inner motives. They have a first and a second term. First, to sell his intellectual wares, and second, to advance socialist propaganda, the news sensation resting on duplicity.

"Mr. Sinclair has indeed, by his trick, 'got even,' as he said he would, with the literary world; he has choked it with his own stuff for a time. He wanted $1,000 to live on while he wrote his now much talked of *Jungle*. So he created one *Arthur Stirling*, a young poet, who could not find a publisher for his masterpiece. So quite consistent with socialist philosophy he took his life in his hand and went to—hades. Our author perpetuated the scheme of the poet's existence

d of his demise upon the general public through the ew York newspapers. They were betrayed into the ox by the aid of Mr. Sinclair's friends (socialists f course), who reported the imaginary death by the naginary drowning of the imaginary poet. The first oint had been gained. *Arthur Stirling* had by death ot a hearing for Mr. Sinclair, who, a few months

DAVID GOLDSTEIN

ater, offered for sale the imaginary *Journal of Arthur Stirling*. Thus Mr. Sinclair found a market for his nind and a thousand dollars for his pocket.

"But this was not the end! Mr. Sinclair, who had acrificed his honor—that is, a man who does not old the socialist philosophy would have done so—and hen he stepped forward to sacrifice his reputation. When 'My Cause' was published, socialists thought it reat fun and good means in reaching the revolution.

"'I knew,' said the author of *The Jungle*, 'that the oax would cost me my reputation and the respect of ll decent people, but that did not matter, for I have ot been favored with the acquaintance of many de- ent people, and am not obliged to hear what the rld thinks of me. Besides, I would cheerfully have obbed a house or sandbagged a millionaire had my ask been possible in no other way. My one desire vas to raise a sensation, first to sell the book, of ourse, and, second, to give me a standing ground rom which to begin the agitation of my cause.'

"The integrity of his evidence regarding the story f *The Jungle* is as good and no better than the uthorship of *Arthur Stirling*, his life, poetry, death nd *Journal*. For upon the word of Mr. Reynolds not ne of Mr. Sinclair's charges, which were placed be- ore the commission to investigate the packing houses, vas substantiated. 'Evidence' all coming from socialist ources vanished into thin air when proofs were anted by the Beef Trust Commissioners, Messrs. Neill and Reynolds. Disgusting and filthy as the con- itions were found to be, and loudly calling for no esser remedy than the recommendation of the Presi- ent—for 'inspection from hoof to can'—for the pure ood bill—nothing was found equal to the packing of ead or diseased flesh of cattle, nor comparable to the orror of rendering human bodies into food products.

"But then the motive of the President is Reform, while that of *The Jungle* and its socialist sources is Revolution—there is a difference as wide as heaven rom hell.

"Mrs. Ella Reeve-Cohen-Bloor, a most radical ad- ocate of socialism for many years, whose testimony n support of Mr. Sinclair's charges backed out step y step as it was pressed for proof after proof, plainly tates her purpose in 'muck-raking' in the concluding words of her 'Evidence' in the *New York World* of une 3. She says: 'The real remedy will be the ublic ownership of all these great food industries.' n other words, the confiscation of industrial capital; he means, scandal; the end, revolution! Socialists ccept no moral responsibility for breaking down the arriers of truth; anything is all right that will hasten he 'Cause.'

"It is the same with the moral and social relations," ays Mrs. Avery. "Socialism defends a code that is either religious nor rational. As a case in point one nay note the address before Congregational ministers n which Mrs. J. Phelps Stokes advocated socialist principles without reserve. For under her treatment religion utterly lost its identity. She exclaims with omething of dramatic force: 'By what right, whether divine or human, am I and my sisters compelled to exhaust body and soul that other human beings may be idle, wasteful, and even destroy their own souls in vicious or thoughtless living?' No right indeed! But his is lacking in logic. If this should be the motive for one's work, that 'other human beings may be idle,' etc., one would thus be a sinner and in grievous need of conviction of repentance and of mending one's ways. This elevated boot is kicking at the wrong fact. It misconceives the character of religion by applying the standard of worldly success to the measurement of Christian grace, since when did religion say that it was a mark of spiritual life to take 'uppermost seats'? For that good men ride in automobiles and that bad men go afoot. As a matter of fact the religion of Jesus Christ is as hard for the rich to practice as for the poor, although for opposite reasons. Now if Mrs. Stokes were as careful of environing 'my sisters' with a moral psychology, as she seems anxious for their material welfare, her defence of the Gorky 'marriage' would not have seen the light of day. But this was a perfectly correct defence of socialist philosophy, and it is by the key notes, or the theme rather, of one's utterance that must give out the understanding as to whether one is for or against national institutions. For quite contrary to socialist theory vanity and lust, not poverty, is the cause of divorce and free love, or if you please the basis of 'socialist marriage.' So not only is the misconduct of some church goers a scandal to the faith in Almighty God, but vastly more so is international socialism which enters the political arena as a means of thrusting out religion and ushering in atheism—or chaos rather. But God is not mocked.

"Our choice is our own, but for those who believe in their home and their country it is worse than folly to support that movement which has for its object the destruction of the family, and the nation. To this end we are pledged, to the analysis of reforms and the revolution."

SOCIALISM ON NEW YORK'S EAST SIDE.

From the Jewish Gazette.

HERE is an interesting news-dispatch which appeared on Tuesday morning in several hundred newspapers throughout the United States:

St. Paul, June 6.—Mrs. Rheta C. Dorr, Chairman of the Industrial Committee of the National Women's Federation, has caused a sensation here by her declaration that in her part of New York, the lower East Side, she did not think she knew "a man or a thinking woman who is not an avowed Socialist or Anarchist."

In one of the several papers in which we saw this item it appeared under the headline:

"ALL EAST SIDERS
ANARCHISTS AND SOCIALISTS."

The statement was made at the convention of the National Federation of Women's Clubs.

Mrs. Dorr, who speaks of "her" East Side, is one of the many "friends" who during the past decade have been intruding into its privacy, destroying its hometies, causing radical and irreconcilable differences of opinion to arise between parents and children, nullifying the influence of Judaism as a code and guide of life upon the younger generation of Jews, training and developing a breed of "higher dependents," prigs and cads, humiliating the self-respect of the East Side Jew, and grinding out her experiences, experiment, researches and discoveries into highly remunerative "copy" for newspaper and magazine articles and books, in company (or is it in competition?) with Robert Hunter, J. English Walling, Ernest Poole, John Martin, Hutchins Hapgood, John Spargo and others too numerous to mention. In other words, she is one of the self-appointed "uplifters" of the East Side who have degraded its good name.

Mrs. Dorr is a well-meaning woman, no doubt. Her intentions are good, we are sure, but the road to the habitat of Satan is paved with good intentions. The road to new Sheol that is being prepared for the refugee from persecution and massacre—the gate of exclusion—has, undoubtedly, been paved for a goodly distance by just such books as those written by the Hunters and Spargoes and by such statements as that made by Mrs. Dorr.

Needless to say, the statement is absurd on its face. Not only is it absolutely false that all East Siders are Anarchists and Socialists, but it is equally absolutely false that any very considerable number are enemies of society or desirous of overthrowing the Constitution of the United States. The facts are quite the reverse; most East Siders are neither Socialists nor Anarchists. Of the latter category there are so few that the proportion could be expressed only in decimal number of the fifth or sixth remove; of the former, the number is variable, according to the improvement of the financial condition of the East Side. As a fact, Socialism is fast losing strength on the East Side.

Of course the lady did not say that all East Siders are Anarchists or Socialists. The unscrupulous telegraph editors and headline writers make that implication. What she said was that she did not think she knew "a man or a thinking woman on the lower East Side who is not an avowed Socialist or Anarchist." We believe her; she met none but these, for the reason that being what she is, an intruder and meddler, she would not meet the thinking Jews and Jewesses of the East Side. She met only the "conscious" and "convinced" of the settlements, and her East Side horizon is bounded by the University Settlement, the College Settlement, the People's Institute and the Corning Clark House. The few Jews and Jewesses whom she may have met are that breed who look up to the "uplifters," and being, in one way or another, dependent upon them, imitate them apishly, and repeat their pater, parrotlike. She did not, could not have met East Siders who represent the heart and spirit of the East Side.

THE WESTERN FEDERATION OF MINERS.

The Socialistic Labor Organization of the West Opposes Trade Union Principles.

AN account of the Western Federation of Miners is presented in *The Outlook* of May 19 by Mr. William Hard, who endeavors to interpret the principles of that organization as expressed through its various channels of operation. The differences between the principles of the Federation and those of most other labor organizations, and in particular of the trade unions, are strikingly presented in a comparison of the Federation, which is composed largely of metaliferous miners in the States west of the Mississippi River, with the United Mine Workers of America, whose membership is confined to coal mine workers. After characterizing the latter as "a business enterprise" and the former as "incidentally a business enterprise but fundamentally a philosophical agitation," Mr. Hard says:

> The United Mine Workers accepts the present industrial system and regards the employer as its partner. The Western Federation of Miners denounces the present industrial system and regards the very existence of the employer as an evil. The United Mine Workers is interested mainly in the division of the proceeds of the present industrial system between itself and its partner, the employer. It wants to increase its own share of the proceeds, and it wants to reduce its partner's share. The Western Federation of Miners, on the other hand, is interested mainly in the elimination of the employer. It wants more wages, of course, but if it should succeed in establishing a scale of even a hundred dollars a day it would still be bound by its principles to spurn the relaxing comforts of prosperity and to nerve itself to a continuation of the struggle.

Referring to the internal policy of the Western Federation and to its attitude toward the trade agreement principle of settling and preventing differences between labor and capital, Mr. Hard says:

> The internal policy of the Western Federation of Miners is consistent with its published principles. The most important part of this policy is an aversion to the signing of contracts with employers. A contract is regarded as a manacle. It binds one union when another union might need its help. Presumably if a contract could be signed by the whole working class of the United States with the whole employing class for the term of a year at a fixed scale of wages, the Western Federation of Miners would not seriously object. But in the absence of such a possibility it seems to the Federation that contracts interfere with the mobility and flexibility of the working class.

In brief, the Western Federation opposes the evolutionary process in the construction of the industrial state and would substitute revolutionary methods for its destruction. It would wipe out in its entirety and by revolution the present industrial state along with all the good it has brought to present-day society, instead of retaining this good through eradicating industrial evils, which can best be done by evolutionary processes. Such socialistic principles (the Federation has openly avowed political action through the Socialist party as the industrial cure-for-all) are fundamentally opposed to all the teachings of history as to the process through which social institutions are best formed. And in consequence they are antagonistic to the orderly and natural development of the broad American social state.

In explanation of the radicalism which prevents the Western Federation of Miners from joining the American Federation of Labor, the central national labor organization with which most American trade unions are identified, Mr. Hard says in part:

> The American Federation of Labor tolerates "craft autonomy." That is, when there are several crafts in the same industry the American Federation of Labor usually allows the members of each craft to maintain their own union, if they so desire. The teamsters, for instance, in the packing industry have a union of their own; and so have the firemen; and so have the carpenters. These men want separate unions, and the American Federation of Labor consents. The leaders of the Western Federation of Miners believe that such a division into crafts is fatal. They demand that labor be organized, not according to crafts, but according to industries.

Since the publication of Mr. Hard's article in *The Outlook* the Western Federation of Miners has held

its thirteenth annual convention at Denver, beginning May 28. In their accounts of the convention the Denver newspapers report that 175 delegates were in attendance compared with 300 and 400 delegates in former years. The Denver *Republican* states that "as the roll call of unions progressed it was announced many times that there was no representation." Official reports to the convention, however, stated that a considerable number of unions had joined the Federation since the incarceration of three of its officials in the county jail at Boise, Idaho, for alleged complicity in the assassination of former Governor Steunenberg of Idaho. Among these officials are the President of the Federation, Mr. Charles H. Moyer, and the Secretary, Mr. W. A. Haywood.

This Denver meeting has resulted in a serious split in the Federation over Socialism. It came about through a dispute as to the seating of delegates of the Butte union, the latter being the founder of the Federation as well as its strongest union. The convention seated two members from the Butte union whom the latter had repudiated as delegates because of their Socialistic belief, the Butte union having strongly opposed Socialism. Seven of the thirteen delegates from the Butte union immediately "bolted" the convention and refused to take part in its proceedings.

IMMIGRATION RESTRICTION ORGANIZATIONS.

Objects of the Junior Order United American Mechanics, the Immigration Restriction League, and the Japanese and Korean Exclusion League.

THE recent remarkable growth in the number of immigrants annually coming to the United States has seemingly given an impetus to the activity of those organizations in this country which have to do with the restriction of alien immigration to our shores. These organizations have of late directed much of their influence toward the halls of Congress with the view of securing additional restriction legislation, and are also renewing their efforts along the lines of educating the public to their view of the situation. For the purpose of indicating the objects and principles of these organizations information is presented in this article as to the Junior Order United American Mechanics, the Immigration Restriction League, and the Japanese and Korean Exclusion League. These are not the only organizations that favor additional immigration restriction, as such a policy is endorsed by labor organizations and others, but to our knowledge they are the only ones organized for this definite and distinct purpose.

The constitution of the Immigration Restriction League states the objects of that organization to be as follows:

> The objects of this League shall be to advocate and work for the further judicious restriction or stricter regulation of immigration, to issue documents and circulars, solicit facts and information on that subject, hold public meetings, and to arouse public opinion to the necessity of a further exclusion of elements undesirable for citizenship or injurious to our national character. It is not an object of this League to advocate the exclusion of laborers or other immigrants of such character and standards as fit them to become citizens.

Since the organization of the League in 1894, among its most important activities have been those directed toward embodying in legislation what is known as the educational test. In 1895 it prepared what later became known in Congress as the "Lodge bill," which provided, among other things, for an addition to the excluded classes of "all persons between fourteen and sixty years of age who cannot both read and write the English language or some other language." This bill passed both Houses of Congress, but was vetoed by President Cleveland on March 2, 1897. The League's bill was reintroduced in the Fifty-fifth and Fifty-seventh sessions of Congress, the language of the excluding clause being changed to read as follows: "All persons over fifteen years of age and physically capable of reading who cannot read the English language or some other language; but an admissible immigrant or a person now in or hereafter admitted to this country may bring in or send for his wife, his children under eighteen years of age, and his parents or grandparents over fifty years of age, if they are otherwise admissible, whether they are so able to read and write or not." So far the League's educational test has not been embodied in legislation. The League's other activities include tests made in New York City as to the illiteracy of Hebrew immigrants and the recent conduct of an inquiry as to the need in the South of immigrant labor. Its headquarters are in Boston, and its Secretary and Treasurer is Mr. Prescott F. Hall.

Another out-and-out immigration restriction organization which, however, confines its activities to the problem as presented by Oriental countries, is the Japanese and Korean Exclusion League, with headquarters at San Francisco. This organization has been in existence a little over one year, but it was only on May 6, last, that its principles were formally enunciated in the preamble to a constitution. This preamble sets forth the principles of the League as follows:

> Two unassimilable races can not exist perpetually in the same territory. Contact between such races results in the extermination of that one which, by reason of its characteristics, physical or mental, is least adapted to the conditions of life prevailing in the given territory.
>
> The conditions of life are, in the last analysis, determined by the conditions of labor. Consequently, the question of adaptability, as between two unassimilable races, must be resolved in favor of that race the characteristics of which most nearly conform to the conditions of labor.
>
> The labor of to-day in the United States is a machine, as distinguished from a manual, process. That race, therefore, which by its nature is best suited to complement the machine, as the essential factor of production, is in that respect the superior race, and therefore best adapted to the conditions of American industrial life.
>
> The Caucasian and Mongolian races are unassimilable. Contact between these races must result, under the conditions of industrial life obtaining in the United States, in injury to the former, proportioned to the extent to which such contact prevails. The preservation of the Caucasian race upon American soil, and particularly upon the Western shore thereof, necessitates the adoption of all possible measures to prevent or minimize the immigration of Mongolians to the United States.
>
> With these principles and purposes in view, we have formed the Japanese and Korean Exclusion League, and we urgently invite the active co-operation of all American citizens, to the end that the soil of the United States may be preserved to the American people of the present and all future generations, that they may attain the highest possible moral and material standards, and that they may maintain a society in keeping with the highest ideals of freedom and self-government.

Mr. Walter Macarthur was the representative of the Japanese and Korean Exclusion League, as well as of the State of California, at the immigration conference of The National Civic Federation held in New York City last December.

The Junior Order United American Mechanics, "a loyal, patriotic organization, fraternal and beneficial, strictly non-partisan and non-sectarian," claiming to have 1,600 subordinate councils and over 200,000 members in forty-one States, presents the following in its declaration of principles regarding immigration:

> We recognize the landing upon our shores of the ignorant, the vicious and the lawless of the old world as a constant menace to our institutions, and believe that it should be viewed with alarm by the loyal and patriotic citizens of the entire country.
>
> We announce an honest welcome to all immigrants who come hither seeking to better their condition and intending to become earnest and law-abiding citizens of our country. But we maintain that there is no room in this land for the anarchist, the nihilist or the escaped criminal, or for any one who is not willing to pledge allegiance to our flag and nationality, and to place the allegiance due it above that conceded to any other power, civil or religious. We know our flag to be powerful enough to shield and protect them as well as us in the exercise of both civil and religious liberty.

First place among the four objects of the Order is given to the following: "To maintain and promote the interests of Americans, and shield them from the depressing effects of unrestricted immigration; to assist them in obtaining employment, and to encourage them in business." No applicant shall be eligible to membership in the Order except he be "A white male citizen of the United States of America, born within its then territory or domain, or under the protection of its flag."

For the conduct of a campaign, principally along educational lines, designed to bring about remedial legislation relative to naturalization and a further restriction of immigration, the Order the past year placed in the hands of its National Legislative Committee the sum of $50,000 and appointed a special committee, with headquarters in Washington, to carry on this work in charge of Mr. Jesse Taylor, of Jamestown, O., as its secretary. This committee aims to secure the co-operation of all fraternities, societies and organizations interested in the work. Through this committee the Order prepared a bill (known as House bill No. 17491) which has been reported to the House from the Committee on Immigration and Naturalization. Its general purpose is the restriction of immigration, and it embodies an increase of the head tax, an educational test, heavier fines on steamship companies for violations, more rigid inspection of immigrants, etc. Within the Order there has recently been organized a permanent immigration restriction league.

"TAKE YOUR CHOICE."

From the American Federationist.

NO DOUBT some of our readers have heard thoughtless assertion that certain labor m in the Civic Federation truckle to the e ployers and other men of means, who also are me bers, and these labor men have for that reason be urged to quit that association. Of course, those w know could not very well take issue on the question a do not now. But because that side has been frequen urged and coming upon another view which has be recently published, it is believed that it also will pro "mighty interestin' readin'." The great love (?) whi the Post-Parry Citizens' Alliance has for trade unio and trade unionists is well known. That conglomer tion, impregnated with the virus of trade unio phobia, publish a weekly sheet which they misname t *Square Deal*. In that publication they print an editori which we republish for the benefit of all whom it m concern. It is as follows:

"We quote from a press report of the last nation convention of the United Mine Workers, held in I dianapolis, the following beautiful tribute to the Civ Federation, from the lips of John Mitchell:

> Referring to The National Civic Federatio of which he is a member, President Mitche declared that his association with the gentle men composing that organization had alway been turned to the advantage of the Unite Mine Workers. The Civic Federation, he sai was composed of twelve honorable gentlemer who were themselves employers of labor. Th cardinal principles of the Civic Federation wer to maintain friendly relations with organize labor. This organization favored the trad agreement, and in recognizing the trade agree ment had recognized organized labor. "True," he said, "it has men like Eliot, but if we al thought alike there would be no organized labo and no mine workers' organization. There would be no necessity for them." Presiden Mitchell was warmly applauded when he concluded.

While we and other observers must agree with Mr. Mitchell that the Civic Federation is the most useful ally the closed-shop unionists have, we are rather inclined to think that he was "feeling his oats" overmuch when he boastfully proclaimed the fact. Doubtless the most politic Samuel Gompers was filled with chagrined apprehension when he read this ingenious utterance, and realized that it was a most indiscreet exposure, menacing the continued existence of the tinhorn trust of which he and Mitchell are the chief engineers. For Mr. Gompers knows, as Mr. Mitchell ought to, that the Civic Federation can be useful to the labor grafters' guild only in so far as it can make the public believe that it is intended to secure square and fair dealing between the unions and the rest of the world, that it will lose all influence just as soon as the public finds that it is merely the facile instrument in the hands of the closed-shop combine.

That it is that facile instrument in the conspiracy against the free workingmen of America has long been apparent to those who have studied its methods or thoughtfully read its magazine, or who know that in its action the wishes of Gompers and Mitchell are always first consulted and made the governing rule by its executive manager.

There are many good men and true on the various boards and committees of the Civic Federation who owe it to themselves to see that the absolute domination of the labor trust leaders, which makes that organization their creature, is done away with, so that the other side shall at least have a hearing. If they can not accomplish this they should resign. The Federation is doing business under false pretenses. The cunning of Gompers and Mitchell have brought this about. It registers their will and gives the weight of its influence only as they demand. Can any member of the Federation point to a single instance where its action in connection with labor questions had not been dictated by Gompers and Mitchell?

Do not the good men and true—honorable, broad-minded Christian gentlemen, like Dr. Eliot, John H. Patterson, and others, who are advertised as among its official membership, and whose names give it weight; do not these gentlemen know that when a labor question or proposition concerning the relations between employers and workingmen is presented to the executive manager of the Civic Federation his first question is whether it has been put before Gompers and Mitchell, and as to what they think of it, with, when necessary, the positive declaration that nothing will be done by the Federation without the approval of these two men? If these good men and true do not know this, it is time they learned it, for it is a fact well known to others.

The names of the many eminent and patriotic Americans on the official list alone give the Civic Federation weight and influence. That weight and influence is used to promote the conspiracy against the free workingmen of America, at the head of which conspiracy are Gompers and Mitchell.

Would it not be well for these well-meaning persons who have been used by Gompers and Mitchell as stalking-horses to look into things a little?"

The National Civic Federation Review

PUBLIC OWNERSHIP COMMISSION AT NEWCASTLE-ON-THE-TYNE

THE PUBLIC OWNERSHIP COMMISSION IN GREAT BRITAIN.

IMPORTANT CITIES VISITED, PLANTS INVESTIGATED, OFFICIALS AND EXPERTS INTERVIEWED, AND AN OUTLINE OF THE INVESTIGATING COMMITTEE'S FUTURE WORK.

FIFTEEN members of the Committee on Investigation of the Commission on Public Ownership and Operation of The National Civic Federation, who sailed for Europe on May 22, having completed their work abroad, returned to the United States in August. Their investigation in European cities was facilitated by the itinerary having previously been arranged by Messrs. Maltbie and Sullivan, two members of the Commission, who, with eight experts, had preceded the Investigating Committee three months. The members of the Committee began their work at Dublin and concluded their labors at London.

In all their examinations the Committee consulted with the engineers and accountants. Not only did these technists accompany the Committee upon its visits to the many plants inspected, but they were also engaged—in pairs, the one the nominee of the "pro," the other of the "anti" members—in completing the critical examination of the plants coming under their respective jurisdictions. These experts were: Street Railways—Norman McD. Crawford, of Hartford, Conn.; Gas—J. H. Woodward, of London, J. B. Klumpp, of Germantown, Pa., and Wm. Newbigging, of Manchester; Electric Lighting and Power—A. E. Winchester, of South Norwalk, Conn., and J. B. Klumpp, Messrs. E. H. Turner, of Manchester, and Robert C. James, of Wallingford, Pa., were the accountants.

Labor conditions in the plants chosen for investigation were studied by Prof. John R. Commons, of Wisconsin University, and J. W. Sullivan, Editor of the Clothing [illegible] Bulletin of New York. Legislation and franchises were studied by Milo R. Maltbie, of New York.

The data these experts were required to obtain had been indicated beforehand in very comprehensive schedules, described in the April number of THE NATIONAL CIVIC FEDERATION REVIEW. The committee will be largely guided by these and the American schedules in framing its final report.

The cities visited and the class of plants examined by the Committee were as follows:

Dublin — Street railways, private.

Glasgow—Street railways, public; electric, public; gas, public.

Newcastle-on-Tyne—Electric, private (two companies); gas, private

Manchester — Electric, public; street railways, public; gas.

Leicester—Gas, public.

Sheffield—gas, private.

Birmingham—Gas, public.

London—Electric, public and private (five plants); street railways, private (two plants); gas, private.

Liverpool—Electric, public; street railways, public.

Norwich—Street railways, private.

At Glasgow the Committee's work was especially promoted by the fact of its having the very friendly cooperation of so noted an exponent of municipal ownership as Manager Dalrymple of the City's Tramways. At London similar assistance was rendered by Sir Clifton Robinson, whose interests in private companies is not exceeded by those of any other man in Great Britain.

Hearings were held at London, at which leading exponents of company management were heard. Among those who attended these hearings were Lord Avebury, Mr. Sydney Morse, President of the Chamber of Commerce; Mr. Emil Garcke, of the Industrial Freedom League; Mr. Dixon H. Davies, Solicitor to the Great Central Railway; Mr. Wm. L. Madgen, and Mr. Robert P. Porter, of the London *Times*. The principal exponents of municipal ownership were also heard. Among the latter were Mr. T. McKinnon Wood, leader of the Progressive party of the London County Council; Mr. J. Allen Baker, Chairman of the London Municipal Tramways; Mr. Robert Donald, Editor of the *Municipal Journal* and Managing Editor of the *London Daily Chronicle;* G. W. Spencer Hawes, Member of the Institute of Electrical Engineers.

From the very beginning great interest was manifested in the work of the Commission. Boards of trade, private companies, city governments, labor leaders, members of Parliament, officials of the Imperial Government, representatives of ratepayers' associations —all seemed interested, and every facility was placed at the command of the Committee.

The general sentiment was that the report of the Commission should be of no less value to the people of Great Britain and Ireland than to the people of America. The fact that so many men drawn from different walks of life, and of such diversity of opinion, could be gotten together and dispatched upon so important a mission, was much commented upon, as was the further fact, that they had set out to determine the actual conditions in each case, by employing a corps of engineers and accountants. In short, the Commission and its sponsor, the National Civic Federation, were warmly commended for having undertaken a work of such manifest importance to cities.

Upper Row (from left to right)—John R. Commons, J. H. Woodward, R. C. James, Wm. Newbigging, Milo R. Maltbie.
Lower Row (from left to right—E. H. Turner, Albert E. Winchester, Norman McD. Crawford, J. W. Sullivan, J. B. Klumpp.

BRITISH AND AMERICAN EXPERTS ENGAGED IN THE INVESTIGATION.

The Committee was entertained by the Lord Mayor and other officials of London, the Lord Provost and heads of departments of the Glasgow city government, and by the several other cities visited. A dinner was also given by the Association of Tramways Managers of Great Britain and Ireland, and a luncheon by Mr. Alfred Mosely. The Hon Whitelaw Reid, Ambassador to the Court of St. James, also entertained the Committee at luncheon. Not only were these affairs highly enjoyable from the social standpoint, but, through the speeches and conversations, they also proved to be the source of much valuable information.

The Future Work of the Committee.

The last meeting held in London adopted a resolution outlining a plan for the accomplishment of the remaining work of the Committee. This resolution provided:

That a schedule be completed copies of same to be promptly furnished members of the Committee; that Dr. Maltbie prepare a history of parliamentary action in relation to the municipal utilities under investigation; Prof. Goodnow, a report on political conditions in the municipalities of the United Kingdom as compared with such conditions in the United States, same to include a discussion of the relation of said political conditions to public and private operation of the particular municipal utilities; Profs. Bemis and Parsons, and Messrs. Walton Clark and Edgar, either jointly or individually, such statements for the plants investigated here and abroad; that the schedules for each plant be collated in a clear, concise statement for the use of the Committee in drafting its report; that the officers of the Committee prepare a general statement of conclusions and recommendations that may be used as a basis of discussion and adoption with such emendation as the Committee may order, etc., etc.

In this country the work of investigation is almost completed. The cities that have been visited are: Wheeling, Allegheny, Indianapolis, Chicago and South Norwalk; a number of other cities have been examined by the experts and by members of the Committee whose work has been specialized. The experts employed in the American investigation are: Gas—Fred C. Burnett, of Toronto, and A. E. Forstall, of New York; Electric Lighting and Power — C. E. Phelps, Jr., of Baltimore, and Theo. Stebbins, of Columbus, Ohio; Water — Dabney A. Maury, of Peoria, Ill.; Accountants— Marwick, Mitchell & Co.

A report upon the Massachusetts method of regulating the electric lighting industry is being prepared by Alton D. Adams, of Worcester, and C. I. R. Humphreys, of Humphreys & Glasgow, New York.

Expert work, not technical in character, in relation to the plants selected, is being performed by Prof. John H. Gray, of the Northwestern University; and Walter L. Fisher, of Chicago, has prepared a report upon the history of the municipal lighting plant of that city; Prof. Leo S. Rowe, of the University of Pennsylvania, has made a similar report on the gas question in Philadelphia. The special investigation of labor conditions is now being completed by Prof. Commons and Mr. Sullivan.

Cleveland, Philadelphia, and one or two other large cities will be visited by the Committee shortly. The subcommittees provided for in the resolution referred to will then complete the duties assigned to them. This will be followed by one or more meetings of the Committee, at which its report will be drafted.

At the present time the work of collating the matter contained in the completed schedules—the data gathered by the experts—in such a way as to make its assimilation more easy, is now being proceeded with.

It is expected that the Committee will be ready to report to the entire Commission about the first of the year.

As the trade agreement has been found to be one of the most important factors in maintaining industrial peace and stability, and in giving the unions a standing which enables them to take part in determining wage rates and shop conditions without continual recourse to strikes and the expenditure of large sums for carrying on an industrial warfare, it is most essential that they should indicate a determination to at all times comply with the terms of their contracts.—*Iron Moulders' Journal*

PROBLEMS PRESENTED BY INCOMING ALIENS.

STATISTICAL INFORMATION IS CALLED IN QUESTION BY WELL-KNOWN EXPERTS AT THE FEDERATIONS' CONFERENCE ON IMMIGRATION.

STATISTICS generally accepted as representing the facts as to many phases of the immigration problem came in for a vigorous and searching analysis by experts in this branch of knowledge at the annual meeting of the Department of Immigration of The National Civic Federation held at the Park Avenue Hotel in New York City on September 24. All "sides" of the immigration issue, including the two most radical views, were represented, and as a result of the analysis of statistical tables there was a general feeling among those attending the conference, many of them from widely separated sections of the country, that the first and most important work to be undertaken by the Federation's new Department was the correction of much of this alleged statistical information. Franklin MacVeagh, of Chicago, Chairman of the Immigration Department, presided at the meeting. Following the general session there were separate meetings of the seven committees of investigation which are charged with the direction of research work.

Mr. Prescott F. Hall, Secretary of the Immigration Restriction League, in an extended discussion at the general session of the immigration bills now before Congress, alluded as follows to the lack of information: "I think all who have studied this subject for any length of time feel very much the scarcity of accurate statistics on the immigration question. I certainly do. And it is one of the very encouraging things about the formation of this Department that we can

MR. PRESCOTT F. HALL
Secretary of the Immigration Restriction League.

hope after a time to get more accurate and reliable statistics. Until that time we have, of course, to take such as we have for what they are worth."

After emphasizing the need and pressing demand for legislation that would further restrict immigration, Mr. Hall analyzed in detail the various sections of measures now pending before Congress. He justified an increase in the head tax, proposed by the Senate bill, from $2 to $5, on the ground that there was need for more money to carry out efficiently the work of the Immigration Bureau. Among improvements in the service needing more money, he referred to better facilities for inspection, additional expenses for the distribution facilities proposed, the cost for medical inspection abroad, better paid and more inspectors, the district-attorneys' offices in enforcing present immigra- stations at Southern ports, additional appropriations for district-attorneys' offices in enforcing present immigration laws, the expense of further and more complete statistical investigation and reports, and the need of more money to meet the cost of deportation. In addition to these proposed expenditures justifying an increase in the head tax, Mr. Hall stated that there is the practical argument that if we are interested at all in the reduction of the amount of immigration, an increase in the head tax will have an effect in that direction.

The clauses referring to the excluded classes were discussed and endorsed by the speaker, and the stimulation of immigration was denounced. In this latter connection Mr. Hall said: "The flow of immigration is not entirely normal and is not the natural seeking of our shores by the immigrant, but to a certain extent, and to a large extent, I believe it is artificially stimulated. If that is so, there is more reason why we should on this side take steps to stiffen our existing laws, because the steamship companies will take any person whom they can possibly get through. If we stiffen up our laws they will be driven to seek a better class of immigrants and, therefore, the theory of the present laws, i.e., that the steamship companies practically enforce them, will be carried out more in the way in which it was originally intended to be carried out." The additions to the excluded class provided by the Senate bill include those suffering from tuberculosis, feeble-minded persons, persons of poor physique, children under seventeen years of age unaccompanied by parents, and "any person whose ticket or passage is paid for with the money of another person, or who is assisted by others to come." Of this last provision Mr. Hall said: "Under the present law any friend or relative may send for an immigrant. The object of this clause is to limit the privilege of sending to such persons as are under some legal or moral obligation to support such immigrants after they arrive. It is estimated that upward of fifty per cent of the present immigration is assisted. The effect of this is that a lot of persons come who probably would not come except for that assistance, that is to say, in many cases the more energetic and serviceable members of a family come over, and after getting a footing here, they send for their friends and relatives who probably would not be able to come alone. It goes without saying that a class which is obliged to be assisted to come cannot be the equal of a class which would come of its own accord, and the class of assisted individuals includes a great many persons who sooner or later come upon the public for support in various ways."

Referring to the section relating to the subject of fines upon steamship companies, Mr. Hall said: "Under existing laws a penalty of $100 is imposed upon the steamship lines which bring over immigrants suffering with a loathsome or dangerous disease, if it could have been ascertained at the port of departure that they had that disease. The proposed laws impose fines upon steamship companies in certain additional cases, namely, if they bring idiots, imbeciles, feeble-minded and insane persons, or epileptics. The theory, as I said, of the present law is that the rejection of aliens at the ports on this side will not of itself be a sufficient inducement to the steamship companies to examine immigrants carefully at the port of embarkation or at the time they purchase the tickets. Experience, however, shows that the steamship companies will take everybody that can possibly pass muster, and that in fact they bring numerous diseased persons. This fine was put into the act of March 3, 1903, with the object of stopping that practice as to diseased persons. But in 1904 $31,000 in fines were collected from the steamship companies under this section, and in 1905, after a year's experience, $27,300 in fines were collected, and the Commissioner-General's report for 1905 of the number of diseased persons brought in by the steamship companies shows that this provision, as it stands in the law of March 3, 1903, is not adequate to accomplish the purpose for which it was intended, as there was an increase of forty-one per cent in the diseased persons brought over the previous year. The object of the section in the proposed measure is to extend the classes which the steamship companies should be obliged to weed out."

As to the demand for labor throughout the country, Mr. Hall stated that, while it is true we need more farm laborers in various sections of the country, the same is true with farm labor in England. "It is not purely an American matter," he said, "for in some parts of Europe it is the same. It arises in the United States from the seasonal character of the work. Immigrants are desired a few weeks of the year to harvest the crops, and the rest of the year there is nothing to do, so that the total rate of wages during the year for agricultural work is less than for contract work in the large cities. As long as that is the case it will be impossible to get immigrants to remain permanently in the farming regions. The kind of immigrant who will go to those regions and take his family there and settle there, and who has some means, and who will permanently take up land there, is the kind desired in the various States. That is not the kind we are now receiving to any extent.

"My friend, Prof. Willcox, has recently published an article in which he attacks the proposition that there is a tendency of recent immigrants to congregate in the city slums. I do not consider myself competent to discuss that question without a great deal of study, but I would like to point out that for present purposes of restriction it makes very little difference whether the tendency to settle in the slums is a tendency of persons who come here to remain, or whether it is a tendency to be found there. If you have a large stream of immigrants passing through your large cities there will be an excess of certain kinds in the city all the time. For the purpose of relieving that condition and of considering the question of purely exclusion and restriction, it makes, to my mind, very little difference whether there is in fact this special tendency to stick to cities. The eastern seaport cities will in such a case be overcrowded by a certain class of immigrants in any event."

While approving of medical inspection abroad and the employment of secret service agents, Mr. Hall stated objections to Consular inspection of immigrants. He approved heartily of the proposed educational test in the measure now before Congress. He said that the purpose of this illiteracy test is not at all based upon the view that a man is necessarily a better immigrant because he can read and write, but that, as a matter of fact, statistics show that the class that can read and write is on the whole a better class than that which cannot. He stated that the illiteracy test would not necessarily cut down the volume of immigrants, but that it might do so; it would, however, tend very much to raise the quality; and "if one million

MR. NATHAN BIJUR
Vice-President of the United Hebrew Charities.

immigrants a year are sufficient for us, why not get one million of the best instead of one million less good It is not merely a question of suffrage, although that enters into it, but it is a question of assimilation, as an immigrant who can read has many channels of assimilation open to him which a man who cannot read doesn't have."

Besides the Senate bill there is also before Congress what is known as the Gardner bill. The two are somewhat similar, although the House bill contains one or two provisions not in the Senate bill. One of these defines still further a class of immigrants designated as those "liable to become a public charge," and provides for a money test. This was approved by Mr. Hall.

In calling attention to a number of diagrams reflecting statistical information as to the effect of past immigration, Mr. Hall referred to illiteracy, stating that in 1905 the native white population had an illiteracy of 4.6 per cent; foreign whites of 12.9 per cent. "In other words," he said, "immigration to a certain extent tends to keep people illiterate in this country. Illiteracy has been going down, but it has not been going down as fast as it would if we had had an illiteracy test for immigrants in the last fifty years. One-fifth of those in the country at the present time cannot speak English."

Mr. Hall showed diagrams which aimed to present facts as regards crime among native whites of native parentage, foreign whites, and native whites of foreign

parentage. One diagram referred to juvenile prisoners compared with the population of school age, and another showed the male prisoners per million of voting age in 1890. In commenting upon these diagrams Mr. Hall said: "You observe that to a certain extent the children of foreign-born parents are more criminal than immigrants themselves. That means, for a generation or two at any rate, not only is there a great burden upon our penal institutions, but it takes a little while for these unfortunate tendencies to be eliminated. It may be by the fifth or sixth generation this phenomenon will disappear, but for the time being it is in full force, and as immigration is keeping up and increasing, we have that problem constantly before us. That the children of immigrants are more than twice as criminal as the immigrants themselves is due in part to the fact that the immigrants coming into a new country have very often got into hard circumstances and are very largely less favorably situated than the native element. But at the same time, no matter what the cause, the facts remain that they are here and that they constitute that burden.

"In regard to the insane a census bulletin recently issued shows that the foreign-born furnish one and three-quarter times their normal proportion of insane. And another census bulletin shows they furnish three times their proportion of paupers. The fact that the immigrant is a large and increasing burden upon our institutions is evidenced by the testimony of those who come in practical contact with them, namely, the charity organizations. I have recently been in correspondence with the Boards of Associated Charities throughout the country, and I have here a list of endorsements of this Senate bill from widely scattered communities. California, the South, the middle States, and the East alike favor this measure.

"There is one thing upon which my opponents and I can agree, and that is, that we want to get down to definite facts and not rely upon [illegible] and generalizations. We do not want to argue that, because railroad dividends are high, there is no use in excluding laboring people. We have so far got a certain body of statistics together, such as they are. If they are not correct, we want to improve upon them.

"A great deal has been said about the traditional policy of this country, and just to remove a possible misunderstanding about that I would like to revert to the fact that at the very beginning of this country the people who founded it—Washington, Jefferson and Madison—were all strong restrictionists. As far back as 1826 the State of New York passed a law restricting immigration. Several other States passed laws restricting immigration about the same time. In 1882 the Federal Government took up the subject and since that year has been continuously strengthening the immigration laws. Now, if by a traditional policy is meant the policy of doing nothing, I maintain that that is not the true fact. Our traditional policy has been that of wise and conservative action in regard to such elements as we allow to come in and that is the present status of things to-day. We now exclude sixteen classes of people, and the present Senate bill is not something new of itself, although some of its provisions are new, but is an act calculated to carry out just what the original immigration act of 1882 was passed to accomplish. The present law does not accomplish it. There have been loop-holes. The act of 1891 stopped some. The act of 1893 stopped others. The act of 1903 was still better, but if the Senate bill now pending were to be passed, it would do nothing more than what was originally proposed in the act of 1882, as shown by the debates in Congress. We already have had one elaborate investigation into this subject—that of the United States Industrial Commission—who through its experts have made careful investigations up to the time of publication of their report. We need further data, but to my mind there is no reason for delay in passing what has been characterized as the very mild and moderate measure of these bills. We can at least do that. Then we can study further and see whether anything more is desirable."

THE NEED OF FACTS AS REGARDS IMMIGRATION.

Representative of the United Hebrew Charities Points Out Reasons for Questioning Our Present Immigration Statistics.

NATHAN BIJUR, Esq., Vice-President of the United Hebrew Charities, said that in his study of the question of immigration the first thing that confronted him was the absence of accurate and complete statistics. He said he could not understand how men could draw conclusions and be willing to advocate legislation based upon such conclusions, when at the same time they admit that they have not the facts adequate to the forming of conclusions.

"The question of immigration," he said, "if it be analyzed, I suppose in the last stage comes down to this: Are we getting any benefit, or are we getting any harm from immigration? Not do 16,000 diseased people come to our shores in thirty-six years, because, of course, if you have immigration, you will have diseased immigrants. The specious claim that fifty per cent of the immigrants that come in here are 'assisted' does not impress me a bit; because four-fifths of the whole population is assisted since we have about one male wage-earner to every family of five. There is nothing startling about any statement of that sort when you come to analyze it. If this statement is intended to convey the impression that fifty per cent of the present immigrants are paupers and are 'assisted' to come over by other persons than their relatives,—it is a base calumny. The question is, What has anybody now to present in the way of facts bearing on the benefit or the disadvantage to the country of immigration and of to-day's immigration in particular?" Mr. Bijur said that the only arguments that survived even superfical scrutiny were generalizations like the reference to the competition of the immigrant with the American workingman, and the fear that something might happen some day if the present immigration continues. He referred as follows to some of the more current statements against immigration: "First, we are told that the immigrant is dependent upon public support in greater ratio than any other part of the population. Now, it would not be surprising if he were, because the immigrant is a poor man. He comes here from other countries to improve his condition. He, of course, occupies the lowest financial stratum of the social structure. That is, he is doing the hard work. Of course, you expect to find among the poorest people the greatest amount of dependence. That is nothing wonderful. I know, everybody knows, that the poor are more dependent than the rich. If you want to abolish poverty, take that up, but do not mix up social problems and say they have something to do with immigration unless you think that by keeping out all immigration you won't have any more poverty. I do not think that the experience of any country has brought out facts that would justify any such inference. If you find that the immigrant is more dependent than the rest of the population I should say that would be a very natural thing. But do you find him so dependent that it is really something startling? Do you find him so dependent that you think he is unduly dependent and that you are getting what is known as a pauper class?"

Mr. Bijur referred to the report of the Bureau of Immigration for 1904 purporting to show the relative proportion of foreign-born and natives in the charitable institutions of the United States, the proportion being 30 "alien" dependents out of each 1,000 alien population compared to 5 out of 1,000 of the naturalized and 2½ out of 1,000 of the native. In commenting upon this, Mr. Bijur says: "That statement has gone through the entire literature of immigration statistics, and it is absolutely a baseless statement. It has not the ghost of a foundation and never had. The first crucial trouble is that it does not define aliens. It is generally understood as referring to people who have been here only five years. It does not say how these statistics were taken which gave the figures 30,000 alien dependents, but I made investigation of both those figures. Now, remember, this is the very basis on which it has been charged repeatedly that the present immigrant is distinguished from the immigrant who came here and was so desirable in the thirties, forties and fifties—and that the present immigrant is so undesirable. Let us see. The census of 1900 shows that there were but 1,000,000 males foreign-born of voting age in the United States unnaturalized, and that is the same number as the 1,000,000 aliens with which the Bureau's report compares the 30,000 alien dependents. In other words, the report referred to has only as many aliens with which to compare the body of dependent aliens with as there are males of voting age, foreign-born, not naturalized, or what we might call political aliens. On the other hand, this 30,000 of alien dependents is made up of men, women and children, and is made up of men, women and children who have been in this country all the way from five to seventy years, as the report of the New York State Board of Charities for 1905 plainly pointed out. They took nine hundred and thirty-nine cases of inmates in the almshouses which were tabulated by the Commissioner-General of Immigration and they found that five hundred and forty-four of these were women and that more than seventy-five per cent of all the cases in the almshouses tabulated in the government report had been in the country five years, and some forty, fifty and sixty years.

"But suppose the figures were correct; suppose someone had been able to get statistics about the whole body of persons in this country less than five years and had found that the people who had been in this country less than five years were more dependent than all the rest of the people. That is of no practical importance at all. The question is, Are the people who

OFFICERS OF THE IMMIGRATION DEPARTMENT OF THE NATIONAL CIVIC FEDERATION.

have come into this country during the last five years more dependent than the people who came into this country at some other period were during their first five years. It is not pertinent to compare the present condition of people who came here during the last five years with that of people who came here thirty years ago, and who, I hope, now are millionaires. The fact is that the people who came in during the last five years have not had their chance yet. Give them a show. In other words, that whole statement which through repetition has spread broadcast throughout the country the impression that the present immigrant is more dependent than the immigrant who came in the past, is just nothing."

In commenting upon statistics of crime, and in particular as to male prisoners per 1,000,000 of voting population in 1890, Mr. Bijur said: "Now, remember, to begin with, the immigrant is generally over fourteen years of age. The large proportion of immigrants is grown-up. The proportion of children among the immigrants is very much smaller than among the general population. And remember also that the proportion of crime is very much larger among grown-up people than it is among children. Now then, when you find that there is a greater criminality among the immigrants than there is among the rest of the people, that must be so; it follows, as the night the day, that criminality among immigrants must be in higher proportion than with the rest of the population—just assuming the immigrant is like we are.

"Again, what are the crimes included in your statistics? Have you, as was done with some Massachusetts data, excluded crimes arising from drunkenness, so that the immigrant of 1860 should seem to be more law-abiding than the present incomer? What are the 'crimes' for which juvenile prisoners were convicted? Were they the kind of 'crime' for which the children of the poor are always convicted—the petty offenses of throwing banana skins on the street, and of breaking windows in play—all such offenses that go with a poor population. Yes, we know it is that. Moreover, you would expect to find a greater ratio of crime among the poor than among the rich. You are not discovering anything when you discover those things. You are not getting one whit further than the old story that the immigrant is poor,—in fact, he would probably not come here if he were not poor.

"Now, the other side of the picture—the value of the immigrants to the country. To bring up 1,000,000 people to the age of the immigrants coming to us each year would admittedly cost over five hundred million dollars. We are getting five hundred million dollars annually brought to the country through immigration. Does any one pretend that the criminal and dependents among the immigrants cost us five hundred million dollars annually? If we are going to work with statistics, if you think this question can be solved with statistics, then let us have them all. Let us have both sides of the picture. Then, how about the consumption? There are 1,000,000 immigrants and they are consumers; they are not all dependents; they are not all in the almshouses and the prisons. And as consumers they are adding more to the prosperity of the country. Has anybody figured on that? No. No one bothers about that. Here is a daily growing home market which puts into the shade all our eagerly-sought and dearly-bought foreign markets.

"Now, what I hope will be done by this Department of the Federation is that it will gather together all the facts, such as they are, the best statistics available from everywhere and put them down and say: 'Well, so far as we have been able to gather anything, this is what we know,' and then let us sift them and see how reliable they are. When we find a government report which does not mean anything, say so, and say why. When we find statistics of crime which have left out certain classes of criminals, let us say so. Show what the difference would be if they were put in, and go on through and collect all these things and put to the credit of the immigrant all the facts that are to be put to his credit, as well as charge him with all the things that ought to be so charged. Now, that has not been done by anybody. Everyone who has discussed this subject has discussed it from the point of view of the advocate. Let us formulate great general facts. We can formulate a general line of facts based upon fair statistics. Although, of course, we can probably never have statistics isolated and correct in this topic like the ascertained facts in physiology, in chemistry, in geology and in other more or less exact sciences and subjects. I have not had my statement challenged yet, that up to date there have been no arguments to present against our present immigration based upon reliable data."

ASSIMILATION AND IMMIGRATION.

Professor Willcox Calls Attention to Important Phases of Statistics of Crime.

PROF. WALTER F. WILLCOX, of Cornell University, whose analysis and explanation of census statistics has made him one of the leading statistical authorities in the United States, said he felt disposed to accept the principle that the presumption on this question of immigration is in favor of the traditional policy of the country. "The burden of proof," he contended, "must be held to rest with the other side. I believe this for the reason that our policy has worked so well in the past, both for this country and other countries. If we go back, say two or three hundred years, the right to change one's place of residence according to one's judgment of the advantages or disadvantages was not a recognized liberty of the individual. That liberty has gradually established itself in the countries of Europe and in the United States. I take it that no country has done more to establish that liberty than has the United States.

"Now, what about the results of that policy? It seems to me one may say, very briefly, that about one hundred and fifty years ago the population of Europe, according to our best knowledge, was about 130,000,000. It is now 400,000,000. At that time there were practically no people of European stock living outside of Europe. At the present time there are 100,000,000 of European stock living outside of Europe. In other words, the population of the world of European stock has increased 270,000,000 in the last one hundred and fifty years, and a very large part of that increase must be held to be due to the fact that Europeans during that time were allowed to follow the line of least resistance, or to seek their own advantage, even though it called upon them to leave their home or place of residence. We are wont to forget that this is not purely an American question; it is also a European question.

"We are wont to forget that although millions of people are coming to us from Europe, yet the population of Europe at the present time is growing faster than it ever grew before in history. And it is growing faster because of the reaction of these other countries, not merely of the United States but of South America and Australia, which are sending their benefits back to Europe. Practically, this increase of Europe is the whole increase of the population of the world, so far as we can tell, an increase of the people whom, on the whole, we are wont to regard as the leaders of progress.

"It seems to me that these facts establish a strong presumption in favor of the traditional policy of the United States. On the other hand, I think all persons must admit that there might be an excessive immigration into the United States; in fact, it might become so great as to become detrimental to the welfare of this country. Where we would draw the line we cannot say, but if the influx of immigration became, instead of 1,000,000 or so a year, 5,000,000 or 10,000,000 a year, I think most of us, perhaps all of us, would admit that it was too great."

Prof. Willcox stated that what appeared to him to be the central problem was whether or not immigration to our shores is too great. He was inclined to put the question of immigration as being: Is the process of assimilation keeping pace with the process of immigration? In attempting to answer this question, he stated that the first thing to know is how large is our present influx of population, that is, how large is our present current of immigration. This point Dr. Willcox discussed more fully in his paper before the Committee on Basal Statistics, which is presented on another page of this issue.

In referring to statistics which purport to show that the tendency to commit crime on the part of foreign-born people is decidedly greater than on the part of the native population, and that this tendency also manifested itself among the children of the foreign born, Prof. Willcox said: "It should be noted that crime, or rather imprisonment for crime, is much more a city phenomenon than a country phenomenon. I do not mean to say that the city population is more criminal, but that arrest and imprisonment for offenses are more common in the city than in the country. It will, therefore, be expected that those parts of the population living largely in cities would show, in the total population of the United States, a larger proportion of prisoners than those living in the country. Furthermore, the tendency to commit crime is largely a question of age. The criminal age is from fifteen to thirty years; consequently we should expect to find, as we do find, that those elements of the population which, like the children of our immigrants are very largely of criminal age, would have a high criminal tendency. Hence it is not at all surprising to see on the face of the figures that the children of immigrants show a much higher criminal tendency. But I should doubt whether, if you could make your comparison age for age, you would find anything like that difference. The apparent inference then is, first, that the immigrants and the children of immigrants are very largely in cities and the native population largely in country districts; and, secondly, that the children of immigrants are especially of the age when crime is most likely to occur.

CHAIRMEN OF THE COMMITTEES OF THE IMMIGRATION DEPARTMENT.

Mr. Norton is Chairman of the Committee on Agencies for Advancing the Welfare of Immigrants; Prof. Willcox that of Basal Statistics; Mr. Hamlin of the Committee on Supply and Demand; Mr. Holliday on Naturalization; Prof. Jenks on Legislation and Its Enforcement; Dr. Lefavour on International Relations, and Mr. Reynolds on Oriental Immigration.

"You notice that the persons indicated by the diagram are not criminals. We are constantly confusing prisoners with criminals. Suppose a person in New York is arrested for intoxication in the streets. The question whether he goes to prison depends chiefly on whether he has $10 in his pocket to pay the fine. It is very largely true that the statistics of prisoners are the function of the economic standing of the people confined. If we had the figures, not of all persons arrested for crime, but simply of all who are tried for crime, they would show a difference. I confess I have been unable to find in the figures properly qualified the evidence that there is any considerably greater tendency on the part of immigrants themselves to commit crime than there is on the part of the native population. I think there is a greater tendency in the part of the children of the immigrant as compared with the children of the native."

IMMIGRATION AND HOMICIDE.

Professor Loeb also Points Out Important Statistical Errors as Regards Crime Among Immigrants.

ANOTHER criticism of current statistical information was that of Prof. Morris Loeb, who referred to recent tabulations showing the tremendous effect of Russian, Italian and Slavic immigration upon homicide. "The statistics are really very startling," he said, "so startling that there was evidently something wrong. The presumption was that homicide was taken to stand for criminal tendency, while, as we all know, in New York City for instance, a man who allows a brick to drop from a roof which hits somebody accidentally, that man is arrested for homicide. Homicide was taken synonymously with murder, and I find that homicidal statistics were taken to stand for murder statistics. The conclusions drawn of homicide, when you are unable to differentiate in various parts of the country between accidental killing and murder, are wrong. I do not suppose the foreman of a mine in Arizona can be arrested for homicide if it happens that half a dozen 'Dagoes' or 'Greasers,' as they call them, were blown up by an accidental discharge of dynamite in the bottom of a mine, whereas a foreman in New York would be arrested for any fatal building accident. The question was also entirely eliminated, whether, as in the South, a man would be arrested for homicide if he took part in a lynching bee. And there were no attempts made to discriminate between homicide and murder proper. Nevertheless, within six months those statistics are going to be quoted in favor of restriction.

"But there is another side to it that strikes me very forcibly, and that is this: According to the statistics, which are absolutely erroneous as far as showing actual criminal tendency, the worst offenders were three classes—Italians, Mexicans and Chinese—who stood highest in the proportion per one hundred thousand. It struck me at once that the Chinaman was pretty inoffensive, and the proof came in immediately. Ninety-six per cent of all the Chinamen in the United States are males between twenty and sixty years of age; whereas only twenty-four per cent of the inhabitants of the United States at large are of that age, which has just been shown by Prof. Willcox the age of crime. Of course, if ninety-six per cent of the Chinamen happened to be of an age when the criminal tendency is strongest, whereas only twenty-four per cent of the entire population of the United States are of that age, you would expect the Chinaman to suffer by a comparison based on these statistics. The same thing is true as regards the Italians and the Mexicans. I was struck by something else, and that was this: In Arizona and New Mexico and the entire territory which was taken from Mexico during our war of 1849, all people are called Mexicans if they speak Spanish, whether they are Mexicans or whether they have been in the United States for two or three generations. Now, all these persons are imprisoned in Arizona and New Mexico and southern California as Mexicans. Nevertheless, there is no way in the United States census to find out how many real Mexicans are in the country, because the United States census disregards the immigration from Mexico as a part of the immigration into the country. Furthermore, among the nationalities which are called very bad on account of this homicidal tendency, I find there are many seamen, and that the man who is arrested on the border, or arrested in a seaport for a crime committed on board ship, or in some low drinking dive on the seashore, will be accredited to that nationality as a criminal, whereas he was never entered as an immigrant. These figures alone produce such an effect that I cannot see how anybody with a conscience can go ahead and accuse these poor lambs of dirtying the water for the wolf who is drinking up stream."

A LABOR VIEW OF IMMIGRATION.

John Mitchell, the Mine Workers' President, Tells of Its Effects in the Coal Industry.

AMONG others who discussed different phases of the problem was Mr. John Mitchell, President of the United Mine Workers of America. Mr. Mitchell stated that he approached the problem not as a student or an expert, but as a practical workingman who has from daily experience observed the effect of practically unregulated immigration. "In this period of unprecedented industrial prosperity," he said, "the people of my trade are given the opportunity to work about 200 days per year. There is certainly something the matter when a man who offers to work 300 days a year is permitted to work only 200 days, and if during this time of great industrial activity, a trade or an industry is only permitted to work 200 days per year, what will they be permitted to work in times of either financial or industrial depression?

"It is a matter of grave concern to the 600,000 men who mine coal in the United States whether or not there is to be some reasonable restriction made upon the admission of aliens into this country. I think that the restriction ought to be upon the broadest possible lines. I think that we should have due regard for those who are less fortunate than ourselves who live in other countries. I think that we should be careful not to permit ourselves to be under even the suspicion of seeking to keep immigrants from landing here because of national or religious prejudices, but I do believe that there ought to be some qualifications, that there ought to be some educational qualifications; that it should be required by our government that those arriving upon our shores should have sufficient money to enable them to select their employment. It is certainly not fair nor just to the American workingman, or to those who have come here some years ago, that a newly arrived immigrant should be forced, by his own necessities, to take the first job offered to him. If this is to be, it means that he takes the job of someone who preceded him here, or who was born in this country. I think it is not unreasonable, with the large population we have and with our own citizens irregularly employed, for us to afford to them who are here the first and best consideration.

"I believe that by fixing a high standard—a reasonably high standard—as a condition of admission to this country, we are not only protecting our higher standards of life and labor here, but we are fixing a higher standard for those who are abroad. If men must have a reasonable education, if they must have a reasonable amount of money in order to be admitted to our country, the chances are that the countries of the Old World will raise their standard to meet our requirements, and in that way we are not only conferring upon our own people that protection to which they, as citizens of this country, are entitled, but we are fixing a higher standard for those who live in the countries of the Old World."

IMMIGRATION AND THE MACHINISTS.

President O'Connell Says the Immigrant Competes for the Place of the American Workingman.

MR. JAMES O'CONNELL, President of the International Association of Machinists, stated that when men are competing for a living for themselves and their offspring, "then we feel it, then we know something about immigration. It is not academic or statistical with us then. I have the honor of representing an organization of 100,000 skilled mechanics, and we feel the immigrant proposition every day. We meet it every day in our own way. We meet the man who comes in every day and stands at the shop door. We have to compete with him. He is not competing with us, we are competing with him, and if we are successful, all right. If we succeed in assimilating that gentleman to our way of thinking, well and good. But if we don't? The question of assimilating the immigrant is one of years and years.

"We are very materially affected by immigration. Our wages, the condition of our families, the way our families are cared for and fed is gauged by immigration; the schooling of our children is dictated by immigration. It is gauged by the fellow who is competing with us and that fellow comes largely, of course, from among the immigrants. We have our own citizens and our own people who are in competition in a way, but it is the man who has come here and is met at the shore by the fellow who is bidding for him—practically by the owner of these men, as is now being done on the greatest public work a government is undertaking—offering so much and so much, selling Chinamen by auction at nine cents an hour. I say, we are the ones who suffer from immigration—our people, our wives, our children; our standard of living is based, is pitted against immigration. We meet immigration here and there and everywhere. In the mining district, in the mechanical trades, in the clothing industry, the allied industries, and in all the industries in which the human being is engaged in our country to-day, we meet with immigration. We feel that our standard of living is kept down. We feel the need of better protection against immigration (not that we have any desire to keep out the desirable immigrant, and I cannot say to you what is desirable immigration to your satisfaction, although I think I know what I mean by that). We want fair opportunities here and we do not want an unfair competition. In other words, we do not want a tariff upon the product and no tariff upon competition with our labor. We want protection from all sides, and I do not say this in a political sense."

THE DEMAND FOR LABOR.

A View of the Situation as Presented by Conditions on the Pacific Coast.

IN discussing the statistics concerning juvenile delinquents, Mr. Hugh F. Fox of New Jersey, stated that as they were sixteen years old he did not think anyone who had studied the question would be willing to base any conclusions upon them. "Sixteen years ago," he said, "juveniles were arrested for all sorts of things that are not considered crimes to-day and they were dealt with in an entirely different fashion; in fact, the whole attitude of the police and the judiciary in regard to the so-called juvenile incorrigible and delinquent of sixteen years ago would to-day be considered semi-barbarous. The whole progress in this question during the last ten years makes the data of sixteen years ago practically the data of the dark ages. I do not think we can base any conclusion that is of value in relation to the immigration problem on such data as was obtained in 1890 on that question."

Mr. Fox referred at some length to conditions in New Jersey with regard to the dependent and delinquent classes and of the agricultural conditions with reference to labor and immigration in New Jersey and along the Pacific Coast. Referring to the hop business in Oregon, Washington and California, Mr. Fox said: "We are now almost at the end of harvesting. Telegrams have been coming to us frantically from all our agents and buyers and brewers interested with us in the ranches, telling us that they have not enough pickers to harvest the crops. This condition has been getting worse each year, partly because the Chinamen who came in before the Exclusion Act have been prosperous, and the Chinaman to-day is successfully competing with the American, the Englishman and the Scotchman as a hop-grower in the Pacific Coast States. He is running large ranches and is himself in many cases employing white labor. Now, I know it is said that that is casual and occasional and seasonal labor. That is true to a certain extent. There is enough of it in harvesting fruit and in the hop and similar industries to keep men employed three or four months. There is ample opportunity to-day for the man who goes there as a seasonal laborer to get small pieces of land, and by farming not only to earn his living during the other nine months but to become in a few years very prosperous. The fact is you cannot separate the immigration problem from the land problem in that part of the country, and I presume elsewhere. Until the last few years that country contained a large number of men who were land poor, because of the policy of the government in giving away quarter sections of extremely rich and valuable land that was very carelessly farmed. I do not attempt to state what bearing this has upon the immigration problem further than this, that it is perfectly clear there are large sections of the country to-day calling for labor and having no prejudice against its nationality, and that it will be a very long time before the country will be so filled up that the demand for such labor will be at all diminished."

IMMIGRATION AN INTERNATIONAL QUESTION.

DR. CHARLES FLEISCHER, of Cambridge, stated that it seemed to him feasible for the Department to start a project for getting the different nations of Europe interested with us in this immigration problem, and thus lifting it to the plane of an international question. "It is not simply the going and coming of many of these immigrants but the fact of the conditions stimulating immigration to America that raises the question to the plane of internationalism. Knowing America as I know her, through history and through personal acquaintance, I see America as a nation somewhat different from other nations in that we are avowedly humanitarian. Therefore, in justice to our national characteristics as well as to our history, it seems to me that we cannot develop an attitude of hostility toward immigration here and at the same time be indifferent to the causes abroad which stimulate this migration. For instance, we cannot say that we have no right to interfere in the internal conditions of Russia and at the same time try to keep out the Russians who are moved to migrate to America by those very internal conditions that obtain in Russia. Such an attitude of indifference to the causes that stimulate migration is false to our history."

A SOUTHERN VIEW OF IMMIGRATION.

MR. THEODORE AHRENS, of Kentucky, presented to the Department a Southern view of immigration. He said in part: "I do not think that this country has reached the point where it does not require further immigration. Speaking for my section of the country, that is, the South, I am sure we do need more immigration. As a manufacturer, I feel to-day the necessity of the absolute want for labor. This condition exists not only in Kentucky, but in Alabama and other Southern States. We could use a million more immigrants a year, but we want them to be of the best kind. I believe we can get one million immigrants a year of the desirable class. I think we ought

to throw around our immigration laws such restrictions as the bill before Congress proposes, at least the most of them. I believe that every healthy man, woman or child who comes to the United States, whether they have $25 or not, should be admitted, because this country was built up by just such people. The great majority, such as the Irish and Germans and all other people who came here twenty-five or fifty years ago, never had $25 or $50 that one clause of the proposed legislation provides for. I am in favor of keeping out the criminal classes, consumptives, epileptics and people who are not fit to take care of themselves."

PROPOSED IMMIGRATION LEGISLATION.

REV. ADOLPH ROEDER, of New Jersey, in referring briefly to the point raised as to the effect of immigration upon the number of days employed by the coal miners of the country, stated that it might be possible for this condition to be due rather to the control of coal production and transportation by the railroads. In speaking of the additional restrictions to immigration imposed by the bills now before Congress, he stated that he doubted very much whether the head tax, or the linguistic provision, or other sections of the bill, will seriously interfere with the number of immigrants to the United States. He said: "I think there will be almost as many. I hope there will be. And I think they will be of a better class, which would be good for their own sake, because it puts a lot of people at a disadvantage when they are thrown into a country where they cannot distinguish between liberty and license. In the removal of unintelligent men from the sway of a monarchy where they are well controlled and held well in hand, there is always danger of that removal resulting in the feeling of license and in the increase of the sense of personal liberty which does not exist. Personally, I favor these rather slight restrictions proposed in the bills now before Congress."

Among the other speakers at the conference were Mr. Franklin MacVeagh of Chicago, Prof. J. W. Jenks of Cornell, James W. Kinnear of Pittsburg, Mrs. Florence Kelley of New York, and Mr. D. G. Ambler of the Jacksonville (Florida) Board of Trade.

WELFARE WORK IN POWER STATIONS.

From the Paper Trade Journal, New York.

One of the most interesting phases of modern industrialism is the increasing attention paid by large establishments to so-called welfare work, for the betterment of the conditions under which the employes labor. Activities of this kind are in no sense confined to the rank and file of the employes, but are in many instances broadly beneficial to even department heads. In electric railway circles a great deal has been done along this line to improve the living conditions of employes directly occupied in the handling of cars; companies have fostered esprit du corps and strengthened many a motorman and conductor's position in life by liberal contributions to benefit associations, by supplying various necessities at less than cost, etc. Sometimes the power plant has been overlooked in these commendable activities, and it is the purpose of these comments to point out several ways in which welfare work can be extended to this part of the system.

In far too many plants the chief engineers are unprovided with any sort of office facilities worthy of the name. Of course, a power house is no place for mahogany desks, Turkish rugs and Louis Quinze chairs, but where a man is obliged to prepare careful and regular records of the power cost in detail, something in advance of a nail keg or an oil barrel is sure to be appreciated in lieu of a handsome desk. Again, power houses are sometimes lacking in anything but the most elementary sixteenth century sanitary facilities; lockers are conspicuous by their absence; or there is no place where an engineer or fireman can wash himself and then enjoy a meal which has to be taken when on duty. The provision of hot water for this purpose, a mirror and a few brushes are certainly appreciated by deserving men, and cost little from the company's standpoint. Power plant attendants are not averse to good personal appearance on the way home from work, any more than are the draftsmen in the main office. Another point is worth securing: the provision of enough men so that each power-house attendant can take a day off once in seven or eight days, instead of being hemmed in to continuous service all the year round. Bonuses for reduced cost of power generation are helpful in some plants, and promotions from within when capable men for advancement can be secured from the company's own force are usually much appreciated by employes of the right sort. One or two technical journals supplied by the company ought to be available at the power house for all employes, and all reasonable encouragement should be given to power-house men engaged in night duty or outside efforts of any kind to become more efficient workers. It is in no carping spirit that we mention these points, but in many plants the working conditions may be improved by very simple and inexpensive methods.

OUR GAIN IN POPULATION THROUGH IMMIGRATION.

STATISTICS AFFECTED BY CHANGES IN DEFINITION—ATTENTION DIRECTED TO HUNDREDS OF THOUSANDS RETURNING EACH YEAR TO EUROPE.

By Walter F. Willcox

THE meaning of any statistics depends largely upon the meaning of the unit in which the statistics are expressed. It is a common but fallacious assumption that a word used as the name of a statistical unit has precisely the same meaning that it has when used in popular speech. In the present case the word "immigrant" has had and to some degree still has different meanings, which may be called respectively the popular or theoretical meaning and the administrative or statistical meaning, and these two should be carefully distinguished.

In the popular or theoretical sense an immigrant is a person of foreign birth who is crossing the country's boundary and entering the United States with intent to remain and become an addition to the population of the country. In this sense of the word an alien arrival is an immigrant whether he comes by water or by land, in the steerage or in the cabin, from contiguous or non-contiguous territory, and whether he pays or does not pay the head tax. The essential element is an addition to the population of the country as a result of travel and the word thus covers all additions to the population otherwise than by birth. A person cannot be an immigrant to the United States more than once any more than a person can be born more than once. It is a characteristic of this meaning that it does not alter.

The word immigrant in its administrative or statistical sense is not defined on the reports of the Commissioner-General of Immigration, but from that source and from the instructions and other circulars issued by the Bureau the following statements regarding its meaning have been drawn:

1. The administrative or statistical meaning of immigrant is not fixed by statute law but is determined by the definitions or explanations of the Bureau of Immigration and those are dependent upon and vary with the law and administrative decisions.

2. In the latest circular of the Bureau immigrants are defined as "arriving aliens whose last permanent residence was in a country other than the United States who intend to reside in the United States." This definition seems to agree closely with the popular or theoretical one.

3. But the foregoing definition is modified by a subsequent paragraph of the same circular which excludes from the immigrant class "citizens of British North America and Mexico coming direct therefrom by sea or rail." So the official definition is substantially this: An alien neither a resident of the United States nor a citizen of British North America, Cuba or Mexico, who arrives in the United States intending to reside there.

4. The only important difference between these two definitions is that the statistical definition excludes, as the popular definition does not, citizens of British North America, Cuba and Mexico. As the natives of Canada and Mexico living in the United States in 1900 were 14.2 per cent of the natives of all other foreign countries, it seems likely that the figures of immigration for the year 1905-06 should be increased about 14.2 per cent in order to get an approximate estimate of the total immigration into the country during the year just ended.

5. Perhaps the most important difference between the popular or theoretical and the statistical definition of immigrant is that the former is unchanging and the latter has been modified several times by changes of law or by modifications of administrative interpretation.

6. Until January 1, 1906, an alien arrival was counted as an immigrant each time he entered the country, but since that date an alien who has acquired a residence in the United States and is returning from a visit abroad is not classed as an immigrant. This administrative change has brought the statistical and the popular meanings of immigrant into closer agreement, but in so doing has reduced the apparent number of immigrants more than ten per cent and has made it difficult to compare the earlier and the later statistics.

7. Until January 1, 1903, an alien arriving in the first or second cabin was not classed as an immigrant, but rather under the head of other alien passengers. This change likewise brought the two meanings of immigrant into closer agreement, but also made it difficult to compare the figures before and after that date. By a mere change of administrative definition the reported number of immigrants was increased nearly twelve per cent.

8. Until the same date an alien arrival in transit to some other country was deemed an immigrant, but since that date such persons have been classed as non-immigrant aliens. This change also makes the figures before 1903 not strictly comparable with later ones. About three per cent of those who were formerly classed as aliens have been excluded since 1903. The alteration has brought the two definitions closer together, but in so doing has entailed administrative difficulties which lead the Bureau to favor a return to the former system or at least to favor collecting the head tax from such aliens in transit.

9. An immigrant in the statistical sense is a person liable for and paying the head tax. But to this there are two slight exceptions. Deserting alien seamen not apprehended are liable for the head tax which is paid by the company from which they desert, but such cases are not included in the statistics. Citizens of British North America, Cuba and Mexico coming from other ports than those of their own country are reported as immigrants, but do not pay the head tax. Obviously both are minor exceptions hardly affecting the rule. In the popular or theoretical meaning of immigrant this head tax is not an element.

10. Probably other changes of definition have occurred of recent years. No attempt has been made to exhaust the list. The general tendency of the changes has clearly been toward a closer agreement of the popular and the statistical meanings. But they have probably tended to make the increase of immigration indicated by the figures greater than the actual increase, and to that degree to make the figures misleading. If the Government Bureau of Immigration and Naturalization could make a carefully studied estimate of the extent to which such changes in the official reports really modify the apparent meaning of the published figures, it would render a valuable service.

11. A committee like the present can hardly make such an estimate or go further than to point out that for the reasons indicated the official statistics of immigration are likely to be seriously misinterpreted and are constantly misinterpreted by the public.

The official statistics of immigration being subject to all the qualifications indicated and reflecting so imperfectly the amount of immigration as ordinarily or popularly conceived, the question at once arises, Can any substitute or any alternative be proposed? What the public is mainly interested in, I think, and what it commonly but erroneously believes is indicated by the official figures of immigration, is the net addition to the population year by year as a result of the currents of travel between the United States and other countries.

Alternative figures for the last eight years, a period which closely coincides with the last great wave of immigration now at or near its crest, may be had by comparing the total arrivals and departures in the effort to get the net gain. The results appear in the following table:

Fiscal Year	Total Passengers Arrived	Total Passengers Departed	Total Immigration	Arrivals Minus Departures	Per Cent That Net Increase Makes of Immigration
1898..	343,963	225,411	229,299	118,552	51.8
1899..	429,796	256,008	311,715	173,788	55.8
1900..	594,478	293,404	448,572	301,074	67.0
1901..	675,025	306,724	487,918	368,304	75.5
1902..	820,893	326,760	648,743	494,133	76.3
1903..	1,025,834	375,261	857,046	650,573	75.9
1904..	988,688	508,204	812,870	480,484	59.3
1905..	1,234,615	536,151	1,026,499	698,464	68.1
1898-1905			4,822,662	3,285,372	68.1

The figures indicate that the net increase of population by immigration during the last eight years has been slightly more than two-thirds of the reported immigration. But these figures of net increase should be increased by an estimate of the arrivals by land from Canada and Mexico. As the Canadians and Mexicans by birth residing in the United States in 1900 were 14.2 per cent of all residents born in other foreign countries, this would indicate an influx of 466,000 Canadians and Mexicans, a figure probably in excess of the truth, since the currents have probably been setting Canadaward of recent years. I estimate, therefore, that the net increase from immigration 1898-1905 has been about 3,750,000 instead of 4,820,000, as might be inferred from the Reports of the Bureau of Immigration. The actual increase would then be about 78 per cent of the apparent increase.

[The above article was presented as a paper by Professor Willcox before the Committee on Basal Statistics of the Federation's Immigration Department. It should be regarded as provisional, and is published not alone for its value and interest but also with the hope of eliciting criticisms or corrections.—The Editor.]

WHY THE AMERICAN FEDERATION OF LABOR WENT INTO POLITICS.

THE VIGOROUS CAMPAIGN OF THE NATIONAL MANUFACTURERS' ASSOCIATION AND OTHER EMPLOYERS' ORGANIZATIONS PRACTICALLY FORCED IT.

THE entrance of organized labor into active participation in national politics, the wisdom of which has been seriously questioned by many friends of he labor movement, is the direct outgrowth of the ontest which has been waging the past several years etween the trade unions, as represented in the Ameri- an Federation of Labor, on the one side, and manufac- urers, as organized in the National Association of Manufacturers and in the Citizens' Industrial Alliance, n the other. The public, while noting here and there n the press indications of this activity of the National Manufacturers' Association and the vehement half-page dvertisements of the Industrial Alliance in which or- anized labor is attacked, nevertheless the public gen- rally realizes but faintly, if at all, what the real extent f this opposition to the labor movement has meant. Organized labor itself, of course, understands it thor- oughly and fully measures the strength of this opposi- ion. Its leaders at every turn in Congress meet the fficials and attorneys of these hostile organizations, nd spend weeks in open combat with them before the ommittees. The columns of the manufacturers' jour- als are filled with denunciations of organized labor, ts leaders and all its policies.

One feature of the campaign as carried on by the fficials of the National Manufacturers' Association has een the sending of letters to their members which, lthough marked "confidential," do not fail to reach the abor journals, whose editors publish them to show the actics of their opponents. To show the nature of this ind of opposition, we present some of these letters:

THE NATIONAL ASSOCIATION OF MANUFACTURERS OF THE UNITED STATES OF AMERICA.

General Offices: 170 Broadway (Maiden Lane and Cortlandt Street.)

NEW YORK, Feb. 20, 1904.

Confidential.

DEAR SIR: Our fight against a favorable report of he Eight-Hour bill by the House Labor Committee in Washington is getting warm, and we ask you, as a manufacturer and employer with a vital personal inter- st as well as a patriotic interest in beating this arbi- rary and dangerous socialistic proposition, to help us.

Hon ——— — ——— of your State is, as you now, a member of this House Labor Committee. While we understand that he is a brave and patriotic man, who will not be afraid to do what is right in his behalf when it comes to a vote in the committee, ve naturally wish to have him supplied with as many *acts, reasons and arguments* against the bill as possible *rom home* in order that any such thing as a weakening n his part might be absolutely prevented; for it is not nly certain that every vote in the committee will ount, but it is of course of the utmost importance that ur friends in the committee should realize that they re right, from the beginning of the fight to the end of t, and that they can well afford to stand by the sub- tantial people of their State in helping the fight to be nade, in their own time and in their own way of ourse; for we certainly want to be friendly enough o our own friends not to ask them to expose them- elves unnecessarily.

Therefore, if you should write such a letter—the Congressman's address is House of Representatives, Washington, D. C.—and will make it strong and will ot hesitate to make it long and full of reasons, and ut some of the feeling into it which we believe all manufacturers and employers entertain at the present ime in reference to this coercive labor proposition, a ost valuable and perhaps a most essential service will ave been done. We should all of us very naturally eel chagrined if the member of the committee from our State should fail, on account of a lack of interest rom home, to do his part. Kindly do us the honor nd the service to write us what you have done in rder that we may have as much information as possi- le and thus may co-operate with you as effectively as ossible.

Yours most respectfully,
MARSHALL CUSHING,
Secretary.

THE NATIONAL ASSOCIATION OF MANUFACTURERS OF THE UNITED STATES OF AMERICA.

General Offices: 170 Broadway (Maiden Lane and Cortlandt Street.)

NEW YORK, June 15, 1904.

Confidential.

DEAR SIR: We should like first to recall your gen- erous and essential service of last winter; for I ssure you positively that our fight for free industrial onditions before the various committees of Congress ould not have been successful without the assistance f all our friends everywhere.

There is now a service of vital consequence that you an do for the cause. As you know, the Democratic ational convention meets in St. Louis on July 6. It is evident that devotees of Bryan anti-injunctionism and of Hearst eight-hourism—to coin the words—will seek to cause the reaffirmation of the anti-injunction plank of the last two platforms, and, possibly, addi- tional labor planks—for eight hours and almost any kind of socialistic legislation may be endorsed. In fact, it is not safe to assume that these propositions will be kept out of the platform, except by the most diplomatic and resourceful and persistent efforts which you or your association, as an association and as indi- viduals, in common with all of our friends everywhere can make. You have the right to make these efforts; and we ask you, a little more earnestly than we have ever asked anything of you before, to make them.

This labor question is industrial, not political. In your opinion, as well as ours, of course, no party has any business, whether from the standpoint of patriot- ism or of mere politics to seek to make any such demagogic appeals. I ask you to believe that the whole country feels so nearly as we do on the question, and that public men of both parties are given to feel so nearly as we do on the question, that you are safe in assuming that your efforts, collectively and individu- ally, addressed to any or all of the delegates to St. Louis with whom you are acquainted, or can get in touch, whether on the resolutions committee or not, whether from your State or not, whether known to be friendly to our cause or not, would have the right effect.

These planks will not be left out unless we make the effort. Please do everything on earth that you can, perfectly secretly, without any publicity of any kind, simply scoring with each and every influential person whom you can think of having anything to say about the matter. And please advise me what you have done and are doing, in order that I may co-operate with you as effectively as possible.

Yours most truly,
MARSHALL CUSHING,
Secretary.

THE NATIONAL ASSOCIATION OF MANUFACTURERS OF THE UNITED STATES OF AMERICA.

General Offices: 170 Broadway (Maiden Lane and Cortlandt Street.)

NEW YORK, December 8, 1904.

Strictly confidential.

DEAR SIR: You have not replied to our recent letter. It is our fault; we didn't write you strongly enough.

The simple question is whether your own valued company will not join the other manufacturers of the country in providing *an absolute insurance against destructive and even revolutionary labor legislation at Washington* and at the different State capitals. We believe that you will.

Nobody has ever questioned that it was the National Association of Manufacturers that beat the Eight- Hour and Anti-Injunction bills in Washington last winter. We have got to beat them again this winter, for Mr. Gompers insists that both bills shall be pressed and Senator McComas, of Maryland, agrees.

Not only is the National Association your only guar- antee against the enactment of such revolutionary schemes, subversive of the very principles of our gov- ernment, but the whole tendency towards collectivist and paternal legislation needs to be stopped, and it is this immense and successful movement of manufac- turers which alone, apparently, can do it.

I want again to ask you to join us. If we double our strength, we treble or quadruple our power; but we have to be right, and *you can help us to keep right.* We have many friends in your industry. Will you not join them, and us, in the good cause? You will get your money back, anyway, in business advantages.

Please let me hear from you. I won't permit you to be disappointed. Yours most cordially,

(Signed) MARSHALL CUSHING,
Secretary.

THE NATIONAL ASSOCIATION OF MANUFACTURERS OF THE UNITED STATES OF AMERICA.

General Offices: 170 Broadway (Maiden Lane and Cortlandt Street.)

NEW YORK, February 27, 1905.

Confidential.

DEAR SIRS: We take the greatest pleasure in caus- ing to be mailed to you (from this office under Con- gressional frank) a copy of the Eight-Hour report, so-called, just submitted by Secretary Metcalf to the Labor Committee of the House. As you will doubt- less recall, it was managed last spring—at the close of the most remarkable manufacturers' campaign ever seen in Washington—that this whole question should be referred to the Department of Commerce. The Labor Bureau, under the direct supervision of Colonel Wright, has now completed this inquiry. Not only does the report sustain our contention at every point (that the compulsory eight-hour day by act of Con- gress would be uneconomic and even destructive to the industries of the country and a radical or even revolutionary recognition of a wrong principle of gov- ernment interference at the behest of "labor"), but the reference of the question itself establishes a prece- dent which possibly is just as valuable; namely, the pos- sibility of referring such questions for investigation by the proper department itself hereafter, a thing which has never even been attempted until our Association took it up. This matter has already been referred to on the first two pages of our American Industries of February 15, as well as in the editorial columns, to which we respectfully refer you; but we ask you to read and preserve the report itself as one of the most significant industrial documents thus far issued.

The House Labor Committee in executive session Thursday laid this report on the table. Its only friend who was present—Congressman Caldwell, of Illinois, (beaten for re-election)—moved to report the bill favorably, but by the watchfulness of our friends it was laid on the table, and thus the notorious Gompers Eight-Hour bill dies with this Congress. In this, however, as in the Anti-Injunction campaign, the labor lobby may be expected to be just as active as ever in the next Congress. But the Association will also be just as active.

We do not believe there is any calculating in money the value of this work which the Association is doing, which, of course, would be impossible if our individual members everywhere did not follow the work closely and back it up promptly and generously whenever we ask them to do so. In fact, it is always their support without which success could not be attained.

Yours most cordially,

(Signed) MARSHALL CUSHING,
Secretary.

LABOR'S BILL OF GRIEVANCES.

This active campaigning on the part of organiza- tions representing employers and manufacturers be- came so strong in Congress that in March, 1906, what has come to be known as "Labor's Bill of Grievances" was presented to President Roosevelt, and to the Speaker of the House of Representatives and the Chairman *pro-tem.* of the Senate by prominent labor officials represented in the American Federation of Labor. These grievances grew out of the refusal of Congress to enact into legislation certain demands of organized labor, including the enactment of the Eight- Hour law; legislation to safeguard the American workingman from the competition of convict labor; relief from induced and undesirable immigration; pro- tection of seamen from involuntary servitude; re- dress from repeated violations of anti-trust and inter- state commerce laws; protection from the questionable use of the injunction, and insistence of the right to petition on the part of government employes. In clos- ing their Bill of Grievances the representatives of organized labor said: "Labor now appeals to you, and we trust that it may not be in vain; but if, perchance, you may not heed us, we shall appeal to the conscience and the support of our fellow citizens."

Following this appeal, and soon after the close of the last Congress, the Executive Council of the American Federation of Labor issued an address "to all organized labor and friends in the United States" in which was set forth the political program of organ- ized labor. Following a general analysis of present- day industrial and political conditions, the address quotes a resolution adopted by the National Conven- tion of the Federation as long ago as 1897, as repre- senting the attitude of the organization towards poli- tics. This resolution stated that "the American Fed- eration of Labor most firmly and unequivocally favors the independent use of the ballot by the trade union- ists and workmen, united regardless of party, that we may elect men from our own ranks to make new laws and administer them along the lines laid down in the legislative demands of the American Federation of Labor, and at the same time secure an impartial judi- ciary that will not govern us by arbitrary injunc- tions of the court, nor act as the pliant tools of corpo- rate wealth." The program stated that "within the past few years claims and promises made in plat- forms or on the hustings by political parties and poli- ticians, and especially by the present dominant party, have been neither justified nor performed. Little at- tention has been paid to the enactment of laws pre- pared by us and presented to Congress for the relief of those wrongs and the attainment of those rights to which labor and the common people are justly entitled and which are essentially necessary for their welfare. Several Presidents of the United States have, in their messages to Congress, urged the passage of equitable legislation in behalf of the working people, but Con- gress has been entirely preoccupied looking after the interests of vast corporations and predatory wealth.

Congressmen and Senators in their frenzied rush after the almighty dollar have been indifferent or hostile to the rights of man. They have had no time, and as little inclination, to support the reasonable labor measures, the enactment of which we have urged, and which contain beneficent features for all our people without an obnoxious provision to anyone." The relief asked for not having been granted, the program goes on to state that the American Federation of Labor determined upon taking the issue into active politics.

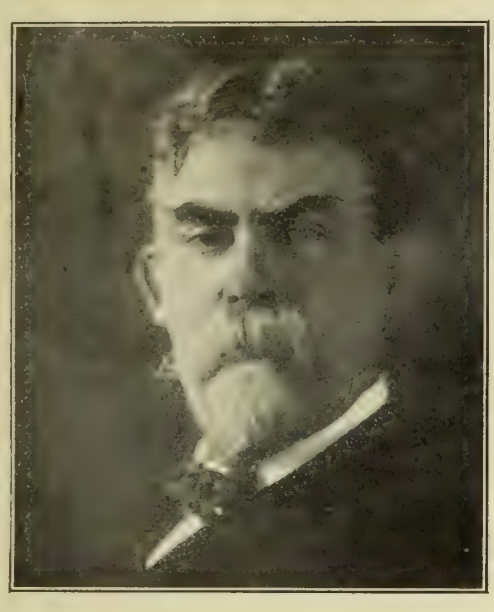
Perhaps the one question above all others that has engaged most strenuously the fighting strength of what may be termed the hostile camps of capital and labor is commonly known as "Government by Injunction." The public generally has little conception of the significance of this issue, being unconscious of the fact that it involves fundamental principles as to the rights of man and the rights of private property. How important these issues are to the future welfare of the nation can best be indicated by presenting a summary of the testimony before the House Judiciary Committee last spring on the anti-injunction issue. Some eight bills treating of this subject were before the Committee. The hearings, however, centered around the bills which aim to limit or define the power of Federal courts in issuing injunctions in labor disputes.

In general, the proposed legislation emphasizes four remedies for the injunction issue. One is the division of contempt of court into two classes—direct and indirect—the latter including an injunction or order of the court, and permitting those accused of contempt who come in this class to have a trial by jury. Another proposed measure makes certain acts innocent; takes certain acts which are lawful for one to do out of conspiracies when done by more than one: that is, it makes legal those acts which are legal for one to do if done by several in a trade dispute. Acts declared to be innocent are not to be restrained or enjoined. One of the proposed measures declares the right to do business to be not a property right.

Another form of proposed legislation provides that the adverse party shall have an opportunity to be heard before an order is granted. This provides that in cases involving or growing out of labor disputes neither an injunction nor a temporary restraining order shall be granted except upon due notice to the opposite party, after hearing, which may be *ex parte* if the adverse party does not appear at the time and place ordered. In support of this bill the railroad brotherhoods have committed themselves, the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen, the Order of Railway Conductors, and the Brotherhood of Railroad Trainmen being represented in its behalf at the hearings before the House Committee. Its principal point is that it does not seek in any manner to diminish the power of the court as to the injunction—that is, as to the character of the injunction or as to its power for punishment of violation. It simply goes to the question of the notice before any writ shall be issued. Representatives of the brotherhoods state that they did not regard the Gilbert Bill as a complete remedy for the abuse of the injunctive power by some judges, but they believe it to be a step in the right direction.

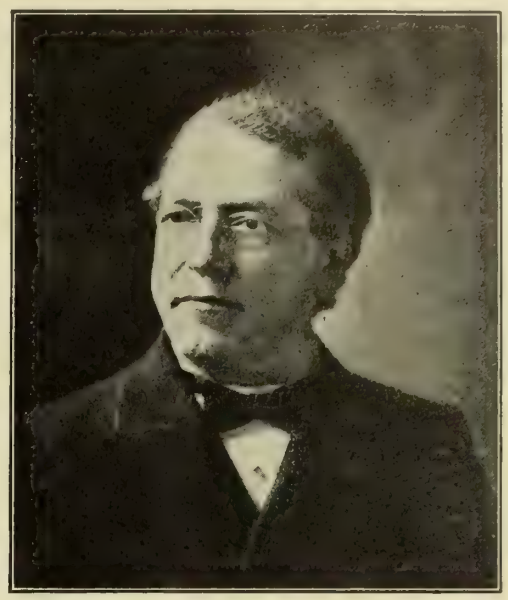
The position of organized labor, as represented in the American Federation of Labor, is presented in the testimony of Mr. Samuel Gompers, its president. He contends that there is not now upon the statute books one line that by its fair interpretation is a warrant for the issuance of injunctions in labor disputes. He claims that under the operation of the issuance of the injunctions, the very things they might do as men and as citizens, they are denied the right to do as workingmen. "The injunctions treat us as a class; the injunctions apply to us as workingmen, and apply to no other members of the common country," he says. The enjoining of men from committing any criminal act, Mr. Gompers contends, is an improper exercise of the power of the equity court; "yet some of our opponents," he says, "would have it appear that we favor criminal acts, or that we favor their commission. But we contend that the writ of injunction was never intended to be issued to enjoin men from committing any unlawful or criminal act; that both our country and our States provide for the apprehension and the trial by a jury of persons who commit such acts to ascertain whether such person has been guilty of a criminal act and to punish him if he is found guilty, and that organized civil society has constituted a police force, large or small as the circumstances may warrant, for the apprehension and prevention of any criminal act.

"The representatives of labor appearing for and advocating the enactment of an anti-injunction bill, and an effective one—I want it to be clearly understood—neither directly nor indirectly nor remotely aim to attack the writ of injunction as a writ. We recognize its importance and its value and efficiency and appropriateness and effectiveness within the limits of its original purpose, and that is to protect property rights when there is no other remedy at law."



President Gompers states that what the American workingmen want is an effective bill that shall remove the condition that has selected them as workmen specially to have injunctions issued enjoining them from doing things that apply to no other man, woman, or child. Referring to trespass, unlawful acts, and criminal acts, Mr. Gompers states that no one can defend them and claim honest citizenship in our country. "But the doing, as I say, of the most ordinary things that men do in their every-day lives are more and more coming to be touched upon by injunctions. One injunction was issued—or, rather, many injunctions were issued—prohibiting persuasion, and not even designating what kind of persuasion. We can understand that there is such a thing as persuasion glibly used by the tongue and a club held in the hand; and no one can at all justify such persuasion as that. But even so, in such a case the injunction should not lie, because such an attempt is a threatened assault upon the person, for which there is a law to prevent, to apprehend, to try, and to convict and to punish. But there is a persuasion—that persuasion which is commonly understood in our language—which no man can deny the right to exercise by another. . . . I hold that the workmen have the right to go to any workman employed by anybody, whether in a strike-bound establishment or otherwise, and if such a workman has no legal contract with his employer, and it would not violate the terms of a contract, the associated workmen have the legal right to offer this man inducements to quit his employment and go to work with them in some other establishment, or not to work at all, for the time being. They have the right to 'lure away' and 'wean away' from an employer a workman, and to offer him money inducements, so that he may quit that employment and work for another, or to go idle for a period, in order that a certain lawful, honorable purpose may be achieved. And yet the injunction is issued against workmen for doing that very thing; and for doing it after the injunction has been issued they have been sent to jail."

President Gompers states that organized labor objects to the fact that the courts have read into the law new features. "We are suffering," he states, "from court-made law rather than statute law," and he indicates that the purpose they have in view in offering their bill "is that the law and its purpose shall be as it existed prior to the existence of these modern injunctions in 'trade disputes arising between employers and employed." He states that his contention is that there has not been one injunction issued that is not in contravention of fundamental rights. He states that he holds that the things which are enjoined and which are in themselves unlawful the courts should not issue injunctions against, because there is already a remedy for them at law. He says further: "We hold that the issuance of an injunction is an extraordinary remedy which is to be resorted to only when the end to be reached can be obtained by no other legal process. That there is a legal remedy for the things which an injunction can enjoin goes without saying, but it is the purpose of the opponents of our legislation on this subject to get rid of the trial by jury in the regular process of the law. Their purpose is to make the judge who issues the injunction both the judge, the jury, and the executioner, and, indeed, to take away from the workman enjoined the constitutional right of being tried before a jury of his peers for any crime or unlawful offence with which he may be charged.



So long as it involves personal liberty Mr. Gompers states that he goes so far as to contend that the courts have not any fundamental power or rightful power to issue an injunction to restrain an unlawful act distinguished from a criminal act. Where it is affecting property Mr. Gompers states that he is in entire accord with the best conception of the writ of injunction; but when it involves personal liberty, the freedom and the exercise of lawful rights guaranteed to the citizen, then he holds that under no circumstances should the writ of injunction apply; and, further, he says it does not apply except to workmen when engaged in a dispute with employers.

"Writs of injunction," he says, "in so far as they enjoin acts forbidden by law, are superfluous, erro-

OTTO M. EIDLITZ, Chairman Board of Governors, Building Trades Employers' Association, New York City.

On the Part of Wage Earners.

SAMUEL GOMPERS, President American Federation of Labor, Washington.
JOHN MITCHELL, President United Mine Workers of America, Indianapolis.
JAMES DUNCAN, General Secretary Granite Cutters' International Association of America, Quincy, Mass.
DANIEL J. KEEFE, President International Longshoremen, Marine and Transport Workers' Ass'n, Detroit, Mich.
WARREN S. STONE, Grand Chief International Brotherhood of Locomotive Engineers, Cleveland.
P. H. MORRISSEY, Grand Master Brotherhood Railroad Trainmen, Cleveland.
WILLIAM D. MAHON, President Amalgamated Association of Street Railway Employes of America, Detroit, Mich.
WILLIAM J. BOWEN, President Bricklayers' and Masons' International Union, Indianapolis, Ind.
J. J. HANNAHAN, Grand Master Brotherhood Locomotive Firemen, Peoria, Ill.
JAMES O'CONNELL, President International Association of Machinists, Washington, D. C.
JOHN F. TOBIN, General President Boot and Shoe Workers' Union, Boston.
JOSEPH F. VALENTINE, President Iron Moulders' Union of North America, Cincinnati.
JAMES M. LYNCH, President International Typographical Union, Indianapolis.
DENIS A. HAYES, President Glass Bottle Blowers' Association of the United States and Canada, Philadelphia.
WILLIAM HUBER, President United Brotherhood of Carpenters and Joiners of America, Indianapolis.
TIMOTHY HEALY, President International Brotherhood of Stationary Firemen, New York City.

The Federation's Annual Meeting.

The annual meeting of The National Civic Federation will be held in the Assembly Rooms of the Park Avenue Hotel, New York City, Wednesday and Thursday, December 12 and 13. The subjects for discussion will be "The Income Tax and the Inheritance Tax," "Government by Injunction," and "Child Labor."

Among the speakers on the first-mentioned subject will be Andrew Carnegie, August Belmont, William D. Guthrie, Charles W. Eliot, President of Harvard University, Archbishop John Ireland, Oscar S. Straus, Samuel Gompers, President of the American Federation of Labor, N. J. Bachelder, Master of the National Grange, Franklin MacVeagh, Melville E. Ingalls, and Nicholas Murray Butler. Other speakers will be Alfred Mosely, who is to present the English tax system, Professor Hermann Schumacker, of the University of Berlin, who is to talk on the German system, and George Foster, ex-Minister of Finance of Canada, who will present the facts as regards the Canadian Income and Inheritance Tax.

"Government by Injunction" will be discussed by John Mitchell, of the American Federation of Labor; H. R. Fuller, representing the Railway Brotherhoods; George R. Peck, ex-President of the American Bar Association, and General Counsel of the Chicago, Milwaukee and St. Paul Railway; Walter Drew, Commissioner of the National Iron Erector's Association; Louis D. Brandeis, Esq., Frederick N. Judson, Esq., and Seth Low.

In the discussion of "Child Labor" there will be represented the officers of The National Child Labor Committee, representatives of the trade unions from among those occupations in which child labor is most prevalent, representatives of employers' and manufacturers' organizations, labor commissioners, factory inspectors, and representatives of women's organizations.

That these are three vital questions at this time will not be denied. The general demand, finding expression in so many circles, that there should be some curb placed on huge aggregations of wealth, certainly calls for thoughtful consideration by those who believe in the perpetuity of our democratic institutions. Shall we have a graduated Income Tax, and a graduated Inheritance Tax? If so, should there be exemptions, or should every income be taxed alike? Will an Income Tax produce "a nation of liars"? What has been the experience in Europe?

The importance of the problem "Government by Injunction" lies in the fact that organized labor believes that the courts are being used by employers in a partisan way to prevent or break strikes. The employers, while admitting that there may be abuses of the character complained of, claim that the remedy is not along the lines sought by the unions. The merits of the question are fairly well outlined in an article appearing elsewhere in this issue. The question is "Can the abuses complained of by organized labor be remedied without destroying the beneficial principle underlying the injunction?"

The question on Child Labor to come before the meeting is largely this: What is the real extent of the evil, and is everything being done that is possible to do to meet it? As to the character of the evil there is practically no divergence of opinion; as to its extent there is a wide difference of opinion. Many speakers and writers on the subject declare that there are two million children working in the factories, mines, mills and in mercantile and street trades, etc., under fourteen years of age, and that child labor is on the increase. Others claim that these figures are gross exaggerations, and point to the 1900 census which shows in round numbers 1,750,000 children "under 16 years" of age engaged in gainful occupations. But of this total number the same census shows, it is claimed, that there are 1,065,000 engaged in agriculture, and 500,000 in round numbers who are over fourteen years of age, which reduces the total number which it is sought to protect by legislation, to less than 200,000. It is claimed on the one side that there are twelve thousand boys under fourteen years of age in the anthracite coal breakers, whereas officials of the state of Pennsylvania, after investigating the matter, claim that there are not over 8,100 all told under sixteen, and that with only 760 of them is there any doubt about their being over fourteen,—the age beyond which no attempt is made to prevent employment.

Whether there is a disagreement on the number or not, there will doubtless be an agreement among the speakers at the coming meeting that whatever the number of children of tender years engaged in gainful occupations, they should not be permitted to work if they are under fourteen years of age.

The executive committees of the various departments will meet on the evening of the 12th, and in addition to discussing important questions relating to their respective fields of endeavor, will plan their work for the coming year.

The Conciliation Department will organize its work in a way that will enable it to be in touch with every industrial center and to carry on during the coming year a great deal of educational work along the line of Conciliation, Arbitration and Trade Agreements.

The Executive Committee of the Immigration Department will consider the various projects which have been advanced for the distribution of immigrants and which have in view relieving the congestion of aliens at particular points and at the same time meeting the demands of those sections of the country where immigration is so much desired.

The Welfare Department, in addition to considering the Employers' Liability Act, the question of Safeguarding the Lives of Employes, and Industrial Insurance, will plan its campaign for bettering the conditions of employes in the public service, national, state and local. A special committee the past year has been investigating the conditions under which our public employes work, and will recommend that as active efforts be put forth in their behalf as the Department has hitherto taken in the interests of employes of private establishments.

The Immigration Problem.

It was pointed out in the preceding issue of The Review that widely varying and antagonistic views are being entertained on the immigration question because of the absence of *the* facts. In that issue we quoted opponents of immigration as claiming that a large per cent of immigration is made up of "outcasts, criminals, anarchists, thieves and off-scourings of the earth," and in contrast with this we presented another view by a high authority who claimed our immigrants to be "bright, ambitious men and women, the brawn and backbone of any country." Through immigration, Commissioner Watchorn also said, the United States is receiving "the youth and strength and ambition and vigor of foreign lands."

Another and a much more comprehensive view as to controverted facts on the immigration question was presented by well-known experts in this line of knowledge at the conference of the Immigration Department of The National Civic Federation held in New York City on September 24. Many of the statistics generally accepted as accurate were shown not to represent correctly the actual situation. Some of these statistics—even government statistics which usually go unquestioned—were so vigorously combated that many at the Conference expressed their surprise that thinking people should have gone so long without taking some steps to remedy the conditions. So important was this feature among other objects of the Conference that a number of speakers made reference to it in their addresses. Mr. Prescott F. Hall, secretary of the Immigration Restriction League, expressed his views on this point as follows: "I think all who have studied this subject for any length of time feel very much the scarcity of accurate statistics on the immigration question. I certainly do. And it is one of the very encouraging things about the formation of this department that we can hope after a time to get more accurate and reliable statistics."

Another of the speakers, Nathan Bijur, Esq., Vice-President of the United Hebrew Charities, stated that in his study of the question of immigration, the first thing that confronted him was the absence of accurate and complete statistics. He said: "What I hope will be done by this department of the Federation is that it will gather together all the facts, such as they are,

the best statistics available from everywhere, and put them down and say: 'Well, so far as we have been able to gather anything, this is what we know,' and then let us sift them and see how reliable they are. When we find a government report which does not mean anything, say so and say why. When we find statistics of crime which have left out certain classes of criminals, let us say so. Show what the difference would be if they were put in, and go on through and collect all these things and put to the credit of the immigrant all the facts that are to be put to his credit, as well as charge him with all the things that ought to be so charged. Now, that has not been done by anybody. Everyone who has discussed this subject has discussed it from the point of view of the advocate. Let this department formulate great general facts."

The Committee on Basal Statistics of the Immigration Department has undertaken to perform this important service. Prof. Walter F. Willcox, of Cornell University, one of the leading statisticians of the United States, is Chairman of this Committee, and its personnel is made up of other leading statisticians and prominent students of immigration questions. A conception of the character of the work this Committee has undertaken and the scientific spirit with which its members are imbued is indicated in the paper by Prof. Willcox, which is presented elsewhere in this issue. We commend this paper to the thoughtful attention of our readers.

Welfare Work Among Railway Men.

Improvements in safety appliances, the increase in block signals, the construction of double tracks, the progress in locomotive and car construction, and the adoption of new devices have all tended the past twenty years or more to minimize the dangers of railway travel. All these mark a phenomenal advance in the direction of safeguarding the traveling public from accidents. At the same time there are not wanting indications which point to the necessity of greater emphasis being placed on the "human" element, especially as regards the men in charge of the trains. Only in very recent years has the attention the subject demands been given to caring for the physical qualifications of engineers, firemen, and trainmen.

In the recent reports of the Interstate Commerce Commission dealing with the causes of railway accidents, the "human" element occupies a prominent place. It is plain that the physical qualities of the men in charge of trains must be in as perfect condition as possible, if accidents are to be prevented. It is upon this principle that many railway companies are now working. They are requiring their men to abstain from alcoholic beverages, from tobacco and the like which scientifically are known to affect the sight, the nerves, and in general the self-possession of the men. Many railroads are also requiring their trainmen to undergo rigid physical examinations. For preserving in their best working order these physical qualities, railway managements are providing rest and recreation houses for the trainmen at various important points along their lines.

In no other occupation is modern welfare work for employes more necessary than among railroad men in charge of trains. Almost any single accident of any importance results in a money outlay on the part of the railway company more than sufficient to provide efficiently for the care of their trainmen, and we believe that if this one fact could be impressed upon the attention of railway officials it would be a sufficient argument to induce them to undertake welfare work to an even greater extent than is now being done.

But it is not the money cost to railroad companies, in the destruction and damage of property and in the expense of lawsuits growing out of railway accidents and wrecks, that is the element of prime consideration when such a vital subject as welfare work among railway employes is up for discussion. Of far more importance is the assurance to the traveling public that by such consideration of the physical welfare of employes, traveling on American railroads, as far as the human element is a factor, is made safer. Such a result is doubly assured by well-organized and well-conducted welfare work among railway employes. An idea of what is being accomplished in this direction by one railroad can be gained from Dr. Latta's article on "Rest Houses for Railroad Men," which appears elsewhere in this issue. It emphasizes two essential factors in successful welfare work—responsible organization and competent management. Similar work among other railroads will be described in succeeding issues of The Review.

The Ownership Commission Abroad.

The announcement in detail on another page of this issue of the investigations of the Commission on Public Ownership and Operation indicates that this very important undertaking is approaching its termination. The article presents an account of the work performed in the important cities of Great Britain, and refers to the social aspect of the Commission's visit, which should be regarded as an important side of the Committee's studies, inasmuch as the social events enabled them to become better acquainted with those experts and officials in Great Britain who are recognized as among the ablest men in the different lines of work coming within the province of the Commission. It is of interest in connection with the Commission's visit abroad to read of the general expressions of approval of the task undertaken by this body, much of the success of the work of the Committee being due to the courtesies extended to the members. For the efforts of the distinguished foreigners who placed every facility at the disposal of the Committee, the thanks of the members are due.

The coming month of December will probably see the completion of all the special investigations of the different cities as outlined by the Commission, with the probability that by the first of the year the Committee of Investigation will be in a position to present its completed report to the entire Commission. As soon as the Commission has passed on the report finally, it will then be made public. We believe it will have considerable effect upon future discussions of the Public Ownership problem, and that it will be a work of reference for many years to come to those concerned in the various questions involved.

Socialism and Trade Unionism.

The attention of our readers is directed to the synopsis on another page of this issue of the very able articles against socialism written by Mr. James A. Cable, editor of the *Coopers' International Journal,* and published in recent issues of that paper. It will not only surprise, but we believe it will interest our readers to see how clearly and forcibly a workingman disposes of socialistic doctrines, which presumably are being put forth for his benefit. Mr. Cable sees through the confusion between trade unionism and socialism which has grown up in the minds of many, and is able to distinguish between the two. In fact, Mr. Cable, instead of conceding the two as being identical, clearly shows that there is nothing in harmony between the two, despite the fact that some trade unionists profess socialism. The keynote of the whole discussion may be summarized briefly in the author's statement as follows:

"One of our correspondents challenges us to show reason why the trade-union and the socialist movements cannot be harmonized. The reasons are clear. The two movements are seeking opposite ends.

"By reason of its defects the socialists seek to overthrow the present order.

"By correcting its defects, the trade unions seek to make the present order endurable.

"Now, if the trade unions succeed in making the present order endurable, the aim of socialism is thereby defeated; whereas, if the socialists succeed in overthrowing the present order, the aim of the trade unions is defeated. As the success of the one means the failure of the other, the two are diametrically opposed to each other."

This clearly-stated distinction between trade unionism and socialism is commended to the thoughtful attention of our readers, and in particular do we recommend its study to those who have been in the habit of confusing the two and of regarding them as only different names for the same things.

MRS. J. ELLEN FOSTER, by direction of President Roosevelt, has been detailed from the Department of Justice to investigate the conditions under which women and children work throughout the United States. Mrs. Foster has had years of experience in philanthropic work that peculiarly fit her for this position. She was among the first women of the country to practice law, and most of her clients were moneyless and defenceless women and children. She has been prominent in reform movements and usually has had charge of crystallizing sentiment into practical results.

In 1900 Mrs. Foster was appointed by the late Secretary Hay as a representative of the United States to the

International Red Cross Conference at St. Petersburg. Last year she accompanied the Taft party to the Philippines and made a special report to President Roosevelt on the condition of women and children there. She has but recently returned from a trip around the world, in the course of which she studied the condition of women and children in India and China.

The selection of Mrs. Foster for such work commends itself to the general public, for while full of generous sentiment, she is a student of economics and has the logical mind that looks at all conditions in the light of reason.

MISS HELEN VARICK BOSWELL, well known to club women of the country as a forceful public speaker, has recently been appointed Chairman of the Industrial and Child Labor Committee of the New York State Federation of Women's Clubs. Miss Boswell had charge of the session of this important committee during the convention held at Saratoga the early part of this month, and she was highly complimented for the excellence of her program, and for the fairness with

which it represented the different phases of the industrial question.

Miss Boswell has had some years of experience in public work, having organized numerous clubs, and is always fortunate in holding the confidence of the many club women who are her associates. She completed her law course at the Washington College of Law of the District of Columbia, and has found her legal knowledge of great assistance in her public work.

Miss Boswell is connected with the National Civic Federation and during the winter will give a number of lectures before the women's clubs of the country for the Welfare Department of the Federation.

WELFARE DEPARTMENT

CHARLES A. MOORE, Chairman.
CYRUS H. McCORMICK, First Vice-Chairman.
NATHAN STRAUS, Second Vice-Chairman.
ELLISON A. SMYTH, Third Vice-Chairman.
ISAAC N. SELIGMAN, Treasurer.

REST HOUSES FOR RAILROAD MEN.

PENNSYLVANIA'S PROVISION FOR THE WELFARE OF ITS CONDUCTORS, ENGINEERS, FIREMEN AND TRAINMEN.

By SAMUEL W. LATTA, Chief Medical Examiner.

VERY few persons, outside of the railroad people, have any idea what a rest house is or its purpose. I shall explain its origin and the benefits that are derived from it.

In its early days the Pennsylvania Railroad, like all pioneers, experienced great difficulty in not having its train crews where they could be reached readily when needed. This was particularly the case where the men were at the end of the runs and away from their homes. The idea was conceived, therefore, of having rest houses or bunk houses, and they constituted the forerunner of all the welfare work initiated by the company.

The first rest house, as far as I can learn, was established prior to 1875. There was an old hotel building in Philadelphia which our company bought, renovated and fitted up as a rest house for its freight men, that being then a terminus of the freight runs.

Special trains and extra sections of regular trains require special crews. There is no knowing when they will be needed. Emergencies arise, particularly in the night, and it is necessary to be able to locate the men quickly. Freight yards and termini are frequently located at isolated places distant from residential centers and difficult of access to boarding houses. Adequate accommodations are necessary for the crews, arriving and departing at all hours of the day and night, at prices within their reach. In instances, as in Philadelphia, as much as thirty thousand dollars was expended on such a house to allow the men all the comfort and health that is necessary for them to do their work properly.

In many cases the company has rented a room or rooms in private houses, and in some instances an entire house to ensure the comfort and welfare of its employes. In the large yards, situated distant from proper

LIBRARY IN PHILADELPHIA REST HOUSE, (Pennsylvania R. R.)

accommodations, rooms are furnished with chairs and lounges for the use of the yard men. In large freight and transfer stations rooms in which to wash, and to keep and change their clothes, and places for them to eat their lunch are furnished. Some have reading rooms supplied with newspapers and periodicals.

At many isolated places where only one, or at best a few crews have a lay over, cabin cars are used for the freight crews. These are fitted with six bunks, a stove and utensils for cooking, and answer well as substitutes for rest houses. Every freight train has its cabin, and, whenever necessary, the crews can sleep in the cabin, provided with all necessary means of comfort.

GAME ROOM (Pennsylvania R. R.)

A description of one of the rest houses may give a fair idea of them all. The house in Philadelphia, at 1605 and 1607 Filbert Street, is under the care of a competent number of necessary helpers to make the beds and keep the place plentifully supplied with bed linen, soap and towels, while a librarian looks after the library and game room. Over $30,000 were expended on the site and furnishing of this house; it costs $400 to $500 per month for service, all paid by the company. Everything in this building is absolutely free to the men. The house contains reading, game and diversion rooms, a day bunk room, a room for day lounging, bedrooms, locker rooms, and so forth. There are seventy-two beds for night use; sixteen couches for day use; nine hundred eighty-three individual lockers, wherein the men hang their clothes; fifteen stationary washstands; and eight lavatories on different floors; the library contains 1,286 books circulating among the fam-

READING ROOM (Pennsylvania R. R.)

ilies of the men at the rate of three hundred a month; the games furnished are dominoes, checkers and chessmen; the reading room is supplied with Philadelphia and New York newspapers, and various weekly and monthly periodicals. One thousand men avail themselves daily of the privileges of this room; some of them on local runs visit it several times a day. It furnishes a delightful place for rest and recreation while waiting for duty calls. Any one can occupy a couch during the day. Any one desiring a bed for the night must register. He goes to the attendant in charge and states that he is going on duty on a certain train. His name is registered opposite the bed in which he is going to sleep, as well as the time and number of the train for which he is to be called. He is given a check for the bed, and when he goes to the room the colored man in charge allows him to occupy that bed. At the proper time in the morning or during the night he is called for his train. This

DAY BUNK ROOM (Pennsylvania R. R.)

building is sanitarily as near perfect as it can be made. The plumbing is first class; the ventilation is as near perfect as it can be with due regard to dangers of drafts. The beds are taken apart and bedding and rooms are thoroughly aired every day. Every effort is made to render these bedrooms absolutely clean, healthy and safe.

The Pennsylvania Railroad has a rule that everything provided on the road must be of a certain stan-

Lockerroom and Night Dormitory (Pennsylvania R. R.)

dard; there are a standard track and standard trucks, and so in the rest houses there are standard beds. Each bed is a good iron cot with woven springs; and the mattresses are of excellent quality. The company pays special attention to the cleanliness and sanitary conditions of the rooms. The men take pride in going to them, and they show visitors around and comment upon what is done for their health and comfort.

In some places the rest houses are connected with the despatcher's office by means of electric wires. Those for the wreck-trainmen are all connected in that way. The wreck-train houses are all the property of the company. The operator touches a button which rings a gong in each man's bedroom and in five minutes the train is on the way. (When at their homes the men are reached by callers, their residences being carefully kept in the trainmaster's office and every change promptly noted. When a train is to be made up, the caller is given the names and residences of the men and he calls them for that particular train).

At many places the rooms are only used for resting between hours of labor. Then they are equipped with chairs and tables, to make them convenient places for the men to eat luncheons brought from their homes. In some a cook stove makes possible hot coffee. In many small yards, such as are between here and Philadelphia —at Newfield Junction for instance—shanties are provided in which the men keep their clothes and lunch baskets. Each has a key to the building, which is kept locked.

At the large yards we have the big rest houses. Recently there were established very large classification yards at a point called East Altoona, where it was necessary to erect two rest houses. One contains a hundred fourteen bunks for the use of the engineers and firemen, and the other seventy-four beds for the trainmen. I will read you a quotation from a letter that I had from the superintendent of that division: "At East Altoona there are nine rooms fitted up for sleeping rooms. Each of eight of these rooms has eight beds, the ninth room, being somewhat larger, contains ten beds. The beds are made of iron and are single; they are all furnished with Ostermoor mattresses and springs; each bed has two sheets, pillow with pillow case, and blanket; there are a spittoon and chair furnished each bed and at the head there are three hooks in the wall on which to hang the clothes. There is matting through the center of each room and between each bed."

Drinking Water Can in Engine (Pennsylvania R. R.)

This cooler is made of .80 inch tank steel; the inside covering is made o .022 inch galvanized iron and there is a space of 1½ inches between the outside and inside cases filled with granulated cork. The bucket fitting instde is made of .022 inch galvanized iron and has a capacity 3½ gallons.

It will be seen from this that on completion of this yard the necessary provisions were made for the comfort of the men.

The needs of the men are closely looked after, and the same consideration for the care and comfort of the men is shown, whether it involves but one crew or more. On the lines east of Pittsburg and Erie there are fifty such places where two thousand men are given free beds every night. It is difficult to give the number of resting or loafing places furnished. Some seventy-five thousand dollars have been expended on furniture and over thirty thousand dollars are spent annually for maintenance. Now, the lines west of Pittsburg are gradually introducing the necessary bunk and rest houses at all points where they may be required.

The men must have means of diversion. Saloons coming into existence to supply it, gave rise to conditions from which serious results often followed and called for means to overcome them. Indeed the moral welfare of the employes, particularly the passenger and freight men, was a matter of great seriousness to the officials of the Pennsylvania Railroad from its very earliest days. The company has on its payrolls about two hundred ten thousand men, counting the lines east and west of Pittsburg, and its operated and controlled lines. To successfully conduct the business the morale of this great army of workmen must be at least above normal.

A clear brain is needed to safely operate trains freighted with precious lives and priceless commodities. In the furnishing of the rest houses, not only did the company supply the essentials, such as the beds, closets for clothes, lavatories and restaurants, but it also furnished means for amusement, such as newspapers, periodicals, libraries, and games. Some of the houses have rooms fitted with mechanical appliances for instruction in airbrakes, and injectors, and instructors are provided to teach the men. This instruction is very useful, for they have to apply that knowledge in their work, and every man who uses them has to undergo examination in the use of airbrakes.

From a small beginning the rest houses have grown to what they are at present. Some of them are managed entirely by the company, others by the men themselves, and some are under the care of the Railroad Y. M. C. A. Some of them furnish beds free; others charge a nominal sum, like ten cents a night for the bed, and food is furnished in the restaurants at cost.

Arrangements are made at some places with private parties to furnish meals at small cost within the means of the men. Where that is not possible the cabin car,

Washroom and Y. M. C. A. Rest House (Pennsylvania R. R.)

Lunchrooms (Pennsylvania R. R.)

Y. M. C. A. Rest House and Hospital on one of the Gould Line

equipped with cook stove, utensils and means to prepare food and hot coffee, is provided. At points, such as on the Philadelphia, Baltimore and Washington division, in addition to the bunk rooms we furnish a cook house. This is not unusual where the terminus is at a distance from places where board can be obtained.

In Broad Street Station, Philadelphia, there is a railroad men's dining room, at which a first-class meal is served for fifteen cents. Any employe in uniform can go there and get his dinner. He gets roast beef and two vegetables, bread and butter, dessert and coffee for fifteen cents. So along the road, scattered all over, wherever there are restaurants under the control of the company, special rates are made for trainmen. On a dining car the conductor and crew can get a dinner for twenty-five cents, such as you will receive at a dollar.

The company realizes that anything which provides for the physical and mental welfare of the men, rendering them more content, not only benefits the men, but also the company, in that it receives from the employes better and more loyal service. Where men have left the employ of the Pennsylvania Railroad, engaging with some other company under different conditions, they have returned to our company. An experience of more than twenty years with the railroad has convinced me that the company receives large returns on its investment by the excellent service received from its men and the loyal support that the employes delight in giving.

Interrogations and answers follow:

Q. Is there any compulsory element? Are the men compelled in any way to use the restaurants and rest places?

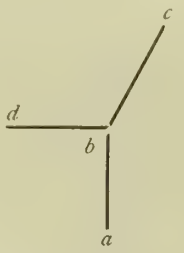
Dr. Latta: They are obliged to be where the company can put its hands on them. We never had any one raise objection to occupying these rooms, especially when they are free; but I do not think they would regard it as compulsory, except in so far as we want to have the men where we can put our hands on them. If they choose to take board at outside places we do not object. We simply provide these places and, if they choose, they occupy them.

Q. Why do you charge for lodging in some places and not others?

Dr. Latta: I don't believe I can answer that question; I don't know why it is done. I know it is a fact. In some places the houses are managed by the men and are located at the request of the men. It may be that the house is not absolutely necessary there, but it is put up for the accommodation of the men, at their request, and they manage it. We provide the heat and light in all cases. I would like to say in this connection that I do not think our men approve of houses not under the control of the company, if it can be helped. I know they would rather that the company or they should manage them than the Y. M. C. A. One of the reasons is that the men they send there to handle them are not experienced; they are not familiar with railroad men. You have to learn to know railroad men—they are not like other people in a great many respects; you have to learn their peculiarities and know how to meet them. A branch Y. M. C. A. is established at some point and given charge of a rest house, and they send some young fellow out there as secretary who doesn't know anything about railroad men; he doesn't know railroad men and he has to learn, and the men don't like that. I suppose one reason is that the company does it for nothing; the company does a great deal for nothing. But no scheme for the benefit of the masses will succeed without responsible organization and competent management. Such essential features have marked the successful progress of the institutions of the Pennsylvania Railroad.

HOW THE RAILROAD MEN REGARD SUCH CONVENIENCES.

Not long ago a locomotive fireman, while in New York City, expressed great enthusiasm for the work of the Welfare Department of The National Civic Federation, but he feared that the railroad workers of the country would perhaps be overlooked by the department, and he had many convincing things to tell as to why special interest should be taken in the work for railroad employes. He said:



"In this railroad world of ours there are a great many men working and working hard for a living, and particularly with engines. As the conditions are which confront the men continuously in this great service, there is one crying need, and that is rest rooms, places where the men can go while waiting for the return of their engines to their initial starting point, that they may have rest sufficient to give them the life that is necessary for them to carry on their work. The rest room should be a place sufficiently warm and equipped with the necessary arrangements to bring comfort to the men, in the way of bathrooms, shower baths, and also individual washbowls.

"When I speak of rest rooms, I mean rooms where cots could be furnished for the men who have from two to five hours of uncertainty when they are waiting to return with their trains. They should be near the terminals so that the men could be spoken to at any time that it might be necessary in the way of calling them to their work. Some roads have such houses. The Central Railroad of New Jersey has several bunk houses. They have nice, clean cots, and all the facilities in the world for the men to lay over from 12 to 24 hours. They have nice stoves and there is an opportunity for the men to do their own cooking. This is one of the roads which has provided in this way for the comfort of their men.

"The Pennsylvania Railroad does so well by its employes that they are always contented, for they get everything they need. It used to make other men feel bad to think that the Pennsylvania men got everything and we on the other roads got nothing, but other roads do something now. The C. B. & Q., the C. & N. W., Grand Trunk, Union Pacific, Southern Pacific System, Santa Fe System, Central Railroad of Georgia, and the St. Louis & Southwestern Railroad have some rest houses.

"The need for these rest houses is continually felt. I had a remarkable experience last December at one station which is a new freight terminal. Of the six houses at that place, I found four were saloons and two were large boarding houses. All the employes—five divisions—put up in these houses—sixty crews. I never saw such a drunken lot of men in my life. They threw their money away in these saloons, because there was no other place for them to go to eat or sit down. In another town I think it is not too much for me to say that every dollar that the men earn goes to the saloons, because the only places where they can get lodgings are the saloons. As only railroad men go into this particular town, it is very evident that the saloons get their patronage only.

"There are roads in this country where the men start out and do not get back home for a month.

"The men start from *a* and go to *b*, then they go from *b* to *c*, then back to *b*, and from *b* to *d*, for instance:

"There is no use in this sort of thing. The company could manage so that the men would not be away from home so long. It is a matter of arrangement. The Pennsylvania Railroad has a very different method, and it is just as easy to arrange the runs as they have arranged them. The men are often kept out longer than they should be because the motive power has run down and the railroad companies have not kept it up properly. One reason why the work consumes so many hours is because the engines are so large and the fuel is of poor quality, being mixed with snow and dirt often in bad weather."

That the life of the fireman is a hard one and that he needs all that can be done for him in the way of welfare work is graphically shown by another fireman:

"Where the men work fourteen hours a day they have the best jobs. My run is 165 miles every day six days in the week. It is one of the *good* jobs. Only 17 per cent of the men can 'hit the ball,' that is, stand up and do their work. It is only recently that the work has been so hard—all in the past six years. In many of the large engines in the West the fire is so hot and the space so narrow that many of the men require leather blankets from the waist to the knees to protect them—to keep their clothing from burning. The men are subjected to extreme heat and extreme cold. It is said that only one man in six who enters the position of fireman ever becomes an engineer; five fall by the wayside because health fails, or the eyesight is affected from the intense heat and looking into the bright light.

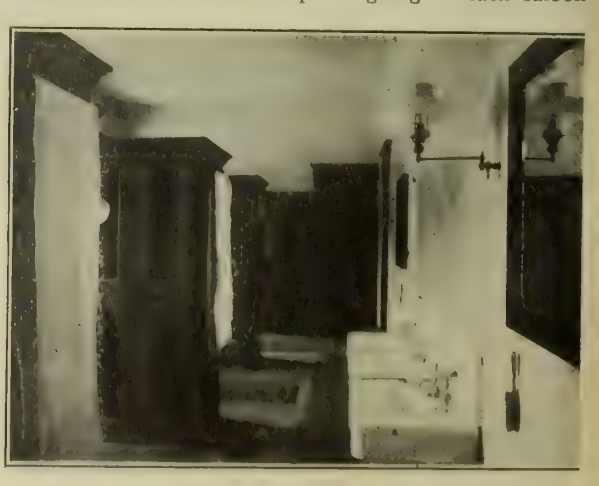
"Railroading has been revolutionized in the last six years and all the work lightened except that of the fireman. That has become almost unbearable.

"The Way Some Men Wash in All Kinds of Weather"

"The First Thing a Man Wants After Leaving his Engine is a Bath and a Good Square Meal"

"Seventy per cent of the men are in the freight service, where the runs are long and uncertain. It is not unusual for them to be out fifty hours, and in extreme cases they have been on duty as many as seventy hours, so you see their comfort especially requires consideration. One of our worst accidents occurred where the engineer on a freight train, who had been on duty thirty-two hours without rest, went to sleep while waiting on a siding for a passenger train to pass. His crew left the train and it slipped down on the main track and was struck by the passenger train."

One of the "crack" engineers of the country, who ran a fast train for twenty years, tells that many of the men lie down in their engines to sleep



"Many a time I have slept alongside of mine on the ground. Often the men lie on the hot sand at the roundhouse or in the sandhouse or a handy box car in warm weather will offer the best accommodations.

"One very great need has been a place not only where the men could rest, but where they could clean up and were welcome. Most of our men come in from 8 to 12 P. M. and there is no place to go except the saloons. They are always welcome there.

"In a certain town in Indiana of 900 inhabitants there are thirteen saloons in full blast. In an Illinois town of 3,000 population there are twenty-two saloons. Both are railway terminals. There is not even a place for a man to wash his dirty face and hands when he comes in tired.

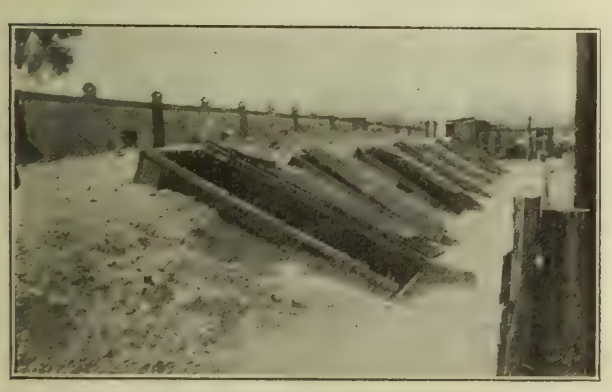
"On many roads as soon as the men ask for any conveniences for their comfort the reply comes: 'We pay so much for so much work.' We try to make an employer see it is the best investment which he can make because, if a man coming in from a good hard trip can get a bath, he is refreshed, but if he does not get a chance to change his clothes, a chance to bathe, and a chance to sleep, he starts out again tired. The first thing a man wants after leaving his engine is a bath and a good square meal.

"At many terminals, if the men come in after midnight there is no place to go except the saloons to get a bite to eat. There is a piano going in each saloon

A Model Washroom with Ventilated Lockers

New Mexico Rest House Named by the Men, "Rose Cottage"

and it is very attractive to the men. After thirty or forty hours on the road a man has a bad taste in his mouth. Nothing looks well to him. The world is all wrong. Then, if he can get something dainty and well cooked to eat he feels quite different.



"The men worked three years to get a building on a certain road on the promise that one would be put at every terminal if this one should succeed. The company put $12,000 in that building alone. The environment was beautiful and it was a nice building, but it was wretchedly managed. For instance, there was a running brook, and it would have been easy enough to have thrown the refuse into it, but it was simply pitched into the yard, emitting an unhealthful and disagreeable odor.

"Then a man would get dirty coffee which had boiled all day, tough steak and some potatoes that had been cooked in cottolene. He knew exactly what he would get three times a day if he went there. Every Sunday we had chicken for dinner. A man would bet $10 that he would get a wing. I don't know how many wings the chickens had, but I never got anything but a wing!

"In that building they put in nice shower baths, six tubs, a reading room, library, gymnasium, game room, restaurant and beds at ten cents, but they put a young fellow in charge who was entirely unfitted for the position. At first 165 men went there to rest and refresh themselves, but this man did not keep the place clean. The food was not cooked well and the men were made to feel that they were in the road all the time. That grinds in on the soul of a workingman more than anything else.

"It grew worse and worse, and finally the beds were not even made. We got into beds that were not changed sometimes for a week. After a few rounds like that the men said, 'If we have to live in dirt, we might as well go back to the saloons.' Inside of a year that building, which we had tried so hard to get and which had so much that could have been made of benefit to the men, was wrecked purely through mismanagement by the man put in charge."

Another fireman makes a special plea for drinking water. He says: "The men should have cans on their engines for drinking water. They have them on the New York Central. I asked for water cans, and the superintendent said, 'What is it that you firemen don't want?' On another road the company was asked to provide water cans for all engines and to furnish ice

"Dugouts." The Way Some Railway Men Sleep in New Mexico

Asleep in His Engine

"A Cage in the Bunk-house Yards of the Southern Pacific Railway at an Arizona terminal. Well adapted to the warm climate. Legs of cage in cans filled with water to prevent entrance of bugs. The cages are made of screen on account of mosquitoes and because it is much cooler for the boys to sleep out of doors down on the desert. The men have washstands and bathtubs."

between the months of April and November. The general manager read that paragraph in the proposed contract and said, 'Furnish water and ice coolers! Why not ice cream through the months of July and August?' I told him that would be satisfactory. I got the coolers but not the ice. If the men do not have water they go and fill up on beer at the end of the runs just to quench their thirst."

In regard to rest houses, the fireman says:

"A bad feature about these places generally is that there is no attendant. Wash rooms and lodging rooms are not kept as clean as they should be. I went into one boarding house where a man had died and the room was given to another man without even changing the bed. There should always be an attendant to see to it that the bedclothes are changed. Consumption largely comes from the fact that it is contracted from the bedclothes. In the last four years our death and disability rate has shown a great increase of consumption.

"On our road, with the exception of a bunk room, in one city, which is not near the terminal, the men have no place to sleep except in stock or waste rooms, which are damp and cold. The men simply lie on the floor, with not even a cushion for their heads.

"The men should also have a place to keep their clothes and the rest house should be near enough so they can get to the trains easily. They cannot carry clothes in the engine, especially if the engine cabs leak.

"The work of the firemen is very dirty and frequently they have no place to wash up. They usually have to eat in all their dirt. In one of our roundhouses the men have a small trough with cold water, right out in the roundhouse, but they cannot use this because it is so exposed. They would be obliged to remove some of their clothing in order to wash themselves satisfactorily. Being overheated, they cannot do so except in warm weather, because the roundhouses are cold, and the men would be compelled to disrobe almost in the open air. Besides, the wipers use the wash place in the round house and the water is never drawn—no pretension being made to keep the trough clean.

"Up to two years ago they used to give two pounds of waste a day to clean our *hands* and now we only have a quarter of a pound a day with which to clean the engine *and* our hands and faces. It won't do for the fireman to give his engineer any,—he can't spare it! You are supposed to clean your engine. You have to do *that!* As for wiping your face with it, it is out of the question!

"Another great reform in this work would be if all railroad companies would institute lunchrooms or eating places along the lines where it would do away with the necessity of men carrying food that they are compelled to retain in air-tight pails from ten to fifty hours. Surely after fifty hours this food is unfit to eat."

Another engineer says:

"All engineers and firemen know that the great needs for the betterment of their labor conditions are decent places to sleep, wash, eat and have some simple recreation as an offset to the enticements of the saloon. The continued change of officers on railroads in the last six years has had a tendency to prevent greater improvement in conditions. Every man in the operating department does everything possible to curtail expenses, but even where they are desirous of introducing these beneficial features for the men they have no time to consider them."

A MODEL HOSPITAL CAR.

The hospital car of the Erie Railroad is provided for use when, in case of an accident, passengers or *employes* are injured and the nearest hospital is so far away that operations on the spot become necessary to save life or relieve suffering. It has been pronounced by surgeons to be the most complete and perfect hospital equipment possible in a car.

The Only Place of Shelter for the Men upon whose Alertness Public Safety so Largely Depends

The car, which is 60 feet long, is divided into two compartments. It has an operating room 15 feet 10 inches in length equipped with an operating table having a movable head and foot extension in the center, an instrument sterilizer on the right and a surgeon's basin on the left. The car also has two lockers fully equipped with surgical instruments and stocked with bandages, plasters, sponges and all anæsthetics, antiseptics, astringents and other medical and surgical necessities. Sliding doors four feet wide on either side with portable steps permit an easy entrance with a stretcher to the operating room, which has six windows, two windows in each door and a large window in the roof over the operating table. All are of ground glass and provided with white rubber roller curtains. Two 4-flame acetylene gas lights, a single flame over the wash basin and a portable lamp furnish light in the operating room at night. A gravity water system to furnish both hot and cold water from tanks just under the roof of the car is provided. The flow of water can be regulated by a surgeon with a valve operated by the foot, thereby avoiding the necessity of handling any of the equipment. Head lining and inside finish are of a composite board entirely without beading, molding or carving which might serve as places for the collection of infectious matter. White enamel paint is used as a finish and the floor is covered with white rubber tiling.

Two sliding doors with ground glass windows lead to the ward-room. It is 43 feet 4 inches in length, and equipped with 11 brass bedsteads, a lavatory and saloon. It has white rubber tiling on the floor, composboard sides, painted in white enamel, and white rubber curtains between the beds, which are provided with spring and hair mattresses, rubber sheets, and bed clothing. Equipment boxes underneath the car are provided with crutches, splints, army stretchers, surgical implements, wrecking tools, and other accessories.

There are six-wheel trucks, insuring the utmost freedom from vibration, on which rests the steel underframe. Steel platforms at either end of the car, with gates which can be closed against the curious, are provided. Three-stem couplers and draft gear ease the movement of the car.—*Erie R. R. THE FEDERATION OF LABOR IN POLITICS.

(*Continued from page* 9)

neous, and unnecessary, and they have no function to perform. In so far as writs forbid acts which the law does not forbid they are erroneous and their future issuance should be prohibited." In demanding anti-injunction legislation, Mr. Gompers states that organized labor asks for nothing extraneous, nothing that is unjust or improper. He says: "We want no immunity from the law for any crimes or unlawful conduct of which any man in the labor movement may be guilty. I grant you that here and there some man may be gathered into the fold of a union of labor who, either from a perverted mind or from wrongs which he has suffered elsewhere or here, may do a thing which no man can defend and which no union man will defend. But you must bear in mind that the organized workingmen of America have not always the choice of material."

VIEWS OF EMPLOYERS' REPRESENTATIVES

In addition to the position advocated by representatives of the railway brotherhoods and that taken by the American Federation of Labor, and opposed to these two, is "the other side." This latter is that held generally by employers, and it is in favor of the *status quo*. In advocating this policy before the House Committee, Mr. James A. Emery, representing the Industrial Citizens' Association of America, and other employers' organizations, expressed his belief that "in its actual effect upon the protection of property and personal rights, which we believe an equity court contemplates, the ultimate effect of such legislation, with the moral weight which it would have upon the legislatures of the States, considered merely as a matter of expediency, would be a course of very serious danger by the withdrawal of effectual remedies, adequate protection, which these courts have given during all the time that Federal courts in the operation of Congressional legislation have had jurisdiction of these matters, and would also operate to affect the action of States dangerously."

Because the power of injunction has been abused by the courts is no argument, he claims, for taking away that power, and he states that it is an exceedingly dangerous position to make the chief argument directed in favor of the proposed legislation the abuse of discretion upon the part of Federal judges. He says: "The powers of the court in existence at the present time have been very frequently used because there has been very frequent occasion for their use. There has been an occasion to protect property by virtue of the right of injunction, and of personal rights involved because of the fact that a continuous attack has been made upon those personal rights; and this is not merely the view of the persons who, by virtue of their interests in the offered legislation, might be assumed to be prejudiced, but it is the view of members of the judiciary, of public men who have had occasion to make themselves familiar with the facts, and of tribunals of a moral character, which from time to time have had an opportunity to present their views upon the question.

"In a labor dispute it is continually laid down as though that were a dispute by itself or was to be governed by different rules in morals and in law; that a man has a right to go to another who disagrees with him as to the advisability, the expediency, or the justice of the strike, and on the streets, in the cars, wherever he finds opportunity to approach him, to keep insisting upon his view and compelling the other to accept it. Gentlemen, if we did not have any other jurisdiction of the equity courts except to restrain a nuisance it would at least seem under that that not only was it necessary that such a power should be exercised to restrain it, but it would be exceedingly unwise to adopt legislation that would seem to prevent the issuance of an injunction to prevent the annoyance of another.

"Legislation that would have as its purpose the deprivation of Federal courts of that power which they possess to-day to fit the remedy to the wrong would be a long step in the direction of taking from the courts and throwing into the field of politics, if you please, the essential principles upon which the Republic itself is founded, and those essential principles, the protection and vindication of which are not merely necessary for the protection of this Government, but of all government and all civilized society—the right of a man to work, the right of a man to sell his labor, the right of a man to enter into a labor market and buy labor offered freely and willingly to him, the right of a man to live his life free from annoyance, the persecution, the intimidation, the coercion, and even the indictable persecution of others—is a right that partakes of the very essentials embraced in our Declaration of Independence—the right of life, liberty, and the pursuit of happiness—which principles were laid down by the fathers of our country as the essential things upon which the Republic rests."

Another bill which representatives of the American Federation of Labor supported before the House Committee is entitled "A bill to regulate the issuance of restraining orders and injunctions and procedures thereto, and to limit the meaning of 'conspiracy' in certain cases." According to the provisions of this bill no restraining order or injunction is to be granted in labor controversies unless necessary to prevent irreparable injury to property or to a property right for which there is no adequate remedy at law. It is further provided that "for the purposes of this act no right to continue the relation of employer and employe, or to assume or create such relation with any particular person or persons, or at all, or to carry on business of any particular kind, or at any particular place, or at all, shall be construed, held, considered or treated as property, or as constituting a property right." In Section 2 of this act it is provided that no "agreement between two or more persons concerning the terms or conditions of employment of labor, or assumption, or creation, or the termination of any relation between employer and employe, or concerning any act or thing to be done, or not to be done, with reference to, or involving or growing out of a labor dispute, shall constitute a conspiracy or other criminal offense, or be punished or prosecuted as such, nor shall the carrying out of any such agreement be restrained or enjoined, unless the act or thing agreed to be done, or not to be done, would be unlawful, if done by a single individual; nor shall the entering into or carrying out of any such agreement be restrained or enjoined, unless such act or thing would, if done or not done, be of the character described in the first section of this act."

ARGUMENTS FOR AND AGAINST THE FEDERATION'S BILL.

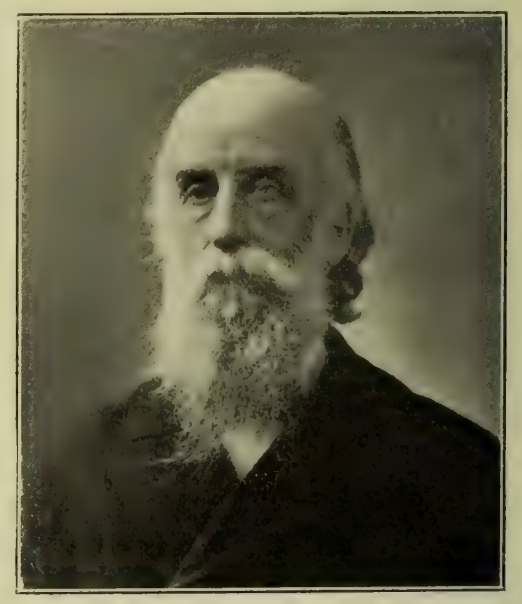
Mr. T. C. Spelling, who appeared before the committee as the representative of the American Federation of Labor, stated that this bill was submitted as a substitute for the other bills which the representatives of the Federation had been supporting. The presentation of testimony and the discussions following the submission of this bill centered largely around two points. One was whether the right to do business was a property right, and the other related to the constitutionality of the measure.

On the first-mentioned point, Mr. Spelling argued that no man has anything resembling a property right to carry on business of any kind, or to any extent, anywhere in the world. He claims that a property right is nothing distinct from property. The great dividing line, he says, is between personal and property rights. The right to carry on business is not, in his opinion, a property right when it is divorced from the question of good-will in a particular business. He claims that it is not a fair assumption that any State has decided that the right to do business is property. It is not a final settlement of the matter even if one State or more than one State has done it. He believes that Congress has power to say that the right to do business shall not be considered or treated as property for the purpose of this act. He says: "This being an act to regulate, or limit, the use of Federal process, the questions of the property right under State laws and views of State courts have no relevancy. Congress either has this power or it has not. If it has the power, this enactment is a supreme law of the land There is no question whatever of a taking of property without due process of law. To say that 'for this purpose' certain things shall not be 'considered, held or treated,' as property, is merely to set a definite limit to the power to issue certain extraordinary court process. It is no infringement upon any property right nor the impairment of any State law, nor the invasion of State jurisdiction. Any State courts which hold the right to do business to be property may adhere to that view and enforce it, because we cannot by this or any act control the jurisdiction of functions of State courts." He claims that what is sought under this bill is the lopping off of unwarranted judicial extension of the words "property," or "property right," and "conspiracy." He denies the claim of opponents of the measure that the right to labor is property as much as he denies their claim that the right to do business is property.

Opponents of the measure, most of them representing associations of employers, contended before the Committee that the right to do business is a property right, and it was claimed that the enforcement of such a measure would be in effect to deprive a person of property without due process of law.

Walter Drew, Esq., representing a number of Citizens' Alliances, says the first thing the bill would take away, if it became a law, would be the good-will of the business, "a species of property which in this country is sacred, inviolate, and is protected by our courts." He states that every court, State and Federal, announced the doctrine that good-will is property, subject to contract, to be bought and sold and dealt with as any other species of property. He claims that the right to assume or create the relation of employer or employe has become an established doctrine of our courts, mainly at the instance and behest of laboring men themselves that labor is a commodity to be bought or sold in the open market like any other commodity, and that the right to buy and sell it is a property right, like any other property right, to be protected by our courts. He claims that the bill not only confiscates property, but confiscates the highest kind of property. "As well attack our system of credit," he says, "as to attack the good-will of our business institutions."

Mr. Daniel Davenport states that the measure "assumes by act of Congress to declare that to be not property which by the laws of every State in the Union—I state it without qualification—is property within the meaning, or, as the term is used, in legal and equitable proceedings, and under the recognized system of jurisprudence in force in this country." He claims that any attempt on the part of Congress to declare that which by the laws of the several States is property, shall not be property, when it comes to the question of whether it should be protected by the courts, would be an unconstitutional exercise of authority by Congress.



LYMAN ABBOTT ON SOCIALISM.

DR. LYMAN ABBOTT, editor of *The Outlook*, in an editorial on Socialism, explains what he considers to be its spirit, doctrine and method. After stating that *The Outlook* is in hearty sympathy with the spirit and largely in sympathy with the doctrine of Socialism, Dr. Abbott dissents from its method. On this point he says:

"We dissent from the method and to some extent from the doctrine of State Socialism—that is, of that form of Socialism which would make the State the chief if not the sole employer of industry—for two reasons:

"State Socialism assumes that the evils of society are primarily in the organization of society; so that if the organization were changed, the evils would disappear. In fact, society never will be better than the individuals who compose it. A sound ship can never be made of rotten timber. Individual reformation and social reconstruction must go on together.

"State Socialism assumes that all functions of society should be carried on by one organization, name-

DR. LYMAN ABBOTT,
Editor of "The Outlook."

ly, the State. In fact, society can better perform its various functions by separate organizations. Putting the Church under State control did not make a free Church. It is more free since it has been taken out from State control. Putting industries under State control would not make the industries free. The industries of the free State of Congo are under State control, and industrial despotism is nowhere in the world so bad as it is in the free State of Congo. The Socialist replies that Socialism assumes a democratic State to organize and carry on democratic industries. But in assuming that the State will be democratic when the strong men of the State are incited by covetousness as well as by ambition to control the State, they assume as true what history proves to be false. To take industry out of the hands of a Carnegie and put it into the hands of a Croker would not make industry free, although Croker were kept in power by popular suffrage and Carnegie were not.

"In estimating the value of Socialism the student should keep clearly in mind this distinction between its spirit, its doctrine, and its programme. He should not be ready to accept its programme merely because he believes its doctrine and admires and shares in its spirit."

THE LITTLE MOTHERS' AID ASSOCIATION.

A MOST PRACTICAL AND SUCCESSFUL EFFORT TO LIGHTEN THE BURDENS OF WOMEN AND CHILDREN IN TENEMENT HOUSES.

By Helen Varick Boswell.

DICKENS put a great deal of wisdom into the mouth of his quaint character of Chops the Dwarf, and Mr. Chops remarked on one occasion anent Society: "It isn't so much that a person goes into Society, as that Society goes into a person." That is about the way it is with Philanthropy and Mrs. Clarence Burns. She didn't deliberately go into philanthropy, but it went into her so deeply as to take root and blossom forth in the most beautiful welfare work that has ever come to cheer the hearts and better the condition of little daughters of the wage-earning women of the tenements, who have thrust upon them by sad necessity the cares and responsibilities of the mother, when she leaves them to look after the smaller children while she is earning the wherewithal to feed and clothe them.

The Association, of which Mrs. Burns is president, has named this child "The Little Mother." You may see her in the streets, alleys, backyards, and on doorsteps, caring for the baby, amusing her toyless flock as best she can, and you pass her in the street as, with basket or bucket on her arm, she carries food, fuel or beer to her family. Her tiny hands do the cooking, scrubbing, washing, mending; her little feet run the errands and after the toddling babies all the long, weary day

These children are robbed of childhood's natural heritage of joy—they are unpaid laborers, about whose hardships no sensational writers are filling pages in the magazines, though they are often dwarfed and deformed by burdens too great for their years—but burdens which are cheerfully borne. The other day I noticed one of the little mothers trying to join a group of children who were following a piano organ. The other little girls were dancing and running, and doing all the things she wanted to do, but there around her neck were the arms of that Moloch of a baby—a regular Old Man of the Sea. If she could just follow along and hear a little of the music was all she hoped for, for you can't dance or run carrying a baby, and such a thing as deserting it never entered her loyal little heart. Her faithfulness is often pitifully demonstrated when she is relieved of the burden for a little while and taken out to Holiday House at Pelham Park for a week's rest. Recently a little deformed girl there was asked why she wakened so early in the morning, and why she did not seem to be enjoying herself more, and she timidly said that at six o'clock she always commenced to worry some, thinking of her mother who started out then to scrub offices, and wondering how the other children were getting along without her. She herself had reached the advanced age of nine years.

Another little girl of twelve, also very wakeful in the early morning, told the attendant she was used to waking early, because in hot weather she always got up at four o'clock and took the baby out and wheeled it about from four to six, so it could get some cool air—at six she came in to get breakfast for the others. Oh, those "others," who are always on the faithful Little Mother hearts. Many of these little girls never get any rest until illness actually overtakes them, and they are sent to the hospital. One of these recently told Mrs. Burns, who was visiting her, that it was the "first rest I've ever had"; and like Little Dorrit's poor Maggie she thought an "orspital was a 'eavinly place!"

Now what are some of the practical features of the work which Mrs. Burns and her associates are doing to lighten the load of the Little Mothers and to fit them to do more easily the things they have to do, and later to become useful members of the community?

In the first place the Little Mothers' Aid Association ranks among the five biggest charities of New York City, and while called a charity, and though much money is given to carry on its uplifting work, yet there is no question of pauperizing in the bounty bestowed by it. No child is made conspicuous by her needs, and self-respect and ambition are stimulated. By promptitude, diligence, kindliness, every Little Mother can earn a certain number of good marks at each lesson which she attends at the several houses conducted by the Association, and as these accumulate she is enabled to purchase from the clothing department articles sufficient to supply her wardrobe—she is a purchaser and not a pauper. Fifteen good marks can be exchanged for a pair of stockings, twenty-five for underclothes, sixty for a dress, eighty for shoes. For these marks she gets a certificate, which she uses to make her purchases, and while it might not be exchangeable for silver and bank notes at the United States Treasury, it is a standard medium of exchange at the Little Mothers' Aid Association. Instead of personal things, the marks will buy cooking utensils, and soap and other things for laundry work—and the unselfish "little women" spend many marks in articles of this kind.

MRS. CLARENCE BURNS,
President of the Little Mothers' Aid Association.

The establishments at which the work is carried on are "Happy Day House," 236 Second Avenue, Manhattan; "Pleasant Place," 16 Greenwich Street, Manhattan; "Up-town Branch," 108 Lawrence Street, near 128th Street, Manhattan; "Sunny Side," 84 Pacific Street, Brooklyn.

At each of these houses "Homemaking Circles" are maintained where the Little Mothers of the neighborhood are taught to make and mend their clothes, to purchase, prepare and serve food in an economical, wholesome and appetizing manner—to fix up something really good for "Papa's dinner pail" that doesn't cost any more than the things he used to buy; to care for their health and that of the household. Singing, calisthenics and recitations are also taught. The marked improvement in the morals and manners of

"LITTLE MOTHERS."

the children in these localities has proven the value of the individual training received. Many instances are on record where through the influence of the Little Mother who is getting the benefit of such training, temperance, thrift and integrity have been permanently established in homes, and bad habits overcome with good.

The sewing and laundry classes are always well attended and the cooking classes, needless to say, are always full, for the children "eat up" all the plain but good things which they are taught to cook and no feast of Lucullus was ever half so well enjoyed. The teaching of these industries is adapted to the needs and limitations of the humblest homes. Inexpensive decorations for the family table are suggested that beauty as well as thrift may be fostered in the home. Take the record of one year for instance: From October to June 1,568 meals have been served by the cooking classes; in the sewing classes 10,482 lessons were given to the eager little maidens.

At the several houses, the small brothers and sisters are gathered daily in the day nursery while their Little Mothers are learning to be more useful to them. These little ones are clothed and fed and bathed, and kindergarten games are played, and they are a happy lot.

The bright rooms of these houses, where the children, often for the first time in their lives, experience the gracious influences of home and instruction, are a happy refuge from the storms of winter and from the stifling heat during the summer months.

It takes much time, thought, and executive ability to keep such a work going and to aim always to enlarge its beneficence. There are no salaried officers. The only ones paid are the servants, the superintendents and the cooking teachers. A woman physician volunteers her services and goes at certain hours to the houses where the girls can consult her, and often visits them and their families in their tenement homes.

This Association was organized years ago by Mrs. J. H. Johnston, who is its honorary president. Mrs. Burns is the active and untiring and energizing force of the work at present, and her associates marvel always at the amount she accomplishes. No woman in all New York City better knows the needs of the poor, no woman is more thoroughly en rapport with the lives of the tenement dwellers, but years of such work have only sweetened Mrs. Burns' faith in humanity, and belief in the institutions of America. She knows the uplift movement of the times, for she helps to make it, and in herself and as exemplified in the Little Mothers' Aid Association, brings a living refutation to the wails of the Socialist that "whatever is, is wrong."

There is need for a great fund to carry on this work, and every year a bazar is given at the Waldorf-Astoria for which hundreds of interested women work unceasingly, and which nets thousands of dollars. Individuals often do much to give joy to the Little Mothers. Mr. Frank Tilford celebrates his own birthday by giving an excursion to Coney Island each year to seven hundred of them. He gives Christmas festivals to hundreds, and Easter and other holiday festivals are held. At Easter each child is also given a potted plant, which is a source of much interest to the household.

During the past summer 6,335 children were taken on outings. Many ailing and crippled children are kept for weeks at the summer home, Holiday House, Pelham Park, where good food, sunshine, air and proper exercise have done much toward restoring health. Often women of wealth invite to their country places twenty or thirty of these Little Mothers for a visit, and the various Guilds and Fresh Air Funds also help the work.

And the efforts of this Association are not confined solely to the Little Mothers—there are also two clubs designed for the recreation and culture of the parents of the Little Mothers. The afternoon and evening meetings of these clubs are well attended; socially and intellectually they are more than successful, and many are the kindly little deeds done by the parents to show their appreciation of what the Association is doing. So from aged grandparents, of whom quite a number come under the influence of the work, to the infants of the Ex-Little Mothers, of whom many are included, the Aid is a daily blessing and lives up to the motto it teaches the children:

"To do all the good I can,
To all the people I can,
In every way I can."

[The Little Mothers' Association, whose work is described in this article, is fortunate in having as its president one who has led in many other successful endeavors—Mrs. Clarence Burns. Mrs. Burns has been active, among other things, in the women's clubs, in urging the establishment of industrial schools, and is at present organizing a movement to establish a hotel in New York for working girls. As the recently-elected chairman of the Industrial Committee of the General Federation of Women's Clubs, Mrs. Burns represents the combined efforts of eight hundred thousand women to better the conditions for women and children.—The Editor.]

A TRADE UNIONIST'S OBJECTIONS TO SOCIALISM.

REASONS FOR ORGANIZED LABOR'S HOSTILITY TO "AN UNTRIED, IRRATIONAL, UNDESIRABL IMPOSSIBLE, NON-UNDERSTANDABLE THEORY."

IN the five recent issues of the *Coopers' International Journal*, the official organ of the Coopers' International Union of North America, an interesting discussion has been carried on by the editor and certain members of the union on the subject of socialism. It appears that in this union there are a number of socialists who, following out the policy of "capturing the trade-union movement by boring from within, attempted to use the *Coopers' Journal* for free printing and distribution of socialist propaganda. They proposed an amendment to the constitution of the union "to open the *Journal* to a discussion of socialism, giving its advocates equal space with its opponents," which proposition, by the way, has been overwhelmingly defeated. Pending the final vote on the question by the union, the editor voiced the sentiments of the conservative members in a series of articles from which we quote the following extracts. After the preliminary statement that the editor was, for a brief time, a member and secretary of a socialistic section and that "it is due to an impartial study of the subject that he is not now in the socialist ranks, the editor of the *Journal* says:

"No two understand socialism alike. It is not a science, it is an untried, irrational, undesirable, impossible, non-understandable theory which never has been a reality and never will be. As a political threat it may at some time have an effect for good in broadening and liberalizing the policies of dominant political parties, but as to its hopes of overthrowing the present form of government and substituting itself as a government, that will simply never happen, and the man who bases his hopes on such an absurdity is to be pitied for wasting his life's energy in a cause that is hopelessly lost from the very beginning. The American people want a system which offers reward for and opens opportunity to energy, thrift and talent. Whatever claim may be made by the socialists, their theory when analyzed offers nothing of the kind. It is calculated to discourage the possessors of these sterling qualities.

"If the time, money and energy spent in advocacy of this will-o'-the-wisp was devoted to the cause of trade unionism, which is striving every day of the year for actual reforms and improvements in our day and generation, the defects in government could be overcome, and there would be less oppression and more comforts for those who earn their bread in the sweat of their brows here and now. If a socialistic government were instituted to-morrow, we could not get rid of selfish men. We could not hang the selfish for there would not be rope enough. Since we could not get rid of them under a socialist government, it is safe to conclude that as the greedy and the selfish prey upon the less intellectual now, so would they do under socialism. 'If man's inequality is wrong,' says the New York *Mechanic*, 'then find fault with man's Creator.' Socialism cannot cure imperfections created in God's wisdom, and, moreover, men are being born and will continue to be born into the world with these imperfections every day. There being nothing in socialistic theorizing, therefore, which promises to cure man of inequalities and imperfections to which he is heir by nature, it fails, because it approaches no nearer to the seat of man's imperfections than does our present or any other form of government.

"There never was a time in any country when all the people could unite in one political or religious faith. The working people of America, however, regardless of political or religious leaning, can be united in the belief that the hours of labor are too long and the remuneration too small. It is possible for all of them, or at least a great portion of them, to be united on this issue regardless of political or religious differences.

"If the socialists are granted the right to inject their politics into the union, the Republicans and Democrats must have the right to inject theirs. If politics may be injected, so may religion, and if an effort is to be made to inject all these creeds and theories into the trade-union movement, the end of the labor movement is not far off. Instead of being a nation of united working men and women, this would be a nation of political and religious factions, each seeking to undo what the other is striving to do and neither of them accomplishing any good. The man who would steer labor's ship upon the rock of political and religious disaster is not a safe pilot and those who hope for smooth sailing in the labor movement had better beware of such piloting.

"Socialism analyzed means, if it means anything, governmental control of everything, which carries with it abolition of the individual initiative and individual liberty. The history of countries and all governments, including our own, demonstrates beyond successful contradiction that governmental power is oppression. We in this country, as all those in other countries, are suffering more from too much governmental power. What we want is less governmental power, but less of it, so that we may exercise and enjoy more liberty and freedom

"Prior to last year's convention it was the custom with the American Federation of Labor to give the socialists all the time and opportunity needed to expound their doctrine and present their theory. So patient was the Boston convention of that body in 1903, that fourteen hours were spent in debating the question of socialism, about ten of which were taken up by the socialists themselves, and after all this talk their resolutions failed of passage by a large majority. Since that

MR. JAMES A. CABLE.
Editor Coopers' International Journal.

time they have been losing strength every year in the A. F. of L. Their oratorical effort, and defeat, at the San Francisco convention in 1904 is accurately described by Luke Kennedy in the following letter to the New York *Mechanic:* 'They put forward their most masterful and brilliant orators, used obstructive and filibustering tactics, in fact resorted to every trick and scheme to accomplish what they had been looking forward to for years—the endorsement of their party by the A. F. of L.—and they were buried beneath an avalanche of "pure and simple votes."'

"As to how strong the socialists were at the recent convention of the A. F. of L. held in Pittsburg, Pa., we will take the word of socialists who were there. The *Cap Makers' Journal* (strictly socialistic) describes the action of said convention on a socialist resolution as follows: 'Suffice it to say here that the last American Federation of Labor convention was a very "harmonious" affair—in fact, so "harmonious" that when President Gompers ruled our resolution out of order on the absurd ground that it dealt with "party politics," there was hardly a delegate to contradict him. All other important resolutions, introduced by delegates Berger, Lavin and others (socialists), were snowed under in about the same fashion, without much ado.'

"The relative positions of the trade-union and socialist movements are very correctly summed up by *Progressist*, of Ticonderoga, N. Y., in the following editorial: 'Organized labor is stronger in America than ever before. The cry for the open shop, and the heated denunciations of the "Parryites" of the boycott, the closed shop and the sympathetic strike is met on every hand by examples of the wisdom of collective bargaining on the part of workingmen when dealing with their employers and the continuance of union shops by cooler-headed employers. Unionists are also coming to understand more fully every day how impracticable are the dreams of the socialist leaders and how fallacious are their arguments.'"

In proof of the statement of the hostility of organized labor to the demands of socialism, the editor of the *Journal* cites the resolutions adopted by the last convention of the Massachusetts State Convention of Labor to the effect that "we recognize as the most despicable attack yet made upon the life of our national body, that organization launched in Chicago, June, 1905, known as the Industrial Workers of the World, headed by socialists of international reputation."

We regret that lack of space prevents quoting in full the opinions of the editor of the *Coopers' Journal* as expressed in this series of articles. On three or four of his telling points, however, we summarize as follows his statements:

"Socialism proposes to solve the problem of wealth and poverty by abolishing wealth and reducing the entire race to a condition of poverty. It proposes to solv the question of righteous living by abolishing Chri tianity and reducing the race to a state of unrighteou ness. It proposes to solve the problems of civilizatio by reducing the race to an uncivilized state. In othe words, they hold that since the very inception of hu manity, the race has been moving forward on wron lines, and that every step so far taken must be retraced, so that under the guidance of socialist minds, which cannot err, civilization may again come forward on right lines and make no mistakes.

"Socialists repudiate municipal ownership just as they do every other reform, because it is 'palliative' and serves to reconcile the people to the present order of things, thereby prolonging the coming of the revolution which they hope for and dream about, which they claim will give to the people complete socialism. Municipal ownership is by no means a part of the socialist platform. Prospective socialists are frequently led to b lieve that it is, but when safely landed in the social bailiwick they are carefully taught that municipal owne ship is only a palliative which retards instead of a vances the progress of socialism.

"There can be no fusion between voters who wa reforms in government and socialists who demand t overthrow of the republic, because they are seeking o posite ends. Moreover, the socialist party stands fund mentally pledged against fusion or compromise of a kind. The socialist position is clearly stated by *T Appeal to Reason* of April 28, 1906, when it say 'There is no such thing as reform. Elimination is t only remedy.'

"The socialists claim that the Church of God havi evolved from capitalistic environment, is a capitalis institution, which with all other institutions of to-d must finally fall when the much-heralded revolution inaugurated. They contend that the Christian religi is an invention of the masters for the purpose of di tracting the minds of the workers from their true co ditions so that they will not rebel against the capitalist system."

The editor of the *Coopers' Journal* points out clear and truthfully the absolute incompatibility of socialis and religion, by quoting as follows from the writin of recognized authorities on socialism:

"Dr. Averling, a socialist of high rank (who was th 'free love' husband of Karl Marx's daughter) accepted the world over as an authority on socialism, says: 'Whether anything or nothing is done, little that is of lasting value can be done until men and women fairly face the fact that the terrible condition of our poor is due, as are so many other ills, to the two curses of our country and time—Capitalism and Christianity. In Christianity we see not only a supporter of the greatest of social evils, but a system that by its fundament principles vitiates human thoughts and distracts the a tention of mankind from the natural and actual.'

"Bax, who is probably recognized as the highest a thority on socialism, in his 'Ethics of Socialism' say 'According to Christianity and the ethics of religion, introspection generally, regeneration must come fro within, must begin in the heart and mind of the ind vidual. The ethic and religion of modern socialism the contrary, looks for regeneration from witho From material conditions and a higher social life.'

"*Avanta*, the organ of the Italian socialists, refers Christianity as the 'dirt heap of modern thought,' a says, 'the civilization of social democracy will never b foul itself with Christianity.'

"*The Comrade*, edited by John Spargo, a socialis periodical published in New York, in its issue of Ma 1903, says: 'Christianity is not big enough, not pu enough, nor noble enough to measure our great worl faith. Socialism-Christianity would be socialism d stroyed.'"

We do not hesitate to say that if these articles we read by every student of the question, there would be much clearer perception of the distinction between trad union principles, which uphold American institutio and the doctrines of socialism, which aim to undermi and destroy them. On this point the editor of t *Coopers' Journal* says:

"One of our correspondents challenges us to sho reasons why the trade-union and the socialist mov ments cannot be harmonized. The reasons are cle The two movements are seeking opposite ends.

"By reason of its defects, the socialists seek to ove throw the present order.

"By correcting its defects, the trade unions seek make the present order endurable.

"Now if the trade unions succeed in making the pre ent order endurable, the aim of socialism is there defeated; whereas, if the socialists succeed in ove throwing the present order, the aim of the trade unio is defeated. As the success of the one means the fa ure of the other, the two are diametrically opposed each other."

ONE OF NEW YORK'S GREAT UPLIFTING AGENCIES.

WHAT THE CHARITY ORGANIZATION SOCIETY HAS ACCOMPLISHED IN RECENT YEARS AS TOLD BY ITS GENERAL SECRETARY.

By Edward T. Devine, General Secretary, New York Charity Organization Society.

THE society has obtained from charitable agencies and from private individuals the exact kind and amount of relief which was required for from three to ten thousand families each year since it was founded a quarter of a century ago. It has transformed a fair proportion of those who were, or who might otherwise have become, chronic paupers into independent self-respecting citizens. It has provided for the support of widowed, disabled, infirm, and aged persons, and enabled friends and relatives to do their share toward such support in co-operation with strangers when the latter was necessary.

The evidence of this primary claim, made on behalf of the Society, that it has successfully taken care of the families who applied for assistance or whose needs were made known by third parties can be found, of course, for the most part only in its family records. One who has worked year after year on one of the district committees or as a friendly visitor knows that these things have been accomplished: that the sick have been furnished with medical attention, nursing, medicines, special diet and, when necessary, with protracted convalescent care; that pensions have been raised for widows with dependent children and continued until the children were old enough to work; that absconding male heads of families have been brought back to the discharge of their natural responsibilities; that employment has been procured; friendly encouragement and oversight freely given, not for a day but for months or years; that children and mothers have been sent to the country and to the seashore, and that scores of other similar services have been rendered, some of which require substantial financial outlay while others have demanded that personal attention which in busy New York it is far more difficult to secure.

Ten years ago an experienced charitable worker said to one who was just turning into this field, "Study your case-work. Fix your attention on the individual family." That was excellent advice and any charitable society may rightly be judged only by its success with the individual families who come under its care. What the society has accomplished then, first of all, is to give intelligent, sympathetic, and efficient care to the very large number of individuals and families whose needs are brought to its attention.

In the next place it has cleared the streets of New York of professional beggars. Due credit is to be given to the legislature for its strict laws, to the police department, to the city magistrates for convictions and sentences, to the Workhouse for holding its prisoners, and attempting to give them suitable employment, and to citizens generally for individual co-operation. The Charity Organization Society, however, directed the educational campaign against mendicancy and imposture, made the complaints effective, supplied the information necessary to conviction, and prevented premature discharge for a consideration. It has given a helping hand to mendicants desirous of giving up the shameful life of a parasite and entering on that of self-support and self-respect, and finally, while convincing the whole fraternity of yeggman-panhandlers and ordinary mendicants throughout the country that New York is unsafe territory in which to operate, has yet through its publications and correspondence helped to make other communities less "safe" and has therefore not lessened local burdens at their expense. It has done more for these mendicants individually than has ever before been done for any similar class here or abroad. As the foundation of its work for them and for the city, the Society has insisted that there must be such persistent and intelligent police work that it shall be impossible to live by begging whether from passers-by, at the basement door or by ingenious letters of introduction.

Just now there is a relaxation in the police co-operation owing to the abolition of the Mendicancy Detail—as a part of a general policy of doing away with special details, and there is a corresponding increase in the amount of begging. This reaction will, however, surely be promptly met either by the restoration of this particular detail, which unlike some of the others was engaged in distinctly police work, or by some other plan which the Police Commissioner may devise to take its place.

Verging on and often actually constituting imposture and fraud are the activities of many groups organized in the name of charity. The service which the Society rendered for several years in keeping its members informed as to the standing and management of charitable institutions, and the legitimacy of appeals for support especially from new enterprises, led to the recent establishment of the Bureau of Advice and Information. On request advice will be given to prospective donors concerning plans for founding new institutions; to managers of charitable enterprises regarding needed reforms, new buildings, changes of location and other

DR. EDWARD T. DEVINE.

matters of like character. The Burke Foundation, various hospitals and sanatoria for consumptives, the removal of children's institutions to the country, the organization of charity in Havana, and the relief work in San Francisco may be mentioned as illustrations of the wide range of undertakings upon which such advice and assistance has recently been requested.

The most important achievement of the Society in recent years was the inauguration and carrying through to complete success of the movement for a new tenement-house law and for the creation of a distinct municipal department to enforce its provisions. When the need for advanced legislation was unsuccessfully urged upon the local municipal assembly in the summer of 1899 there was little or no popular interest in the subject, and no outer evidences whatever that the time was ripe for the beginning of an agitation which, within two years, would place upon the statute books a radical and sweeping law by the side of which the Society's original suggestions appear insignificant indeed. The credit for this reform belongs very largely to two individuals: Robert W. de Forest, President of the Charity Organization Society, and Lawrence Veiller, who in 1899 was Secretary of the Society's Tenement House Committee. The Society made an energetic campaign through the public press, before the local and state legislatures, in and through trade unions, settlements, churches, and all kinds of philanthropic agencies, and finally, by means of the tenement house exhibition of February, 1900. As a direct result of these efforts a state commission was authorized by the legislature and appointed by Governor Roosevelt. Of this commission Mr. de Forest and Mr. Veiller were respectively chairman and secretary, and its labors were brought to a triumphant conclusion by the enactment of the laws which they recommended. No changes have since been made except at the request or by the consent of the friends of the law, whose views have been presented when occasion required by the Tenement House Committee, which the Society has kept in existence as a means of co-operating with the municipal department, and, whenever necessary, enlightening the public in regard to proposed beneficent or vicious legislation.

The Committee on the Prevention of Tuberculosis has waged unrelenting war on this preventable disease during four years. Notable as is its publication of the "Handbook on the Prevention of Tuberculosis" and an illustrated "Directory of Institutions" dealing with tuberculosis, the public instruction through the issue of hundreds of thousands of cards printed in several languages with simple directions as to how to protect one's self and others against this disease, has been an even greater service. How to care for the sick and to guard those who surround the patient, and the simple and effective modes of home treatment have been contrasted with the cruel waste and certain detriment from the use of whiskey and other stimulants and of patent medicines. No other class in the community has been more quick to appreciate the import of this work or more prompt and effective in their assistance than the trade unions.

Self help and thrift have been encouraged by the Society through the organization of the Provident Loan Society in 1893, and the Penny Provident Fund in 1889. The former is an independent stock company formed to enforce fair conditions in the business of pawning personal property. Those under the necessity of temporarily raising funds upon such collateral are given a private and respectable opportunity to obtain loans at reasonable rates. It now transacts a business of seven million dollars a year. The Penny Provident Fund has over three hundred branch offices, largely conducted by volunteers and sanctioned by school authorities, through which savings of from one cent upward are received and credited by means of stamps pasted in card-books furnished free and redeemable at regular hours at face value. Last year 90,746 people saved $106,100 in this way. Incidentally, many stores and banks have been influenced to extend commercial facilities at a much lower amount than had formerly been thought practicable and an impetus has been given the project for a post-office bank.

Fresh air work has won recognition and approval throughout the country. One of its earliest successful divisions was the Creche started by this Society in the shadow of the Statue of Liberty for the benefit of mothers with babies whom they could not leave or send away and who could not afford to stop work to accept a longer trip than one day. The Edgewater Creche, a separate organization, has succeeded this work, and now conducts it in conjunction with the Society.

The Charities Directory, a fully-indexed, classified and descriptive guide to the philanthropic, religious, and educational resources of the city, has passed through sixteen annual editions and comes to be more and more used and relied upon. While the mention of a particular institution in the book does not imply endorsement of its purposes, management or methods, still care is exercised to exclude all those about which the Society feels it necessary to warn its members.

The most important of the Society's publications is "Charities and The Commons," the weekly journal and magazine of philanthropy and social advance. The outgrowth of the Society's bulletin of information to members, it now combines six independent efforts at public enlightenment and interest in social righteousness. When at this stage of the twentieth century lunatics are chained to logs in one section of our country, caged naked in sheds in another, and beaten for their imbecility in a third; when an entire large city is scourged with fever bred by neglect; when a great state votes down protection of its future citizenry against lucrative exploitation, there is need of spokesmen and of an organ for them that will stand out sturdily as "Charities and The Commons" has done for new opportunities, new plans, and new hopes for those who are drawn down by their unfavorable environment or heredity.

In order to raise both the standard of efficiency and the standard of remuneration in social work the Society in 1899 started the Summer School of Philanthropy mainly for experienced workers who wished to obtain fresh and broader views of their sphere. It was successful from the first. Three years ago an afternoon course was established to be carried on all winter for the benefit of those at the time actually engaged in work in New York and with especial regard for New York conditions. One hundred and fifty-six employees of the local charities, public departments, settlements, and churches were enrolled. But the plan was found to be insufficient and the endowment of the School by Mr. John S. Kennedy in the following year made possible the adoption of the present plan by which the course has been placed on a professional school basis and the entire time and attention of the students for one year is required for successful prosecution of the course. Fifty-eight students were registered for the last academic year.

A feeling of bewilderment is the first thing that comes to the consciousness of the average good citizen on being approached for alms. What is he to do? Kindly but firmly direct the applicant to the Joint Application Bureau maintained jointly with the Association for Improving the Condition of the Poor. It is open from 9 a. m. to midnight every day of the year for the reception of applicants for aid and the care of the homeless. All homeless people referred to either society are assisted sympathetically and constructively through this bureau. Persons applying for aid may be referred here by anyone, whether a member of the Society or not, and an applicant who calls without reference will be equally well received.

The woodyard and laundry maintained by the Society are nearly self-supporting by their revenues. Both are of great importance to the work as furnishing sufficient and satisfactory tests of the sincerity of earnestness of applicants and temporary occupation while employment is being sought. The salutary effect of remuneration for services is in marked contrast with the giving and acceptance of gratuity even under the best circumstances. The laundry also trains unskilled hands

ch are capable of earning only one dollar a day at gh cleaning into skilled laundresses for whom there n unlimited demand at from $1.50 to $2.50 a day.
rom these tests the fit pass on to work which they assisted to obtain. And the unfit? Until recently were borne with more or less grace as a necessary len on either the public treasury or the more special- aid of private societies. The Special Employment eau of the Charity Organization Society is adjust- the remaining abilities of men who are handi- ped either by a physical or social affliction to cer- kinds of adapted employment. Whatever the n of affliction, such persons find it almost impos- e to secure respectable remunerative occupation themselves. The commercial employment agen- find it too expensive to make sincere efforts in their alf. After five months' trial it may be said that bureau is successful and its continuance will be ranted if friends of the idea will meet the neces- y expense.
Matrons in the precinct police stations, female fac- y inspectors for industries employing women and dren, a Municipal Lodging House for wayfarers, ex- sion of legal aid to the poor, the Council of Fresh Charities, inception of the National Child Labor mmittee, and the National Association for the Study Prevention of Tuberculosis are examples of results omplished by this Society, or in co-operation with ers, which space does not permit me to enlarge upon. The result of the movement inaugurated by this iety and carried to completion by the gift of an indi- ual citizen for a Charities Building to house all the charitable organizations of the city and thus to ure closer co-operation and better understanding sts in handsome and tangible form. Such societies this building was designed to accommodate are espe- lly encouraged to take space in it rather than in a eign environment by reduction of 20 per cent on mmercial rentals.
Although the Society has sought to subordinate its ief rather than to advertise it, the total amount which expends as intermediary has constantly increased. e part which it plays in the support of the depen- nt is indicated by the fact that "for the relief of dows and small children" it now annually expends out twice as much as the Society which bears that me and which for more than a century has devoted entire energy and resources exclusively to that ch- object. The Provident Relief Fund which was rted by friends of this Society to supply relief to milies for whom there is no existing special agency s recently become one of its regular departments. e disbursements for relief are at present from three five thousand dollars a month.
It must not be overlooked, however, that these sums present but a small part of the total obtained from urches, national societies, and other co-operators for e families under its care.
To summarize the Society's past service and present sition in the community it may be said that it has ught to take an appropriate part in every movement r the genuine welfare of the poor of New York City, nenever there was any reason to believe that such par- ipation would be of service. It has endorsed and pported state and national measures for social ad- nce, while standing consistently for the maintenance that which has already been secured by individual itiative and normal growth.

THE IDLE RICH YOUNG MAN AND "PARLOR SOCIALISM."

xtracts from an Address by Sherburn M. Becker Mayor of Milwaukee.

FEEL like warning young men, whether rich or poor, against the dangers of the fantastic and the treme tenets of Socialism. We have a government at was founded upon good principles largely by young en, and while it has often been threatened with de- ruction, it has weathered the storms of over a cen- ry.
I am not in sympathy with what the press has been eased to call "Parlor Socialism," nor any other kind Socialism which contemplates the utter overthrow of r present form of government.
"[illegible] room for reform and we are growing [illegible] every day. Let us not be led astray by the more less attractive pleadings and arguments of theorists ho talk of revolutions. These things come to us [illegible] the agency of men who have made [illegible] country other than our own, [illegible] believe, no matter [illegible] be.
The idle rich young man, with proper training, has [illegible] the honorable professions— e church, medicine, the law, the newspaper office, erature, art. If he will identify himself with any ne of these he will be producing something and will a working man in every sense that the word implies. he man who shovels in the street is not the only pro- er and he is not the only man who toils. I could tell u, were I not too modest, of at least one mayor who ork hard and who is known to have labored far into e night for days and weeks that he might do himself [illegible] duties of his office.

HON. SHERBURN M. BECKER,
Mayor of Milwaukee.

A few weeks ago there came to Milwaukee a young "Parlor Socialist" who informed his hearers in a public address that he had been idle for years; that he produced nothing, and that he had no object in life except to spend the money earned by labor and which did not rightfully belong to him. When I read his address in a paper I felt like saying to him, "Go to work —you have the ability and you are needed—stop talking and do something. Get out of the parlors of the rich if you think you belong somewhere else." And it struck me that a desk in a bank or a newspaper office would be a good place for him. Now I am informed that he is to take a course in agriculture and raise cabbages and turnips, perhaps.
I believe that this young man, Joseph Medill Patterson, means well—that he is honest and sincere, but that he is not the kind of man who makes a success of farming. He has, I understand, the advantages of a college education and the good breeding that goes with it. He was trained in the school of journalism and is an able correspondent and reporter.
Then why should he go to the farm to milk cows or sow grain?
Why cannot he do good in the world with his pen? He can produce something with that as well as others can produce something with the plow or the corn planter. But he probably imagines that he must do manual labor, and toil with calloused hands. He is mistaken. We need intelligent young men in intellectual pursuits to help guide us in the right direction. We need brains as well as muscle, and we must have them. It is within the power of the rich young man to do his country great service. He is not handicapped with poverty and therefore is not tempted to be a grafter while in office. His ambition is not to make money, but to make a name for himself. There might be exceptions to this, but not many.
I do not mean to say that the rich young man is always honest or pure minded or that the poor young man is usually dishonest. What I am trying to do is to demonstrate that there is a place for the idle rich and educated young man, and to show you the things that recommend him. As a matter of fact more poor young men go to the front, I believe, in public affairs, than any other, because the former is forced to do something and in casting about for a calling he seeks public favor at the polls.

LABOR IN BRITISH POLITICS.

American Delegate to British Trades Congress Discusses Labor's Political Future in England.

THE fraternal delegates sent this year by the American Federation of Labor to the British Trades Congress were Mr. Frank K. Foster, of Boston, and Mr. James Wilson, of New York. During his absence Mr. Foster wrote a series of letters, giving his observations on labor matters in Great Britain. One of the most interesting of these, which appeared in the *Boston Globe* of September 27, relates to the much-discussed status of trade unions in politics in the United Kingdom, and includes also an analysis of the real nature of socialist sentiment among British workingmen. In the course of his letter Mr. Foster says:
"Is the British political labor movement liable to continue in its present form? This question I have asked Englishmen of many classes, trade unionists, shopkeepers, lawyers, and at least one cabinet minister. The journalists are discussing it from all standpoints. The politicians are seeking to find its answer. British conservatism is puzzling over it and society as a whole is in a state of mind.
"It all depends. It appears more than likely that while the main policy of seeking labor representation will be followed, there will be a readjustment of the machinery so far used. The general consensus of opinion seems to be that many of the present labor members were elected by the revolt against the Chamberlain protective policy or by Liberal votes as well as by labor votes, and that the concessions which the present government is undoubtedly prepared to grant will greatly weaken the strength of the independent movement should another general election take place. It is nevertheless conceded that even should a satisfactory trades dispute bill be passed, the independent movement would still continue to possess a good deal of vitality.
"There is every indication that Keir Hardie will be supplanted from the recognized leadership of the labor group of M.P.'s when parliament reassembles, and that the extremist policy which he stands for will be likewise dropped. The place will be filled by D. J. Shackelton, M.P., a man of quite a different type—sane, solid, judicial—whose quality of mind and leadership is far more in accord with the British temperament than those of the fanatical and irreconcilable, though more brilliant, Hardie.
"Shackelton, by the way, is one of the fraternal delegates to the American Federation of Labor which meets in Minneapolis in November. He is a socialist, but of the genial and untheoretical type, inspired by temperamental altruism rather than by a vindictive and systematically-stimulated class hatred. This distinction, indeed, may be held to apply to by far the larger portion of the so-called socialists of England. A most eminent authority informed me that not five per cent. of those who called themselves socialists either knew or cared anything about the doctrine of 'the collective ownership of the tools and instruments of production and distribution.' Their creed is a purely opportunist one, demanding practicable reforms.
"Now this kind of socialism finds no great difficulty in fusing and obtaining recognition of all sorts from the old-line trade unionists who make up the rank and file of the British movement. But even here there is on all sides to be observed a suspicion that the trade-union funds are being used to carry on socialistic propaganda under the stimulus of the crisis which came in the last general election. It was felt that unity must be had at all cost, and so trade-union funds are now being paid in to support candidates submitted by the independent labor party elected mainly by trade-union votes, some of whom are not even members of organized labor or wage earners. The trade-union leaders recognize this incongruous state of affairs and meditate a change.
"Another force which the labor political movement will have to contend with is the middle class defense association, which is now rapidly organizing all over London and the provinces. The middle class is the great rate-paying class and is undoubtedly alarmed at the progress of municipalization and unionism.
"The ostensible object of the new movement is the protection of the ratepayer against schemes to raise taxation, and it may easily become directly hostile to the political labor movement. Measuring the various forces in opposition, then, I should be inclined to predict that labor representation in its present form has reached its zenith for some time to come.
"It will readjust itself and continue to be a force of profit, of stimulus, to the political parties. The chances are that the pressing legislative demands of organized labor, the rational demands, will be accorded recognition. If not, then more labor members will be sent to parliament."
Mr. Foster's impressions are confirmed, in part at least, by the following press dispatch, dated London, October 3:
"The labor movement in Great Britain is at present passing through an interesting phase, which is tending to decide the future dominance of one of the two sections of the Labor party in the House of Commons, the Liberal section, led by John Burns, and the Socialist section, led by James Keir Hardie. The Federation of Miners, at a meeting held this week at Swansea, took a ballot which, although official figures are not yet available, is understood to have decided against joining the Hardie section. On the other hand, a conference of the Amalgamated Society of Railway Servants, sitting simultaneously at Cardiff, passed a resolution, after a long and bitter debate, in favor of adhesion to the Hardie section in spite of the fact that their leader, Richard Bell, M. P., was strongly opposed to the railway men submitting themselves to Socialist dictation."

The most successful trade unions to-day are those who believe in trade agreements, and who furthermore believe in maintaining a discipline so effective that no member, or group of members, can violate them with impunity.—*Iron Moulders' Journal.*

When a union is conducted on conservative lines it always has the respect and good wishes of the public, but let the men who act too hastily obtain control and their administration will meet the disapproval of the real union men and bring condemnation upon the entire labor movement.—*Journal of Labor.*

The National
Civic Federation Review

Vol. II. No. 12 NEW YORK, MARCH—APRIL, 1907 Ten Cents

THE CHILD LABOR SESSION OF THE FEDERATION'S ANNUAL MEETING

The Sixth Annual Meeting of The National Civic Federation was held at the Park Avenue Hotel, New York City, the Five Sessions Being Devoted to Discussions of Government by Injunction, Child Labor, Distribution of Immigrants, the Income and Inheritance Taxes, and to a Review at the Annual Dinner of the Work of the Different Departments of The Federation

THE CIVIC FEDERATION'S SIXTH ANNUAL MEETING.

TRIBUTES TO ITS SERVICE TO SOCIETY—ELECTION OF OFFICERS—IMPORTANT PROBLEMS DISCUSSED—INVESTIGATING COMMISSIONS CREATED.

EVERY great public gathering for the purpose of discussing pressing questions of the time almost unconsciously develops a thought or idea around which all the proceedings of the meeting are centered. Sometimes this central idea lacks definite expression, but in the case of the remarkable annual meeting of The National Civic Federation held in New York City on December 12 and 13, it was emphasized more than once by different speakers. This central thought, around which all the discussions may be said to have centered and to which was attributed the unbounded enthusiasm which prevailed, was American Democracy. Reference was made to it at the various sessions during the discussion of such widely varying subjects as "Government by Injunction," "Child Labor," and the "Income and Inheritance Tax," as well as by the speakers at the annual dinner held on the evening of December 12.

If the animated discussions of these important subjects left any fear in the minds of the hearers as to the progress of the American Republic amid the whirlpool of dangers which seemed to engulf it on all sides, it is not mere literary effort to say that these fears were set at rest by the speakers at the annual dinner. Conspicuous among these was Archbishop Ireland, who stated that nowhere else in the world was such an organization as The National Civic Federation possible, and claimed that it was one of the powerful institutions at work to conserve and preserve democratic institutions. Referring particularly to the conflict between capital and labor, ex-Mayor Seth Low stated that "the great forces by which we are to settle all these industrial questions is the invisible force of public opinion, which this Federation and other agencies are generating, most fortunately, in all parts of this country." President Samuel Gompers, of the American Federation of Labor, stated his belief that "The National Civic Federation is a common ground upon which we may all meet to discuss the various differences upon which we are divided, and to try to find a middle ground so that the common good of all may be subserved. I believe that this Civic Federation, in its endeavor to work out our common policy and common polity, is the effort to make the principles of the Declaration of Independence the very living factors of our every-day lives. The Civic Federation presents itself as the conservator of peace and progress and of the wealth and belief of our common country." Rabbi Stephen S. Wise stated that he rejoiced in the work of The National Civic Federation, "because the aims of this body imply your faith in the American Democracy, not as an act, not as a process, not as an achievement or consummation, but as a development, as an evolving through education." Other speakers referred in a similar strain to the services which The National Civic Federation was performing in strengthening American institutions in conformity with the progress of American Democracy.

At the annual meeting the following officers were elected:

President—August Belmont, President of the Interborough Rapid Transit Company, New York.

Vice-Presidents—Samuel Gompers, President of the American Federation of Labor, Washington, D. C.; N. J. Bachelder, President of the National Grange, Concord, N. H.; Ellison A. Smyth, President of the South Carolina Cotton Manufacturers' Association, Greenville, S. C.; Benjamin Ide Wheeler, President of the University of California.

Treasurer—Isaac N. Seligman, of J. and W. Seligman & Company, New York.

Chairmen of Trade Agreement Department—John Mitchell, President of the United Mine Workers of America, and Francis L. Robbins, President of the Monongahela River Consolidated Coal and Coke Company, Pittsburgh.

Chairman of Civic Ownership Department—Melville E. Ingalls, of the Cleveland, Cincinnati, Chicago and St. Louis Railroad Company.

Chairman of the Conciliation Department—Seth Low, ex-Mayor of New York.

Chairman of the Industrial Economics Department—Nicholas Murray Butler, President of Columbia University.

Chairman of the Immigration Department—Franklin MacVeagh, of Franklin MacVeagh & Company, Chicago, Ill.

Chairman of the Welfare Department—Charles A. Moore, of Manning, Maxwell & Moore, New York.

Chairman of the Taxation Department—E. R. A. Seligman, Professor of Political Economy in Columbia University.

Chairman of the Executive Council—Ralph M. Easley, of New York.

Secretary—Samuel B. Donnelly, 281 Fourth Avenue, New York.

The Committee on Nominations, of which Marcus M. Marks of New York was Chairman, in submitting its report, stated that Oscar S. Straus had felt it necessary to decline re-election as Vice-President on account of his appointment by President Roosevelt as Secretary of the Department of Commerce and Labor. In presenting its nomination for a successor to Mr. Straus, the committee offered the following resolution, which was unanimously adopted: "That in the retirement of Mr. Straus we desire to express our appreciation and thanks for his very valuable services during the past five years of the Civic Federation." President Belmont stated that Mr. Straus's retirement simply meant that he was practically taking a vacation as "he promises to come back to us as soon as the duties which he is now about to fulfill shall have come to an end."

At the close of the discussion on child labor, a resolution was adopted providing for the appointment of a commission to make a thorough investigation of the whole subject of child labor in the United States, the commission to be composed of representatives of various organizations. Provision was also made for the appointment of a commission to investigate the situation resulting from the operation of the Sherman anti-trust law, one on Government by Injunction, and one on the Income and Inheritance Tax.

GOVERNMENT BY INJUNCTION IN ITS VARIOUS ASPECTS.

REPRESENTATIVES OF LABOR AND OF CAPITAL DISCUSS THE CONFLICTING ISSUES OF THE DAY.

AUGUST BELMONT, President of The National Civic Federation, called the annual meeting to order on Wednesday morning, December 12, and extended a welcome to those present. "At this momentous period of our great country's history," he said, "when so many important and perplexing social and industrial problems are pressing for a solution, I regard it as fortunate that there exists such an organization as The National Civic Federation to take a vigorous hand in helping that solution.

"It is timely again to remind you of the purposes of the Federation as stated in its by-laws; they are, to organize the best brains of the nation in an educational movement toward the solution of some of the great problems relating to social and industrial progress, to provide for study and discussion of questions of national import, to aid thus in the crystallization of the most enlightened public opinion and, when desirable, to promote legislation in accordance therewith. The Federation's membership is drawn from practical men of affairs, whose acknowledged leadership in thought and action makes them typical representatives of the various elements that voluntarily work together for the general good.

"Farmers, wage-earners, manufacturers, bankers, merchants, ministers, laymen, economists, and other distinct but interacting elements of society have formed themselves into many useful organizations for the discussion of affairs peculiar to their pursuits and callings, but the Civic Federation, in addition to its departments for the accomplishment of specific purposes, provides a forum where representatives of all these elements meet to discuss important problems in which they have a common interest. Six national conferences have thus far been held, one upon Primary Election and Ballot Reform, on Foreign Policy, on Trusts and Combinations, Conciliation and Arbitration, Taxation, Immigration, and one on Public Ownership. These conferences have, in most instances, been attended by delegates officially appointed by Governors of States, Mayors of cities, and by representatives selected by various commercial, industrial, educational, and religious bodies. The present activities of the Federation are being exercised through six active agencies: The Public Ownership Commission, the Immigration Department, the Conciliation Department, the Welfare Department, the Industrial Economics Department, and the Political Reform Department."

In speaking of the subjects for discussion at the annual meeting, President Belmont stated that the problems growing out of the accumulation of great fortunes were to be considered under the title of the Income and Inheritance Tax, and suggested the hope that the discussion was to result in the appointment of a committee to investigate thoroughly the whole subject and, possibly, to propose legislation, if it is found desirable. "No subject," he said, "can bring greater good to this country, if correctly solved, and greater harm, if, for wise and just taxation, punitive spoliation and the destruction of our boundless spirit of enterprise be substituted through hampering regulations. In contemplating the future of the great and ever-growing needs of our institutions of learning and instruction, our charitable and religious establishments, into whose life and growth have flown a seemingly endless and increasing stream of bequests and donations from great estates and fortunes, such as no other country can boast of, one must pause at the thought of drying up those springs of life. I ask, would popular subscriptions take their place, or, failing that, must a paternal government, to provide them, be the alternative? That is one of the phases of the problem that cannot escape contemplation."

Taking up another subject selected for discussion at the annual meeting—Government by Injunction—President Belmont said: "Seemingly, organized labor and organized employers have come to a deadlock on this question. If I correctly understand it, organized labor does not, as is currently thought, oppose the injunction principle, but it is opposed to what it claims are certain abuses. Organized employers, while largely admitting these abuses, deny that the remedy lies in the direction pointed out by organized labor. When our workmen, however, become imbued with the idea that our courts are used by employers for partisan purposes, so to speak, it is a matter of great moment and worthy of the consideration of this body, and I hope some steps may be taken through the instrumentality of this organization to help solve this apparently insolvable problem.

"Another subject touching our national life, perhaps more closely than any other, because of the sentimental reasons attached to it, in addition to its vast importance as bearing upon our moral and physical development, will be discussed by you at these sessions. I refer to the child-labor problem, up to this time regulated only by the States, but now crystallizing into proposed national legislation. Bills have already been introduced into the United States Senate for its regulation.

"President Roosevelt in his recent message to Congress urges strongly the compulsory investigation of industrial disturbances. I am not sure that such a proposition is advisable in any general sense. In fact, I doubt the wisdom of attempting legislation which will provide governmental interference with every threatened industrial disturbance. If such a policy were to be adopted there would certainly be more justification for its use in the case of quasi public institutions. The public is not vitally affected nor inconvenienced by a strike in a shoe factory or a cotton factory, because there are so many other factories in the same industries that there is no scarcity created by such a strike. In the case of steam railroads, street railroads, electric light and gas plants, the conditions are wholly different. The public,

as a whole, is at once inconvenienced and has a direct interest in the controversy."

President Belmont also referred to that part of President Roosevelt's message having to do with amending the Sherman anti-trust and the Interstate Commerce acts in order to meet a certain fundamental conflict between those two laws at the present time. President Belmont said that the attempt to prevent or destroy all combinations, whether good or bad, is unsound in economics and disastrous in the domain of trade. He quoted with approval President Roosevelt's views on this point. President Belmont then introduced ex-Mayor Seth Low as the chairman of the morning session.

IN assuming the chairmanship of the meeting ex-Mayor Low said that it seemed to him to be one of the bright things in our American life that any question, no matter how strongly people feel about it, can be openly and frankly discussed. Continuing he said:

"It certainly is one of the best phases of The National Civic Federation that it offers a platform upon which men of such diverse points of view can meet to discuss every question of interest in the industrial world. I suppose there are very few, if any, questions upon which opinion is more sharply divided at the present moment in the United States than on this question of 'Government by Injunction' so-called. Very likely the feeling is strong, and the difference of opinion is especially marked because the question is not accurately defined, or at least is defined by some men in one way and by other men in another way. It is very much to be hoped that the result of the discussions here today will be to enlighten us all, so that we may determine accurately to what extent differences of opinion are based upon differences of definition, differences of interpretation of fact, and to what extent they really represent a diverse judgment upon the same state of facts and the same conditions."

T. CARL SPELLING, general attorney for the American Federation of Labor, was the first speaker on the question of "Government by Injunction." He represented that organization in the discussion before the committee of Congress. Mr. Spelling stated that what is meant by "Government by Injunction" is "that power which has been superadded by the courts of the country to their constitutional power, by which they rule, or are said to rule, despotically upon certain occasions in the matters brought before them in litigation; that is, they rule in excess of their jurisdiction.

"If there be such a thing in this country", he said, "as 'Government by Injunction,' as we believe there is, then it is a most despotic government; that is, it is a government without limitation, without check or restraint, and government exercised by one man without responsibility or liability to account to any other man or to any other power on earth. In our form of government, there is no way to reach a judge for his misdeeds except by impeachment, and that has long ago been demonstrated to be a worthless remedy against judicial usurpation."

Mr. Spelling reviewed briefly the judicial history of the country as affecting the subject under discussion, claiming in substance that the effect of "Government by Injunction" was special legislation by an authority other than the properly constituted law-making body. He claimed that the fundamental limitation imposed by the long course of judicial history and procedure was that an injunction shall never be granted except to protect property or property rights. He believed this to be the keynote of the whole issue under discussion. He said that authorities do not distinguish between property, that is, visible and tangible property, and property rights, as regards its bearing on this question. He claimed that the representatives of labor have never insisted that in the case of a trade dispute, if men should undertake to inflict any injury to any property or property rights, for instance, such as trespassing on land, attempting to set fire to buildings or wrecking machinery, anything to which any kind of violence could be offered,—he claimed that they never have insisted that in any such case a writ of injunction to prevent it would not be available. Labor unions, he said, were not trying to abolish the remedy by injunction. "It is not correct to say that never can an injunction issue against strikers or against the working man or in a conflict between capital and labor, because an injunction is always available, and always ought to be used, when anybody, whether workingmen or unionists, or men who do not belong to that class, attempt to inflict any kind of irreparable injury upon property or property rights. We are absolutely safe in assuming and adhering to that position."

Referring to an injunction in trade disputes, Mr. Spelling said: "No court in Christendom has any jurisdiction to restrain me or anybody else from advising any man not to work, not to keep a contract, not to obey the law; you cannot enjoin me in any court for going out and advising men to commit even arson, or murder, or anything else. Now, that sounds harsh, and that is where a great deal of our difficulty has arisen. When anybody proposes to check the usurpation and abuse and excesses of the courts, they say: 'You are advocating violence; you are in favor of disorder.' Now, I admit that it is deplorable that men can be advised to commit crime, to injure people, and to stir up trouble, and put the public to a great amount of inconvenience; but, I tell you, it is more deplorable, it is a thing that will lead to the most disastrous results, if irresponsible men on the bench for life are to be allowed to use their authority above the law and above all the departments of government, to become unrestrained despots, take one side in every trade dispute, become guardians of peace and order and morality in the community, decide ex-parte upon a one-sided showing, that hundreds and thousands of men are about to violate the law, and send forth these special decrees, these enactments of special legislation—for that is what they are—to paralyze and destroy the rights of all these men; I say that is the most dangerous tendency in our government. I do not except the tendency toward monopolization and combination, the suppression of trade; I think that can be remedied. I think that will work itself out; but, I tell you, if these vicious and far-reaching precedents are to be recognized as the law of the land, and the judges are to be encouraged or permitted to go on building more on top of these, that they will soon constitute and erect outside the regular organizations and branches of government a power as despotic as that which destroyed Rome, as that which was exercised in the days of Caligula, as that which was exercised by the notorious and infamous Star Chamber. The liberties of the people of this country are more endangered by that tendency and by that practice than by any other."

Referring to some of the injunctions issued by the courts, Mr. Spelling stated that "they have enjoined men from preventing, by persuasion, or by any means whatever, men from entering the employ of the complainant, that is, the party who went by his attorney before the judge and got out the writ of injunction. They have enjoined men from marching on the public highway; they have enjoined them from meeting in places far from the premises of the employer against whom they struck and from having music and making speeches and presenting their cause to the public. They have done what I call most unwarranted and outrageous things. These things have been done by the courts, exercising all the powers and functions of government on one side in a trade dispute. And you don't hear of any strikers ever going to a court to get an injunction, it is always the other side. Now, the court in such a case palpably and flagrantly takes the side of one party in a litigation, and the stronger party at that despite the greater numbers of the other side. So long as this power is recognized as belonging to those judges, they will, on a pretense, on a claim and allegation that men are about to resort to violence, prevent them from doing innocent and legal things, and taking the proper steps for the preservation of their constitutional rights. We simply want these usurpations lopped off. If we had the law as it stood before these usurpations began—before a system of precedents was built up in contravention of the ancient and just rule on this subject—we would not demand any legislation. It is not to change the law; all we want is the recognition of our rights as they stood before these usurpations."

OFFICERS OF THE NATIONAL CIVIC FEDERATION.

WALTER DREW, Commissioner of the National Iron Erectors' Association, stated as his belief that of all the questions involved under the phrase "Government by Injunction" and growing out of the different legislation proposed in Congress, he considered the most vital and the most important to be the restoration of confidence on the part of the rank-and-file of organized labor in our laws and in our courts. After a brief consideration of the theory in practice connected with the use of the writ of injunction, both temporary and permanent, he claimed that, separate from any question of defect in the law or in its administration, the demand that temporary injunctions should not issue in labor controversies becomes a demand that the practice of our courts shall be changed to grant special immunities and privileges to one particular class only and vitally engaged in warfare with another class. "No reason other than this," he said, "exists for discontinuing the temporary injunction in labor cases which does not exist in any other case that might arise. Without its use in such cases, as in other cases, the relation of the parties may be placed in a condition where justice could never be done between them. The very subject matter of the controversy might be disputed or injured beyond remedy. Organized labor may be aggressive and meet with our approval. It may fight its war with capital if it will, but in that fight it not only must ask but give fair play and a square deal."

Mr. Drew next took up the Pearre bill, of which he said that either it seeks to do away with great and serious evils that exist in our law and its application to labor combinations, or it seeks special dispensations and privileges for labor combinations as a class for the conduct of their so-called war against capital. In this connection he next took up a discussion of conspiracy

under the common law and quoted a number of cases as to the rights of labor in combination. He said: "What would be an unlawful purpose on the part of an individual would likewise be an unlawful purpose on the part of a combination. The converse of this statement, however, is not true and what would be an unlawful purpose on the part of a combination might be entirely lawful for an individual, and it is with this fact that the chief fault is found by those who are proposing to change the law. This difference in the law concerning the purposes of an individual and those of a combination is explained by one word—malice. Ordinarily it is of no moment in the eyes of the law whether an individual acts from motives of malice or not, as long as his conduct is confined within the limits of the law. In other words, a malicious motive on his part would not make unlawful that which would otherwise be lawful. A different rule, however, applies to combinations, and a combination, whether of working men or of any other class of citizens, that inflicts intentional injury upon others from malicious motives, while it may not be liable criminally, still it becomes liable civilly and its action is held to amount to a legal wrong. A combination may not wilfully inflict injury upon third persons without lawful justification or excuse, and if such justification or excuse be lacking, its conduct in the eye of the law is deemed malicious and unlawful." Mr. Drew claimed that every principle in the law of conspiracy is applied equally and impartially to all combinations and that in no particular is there any rule or principle enforced by our courts against combinations of labor which is not equally applied to and enforced against other combinations.

Referring to the Pearre bill, Mr. Drew said: "The effect of this measure would be to make lawful and substantiate every method now employed by organized labor except the commission of actual crime. Not only would combinations for the purpose of establishing monopolies, for the purpose of inflicting malicious injury and for other purposes now declared unlawful be legalized, but a systematic use of coercion and intimidation, which have their only strength and danger when used by many against the one, would be beyond the reach of the law. In providing that such combinations should not constitute a conspiracy, not only are they placed beyond the reach of courts of equity, but civil and criminal remedies also are taken away.

"The mere fact that injunctions have been used to a greater extent in recent years than formerly is no proof whatever, without further showing, that they have been misused, but is simply proof that there has been greater occasion for them. Neither is it to be supposed that courts of equity or of law could be infallible in one class of cases more than in others. Courts make mistakes like the rest of us, for the matters upon which they are called to decide must be determined in the light of the judgment, the knowledge and the limitations of the human mind, and it is human to err. But if the mistakes be honest, and if there be no greater number of them in any one class of cases than in any other, the fact that isolated cases might be presented in which the writ of injunction has been improvidently employed, would furnish no more reason for doing away with it altogether in labor cases than in doing away with the whole body of the law and the jurisdiction of all courts.

"With no case made out of discrimination or inequality, either in the law or its administration as to labor combinations, one conclusion only will remain, and that is that organized labor in proposing this legislation seeks special immunities and privileges before the law not enjoyed by other combinations or other classes of the people.

"I shall not enter into an extensive discussion as to the dangers of class legislation. It is not necessary. Not only the history of nations but the fundamental spirit of our institutions alike condemn it, and any class that persists in demanding it will find the face of the great American public solidly set against its efforts. In this case it would be more than class legislation in its results. It would lead to a state of anarchy in labor controversies, for the employing class, finding no protection in the law in their individual fights against combinations using legalized methods of coercion and intimidation against them, would, from the very instinct of self-preservation, seek their protection outside the law and we would have this whole great contest, this war, as it has been termed, between capital and labor, taken out of the pale of civilized methods and of civilized courts."

JOHN MITCHELL, President of the United Mine Workers of America, was the closing speaker on the subject of "Government by Injunction." Among other things he said:

"Do you know that in labor disputes, when the proposition to arbitrate is made, very often—indeed almost generally—the workingmen will make the reservation that the question to be arbitrated shall not be submitted to a Federal judge? I do not share fully in these apprehensions, but the very fact that workingmen do express a fear of the impartiality of the Federal Judiciary is in itself a matter of grave concern, not alone to those who have suffered from the injunction but to the entire people of this country. Men do not lose confidence without cause or at least without the belief that they have cause. So many injunctions have been issued, so many laboring men have been incarcerated because of the violation or alleged violation of these injunctions—not because of the commission of crime, not because they have violated any law of the land, but because they have insisted upon doing those things which they have a legal and a constitutional right to do.

"I wish to say for myself—and I yield to no man living in loyalty to this country—that if a judge were to enjoin me from doing something that I had a legal, a constitutional, and a moral right to do, I should violate the injunction. I shall, as one American, preserve my liberty and the liberties of the people even against the usurpation of the Federal Judiciary, and in doing this I shall feel that I am best serving the interests of my country.

"It is indeed unfortunate that within recent years the courts have gone so far in the exercise of their equity power. It is presumed that injunctions shall be issued only in cases where there is no adequate remedy at law. It is presumed that they are issued in cases where there is danger of the infliction of irreparable injury. In a coal strike in West Virginia, for instance, an injunction is issued; this injunction restrains the men from the commission of crimes and also from the performance of acts which are entirely legal within themselves. The men proceed under direction of their attorneys to do only those things that they have a legal right to do; and they are called into court—they are charged with no crime, they are simply asked, have they violated that injunction? They are permitted to make no defense. They, as truthful men, must plead that they have violated the injunction, that they have walked upon the highway, that they have spoken to the men who wanted to work; the consequence is that they are sentenced to prison, not for violating the law, not for the commission of any illegal act, but because they have done those things which they had a legal right to do; and they are sent to prison without a trial by a jury of their peers. It is to this phase of the injunction that we take exception."

THE EXTENT AND MENACE OF CHILD LABOR.

EMPLOYERS, EMPLOYES AND STUDENTS OF INDUSTRIAL CONDITIONS SHARPLY DISAGREE AS TO THE FACTS AND FIGURES INVOLVED IN THIS PROBLEM.

AT the afternoon session of the first day's meeting the subject, "The Extent and Menace of Child Labor: Is Everything Possible Being Done to Eliminate It?" was discussed. Daniel J. Keefe, President of the International Longshoremen, Marine and Transport Workers' Association presided. He stated that as his organization in no way comes into competition with child labor, he had no desire to discuss the subject, but expressed the opinion that many of the public statements with reference to child labor are very much exaggerated.

SAMUEL McCUNE LINDSAY, Secretary of the National Child Labor Committee, in referring to the claim that gross exaggeration with respect to the statistical enumeration of child labor in this country had been made, said that he didn't think "there is any one who will deny the fact that there have been exaggerations and erroneous statements about child labor. I have seen all sorts of estimates in the papers and magazines, some of them specifying particularly the number of children in particular occupations, and others making mere guesses as to the total number of children employed. I think most persons who read these newspaper statements and have any knowledge of statistics at all, treat them with the indifference that they deserve. I want to say with respect to the measurement of the extent of child labor that I believe it is impossible to measure child labor statistically with any accuracy or with satisfactory results."

After referring to the United States Census as the official source of information, Dr. Lindsay analyzed its methods of securing the data and then referred to the charge of gross exaggeration which had been brought against those who claimed that "two million children are working in the factories, mines, mills, mercantile establishments, etc., under fourteen years of age." Continuing on this point he said: "I presume that such a claim has been made; I would not like to deny it although I don't know anyone who has made it and I don't recall at the present time having seen exactly that claim made anywhere. The National Child Labor Committee has never made such a statement. In a report made a little over a year ago, we said that a conservative estimate for 1905 showed that there were two million children under sixteen years of age engaged in gainful occupations in the United States. This estimate took account of the probable increase since 1900 and always referred to children ten to fifteen years of age on the same basis of calculation as the census itself. That statement was made upon the authority of the National Child Labor Committee. We have had no occasion, by reason of any argument that has been made on the employers' side anywhere since then, to question the accuracy of the statement. I believe it is as true to-day as it was in 1905. The general policy of the Committee has always been to state its case conservatively, to under-estimate rather than to over-state the facts brought out in its work. In other words, we have secured data from private reports, by investigations of our own field agents, from reports of State officials, factory inspectors, school officials, State committees and educational authorities in several of our States, and applying the usual statistical methods of estimating, based upon a proportion, we have come to the conclusion that that estimate of two million children ten to sixteen years of age, in all occupations in the year 1905, is an under-estimate rather than an over-estimate. We could very well make it a little stronger without any danger of going beyond the records that we have at hand.

"Then as to the kind of child labor that represents. No one, so far as I know, has undertaken to say that all those children are the victims of abuse; not at all. No one has undertaken to say that all the kinds of labor represented in the employment of those two million children are necessarily harmful. We do say, that as a general principle, any child under sixteen years of age who is required to work for its living, required to contribute materially to the support of itself or its family, is in a perilous and hazardous condition; that such burdens in childhood are contrary to the spirit of our institutions. It is depriving children of opportunities and bringing about class distinctions that we should seek in this country to avoid. We will say that some forms of child labor represented by these two million children are extremely harmful for children under sixteen years of age and that the labor of many of these children under sixteen years of age should be absolutely prohibited, namely, the labor of all children under fourteen years of age—which represents some 180,000 of these in occupations other than agriculture; that the labor of all the others should be protected, restricted by legal enactment, so that at least all children under sixteen years of age would be prohibited from working in physically and morally dangerous occupations, especially in mines, underground and also at night work, which we believe to be particularly hazardous.

"Now, beyond these statements, and I have tried to make them as definite and as clear as possible, there is nothing in the reports of our National Child Labor Committee that will warrant any further assertions; as to the accuracy of those statements we are prepared to defend them, and to show that they are understatements rather than over-statements.

"As to the question of the further classification of these two million children according to occupations, first of all we find that most of them are in agricultural pursuits. Understand, I am now taking the Census figures and correcting them as of the date 1905, which means, adding a quarter of a million to the 1,750,000, which gives us 2,000,000. Of this two million a large proportion are in agricultural pursuits. Of the 1,750,000 in the year 1900, 790.623 were under fourteen years of age, and of that number 604,265 were engaged in agricultural pursuits, leaving 186,000 under fourteen years of age engaged in the manufacturing and mechanical pursuits, trade, transportation, domestic and personal services and professional service.

"The point we have made in the use of these statistics has been chiefly this, that 1900 as compared with 1880 showed an increase in the volume of child labor. The Census itself shows, from these figures, that the proportion of working children of either sex engaged in agricultural pursuits and in domestic and professional services was smaller in 1900 than in 1880, while the proportion in trade, transportation and in manufacturing and mechanical pursuits was larger, the movement being rather more marked for female than for male children. That is the essential fact that has been brought out by the Census figures, examined for whatever they are worth. This fact has attracted our particular attention and merited our notice in the work that we are trying to do for the welfare of the children—that in those trades, in those lines of activity where the danger is greatest, the danger to the health, physical development, moral development and education, the increase has been greatest. The figures show some alarming changes in the increase between 1880 and 1900 in these particular trades and industries where the work of children is hazardous. In the next place, we believe that the increase since 1900 has been steady."

Referring to the remedy that is being applied to cure

the child labor evil, Dr. Lindsay detailed the efforts of the National Child Labor Committee in securing prohibitive legislation, both State and National, and endorsed the Beveridge-Parsons bill in Congress. He expressed the belief that in preventing child labor, "we shall remove a very large cause of all our social discontent and many of the causes of the political disturbances of our present day."

OWEN R. LOVEJOY, Assistant Secretary of the National Child Labor Committee, spoke on "The Extent of Child Labor in the Anthracite Coal Industry." He quoted from the 1905 report of Chief Roderick of the Pennsylvania Department of Mines in part as follows: "During the latter part of 1905 a man by the name of Lovejoy made a tour of the anthracite counties inquiring into the ages of boys employed at the mines. In blazing headlines, the daily papers published, on Mr. Lovejoy's authority, the statement that ten thousand boys were found at work in and about the breakers who were under the legal employment age of fourteen years." To this Mr. Lovejoy replied in part as follows: "It should first be observed that the statement 'in blazing headlines' was never made by my authority, or the authority of the National Child Labor Committee, that 'ten thousand boys were found at work in and about the breakers who were under the legal employment age of fourteen years.' It was said, discussing the estimate made by Dr. Peter Roberts, 'if the borough we are now studying were taken as a basis for such a generalization, the number of boys under fourteen years of age working in the anthracite coal industry would be 12,800.'"

Mr. Lovejoy referred to other statements as to the number of boys under age employed in the anthracite coal industry, and explained the method of computation by which the representatives of the National Child Labor Committee arrived at their conclusions. The source of much of this information was pointed out as being the public school superintendents. On this point Mr. Lovejoy said: "If the same proportion of child labor prevailed in the entire region which is estimated here by these school superintendents, the total number would be six times 2,460, or 14,760 boys working under age, with falsified certificates, in the mines and breakers of the region. It is not claimed and has never been claimed by this Committee that the number of boys under age in the breakers is six times the 2,460 estimated by the school superintendents of these seven boroughs. The nearest approach to such a claim has been that if the same percentage prevailed throughout the region as found in these boroughs for which estimates were given by the school superintendents, the number in the *mines and breakers* would be not less than ten or twelve thousand, but estimates of the number have been accompanied always by the contention that 'until some accurate method to determine the age of children has been applied, the exact number will never be known.' The school superintendents, the class of public officials most familiar with the children, complain of the difficulty in determining the age of the children in default of accurate vital statistics."

Mr. Lovejoy argued for the enactment of a law in Pennsylvania which would make sixteen years the minimum age limit for employment in or about any mine, on the ground that coal mining is an occupation dangerous to the life and limb of those employed therein. "If it were true," he said, "that 'if a uniform law, with fourteen years as the minimum, were passed, Pennsylvania would lead all other States and countries in practical and sensible protective legislation on this important question,' then we would be constrained to say that other States and countries where coal mines are operated would be sadly in need of reform. Fortunately, the assertion is erroneous; for Illinois, Montana and Missouri forbid the employment of children under sixteen in mines, while Arizona, Colorado, Montana, Missouri and Utah limit the employment of children in mines to eight hours in the twenty-four. Austria forbids the employment in mines under fifteen years, while both France and Germany, although not having a higher age limit for employment, require that all chilren employed shall have completed the common school course of education."

W. J. RICHARDS, Second Vice-President and General Manager of the Philadelphia and Reading Coal and Iron Company, in his opening remarks stated that, "the cause of my appearance here to-day may be found in the unwarranted statements that have been appearing in the public press for the past six months regarding the employment of child labor in the anthracite fields of Pennsylvania."

"There is in Pennsylvania," he said, "covering the portion of the anthracite fields, a mine law, and in addition special laws have been enacted from time to time limiting the age at which boys can be employed in the breakers and the mines. In the agitation for these laws, the operators have always favored and advocated the highest age suggested. The law now standing on the statute books of Pennsylvania and the age limit fixed thereby was enacted by the Legislature in 1903. That law fixes the age for the employment of boys in the breakers at fourteen years and the age for employment of boys in the mines at sixteen years. These ages have the full approval of all the operators and mining companies in the anthracite regions. The effort of the companies has always been to rigidly adhere to that law. The instructions to all the superintendents and foremen of collieries have been to give close attention to every boy coming to or at work to learn whether he is of the age he is represented to be in the certificate furnished by his parents or guardians.

"To further protect the child and to prevent the employment of any under the legal age the State of Pennsylvania has a compulsory education law requiring the attendance at school of all children under fourteen years of age. To fully enforce its provisions a truant officer is appointed in each school district, whose duty it is to compel the attendance at school of every child under fourteen years of age. This truant officer is a resident of the school district, a man who knows the people and children of his locality. Before the beginning of each school year, he or the district assessor visits from house to house making a complete census of all the children of school age, noting where they are attending school. If any child under the school age has gone to work at any breaker or factory, the truant officer compels the discharge of the child and requires that he be sent to school. Another check is thus provided to prevent the conditions represented by the recent articles of which we have complained.

"Anthracite mining is a large and important industry. We are in every way endeavoring to live up to the laws. We have always led in any effort to improve the advantages and educational opportunities of the boys of the region. There has been no attempt at evasion on the part of the operators. When one of these laws was declared unconstitutional, the operators still continued to enforce the age limit of the law."

Mr. Richards then presented in detail the report of the Pennsylvania Department of Mines, giving the result of a special investigation made by its inspectors in 1905 as to the extent of child labor in the anthracite mines in reply to Mr. Lovejoy's assertion that "the boys working in the hard coal breakers of that State under fourteen years of age number not less than 12,000." Chief Roderick's letter of instruction to the inspectors requested them to "make a strict inquiry as to the ages of boys working in and about the breakers. See whether Section 1 of the Act of May 2, 1905, has been complied with. Insist upon all boys, wherever found, furnishing proper proof of age according to law. You are authorized to enter legal proceedings against all violators of this law, whether employer or employee. Make a report to this department of the total number of boys over fifteen and under sixteen years of age employed in and about each breaker; also give the names of boys of doubtful age, with the address of their parents or guardians." As a result of this investigation, Mr. Roderick stated that "the total number of boys ranging from fourteen to sixteen years of age, employed in and about the breakers, is 8,124. Of this number the inspectors had some doubt as to 760 of the boys having reached the legal employment age, although each of them had presented the certificate required by law, which was on file, showing that he was over fourteen years of age. The boys of doubtful age number a little over nine per cent of the total number employed. It is very probable, however, that many of the 760 classed as doubtful by the inspectors are over fourteen. The difficult thing is to get at the correct age of these 760 boys, as at least seventy-five per cent of them were born in foreign countries."

Mr. Richards stated in conclusion that the company with whose operations he is connected has had a careful examination and investigation made covering its employes between the ages of fourteen and sixteen, and the finding corresponds very closely to that of the State of Pennsylvania. "I am perfectly convinced," he said, "that cases where boys are working under age are very limited."

CHAIRMEN OF THE FEDERATION'S SEVEN DEPARTMENTS.

DR. ROLAND P. FALKNER, a well-known statistician, without attempting to minimize the necessity for eradicating the evil of child labor, at the same time claimed that "the menace to society does not exist unless such child workers are an appreciable factor in the life of the community or of the nation. Society counts with large aggregates; it deals with great masses. To it the question of the extent of the evil is of the utmost importance. It would know whether it has to deal with a sporadic, comparatively infrequent phenomenon, or whether the evil is widespread." He then proceeded to analyze the census results of 1900 in regard to child labor. He said: "They show that between the ages of ten and fifteen years inclusive there were 1,750,178 persons employed in gainful occupation; that they formed 18.2 per cent of the population between

the ages of ten and fifteen inclusive, and that they were divided among the groups of occupations recognized by the census as follows: Agriculture, 1,061,971; professional service, 2,945; domestic and personal service, 279,031; trade and transportation, 122,362; manufacturing and mechanical, 283,869.

"Whatever may be our view of child labor, it is clear that not all of this labor would fall equally under condemnation. The labor upon the farm, where the child works generally in assisting the parent or guardian, certainly falls in a different catagory from that in factory, mine, or sweatshop. So little does public opinion condemn such labor that none of the laws designed to throw a protection around the child include it within their sphere. Some of it may be objectionable, but the great bulk of it is so little objectionable that we can throw it out of the reckoning. We have left, then, 688,207 workers in fields other than agriculture."

Dr. Falkner then presented statistics showing the sub-division in age groups, and of a total of 688,207, 310,825 were fifteen years of age and 191,023, fourteen years of age. As to children of these ages Dr. Falkner said that, "it may be in some cases a hardship for a boy or a girl of fourteen and fifteen years of age to earn his or her living, but it is nothing abnormal or unusual. Nor does legislation seek to restrict such labor except in particularly hazardous industries. At this age legal restriction of child labor is the exception rather than the rule. Eliminate the children of fourteen and fifteen years of age and we have 186,259 children at work in 1900 under the age of fourteen who are the proper objects of restrictive legislation. That the number of child workers is so much less than currently reported should not lessen our sympathy with these unfortunates or diminish our efforts to alleviate their condition.

"In face of the evidence presented, how can it be claimed that child labor is a menace to our civilization, a menace growing more threatening as time advances? We may recognize the evil, whether it exists in particular localities or in particular industries. We may and should put forth every effort to diminish it. We should save as many children as we can from the harm which may arise from their employment at an early age, but Why should we malign our democracy with exaggerated pictures of the evil? Why should we condemn our modern industrial system as a whole for an evil which is by no means general? Why should we grow pessimistic over our whole industrial outlook, and looking it in the face see beams in its eyes where there is only a tiny mote?"

CHARLES P. NEILL, United States Commissioner of Labor, stated that there was one very important point that seems to have been entirely overlooked by Dr. Falkner. "If there are 200,000 children this year," he said, "they do not stay fourteen years of age for a lifetime. One-half of these, who are, say, 12½ this year, will be thirteen years old next year. Every year 100,000 go out of the twelve-year-old grade, and another 100,000 children come in; so that, as a matter of fact, it is only a few years before you have got a million citizens who are turned into the body politic with the unfit surroundings of their child labor. I want to submit that the question is not how many are at work this year, but how many children in a reasonable time, within a period of five or ten years, will be at work at the age of twelve or thirteen years. While on the subject, I would like to suggest one further question, that those 200,000 be given two years more of schooling and two years more of childhood, so that if the number is so small in any single year, it will not affect industry to any appreciable extent, but in a given period of ten years it will affect the citizenship of this country to a most material extent."

W. A. MAY, General Manager of the Pennsylvania Coal Company, premised his remarks with the statement that "in order that there may not be a misunderstanding on the part of the public or false conclusions drawn from the magazine articles and newspaper accounts of the conditions existing in the anthracite regions as they relate to the employment of boys in and about the mines," he thought it appropriate "to give facts, figures and arguments which will materially lighten the dark and somber pictures they have drawn. These articles and accounts dwell mainly on single and isolated cases, making them typical when in fact they are not so." Mr. May then told of the efforts made by the employers to get at the ages of the boys seeking employment, so as to comply with the child labor act, referred to the constantly lessening number employed; mentioned instances of money expended for their comfort when employed; discussed the doubtful wisdom of abolishing the boy; and presented several notable examples of what slate pickers, driver boys and car runners have become in after life. "Boys under fourteen," he said, "the age limit fixed by law at which they may be employed at the collieries, [illegible] never employed if we know it. We ask for and [illegible] to be their parents or guardian. This was the practice with our companies before the present law, which has for one of its conditions the [illegible] should be required to file a certificate [illegible]. What more than this can you ask of us? The boy may be under age, but having taken every precaution, we cannot be held responsible."

Following a presentation of statistics showing the lessening number of boys employed as slate pickers in the breakers of the Lackawanna and Wyoming valleys, where the larger portion of anthracite coal is produced, Mr. May referred to the improvement in slate picking machinery, which eliminated the boy, and stated that "if we could use machinery and clean the coal as the public demands that it must be cleaned we would do so; we would not use boys." He stated that the change as to the employment of boys as slate pickers was great and added "if the use of boys for this work is an evil, it is not a growing one." He referred to the expenditures of the companies in heating the breakers and removing the dust therefrom. He stated that men could not be employed to pick slate because of the lack of supply and because of the character of the work which permitted boys to do it much better than men.

"Is it wise to entirely abolish the boy from our work?" he continued. "One of the speakers referred to the fatalities in our mines. That is true; we have many of them and we shall have them so long as mining is carried on; but will they not be increased by banishing the boy? To avoid accident you must have experience. We need that which comes from training of the hands, the limbs, the eye and the ear. There is no way to get it but by actual work, and how can you get it more quickly, to the greater advantage of the boy when he becomes a man and to his fellow workers, than by putting him at work? I mean a boy fourteen years old and over, because we do not believe it best to employ boys under that age any more than you do. To set the boy at work is the only way, and if you would go into the mines with me, you would quickly see how a boy will get that agility, that alertness, that brightness, which prevent accident. True, boys are killed; and men also are slain; but many more would be sacrificed on the altar of trade and for the sake of public comforts and welfare if they went into the mines without the knowledge gained by actual practice. In other words, we must have apprentices and they must begin young. This is not a false position and it will appeal to any one of you having had experience in practical affairs and in the handling of labor."

JOHN MITCHELL, President of the United Mine Workers of America, said that he was surprised at the statement that men could not be secured to pick slate, because the companies were unable to secure a sufficient number of men to work in the mines. "I dare say," he said, "that with the close of this month and the close of this year the breakers and collieries in the anthracite region will not have operated two hundred days in the year 1906. There are not more than two years in the past twenty when the anthracite miners have been given opportunity of working more than two hundred days in any one year, and if they are permitted to work only two-thirds of the working days in the year, it isn't likely that men are not employed in the breakers because of the inability of the companies to secure men to work in the mines. I quite agree—and I want to be fair about this matter—that men are not as suitable, they are not as well equipped to pick slate as boys. Boys are employed because they are nimble; a man would not work in a breaker; it is work entirely unsuited to him; a boy will work there; and a very large number of the accidents are due to the fact that the boys do run about, that they won't sit constantly at their employment, that at every opportunity that offers itself they want to play, and why wouldn't they? That is why we want this age limit raised, so that the boys may play before they go to the breaker.

"There has been a decided improvement in the conditions of child labor in the anthracite coal fields. Whether that improvement has come about because of the high motives or humane promptings of the coal companies or not, I am not going to say, but I will make this statement: That prior to the advent of the miners' union, there was no effort made to regulate the employment of children; prior to the year 1900, when the coal miners in the anthracite fields first engaged in a strike, there were no adequate laws regulating the employment of these boys, and the men are legion in Pennsylvania who started to work in the breakers when they were eight years of age. There are hundreds of boys of eighteen and twenty years of age there now, who started to work at ten and twelve. The age limit has gradually been raised; it has raised because of increasing intelligence, because of the Americanization of these non-English speaking people, because of the promptings of humanity, but particularly because of the education and influence of the miners' union.

"In justice to the anthracite coal companies I want to say, and I do it gladly, that when the law enacted in 1903, I believe that was the year, which fixed the age limit at which boys might be employed at fourteen and sixteen, was declared to be unconstitutional, the coal companies through their presidents issued orders that the provisions of the law should be continued in force anyway, and they were in most instances continued in force until a new law was enacted. The new law provided that the boys might not be employed in the breakers at less than fourteen years of age, or down in the mines at less than sixteen years of age, but also provided that they must have a certificate from the schools showing they had received a certain amount of education. The coal companies contested that feature of the law, however, and the section fixing an educational qualification was declared to be unconstitutional, so that, notwithstanding the high age limit, it seems to me that they might have left uncontested the law which provided for the educational qualification, because after all it is just as necessary to the future of our American citizenship that men shall be strong mentally as well as physically—that they shall have a reasonable education as well as a strong and robust physique.

"The men employed in the anthracite coal mines constitute only one-half of the miners in Pennsylvania. There are about 150,000 bituminous coal miners in that State, and I presume the children of the bituminous coal miners are about as numerous as are the children of the anthracite miners. The boys may enter the bituminous mines when they are twelve years of age. There is no law that prohibits the employment in the bituminous mine of children above the age of twelve. The only requirement, however, is that the boy of twelve must work with his parents or with a guardian, and inasmuch as there is no employment in the bituminous mines for a boy outside, as there is in the anthracite field, it means that all the boys in the bituminous districts must go down in the ground; they must spend their lives in the earth, not on it; and it seems to me that some law should be enacted for the protection of the sons of the bituminous miner."

ELLISON A. SMYTH, President of the South Carolina Cotton Manufacturers' Association, who has been engaged in the cotton mill industry in that State for the past twenty-five years, stated that "it has been a matter of surprise to those of us in South Carolina who have been trying for twenty years to better the conditions of the working people there, to be antagonized as we have been by the Child Labor Committee." He said that "the statements that they have made and published are so glaringly incorrect that they have excited ridicule and a feeling of antagonism that otherwise would not have existed." Referring to some of these statements Captain Smyth said:

"For instance, there is a statement published by the Child Labor Committee—a general advertisement—in *The Outlook* of November 17, 1906, which says: 'Sixty thousand little children toil in Southern cotton mills; little girls eight years old work through a twelve-hour night.' Now, there are nine million spindles in all the Southern States. The children work in the spinning room. The spinners are paid so much for each number of sides of a spinning frame they run, and every spinning frame has two sides, and a fair average would be one hundred spindles to the side. If you take these figures you will find that not over 15,000 people could be employed in the spinning rooms as spinners, as a spinner will attend anywhere from six to ten sides, and some as much as twelve sides. What I mean by the 'side' of the spinning frame is attending to the spindles arranged along one side of the spinning frame.

"In the census figures of 1905 the statement is given by the officials that in South Carolina there are employed under sixteen years of age—the advertisement referred to says fourteen years—there were employed 9,769 children in all gainful occupations, including those on farms. We have in South Carolina 3,500,000 spindles, over one-third of what are in the Southern States. If you multiply the 9,700, taking that as a figure, and granting that they are all in Southern cotton mills (whereas these figures include children in all gainful occupations, agricultural and otherwise), but assuming that they are all in the cotton mills, you cannot muster over 30,000 in all the Southern States, and yet here is an advertisement which goes out stating that there are 60,000 children working twelve hours a night.

"Now, I happen to be President of the Association of South Carolina Cotton Manufacturers, and we have 110 mills in that Association, representing 3,250,000 spindles, nearly the whole number of spindles in the State. There are only three mills of that 110 that work at night or have worked at night for years. The weaving mills do not work at night. There are only eight spinning mills in South Carolina, and three of them work at night; but the only rooms that they run are the twisting rooms where adult labor is employed and not children. They only work nine hours at night and receive pay for a full day's work.

"Now, Mr. Lovejoy says, in a statement here that was published in *The Independent*—"Child Labor and Family Disintegration"—he says there are Southern cotton mills in which parents sign contracts to send all their children to work upon reaching a certain age. Now, that happens to apply to me individually. Why wasn't he fair enough to make a further statement and give all the facts? What is the contract? 'I (the parent) agree that all children, members of my family between the ages five and twelve years shall enter the school maintained by the Pelzer Company and shall attend every school day during the school session unless prevented by sickness or other unavoidable causes, but all children, members of my family above twelve years of age shall work in the mill and shall not be excused from service therein without the consent of the superintendent for good cause." Now, what are the conditions? That contract dates from 1892. South Carolina

to-day has no compulsory school law. South Carolina had no child labor law until 1902. The most of our help that have come into the Southern cotton mills have come from the North Carolina mountains, and the backwoods where they had no school facilities at all. The effect of that contract was to force a compulsory school education upon the children of our mill operatives and to limit the age at which they went to work at twelve years. That was done in 1892, and to-day there is no law in South Carolina affecting compulsory education, and there has been no child labor law until 1902 and which now applies to twelve years of age.

"A committee of South Carolina manufacturers took part in and prepared the labor law that is now in existence in South Carolina and was passed in 1892, and a similar committee of South Carolina manufacturers in 1902 prepared a child labor law that is now in existence in South Carolina and was passed by their advocacy. Now, the National Child Labor Committee took no notice of all those facts, and John Spargo tells us in his book, on the authority of Dr. McKelway, Assistant Secretary of the Child Labor Committee in the South, that Southern mills have adjustable legs or supports to the spinning frames, so that they can be lowered nearer the ground for little children. A more ridiculous and silly mis-statement was never thought of or suggested. The whole cotton mill machinery has to be as rigid as possible. Our floors are four inches thick, with a ceiling of seven-eighths of an inch below and upper floors an inch-and-a-quarter above, the idea being to make as stiff a floor as possible, so that those spinning frames that are running eight to ten thousand revolutions a minute should have a firm foundation and not affect the steadiness of the machinery. It would be absolutely impossible to have an adjustable spinning frame so that legs could be moved up and down; such a thing has never been done, never been seen, never been attempted, and yet that statement was made on the authority of a man who was in the South and is supposed to know and ought to know.

"There has been a great talk and cry about the number of children employed in Southern cotton mills, and when that law went into effect in 1902 in all the cotton mills in South Carolina there were only 53 children that were debarred from working on account of their age. In 1902 our committee of cotton mill manufacturers prepared a very careful statement of statistics as to the schools maintained by the cotton mill corporations. In South Carolina our public school system does not permit—the money raised does not permit—of schools being maintained more than four months in the year. The reason of that is that the white man there has the black man to carry. There are more colored people in South Carolina than there are white. The taxes are paid by the white people and the school fund is divided equally and fairly in proportion to their attendance on the schools. The white man is educating the negro children and he is paying for it and as a result he is unable to give to his own children the full length of time that he would do if his money all went to educate the white children. Now, the cotton mills have their own schools. Those statistics were gathered in 65 corporations in South Carolina. They show that $175,000 have been spent by those mills in school buildings and equipments and that there were 7,433 children in attendance on those mill schools. In some villages children are paid money to attend these schools, they get regular pay envelopes just as if they were working in the cotton mills every month if they do not miss a day at school. Those schools run from eight to nine months in the year and the cost of maintaining those schools amounts to between $25,000 and $30,000 a year, all paid by the cotton mill corporations in addition to special school tax of over $40,000.

"We don't want the children in the mills; it is not economical labor; it is not desirable from any standpoint, apart from any humanitarian feeling on the subject, it does not pay. But our conditions down there are peculiar. We work entirely according to what is called the family system, family help. It is not like in New England where the individual is employed, but a man will agree to hire himself and his family, and if you are not willing to employ his family or give them employment, he will go where he can get it; and for the last three or four years labor has been so scarce, the development of the cotton mill industry has been so rapid, that labor has been very scarce, and no one knows that better than the cotton mill operative and that he can go where he can get employment. That very often forces you to employ a child that is twelve years of age, whom otherwise you would not want, because if you do not take the family they will go to another village where they can be employed.

"Now, our association—that is, the South Carolina Cotton Mill Manufacturers' Association—while in our State we had a law of sixty-six hours a week, we voluntarily reduced in the mills of that association—110 mills—last July the hours of labor to sixty-four and fixed the period when they are going to reduce it to sixty-two and then to sixty. We are doing that in the absence of any demand or request of our employes and in response to no supplication or application or notice from labor organizations, because in the cotton mills of South Carolina there are no labor organizations. This movement is being carried on entirely by the mill managers, because they believe that they will get better results and that it will be better for their people, better for the employes, better for all concerned. It will not come at once, but it was thought it would be better and fairer for both sides that the movement should be gradual and a few months apart instead of being rapidly taken all at once."

J. G. SCHONFARBER, of the Maryland Bureau of Statistics and Information, stated that most of the capital invested in the South in the cotton industry is from the North. "You will remember," he said, "that the Eastern capitalists laid the foundation of great fortunes in the slave trade many years ago, and afterward became Abolitionists. You will also remember that the immense cotton industries of the New England States have been fostered very largely by the employment of cheap child labor. The quickening of the public conscience in the East has abolished the employment of children under fourteen years, and for this and various other reasons the same capitalists have now gone South to exploit that section and avail themselves of the profits to be derived from the employment of children where no laws as strict as those of the East are in existence. We should also remember, in discussing and legislating on this subject, that the South is just now awakening from its industrial inactivity, and that restrictive laws as drastic as those in the Eastern States will retard her progress."

ANNA B. BROWN, Vice-Chairman of the Child Labor Committee of the Tennessee Federation of Women's Clubs, told of her experiences in visiting a number of the cotton mills in the Southern States. From her observation she concluded that: "Unless the States I visited and their churches do more than they have done and are doing for the people in their borders, the educational, industrial and moral redemption of the 'poor whites' and the classes from which mill operatives are drawn will depend for the next twenty-five years, as it depends now, on the Southern cotton mills. Long before we club women, and unions, and labor leagues, and philanthropists plunged into the child labor question, the mill men were already settling it. They are emancipating the children, they are doing it slowly, but they are doing it surely."

D. A. TOMPKINS, formerly a member of the United States Industrial Commission and at present a prominent cotton mill owner, as well as manufacturer of cotton mill machinery, of North Carolina, spoke with special reference to that phase of the child labor subject which relates to the cotton mills of the South. He said in part:

"It is important that some of the antecedent conditions in the South should be understood in order that we may appreciate those in existence to-day. You all know that the end of the Civil War was a calamity for the South, although the most thoughtful Southern people do not believe that the calamity was unalloyed for it ended the institution of slavery, and if the poverty that came were a calamity, the abolition of slavery was in turn a sufficient benefit to balance it; but few realize that the subsequent period of so-called 'reconstruction' was a calamity such as never before was borne by a Christian people. During the twenty years succeeding the war, while the white people sacrificed all else in the fight for Christian civilization, there was absolute poverty for everybody. Every man, woman and child in the South was a veteran of the war.

"The beginning of the cotton mill construction was the end of that desperate poverty, and that beneficent work affected not only the owner, but the operative and the farmer. The cotton mills increased the price of cotton for the farmer and removed the competition of the 'croppers,' who are now operatives in the mills. Through the establishment of this industry came the amelioration of the conditions of all the people of the South. It was not a question of who shall work, but how 'hog and hominy' or 'bacon and greens' might be secured for all to live upon. The effort to help the operatives began at a time when everybody in the South was absolutely on the same level of poverty.

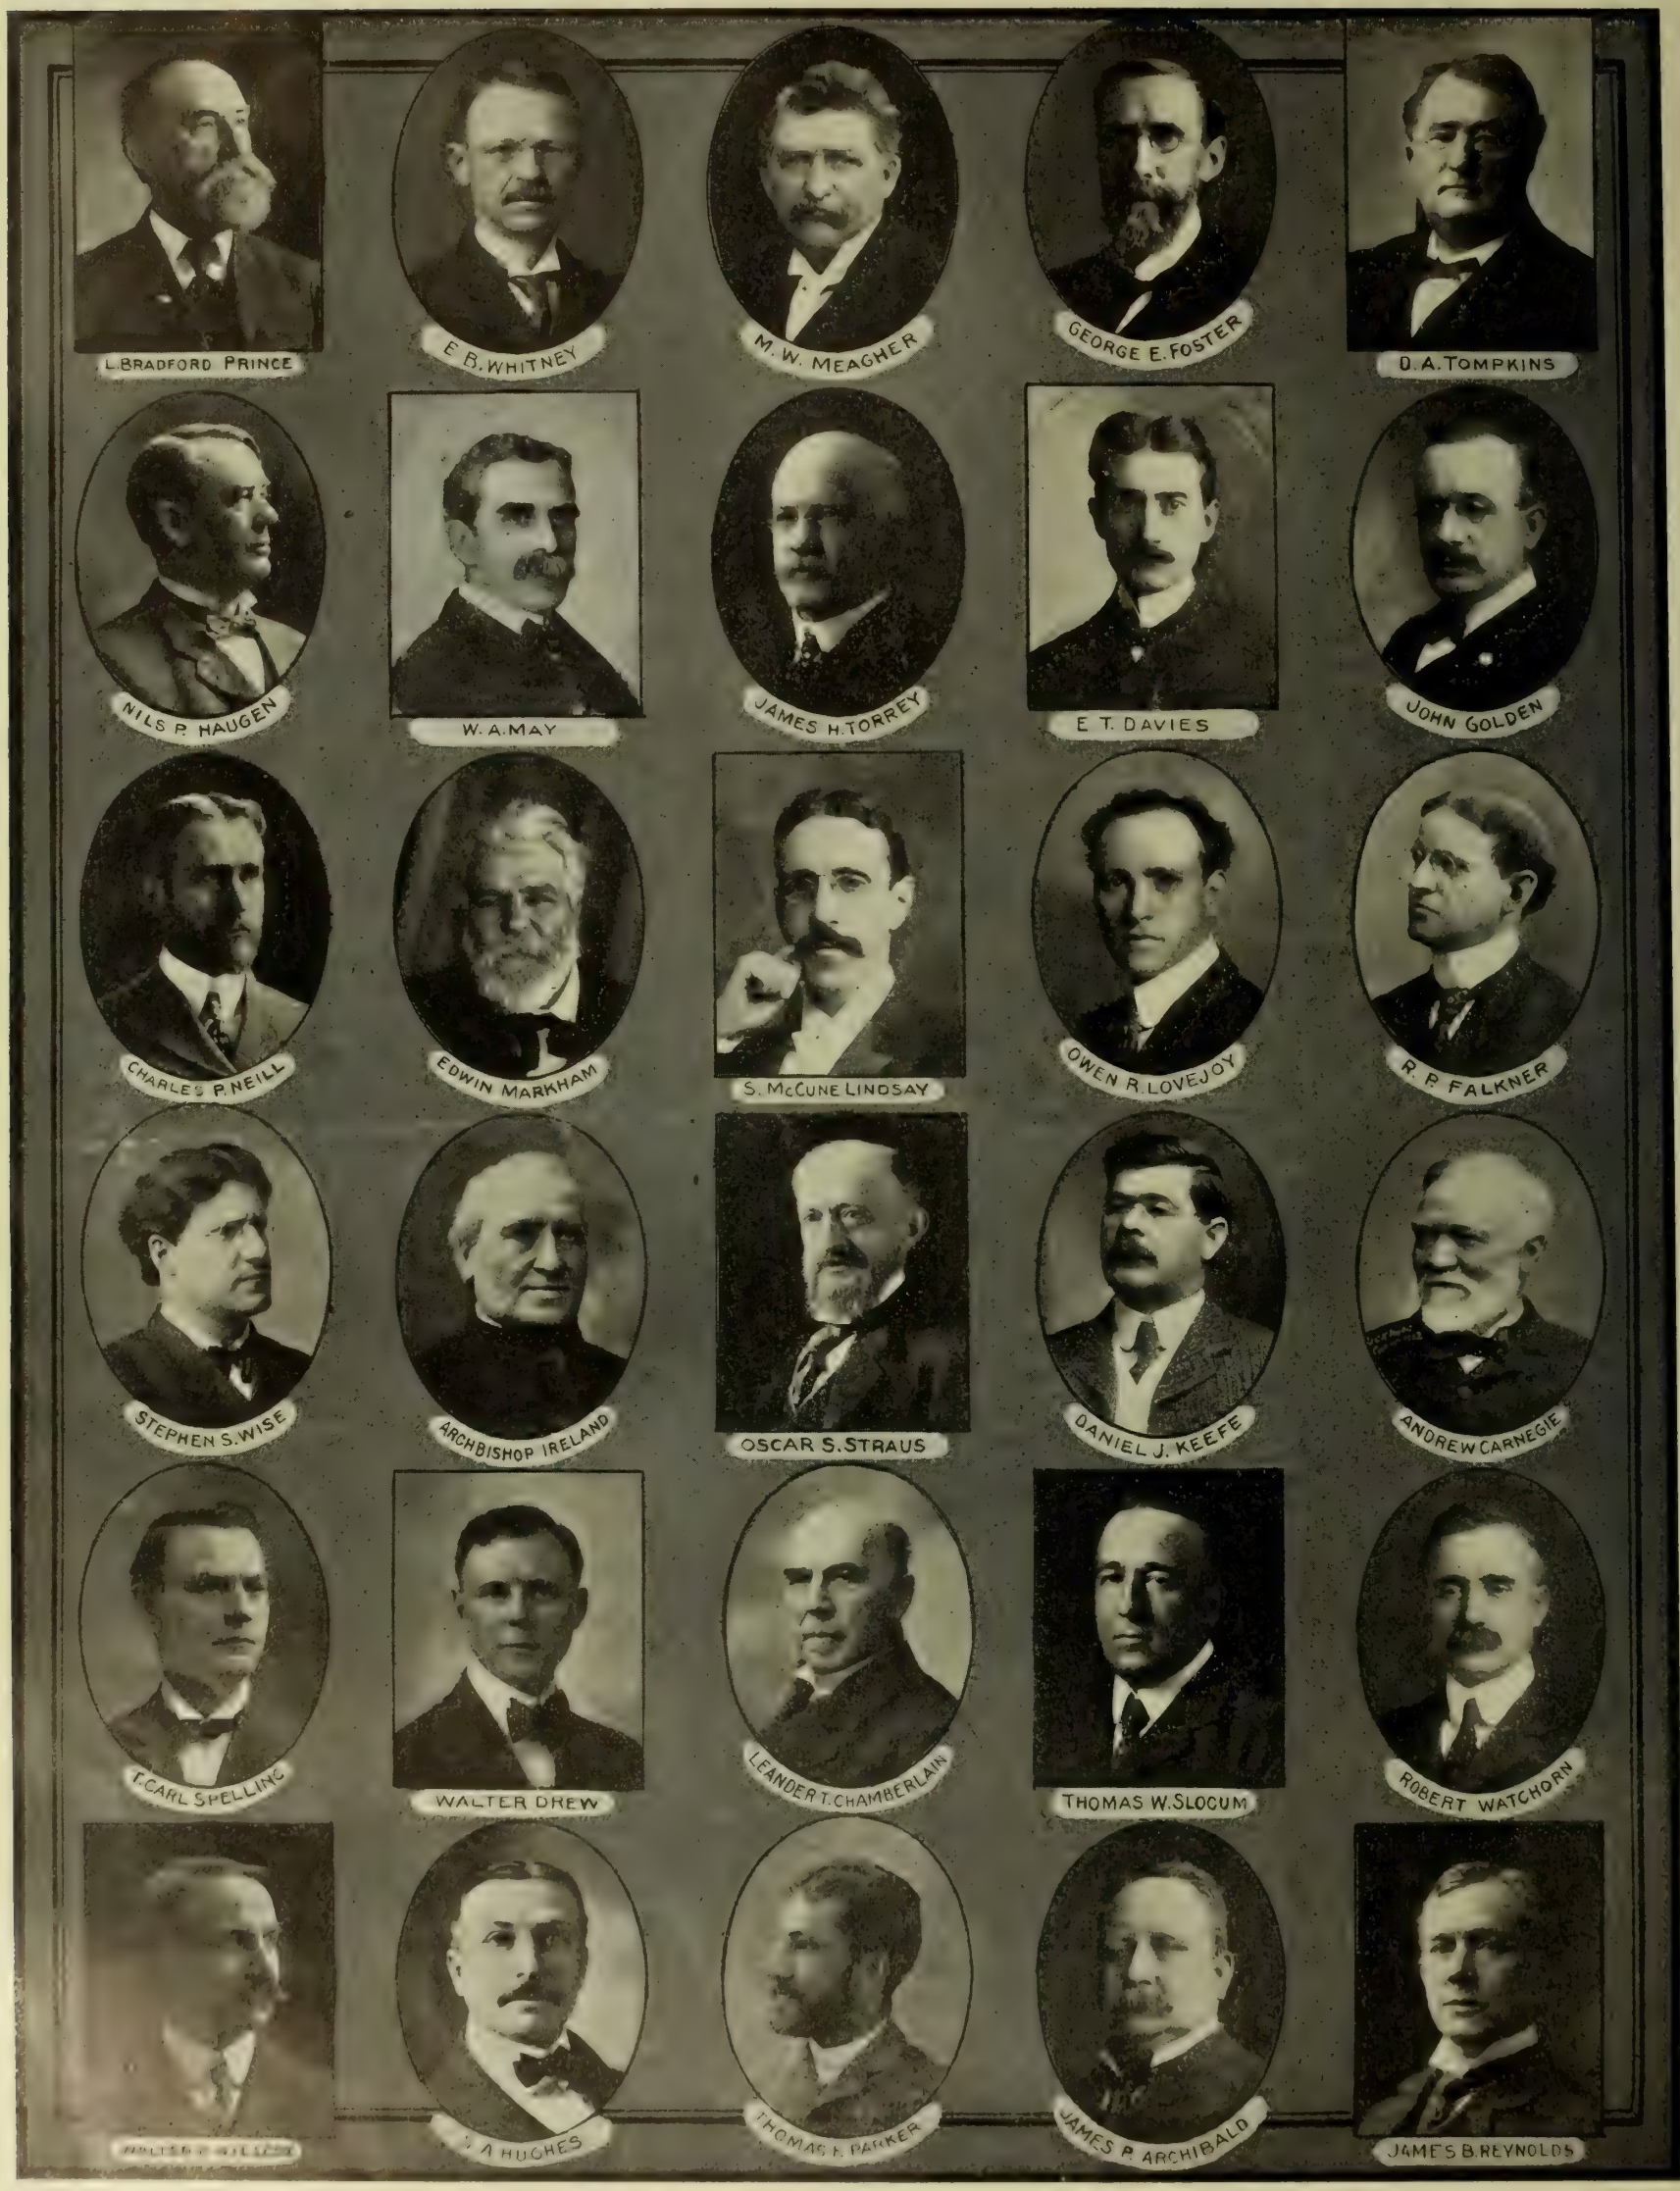
"Immediately after the reconstruction anarchy was ended, and the man on horseback who led, or the one who undertook to build the cotton factory, was simply put forward because he was the right man for the place, and frequently without his consent, to help do the most promising thing for the benefit of the people and the country. The warm ties of friendship generated during the period of reconstruction made every man desirous of doing as much for his operatives as for himself.

"In this work of real reconstruction there came help from unexpected sources. It is to the eternal credit of the New England machinery builders that they gave liberal and long credit to the South which enabled us to make a beginning which has resulted in an industrial development to be brought to a still larger growth for the infinite benefit of the humanity of the South and the Nation. The interest in each other's welfare which was generated during the period of dire distress led the new mill owners among their first undertakings to provide for the education of the operatives by the erection of schools in conjunction with the homes in the mill communities.

"Having established or extended schools, having worked year after year for a compulsory education law, having increased wages fifty to seventy-five per cent, and having brought what to us in the South is great prosperity out of conditions of deepest poverty, through methods which have secured the black man an equal opportunity, we believe that every Southern cotton mill man is doing his utmost to bring about that condition which will enable the limitation of work for profit only for children to fifteen years of age at least. It is not believed that we should undertake to do it arbitrarily, but by continually building up the educational, social and financial forces.

"As long as there are greedy men we must protect children from overwork, but light work in my opinion is not bad for children. In Germany they take a child of ten years and determine its education with reference to the industrial pursuits to be followed; not at twelve, fourteen, or fifteen, but at ten years, and I believe the Germans are correct in their ideas about the proper way to educate children.

"I am engaged in cotton manufacture and machine business. In the latter I have adopted a system of apprenticeship where we particularly desire to have the boy begin at twelve years, for the purpose of education, not for profitable employment. Our apprenticeship contract requires that the boy shall go to school six months in the year, work in the machine shop four months, and we are considering placing in the contract the requirement that he must spend one month of the year in the country, the expense for his board to be borne by our company where the parents are unable to afford it.



"Whatever we do in the way of legislation against child labor for profit, let us not forget that we have a large duty to see that the child when legislated out of the mill shall not be left wholly idle and untrained, but be mindful to provide enough work in school and in some apprenticeship condition to develop a decently trained and educated man or woman. With these conditions I favor raising the age limit of labor for profit to fifteen or sixteen years, but work in the capacity of apprentice for industrial training should begin earlier. I have thought of a graded schedule of apprenticeship work and school attendance, which might well be authorized and controlled by law, for boys and girls in textile pursuits: From 11 to 12 years, three months work in a textile factory may be allowed, but only after an attendance at school of six months; from 12 to 13 years, four months work in a textile factory may be allowed, but only after an attendance at school of four months; from 13 to 14 years, five months work in a textile factory may be allowed, but only after an attendance at school of four months; from 14 to 15 years, seven months work in a textile factory may be allowed, but only after attendance at school three months; from 15 to 16 years, ten months work in a textile factory, but only after attendance at school for two months. This would include official inspection provided by law.

"Instead of enacting laws which totally expel children from that training so essential to their better development as men and women, let us leave the way open for both teaching and training. It is in the period of childhood, I think, that the faculty of mental and physical development may be made most fruitful of permanent results. Very frequently mothers appeal to me to take their boys into our shop when they are too old to make them of any value to us. It is the contact with the actual working conditions,—daily elbow-touch with working humanity, in their early years which is of value in their training. The young apprentice's work in our shop consists in waiting upon the machinists—he gets waste for them, and takes their tools to the blacksmith shop for repair, and does other light work, which secures for him an education through practical contact such as could not otherwise be obtained.

"Weaving is an art and can be carried as high as any of the arts, and it is familiarity with the process of manufacture from very early years which makes the skilled artisan. Why, then, should we legislate in a way which is likely to become too sumptuary and interfere with the higher development of the art? It matters not that a picture has been published recently of a loom showing a bedraggled child operating it, when no child ever did work at a loom, either in this or any other country or period. From time immemorial it has been the custom in the family for the young unmarried women to spin, and the elders to weave—that is where some of you ladies got your name of 'spinster.' To-day, as of yore, the young people do the spinning, and the elders the weaving. The children cannot weave and, therefore, the picture is totally misleading.

"But the Southern cotton mill men want you to realize that we believe that we are doing right and our utmost to raise a totally poverty-stricken country to one of prosperity for all, through constructive efforts, and that we shall continue to work for the greater improvement of conditions in the South."

JOHN GOLDEN, President of the Textile Workers of Fall River, related some of his experiences on a visit to the Southern cotton mills some four years ago, commissioned by his organization and the American Federation of Labor to study conditions there. Speaking of certain portions of the South he said: "I went into the homes of the working people; I lived with them; I went through the mills; I saw their earnings, and when any man tells me that the earnings of the Southern cotton operative are equal to the earnings in

SOME OF THE SPEAKERS AT THE FEDERATION'S SIXTH ANNUAL MEETING.

the North, I am not going to believe it, because I know they are not. And the conditions are not equal; if they were, we would have more people going there during depressions; during some of our big stoppages in the East we would have more people going down South to work; we have had a few, but the only ones that stay are those that either cannot get away or are fortunate enough to become officials.

"I want to tell you in regard to this question of child labor, that I am frank enough to admit it isn't confined to the South alone. There is a lot of it down there. I think the question of whether it does exist has gone beyond the debating stage. We have some of it in the North and East. In spite of many of our humane and progressive labor laws, we have it in Massachusetts, my home State, because I have seen it there. That is mostly on account of the lack of efficient factory inspectorship, the appointing of men as factory inspectors who know nothing about mill conditions, and who are very often appointed to pay off some political debt. It is no use whatever in passing any kind of factory laws, no matter of what humane character they may be, if you do not put in men to enforce them after they are passed. Such is not the case, I regret to say, at the present time in many of our States."

SAMUEL GOMPERS, President of the American Federation of Labor, spoke briefly on child labor conditions with special reference to the South. He related instances concerning investigations of conditions in that section, stating that one of labor's representatives, who went into one of the towns of Mississippi to investigate conditions of the cotton mill operatives, was informed that unless he left the State summarily he would be escorted out by the police, and in fact, he was accompanied on his way beyond the borders of the State by a representative of the city government.

"I know, too," said Mr. Gompers, "that there was pending in the South Carolina Legislature a bill to limit the hours of labor and also to restrict the age of children in the cotton mills of that State, and I have been informed that the resolution of the Cotton Manufacturers' Association of South Carolina to 'voluntarily' limit the hours of labor of children to sixty-six per week was done as an offset to prevent the enactment by the Legislature of that State of a sixty-hour law. The people of Alabama secured the enactment of a law limiting the labor of children to sixty hours per week. In 1895, during a visit to the State, I learned that the Legislature just a day before I arrived in Alabama, repealed the law, and it was plainly stated that it was done for the purpose of inviting the capital of the North, of Massachusetts, to come into Alabama. It seems to me that the very reason given is a condemnation of that repeal. The idea that the State of Alabama, at the instance of its cotton manufacturers, should give them or the Northern capitalists, free play in the labor of the children of Alabama!

"This discussion will do good, and that is after all what we are trying to do. If progress is being made, and I think it is, let us accelerate it and save the children—even save a child—from exploitation and give it the opportunity of going to school and the playground and of becoming a worker, a man or a woman."

DR. J. M. WAINWRIGHT, of the Moses Taylor Hospital at Scranton, Pa., discussed "The Relation of Child Labor to Health," based upon professional experience of six years in the anthracite coal region. He expressed the belief that "our coal fields are just as healthy and happy a community as is any other industrial region in this country, and we very much resent the statement that we are behind any industrial people in the United States in anything that makes for good."

He said: "We have heard a great deal about the boys going into the mines and in a few years developing tuberculosis, dying from the Great White Plague. Now, the facts about that are well stated by Miss Lillian Brandt of the Tuberculosis Society here; she has gotten a table from the last United States Census and classifies fifty-three different occupations, and of these fifty-three, miners and quarrymen were classed together as third from the best in point of mortality from tuberculosis. The only people who have less tuberculosis among them are farmers, planters, and farm laborers, as one class; and bankers, brokers, and officials of companies in the other. There are a lot of such figures available; for instance, in the registration area of the United States, consumption causes 10.6 per cent of all deaths among miners and 16.2 per cent of all deaths among all the occupied males, so that miners are nearly one-third less than all the occupied males in point of view of mortality from consumption. In Scranton for the last ten years consumption caused only 3.37 per cent of all deaths among miners, while among all the occupied males in Scranton it has caused 9.99 per cent, or three times as much.

"Another statement that has been made is that the death rate among the children in the anthracite region is worse than it is in the slums of the cities. Now, I would have felt perfectly free to contradict that statement entirely from my own superficial observation, but the facts in the case as obtained from the United States Census, comparing infant mortality in Scranton with that in other large cities, show deaths in early infancy for 100,000 to be 78.1 in New York, 94.5 in Boston, 78.94 in Philadelphia and only 56 for Scranton. Take children's diseases, measles, scarlet fever, whooping cough, diphtheria, etc.—in New York the average mortality for these diseases is 37, in Scranton 27. So that, coming down to facts, our anthracite center is not only not worse than the slums of New York, but it is much better than the slums, with Fifth Avenue, the bucolic regions of the Bronx and breezy Staten Island thrown in."

EDWIN MARKHAM, author of "The Man with the Hoe," and who has written many magazine articles of late on the subject of child labor, read extracts from a number of letters which he had received commenting upon his articles. Some of these letters, he said, are from persons who are not always heard from, that is, from the workers themselves. "I have also received a number of letters from manufacturers, from those who are employing children, and I am forced to say that the arguments which I have read in those letters are somewhat similar to the arguments that can be found in the books of record about 1820, and so on, when the great problem of child labor was a vivid fact in England. The arguments are about the same. I am told that children enjoy this work, in fact, one writer tells me that after working hours the children sometimes play leap-frog. One gentleman in Illinois has invited me to come out there and see the boys play leap-frog. Well, I am glad of that, because the boys ought to play leap-frog. That is one of their rights.

"Another point is that hardship is necessary for these boys to develop them; it brings out their best qualities. Well, there is some truth in that, and I have been pointed to the illustrious Lincoln as a type of a man who developed himself through hardship. Well, there is a great deal of truth in this hardship argument, but there is not all truth in it by any means. We need a small quantity of hardship, all of us, although we are all flying from it whenever it happens to confront us in the road. Now, we are not all Lincolns. Lincoln had that hardihood and strength of character that forced him through obstacles, but the ordinary child is not equipped with that fortitude that makes its way through obstacles. What the child needs is a proper equalization between work, play and school. No child should be idle. I have been asked whether I thought a child should be coddled and deprived of work. I think a small quantity of work for a small quantity of humanity is very good.

"I am also told that the use of child labor is necessary on account of the necessity, the hard necessity, of trade; that the competitive struggle demands the child, for without him many important industries would languish and possibly go to pieces. This certainly is a serious problem, and for that reason it seems necessary that there should be a national law established in order not to hinder and hamper our national progress.

"The children are the seed corn of the nation, and it was Jefferson Davis himself who announced to his compeers 'we must not grind the seed corn.' The State has a right in this matter because the interests of the State are concerned. Of course, you know that amongst the Greeks the idea of the State took the very first importance, in fact, among the Spartans that position, that the interests of the State were absolutely supreme, took such a definite and sovereign position that they assumed the right even to destroy defective children. In our democracy we do not take so radical a view, but still the same principle holds. It is the opinion of the best thinkers since the beginning of Government that the State has a right to perpetuate its own life, and in saving the children from undue work—work coming upon them at a time when they are simply developing to become citizens—the State is only taking that right which has been accorded to her by the best thinkers of the race."

JAMES H. TORREY, one of the representatives of the anthracite operators before the Coal Strike Commission of 1902, referred to "some statements with reference to child labor in the anthracite region just made by Mr. Mitchell" as being likely "to convey an erroneous impression." He stated that "Mr. Mitchell's claim that prior to the advent of the miners' union and the strike of 1900 there was no effort to regulate the employment of children, is very wide of the mark." Mr. Torrey then reviewed in some detail the various enactments by the Assembly of Pennsylvania since 1891 regarding the employment of children in the anthracite industry previous to the entrance into the region of the United Mine Workers of America. The act of 1891, known as the Mine Ventilation Act, forbade "the employment of any boy under fourteen years or any woman or girl of any age inside the mines, or of any boy under the age of twelve years, or any woman or girl in or about the outside structures or workings of the colliery."

Mr. Torrey referred to the testimony regarding child labor presented before the Anthracite Coal Strike Commission, stating that the gist of the testimony "was to the effect that there was no effort upon the part of the operators to evade the law and that so far as it was not properly enforced and respected it was mainly due to the fact that parents themselves gave false certificates as to the ages of their children for the purpose of securing the benefit of their wages. The cases of the employment of children in the anthracite region which presented the greatest hardship and appealed most strongly to the commission were those where they were employed in silk mills, knitting mills, and other industries which have located in great numbers in the anthracite region for the purpose of securing the benefit of the abundant and cheap labor there to be found." As showing the attitude of the anthracite operators with reference to this matter Mr. Torrey made the following statement by their authority during the sitting of the commission in Philadelphia in January, 1903: "There has been some agitation of this child labor question. It has been up a good many times. There has been some consultation among the attorneys for the operators, and I am authorized to state for all the operators, so far as they could be consulted, and I think it includes them all, that we will heartily recommend and co-operate in any effort to have a law passed forbidding the employment of any children under sixteen years in the bituminous or anthracite coal regions of Pennsylvania." He stated further that through the efforts of the operators there was introduced in the legislature of 1903 a measure which carried out the spirit of this proposition.

"This act," he said, "was attacked in the bituminous regions, and was held to be unconstitutional because two acts of Assembly were amended by one enactment. Nevertheless, the anthracite operators continued, so far as was in their power, to enforce the act according to its letter and spirit."

The act of 1905 relating to child labor, which applied solely to the anthracite region, increased the age at which boys might be employed in the anthracite mines to sixteen years for those inside and fourteen for those outside. "Probably by an inadvertence," said Mr. Torrey, "this act required that every minor employed in or about the mines should be required to furnish an employment certificate and in order to secure an employment certificate certain educational qualifications were required. The effect of this provision, if it had been enforced, would have been to require the operators, under severe penalties, to turn out of their employ all boys between the ages of sixteen and twenty-one who had no education, and thereafter refuse to employ any such. The constitutionality of the act was successfully attacked in the anthracite regions because it required different degrees of educational qualifications for different classes of miners who were practically in the same position."

Replying to Mr. Mitchell's denial of the scarcity of labor in the anthracite region, and his allegation that the record of 1906 will show not more than two hundred days' work, Mr. Torrey stated it to be of such common knowledge and universal complaint, that it is practically impossible to secure men enough to fully operate the mines, that it would appear very strange to any one familiar with the situation that it should be seriously questioned. "There was a six weeks' suspension," he said, "decreed by the union in the spring, covering the period required for it to consent to a continuance of the conditions imposed by the strike commission's award, and the usual number of holidays have been observed by them; otherwise, work has been as continuous and uninterrupted as the conditions and transportation facilities would permit."

EDGAR T. DAVIES, Chief of the Illinois Department of Factory Inspectors, in a letter, stated that "there is very little child labor in the industrial field in Illinois at the present time; there was considerable under the old child labor law. We have in Illinois what is considered an excellent law. It is quite different from the laws of other States, and applies not only to manufacturing institutions but also to stores, offices, laundries, mercantile establishments, coal mines, concert halls, bowling alleys, theaters and places of amusement. The policy of prosecuting defendants under the law, which has succeeded one of moral suasion, has resulted in a wonderfully increased school attendance and has reduced child labor eighty per cent in three years."

J. C. DELANEY, Chief of the Pennsylvania Department of Factory Inspection, in a letter, stated that "so far as Pennsylvania is concerned, the evils of child labor are not now and I doubt if they ever were so bad as they have been painted." He presented statistics for Philadelphia and Berks counties, comparing 1906 with 1905 as regards minor employes under sixteen years of age, Philadelphia showing a decrease of 6,394, or 34 per cent, and Berks county a decrease of 906, or 30 per cent. "This decrease," he said, "is not to be charged against or credited to industrial decline, for such has not been the fact. It is a direct result of several things working together to the same good end. They are the raising of the minimum age from thirteen to fourteen years by the Legislature of 1905; the vigorous enforcement of the law by the Department of Factory Inspection, and the passing out of the class of 'under sixteen' to 'over sixteen' of a large percentage of minor employes."

VIEWS OF EXPERTS ON DISTRIBUTION OF IMMIGRANTS.

SOME CLAIM THE PROBLEM IS BEING SOLVED THROUGH ECONOMIC LAWS, WHILE OTHERS SUGGEST REMEDIES FOR THE IMPROVEMENT OF CONDITIONS.

FOLLOWING the afternoon session and preceding the dinner on December 12 a special meeting of the Executive Committee of the Immigration Department was held at the Park Avenue Hotel. The special topic for discussion was "Distribution of Immigrants," which many students, lecturers, writers, and practical men of affairs have been emphasizing the past several years as being the crucial question in a proper solution of the immigration problem. Dr. Leander T. Chamberlain, First Vice-President of the Department, presided.

THOMAS W. SLOCUM, Chairman of the Department's Committee on Supply and Demand, was the first speaker. Among other things, he stated that if by any possible way we can direct our immigrants into those sections of the country where they are most needed and away from the congested centers, it would be a step in the right direction. Continuing, he said:

"Within the last year 1,025,000 immigrants came to this country. Of that number, I think 788,000, or practically eight-tenths, came into the port of New York. The best way to settle the matter of having so many immigrants in New York is to do it in the Irish way; the best way to get immigrants out of New York City is not to bring them in; but how are you going to attract immigrants to some other port when eight-tenths of the immigrants last year came into this port because it was to their advantage to come here? The steamship lines made opportunities for them that no other port provided. So long as the immigrants can come here cheaper than they can go anywhere else, they are going to come here, and we have got the problem of distributing them down through the South and out through the West. When it comes to the Italian, who comes in here and can get $2 or $2.50 a day working in New York, there is not very much to tempt him to go down South or out West for less money, although the purchasing value of that money may be greater there than it is here.

"It has seemed to me that we might perhaps make some practical headway if we, representing the Civic Federation, or the Immigration branch of it, could have communication with the steamship lines with the idea of opening up ports through the South, perhaps New Orleans, Charleston, or Savannah, where we could get the immigrants into agricultural pursuits and in manufacturing towns throughout the South."

COMMISSIONER WATCHORN referred to the distribution of immigrants as being like Banquo's ghost, in that it would not down, and said that those who have discussed it in his hearing or whose writings he had read, have invariably taken the view that by delivering immigrants at a certain place and leaving them there, they have solved this problem. He did not agree with such a view. Continuing, he said:

"The thing that will distribute the immigrants on a sound and healthy basis is to establish sound and healthy industrial conditions over very much more widely extended areas. There is no use telling a man who can get $2.50 a day in a crowded city that it would be very much better for him—and perhaps insure his peace of mind, health of body and enrichment of pocket, and all that sort of thing—if he would only go West or go down South where he would get perhaps only $1.15 a day and live under his own vine and fig tree. The thing to do in the distant States in order to attract immigrants, is to offer them as good wages as they can get in New York and until that is done immigrants will continue to avoid such sections of our country. The evils must be corrected where they exist, and then the stream will naturally flow where it belongs. It is useless trying to correct an evil by indirect treatment. The evil of congestion is due to the fact that the immigrants settle where they are best off, as they think, and you will have to show them where they will be actually better off by distributing themselves, before you can induce them to seek pastures new.

"A delegation came from the South to Ellis Island a short time ago, and they told me that they wanted at least 50,000 men and women to go there; that all the industries were languishing for want of help. I said: 'Very well, there are 700 or 1,000 immigrants here now; turn yourselves loose among them and take as many as you can divert from their chosen destinations.' They spent the afternoon trying to coax them to go there, and they could not get one. Why? Because the men knew well enough from the letters they had received from their friends and relatives what they could expect to get when they arrived there. [illegible] made and duly circulated that conditions in North Carolina are as favorable as they are in [illegible] you will have no difficulty in getting immigrants to go to North Carolina; and until conditions are as satisfactory it is no use asking them to go there, and the suggestion that by sending them to any specially selected port as a means of distributing them I think is purely artificial."

PROF. WALTER F. WILLCOX, of Cornell University, said that during the last fifteen years statements have been made frequently and with increasing emphasis that the immigrants are not properly distributed over the country. "My conclusion," he said, "is that the distribution of immigrants is not a serious problem calling for federal intervention and aid. On the contrary, the immigrants, according to the best statistical evidence, are distributing themselves adequately and satisfactorily. They are following the allurements of economic advantage presented to them and going where those advantages are greatest. If this distribution is to be changed, I agree thoroughly with Commissioner Watchorn that it should be changed by changing the conditions, and that there is no evidence that the immigrants are in serious need of additional information regarding the conditions which now exist.

"To these arguments, when presented at a recent meeting of this Department, the answer was made that there was little difference between a tendency to stagnate in cities and a tendency to be found there. To my thinking the difference is radical. If our tenement house quarters of New York and other cities are crowded with foreign born, who linger there indefinitely in a state of hopeless contentment with conditions as they are, the problem might well be deemed a serious one, but if it be true, as I contend, that the population of these sections is in a state of rapid change, the older arrivals passing on to something different, and in the majority of cases, we believe, to something better, almost or quite as fast as new arrivals crowd in, then the whole mental attitude and temper of the population is one of hope, of confidence, of courage. The difference between a stagnant slime-covered pool, the picture usually raised in one's mind by the word 'slum,' is totally unlike the picture of a lake fed at one end by a great stream but kept at the same level and sweet and fresh by the outflow of countless streams of various sizes and in various directions all around its borders. The latter, rather than the former, I believe, is the true picture of our tenement house sections."

S. A. HUGHES, of the St. Louis and San Francisco Railroad Company, speaking for his section of the country and for a solution of the distribution problem, said that in his opinion the agricultural districts offer the solution. He suggested that land propositions be placed before the immigrants before they embark, so that they may be distributed properly on the land to their best advantage and to the best interest of the community. He said further:

"I believe that the immigrants who are coming to this country, allowing you a fair quota for labor in the cities and in the industrial sections, should be attracted to the farm upon this side, and for that reason I had the pleasure of introducing last December in this convention a resolution providing that the Immigration Commissioners' hands should be so strengthened that they would increase the facilities at the South Atlantic and Gulf ports for diverting the business from Ellis Island to the unoccupied and undeveloped lands of the South and the Southwest. But this cannot be done until you have placed your representatives in foreign countries with suitable land propositions, and the question then will arise, Are we not stimulating immigration to this country? I believe that the doors of our country should be thrown open to any able-bodied man, no matter from whence he comes, so long as he is willing to live under our flag and under our constitution. Although he may be illiterate, we will educate him, barring of course Chinese coolie labor as against our American labor."

CHARLES P. NEILL, United States Commissioner of Labor, agreed with the views expressed by Commissioner Watchorn and Professor Willcox. He stated that he had recently been looking into the matter of the distribution of immigrants and that the results of his investigation thus far appeared to confirm Prof. Willcox's statements. Continuing Commissioner Neill said:

"Some good can undoubtedly be accomplished by bringing the resources and advantages of different sections of the country more directly to the attention of our immigrants who have settled on the Eastern seaboard, but we must not lose sight of the fact that the only law that can in any way influence the distribution of immigrants throughout the various parts of the United States is a fundamental economic law and not a legislative enactment. The immigrants who have come to the United States have torn themselves away from their home surroundings and life-long associations, and many of them have crossed the whole continent of Europe in addition to the Atlantic Ocean. Their purpose is largely to better their economic condition, and they are going to settle on the Eastern seaboard or in the South or the West, according as these respective sections offer them the greatest economic advantage. On the whole, they are going where they earn the largest wages. There is, of course, a certain friction that retards their perfectly free movement, but, generally speaking, any considerable difference in wages will bring immigrants from the East to the South and the West. I think what is most needed is to prevent such a large percentage of the immigrants going into the industrial pursuits instead of going on the land and developing our agricultural possibilities. What prevents this, it seems to me, is that such a large percentage of our present immigrants is without the means necessary to take up land. They cannot maintain themselves until their farms are able to support them.

"In a word, I would like to suggest that it is useless to talk about any plan to distribute immigrants, other than the single plan of offering higher wages in the places that want them than they are getting in the places that they are now, or in offering them opportunities to take up land that make the opportunities actual and really within their reach."

REFERENCE was made by Thomas F. Parker, of the South Carolina Cotton Manufacturers' Association, to the practical solution recently attempted in the State of South Carolina with regard to the distribution of immigrants by the establishment of a new line of immigrant steamers to Charleston. Mr. Parker spoke in part as follows:

"In South Carolina our wage scale is just reaching a point where we can commence to bid successfully in the world's labor market. In the last five years the wages in our State, including our mills, have advanced fully 50 per cent. The immigrants to our State for cotton mills in the past have mostly come from the native population of neighboring States. The question of immigration from abroad is very new to us.

"South Carolina is one of the first Southern States to have a Commissioner of Agriculture, Commerce and Immigration, with an appropriation from the Legislature, and his visit abroad and his return on board of the first immigration steamer, the Wittekind, to Charleston, S. C., with 475 immigrants, carefully selected abroad, has attracted considerable attention in the South. We are informed that the results so far have been thoroughly satisfactory to the North German Lloyd Line, and that the indications are that it will permanently establish a line of steamers between Hamburg and Charleston, which would be an important step, as we see it, towards the proper distribution of immigrants.

"We realize that immigrants after arriving in America will eventually drift to where wages and conditions of living are most inviting, but our State prefers selecting the immigrants abroad, and first showing them what inducements the State of South Carolina has to offer, before others talk to them, and we want to save the per capita expense of transportation charges from New York to South Carolina of from $15 to $20. Our idea is that South Carolina has a better chance of keeping permanently people landed in Charleston, than if they were landed in New York or other ports.

"There is no question in my mind that the future development of the South is dependent on immigration from abroad, and that it is time we learn how best to handle this question. Perhaps one of the principal inducements which we can offer is cheap and desirable land. Each family of foreigners that we settle and satisfy is a nucleus around which other foreigners will collect."

JAMES BRONSON REYNOLDS, as Chairman of the Department's Committee on Oriental Immigration, brought before the conference a resolution passed by his Committee authorizing an investigation regarding the economic, social and political conditions of the Chinese, Japanese and Koreans in this country. He said: "We desire to inquire what occupations the Chinese, Japanese and Koreans in this country are engaged in, what compensation they receive and what their hours of labor are. We desire in the second place to investigate their social and political relations where they are found, as is the rule, in communities by themselves. As we are probably all aware, comparatively few of them speak our language fluently, so that the laborers and trades-people of these races are limited to association with their own people. We desire to inquire into their condition under these circumstances and determine what are their actual relations to our own people. We have already inquired regarding the information now possessed on the subject, and find that little exact information is possessed by any one."

JAMES P. ARCHIBALD, Assistant Commissioner of Licenses of New York City, said that to his mind the question of distribution was the most complex phase of the entire immigration problem, and stated his belief that until some elucidation is afforded by

those most interested—the farmer, the manufacturer and the contractor—chaos will still prevail and but unsatisfactory results remain. He gave a number of cases of enforced labor in certain sections of the South, and called for measures to prevent a continuance of such conditions. Continuing he said in part:

"The cases I have here cited are absolutely true and are a fair sample of the treatment which not only illiterates receive in certain parts of the South, but men of more than ordinary intelligence are inveigled into taking these chances, and to them the suffering must be keen indeed. This state of affairs does not apply, as a rule if at all, to agricultural laborers, but does in all its baseness, brutality and deceit, to contractors in particular, to quite a number of unscrupulous manufacturers, who think that this kind of treatment is never heard of outside of the one State where it happens, and presuming upon this, in which they are grievously mistaken, they keep up those vicious practices until it not only gets into the local courts but to the Federal courts. Even President Roosevelt himself has taken notice and has appointed special commissions to stop this practice of peonage in the very localities referred to, many convictions for which have been recently obtained and salutary punishment of both imprisonment and fines has been justly inflicted.

"Thus it is necessary, if those who love the South would develop its great resources, to be satisfied for the time being with less profit on their commercial enterprises, and devise ways and means of bringing the alien closer to the land—the land at present out of use—to give the immigrants a reasonable chance to establish homes and enable them to look into the future and see something in it for them and their offspring. No man will pay from $8.00 to $15.00 for transportation to the sunny South, undergo estrangement from family and friends and be subjected to almost inhuman treatment for $1.25 per diem while there are $2.00 per day and over right here in New York City, where at present there is being spent over four hundred millions of dollars in enterprises of public and private utilities, and where a greater demand for unskilled labor than can be supplied has existed for the past two years."

A REVIEW OF THE CIVIC FEDERATION'S ACTIVITIES.

THE WORK OF THE DIFFERENT DEPARTMENTS SUMMARIZED AND ITS SERVICES COMMENDED BY DISTINGUISHED MEN AT THE ANNUAL DINNER.

VICE-PRESIDENT OSCAR STRAUS presided at the dinner held at the Park Avenue Hotel on the evening of December 12. He referred to the efforts preceding the organization of the Federation in New York City in November, 1901, explaining that the lines of work were undefined and the whole plan tentative when those invited met in the rooms of the Board of Trade, so much so that it was problematical whether there would be a meeting over which to preside. The event brought forth, however, the largest representation of important labor leaders and of capital that had ever assembled in the city. Continuing Mr. Straus said:

"I think that I am not claiming too much for this organization when I say that, since the beginning of its work, a better relationship from that existing hitherto has developed between the labor leaders and the important employers of labor throughout the country. I personally feel a great indebtedness to the Federation. It has been an education to me, and whatever qualifications I may possess for the position to which I have been summoned, I owe (so far as that branch of the department's work relating to labor is concerned) to having come in closer contact with the great leaders of the industrial forces of this country.

"This evening I had one of the most prominent labor leaders of this country say to me—and I repeat his remarks in order to give you an idea of what results the work of the Federation is producing—'When you occupy your position, we feel we can come before you because we have met often before, and that you understand us and that we understand you.' This is no compliment to me; it is a compliment and it is a tribute to the work of this organization.

"Nine-tenths of the troubles between capital and labor result from misunderstanding. I heard a gentleman say this evening: 'It is unfortunate that The National Civic Federation has not been able to prevent two or three of the important strikes that have taken place during the five years of its existence.' Yes, it is unfortunate, but it has been a most fortunate thing, by reason of the existence of this Civic Federation, that many misunderstandings and strikes have been prevented of which there is no public record, but of which the Conciliation Department of the Civic Federation has knowledge and information that would surprise and gratify the community. We have learned how to assemble about the council table and to thrash out differences, and to prepare the common ground to which each side can repair for the purpose of doing everything in its power to avoid a disagreement or a rupture.

"I was told the other day: 'Why, you never can satisfy labor; if you give them eight hours to-day, next year they will want seven; if you give them five dollars a day wages this year, pretty soon they will want seven dollars.' I said: Perfectly true, for, after all, a healthy dissatisfaction, as distinguished from envious discontent, is a stimulus to our civilization. Whenever the desire for improvement is dead, our civilization is dead. For five years I lived in a country where medieval conditions prevailed and there the people were satisfied; there was a stupor of satisfaction, and there was a paralysis of energy. The government had directed to itself every power and every influence, it controlled every business, it controlled every enterprise, and instead of individual energy accomplishing anything, it was through favoritism and fawning that rights were obtained. Yes, healthy dissatisfaction, as distinguished from covetousness, is the very basis of our progress.

"How important is the promotion of industrial peace has only yesterday been illustrated. The great dynamite inventor, Nobel, who died a few years ago and who appreciated peace as perhaps no other man could, for he knew what the destruction of war meant, left an annual prize of $40,000, among a series of prizes, to be distributed to the foremost promoter of international peace; and recently that prize has been given, to the honor and credit of this country, to its chief magistrate, Theodore Roosevelt. The surest foundation for international peace is internal industrial peace, and I am sure that the example he has set in this respect, such as the examples he has set in the 'world's peace,' will have its influence in every civilized country, because in every civilized country they have the same question at issue, namely, the promotion of the good relations between the great industrial forces. And in this connection I can imagine no more important work in which any man could be engaged than the work that is embraced in the scope of The National Civic Federation."

CHARLES A. MOORE, Chairman of the Welfare Department, presented a report of the work done the past year. The Department is now composed of over two hundred and fifty employers in different industries throughout the United States. He explained that opportunities for presenting the subject of welfare work to employers and the public generally through different types of meetings have been taken advantage of the past year. One result of the plan for holding conferences of employers in the different sections of the country for the interchange of experiences to stimulate interest has been the formation in New York and Boston of local committees to promote the work in these places. The Workshop Improvement Committee of the New England Civic Federation has for its object the promotion of practical interest in the improvement of such working conditions as affect the health, comfort and convenience of employes in factories, stores and other places where labor is performed.

He said: "No coercive work will be undertaken by these local committees. The same methods as those adopted by the national Welfare Department are used. When the average employer learns of the improvements which are pertinent to his industry, he is ready to adopt such measures as will afford health and comfort to his employes. This is accomplished again through conferences and literature. Such local work will be promoted in Philadelphia, Cleveland, Pittsburg and Chicago as early as feasible."

Referring to the numerous conferences held the past year Mr. Moore said: "It is interesting to note the effect of the conferences upon our own members. I, for one, after a meeting in New York last February immediately installed proper ventilating devices for metal polishers, and I would defy anyone to-day to claim that our metal polishers are not protected from the dust attendant upon the trade. Mr. Underwood, after the conference with the Chinese Commissioners, at which conveniences for railroad men were displayed by use of the stereopticon, immediately consulted with our Department in reference to rest houses for the trainmen on his road, and he is erecting rest houses which will be far superior to any which have yet been constructed. And, again, Mr. Belmont and Mr. Vreeland, through association with us in the work, have just announced their intention of vestibuling the street-cars of New York City."

Mr. Moore referred to the special investigations carried on the past year by representatives of the Welfare Department, including the charity institutions of New York City, the conditions in Panama, cotton mill operatives in the South, the tunnel workers in New York City, etc. He stated that at the request of labor leaders and others the Department was soon to take up investigations of the tobacco, glass, and paper industries. The methods of the Department in distributing literature, plans, photographs, and architectural designs concerning welfare work were described.

In concluding his report Chairman Moore said: "Questions of such great importance, affecting wage-earners and their families, are before the country to-day that I feel the necessity of recommending the appointment of special committees to investigate and recommend what should be done to meet the needs of workers along the following specific lines: Industrial training; industrial insurance, which includes savings banks, life and accident insurance, building and loan associations, and old-age pensions; public service employes; employers' liability; deleterious trades; eating and ventilation; architecture, and sanitation of work places.

DR. LEANDER T. CHAMBERLAIN, First Vice-Chairman of the Immigration Department, presented a report of its activities the past year. As this department was organized as recently as June 29, 1906, much of the report dealt with the events leading up to its organization, an announcement of its officers, and an analysis of the purposes of its seven investigating committees. Continuing, Dr. Chamberlain said: "One important feature of the work of the Immigration Department to which attention is called was the conference held on September 24. The discussion was participated in by prominent experts whose views and presentation of facts served, partly through the wide publicity given by the press, as an educational force of importance.

"Through the efforts of the Committee on Agencies for Advancing the Welfare of Immigrants, action has been taken resulting in greater protection being thrown around the newly landed immigrant at New York City. It is believed that an effective check has been put upon the increasing number of cases where immigrants have been defrauded. We also have to report that this committee has in preparation a hand-book for immigrants, and that it has also planned to secure from the New York legislature a bill authorizing the licensing of ticket sellers and bankers who have to do with steamship transportation and in the forwarding of immigrants' money.

"The Committee on Basal Statistics has in view the drawing up of a general scheme of statistical investigation.

"The Committee on Legislation and Its Enforcement has in prospect the preparation of a digest of existing laws, departmental regulations, court decisions and department rulings concerning immigration in the United States and foreign countries.

"The Committee on Oriental Immigration has received the sanction of the Department to undertake an investigation of the economic and politico-social conditions surrounding the Chinese, Japanese, and Koreans in this country, including their actual employments, wages received, hours of labor, and their industrial and social condition generally. It is also desired to ascertain their communal relations to people of their own race, or our race, and to public officials in this country. Inquiries also are to be made regarding the effect of civic disfranchisement and ignorance of our language, customs, and laws on their social and moral condition."

ARCHBISHOP IRELAND, in his opening remarks, referred to the pleasure it had given him to be identified with the work of the Civic Federation from its earliest days, and stated that each time he assisted at one of its annual meetings he had found occasion to rejoice at its growth and at its constantly increasing influence and usefulness.

"But never before as this evening," he said, "have I realized what a great institution it is. It is really a wonderful institution. As to the great and good work of the Federation, the reports of the chairmen of committees which you have just heard have given ample evidence. Think of it! Think of how much has been done by the Welfare Department, and think not only of the physical good but of the moral good done thereby. And again our work in the Immigration Department has gone all over the world. A few months ago I was in Europe, and throughout several countries I was asked: 'Tell us something of that great immigration meeting that you had in New York; do you know anything about it?' Well, I was quite proud to be able to say I knew a great deal about it, for I was one of those who took part in that great meeting.

"I believe it is only in America such an institution is possible. And because of the fact of the Civic Federation, I am proud of my country. This fact was told to me in England and France—it is all due to our American democracy, that you can find men of every social position, employers and employes, the rich and the comparatively poor, sitting together around the same table and feeling that we are all equal before the Almighty, all children of the same God, all brothers together.

"Another reason why the Civic Federation is truly an American institution is the fact that we are ac-

WILLIAM H. JOHNSTON, President United Brotherhood of Carpenters and Joiners of America, Indianapolis.
TIMOTHY HEALY, President International Brotherhood of Stationary Firemen, New York City.

Activities of the National Civic Federation.

This issue is appropriately given up to a bird's-eye view of the manifold activities of The National Civic Federation. In it is presented a detailed account of the sixth annual meeting of the organization; a brief report of the second annual gathering of the New England Civic Federation; an account of the Federation's remarkable conference between representatives of capital and labor and the general public held in Chicago at the residence of Mrs. Potter Palmer; and reports of addresses and lectures by officials of the different departments of the Federation before a large number of organizations in various sections of the country.

The sixth annual meeting of the Federation, held in New York City December 12 and 13, was a most remarkable and stimulating gathering. All five of the sessions, as well as the dinner held on the evening of December 12, were largely attended by representative men and women, and marked interest was manifested in the subjects discussed by well-known speakers. These subjects comprised Government by Injunction, Child Labor, Distribution of Immigrants, The Work of The National Civic Federation, and The Income and Inheritance Taxes. In addition to the educational value of these discussions, one of the most conspicuous results was the provision for the appointment of four investigating commissions—one on Child Labor, one on Government by Injunction, one on Income and Inheritance Taxes, and one on the Anti-Trust Laws. The details as to the personnel of these commissions and the plans for their investigations are now being worked out.

The importance of a Commission to inquire into the operations of the Anti-Trust laws is indicated in the fact that those engaged in various governmental relations in enforcing the statutes against combinations in restraint of trade have repeatedly emphasized the need of certain changes of law and policy. The prosecutions and verdicts and judicial decisions of the past ten years, both State and Federal, have completely established the supremacy of law over such combinations and yet, notwithstanding, there is at present a very unsatisfactory situation resulting from a strict enforcement of these laws. This condition is stated by President Roosevelt in his last message to Congress, as follows: "The actual working of our laws has shown that the effort to prohibit all combinations, good or bad, is noxious where it is not effective. * * * It is unfortunate that our present laws should forbid all combinations, instead of sharply discriminating between those combinations which do good and those combinations which do evil. * * * It is a public evil to have on the statute books a law incapable of full enforcement because judges and juries realize that its full enforcement would destroy the business of the country."

No one who reads the conflicting statements and different interpretations of conditions as regards the extent and menace of child labor in the United States, presented in this issue of The Review, will question for a moment the necessity of an impartial and thorough investigation of the actual situation. This is what the Commission on Child Labor has for its object.

Statements as to the advisability of adopting the Income and Inheritance Taxes differ almost as widely as do those regarding the status of child labor. The speakers at the Federation's annual meeting who discussed this subject, and who have justified the public attaching importance to their statements, disagreed so radically as to the desirability of enacting such laws that an impartial study of conditions by experts specially chosen for that purpose because of their qualifications was provided for.

Another pressing problem of the present day upon which there are widely-varying views is that of Government by Injunction, and the necessity for discovering the exact situation in this connection is as important as in that of the other questions referred to. The close relation of this issue to the conflict between capital and labor makes its study of particular importance.

A comprehensive view of the work of The National Civic Federation the past year was secured for the first time by members and invited guests at the annual dinner in New York City on the evening of December 12. This was presented through brief reports by officials of the different departments, showing what had been accomplished and indicating some of the plans for the coming year. The work of the Conciliation Department, as reported by Ex-Mayor Seth Low, Chairman of that Department, was particularly surprising if not startling in the impression it left on the hearers as to the great value and importance of the efforts of the Federation in preventing what promised at their beginning to be widespread strikes and industrial disturbances. Mr. Low described some of the methods of the Conciliation Department and called attention to a few of the more important cases which had been settled. As the operation of this Department precludes any public announcement of the cases brought to its attention, the greater part of its work is unknown to the public. Attention was called to the other activities of the Federation, through the reports of its Commission on Public Ownership by Chairman Ingalls; of the Department of Immigration by Vice-Chairman Chamberlain, and of the Welfare Department by Chairman Moore. The broader aspects of the Federation's work in the direction of strengthening and preserving American institutions, and in its relation to the progress of American Democracy, were touched upon by many of the speakers, including Oscar S. Straus, now Secretary of the Department of Commerce and Labor; Samuel Gompers, President of the American Federation of Labor; Archbishop Ireland of St. Paul; and Rabbi Stephen S. Wise of New York City.

Two recent events may be referred to here as emphasizing the broader aspects of the Federation's service. One is the increasing success of the Civic Federation of New England, an account of whose annual meeting is presented elsewhere in this issue. The second event is the remarkable "capital and labor" meeting at the home of Mrs. Potter Palmer in Chicago under the auspices of the Federation. In view of the fact that Chicago has been the center of long-waged industrial conflicts between capital and labor the past decade and more, this gathering of representatives of both organized employers and organized employes in that section promises well for the future.

Another view of the Federation's activities, to which attention is called in this issue, comprises lectures and addresses given in various parts of the country by officials of the organization. These lectures have proven beyond question to be a strong educational force—they supplement much of the other work of the organization and are successful in spreading its principles throughout the country.

It is not without its appropriateness at this time and in this place to call attention to the publicity feature of the Federation's activities as represented in The Review itself. Through its columns great public questions are elucidated by recognized leaders of thought and action and by the publication of reports of special investigations carried on by experts through its various departments. In these and other ways the Federation has made for itself in American national life a place of power and influence.

A new feature of these activities is emphasized in the recent organization of the Public Lecture Bureau of The National Civic Federation. Its purpose is to present to the public different views on important national questions by the best writers and speakers available, including prominent employers, financiers, University presidents, publicists, economists, representatives of the church, bar, labor organizations, etc. Addresses on a number of social and industrial topics have already been given under the auspices of this Bureau in a number of the large cities, including, among others, New York, Boston, Chicago, Philadelphia, Providence, Cleveland, and leading cities of the South; and at the present time arrangements are being made to increase the scope of the work by having prominent speakers deliver addresses on live questions in practically every large city. With the co-operation of the press of the country, which has given considerable space to the lectures delivered so far, a most important educational work is being accomplished. Among the prominent speakers so far engaged by the Bureau is Mr. W. H. Mallock of England, who recently delivered a series of lectures at the leading universities of the country on "Socialism." The speakers who are to follow Mr. Mallock will appear before commercial, religious, labor and educational organizations and institutions.

CIVIC FEDERATION'S ACTIVITIES.

Continued from page 11

customed to listen to one another and to hear men come and state different opinions. Why, if this meeting that we have witnessed to-day had taken place in any country of Europe, there would have been riot before the meeting closed. And when one man would stand up and contradict another, the other would have at once challenged him to a duel. This comes from the fact that in America we are thrown together and that we recognize the manhood of one another. Is it not worthy of America and worthy of religion to hear us all to-day asking, 'What good can we do to the little boy that is away down in some mine of Pennsylvania?' and to hear fellow laborers of that little boy and employers of that little boy say, 'We shall do the best we can for him, for we recognize in him a little brother, a future citizen of this great country.' Is it not beautiful to hear that so wide and grand are the opportunities offered to us all that one who did work as a little boy in those mines died a millionaire?

"Let us not complain that some among us become rich and millionaires. Let us not complain that there are great fortunes. Why, it is all due to America. It is America that has given such opportunities, and if some among us have minds more far-seeing and wills better controlled and more steady to grasp that opportunity, it is to his credit, as it is to the credit of the country that afforded him that opportunity. I always feel proud when I hear that in America there are great fortunes, because the men who have these great fortunes were at one time poor as the poorest among us, and it is because they live in such a great country, the country of opportunity as no other country is, that they have been able to grasp the things that make up these great fortunes. Not that I would have fortunes exercise their power to despoil others of opportunity; not that I would have them absorb the life and liberty of the nation so as to be able to play unjustly with the things in their hands; no, fair play for ever, justice always. But then, if from time to time, out of the shrubs and trees of the forest some do lift themselves higher up in the skies, let us rejoice in the fertility of the soil that gave them the sap that produced these high branches and that rich foliage and let us all see what we may do for our own good; let us not have among us a spirit of jealousy; let us all feel that we are citizens of the same nation; let the rich remember that whatever has come from the opportunities of the country and their own energy, that they are trustees before heaven for what has been placed in their hands to make the best use of it. And let those who have less remember that in a country where all would be comparatively poor, no one could ever hope to lift himself above the small position into which he was born.

"Our workmen are ambitious, hopeful of better things, and consequently are somewhat dissatisfied. It's all the result of America. In other countries they say nothing about the weary, dreary work of every day, and they are satisfied; but every American, poor and hard working as he is, to-day looks up and sees the sun shining for him as for others. He sees, in the flag held ever before him, an invitation to come forward and claim the best. It is only in America that we see workingmen proud of their dignity. But what is best of all, as some become employers and richer than others, they still remember, when they sit side by side with the employes, that they are sitting with fellow citizens and with brothers.

SETH LOW, Chairman of the Conciliation Department, stated that the Civic Federation assumed that the employers of labor and the employes both wish to do what is honorable, and that each asks for himself only what he thinks is right. "Having that belief," he said, "we believe that we can secure conciliation almost always if we can only get the parties to the dispute together in time. That is really the simple method of the Conciliation Department.

"Scarcely a month ago we were fortunate enough to be the means of bringing together two parties to a dispute which affected the welfare of an entire section of this country. It was after the strike had actually taken place, and it is a matter for congratulation on the part of the Federation that its agency was availed of to bring together both sides, neither of whom quite knew how to get together or to make the first advance. When that had been done, the dispute was settled by the parties in interest. I was told, during my recent visit to the South, that the settlement of that dispute was of literally inestimable value to that whole section of the country.

"The Conciliation Department does not do its work through the newspapers. It settles a great many strikes that are never heard of. It prevents more strikes from taking place than it settles, and altogether it is constantly working to bring about a better state of feeling in industrial circles.

"Perhaps the settlement of one strike that was prevented last spring, the manner of it and the method of it, would interest you and will illustrate, as perfectly as possible, the character of the times in which we live, and the character of the country of which we are proud to be citizens. I was at my farm forty miles north of New York, in Westchester county, when the telephone bell rang. I found myself talking to a banker in Philadelphia, who said that his firm were the representatives of a street railroad system, I think in Illinois, close to the Mississippi River; that a strike was threatened; that they were afraid the men would go out before any opportunity could be had to bring about an agreement. Could I, as chairman of the Civic Federation's Conciliation Committee, prevent that disaster? They wanted me to telegraph to the national president, who happened to live in Detroit. I said: 'What can I say? Can I say that you are ready to arbitrate?' 'Well,' he said, 'I don't know that I am quite prepared to say as much as that.' 'Well,' I said, 'may I say that I think I can bring about arbitration? 'Yes,' he said, 'you may say that.' I called up immediately the office of the Civic Federation in New York City, and in fifteen minutes a telegram was on its way to Detroit to this national officer representing the street railway employes, somewhat to this effect: 'I learn that a strike is probable in such and such a place; I hope that it will not take place until the Civic Federation has had the chance to see whether it cannot bring about a settlement; I think arbitration will be accepted.' Instantly a dispatch in reply came back: 'You may be sure that no strike will take place until the Civic Federation has had a chance to see what it can do. If arbitration is offered on fair terms, it will be accepted.' I ask you to notice how frank, how straightforward, and how explicit, that reply was. Next morning I got my Philadelphia friend in New York City by telephone and told him of this dispatch, and I said: 'What shall I say now?' After a little discussion it was agreed that I should telegraph, as I did, that the parties in interest here would telegraph to their local representatives to meet the men and settle if possible; that, failing a settlement, they would accept arbitration; and I asked the international officer, in case of need, to communicate with me again. In three or four days the matter was settled by mutual agreement, without any reference to the Civic Federation. I never heard of it again until Mr. Easley received a letter from both sides expressing their gratitude to the Civic Federation for its good offices.

"I never saw a man in connection with the whole business. I talked to a hole in the wall in Bedford, N. Y. The electric current carried the message to Detroit, to the place where the strike was threatened, and the whole thing was actually settled by that method, simply because The National Civic Federation existed, and uses, as the previous speakers have said, such means of getting together both employers and employes. I think that was a splendid illustration of the sort of service this institution is doing all the time; also, as I said, of the character of the times in which we live."

MELVILLE E. INGALLS, Chairman of The Federation's Public Ownership Commission, reported on the work of that body. He said in part: "As chairman of the Municipal Ownership Commission I have been spending three or four months on its work, and the remarkable thing about it is that I got interested in the work. On the committee are twenty other people, the most delightful people, busy men, men of ability, who knew what they were about. They would not postpone the results that they found on a subject, but they would settle it all up before they went to bed, and start next day on something else.

"We have examined the cities in England; we have examined gas plants, street car systems, and electric plants. We have looked into the plants in this country in the same way; and I have to say to you that those twenty gentlemen on that committee have worked harder than you could get them to work for any salary. The only trouble I have had with them was that they worked so hard and they have gone into so many details, that God alone knows when they will be ready to report. But when they do, you will get the whole history of municipal ownership in the kingdom of Great Britain and in this country and will get some facts that will be invaluable, because they have employed experts on both sides; they have had the people in favor of municipal ownership pick their experts and the people against it have selected theirs, and we have prepared questions and tried the case with those experts. We have got the true situation, I think, of the different plants throughout the country, and then we are going to boil that down into the different reports.

"We have divided off the various subjects, so that each member of the committee can do his work, and when they get through, I promise you that they will have a report that will give you valuable information, that will repay the Civic Federation for the large sum of money that they raised for the expenses of this work, for it has been very expensive. We have had to employ the highest talent in the land and it has taken a great deal of money, but the money was put up by friends, as it would not be raised in any other way, a combination of capital which has furnished the money for us, and these gentlemen on this committee have furnished the brains and done the work. All I did was to keep them good-natured and see that they did not quarrel with each other in their anxiety to get ahead, because we have had people in favor of municipal ownership and people against it. It has been a bitter fight after facts, and I believe in the end when we get through, we are going to give you practically a unanimous report upon the general principles of municipal ownership, and when we do, I believe and I hope that it will be a standard for the guidance of the municipalities of this country."

SAMUEL GOMPERS, President of the American Federation of Labor, referring to his membership in The National Civic Federation, claimed to be one of its earliest members, long before it was known as The National Civic Federation. He said:

"I had faith in the idea; I believed it was capable of accomplishing a great deal of good. It seemed to me that the Civic Federation, endeavoring to bring together men of divergent interests, could discuss the questions affecting them and the questions affecting those they represented. I would not take one laurel wreath, one bloom, one leaf from all the grandeur of the results of our united effort, but I would not have one believe that we can solve all problems of our economic life by our Civic Federation. I think that no man surrenders one jot of his opinions or of his rights in becoming attached to the Civic Federation that he holds without membership. I know of a large number of contests contemplated that the Civic Federation has avoided. I believe, though, that the greatest strength of our concerted movement lies in the fact that we strongly hold to the principles and convictions that we held before we became associated with the Civic Federation, and that our best and common interests are conserved by meeting in our Conciliation Department and by our endeavors to bring about a common understanding upon contested points.

"In my endeavor to understand the conditions of labor in the past as well as of to-day, I have come to this conclusion, that the best interests of the working people of America are subserved by their organization, and that through it they are best prepared to defend, protect, and promote the interests of the working people, recognizing at the same time the modern development of organizations of employers in their particular interests as well as in their general class interests. And further, that an organization such as this Civic Federation, composed of the militant representatives of those classes, as well as the representatives of those who are considered in that larger citizen class—those who are not interested in either the one or the other—in bringing them together has demonstrated, as the history of the Civic Federation has proven beyond cavil, that when we have met to discuss the very essence of the interests and the vital points at issue, we have usually been capable of arriving at a common ground.

"These efforts have redounded to the common welfare of all the men and women and children of labor. The industrial workers of our country make constantly increasing demands upon modern society for improved conditions, and these must be considered in the development of our economic and social life. The working people—the wage-earners of our country—are your fellow citizens and mine. They bear the responsibility of sovereignty with you and me. Upon us, as a whole, depends the future of the whole Republic. It is because of this, not only because of our desire to help the children of labor, to protect and promote the interests of the women who toil and of the men who labor, but also because of the common polity upon which the future of our Republic depends, that the organized labor movement of America bases its proposition to benefit all.

"I have an abiding faith in the people of our country and in the institutions of the United States. The Declaration of Independence and all its glowing words are not to me glittering generalities. They imbue me with all the hope I have for the future of my fellow men. They give me an impetus to all that I do and try to do. I believe that this Civic Federation, representing the great captains of industry and of commerce and of learning and of labor—and I do not mention labor last because of its least significance, but because it is the culmination of all—in its endeavor to work out our common policy and common polity is the effort to make the principles of the Declaration of Independence the very living factors of our everyday lives. And it is that hope, it is that desire founded upon experience, that has encouraged the men and women who have toiled long and hard in this work.

"I believe that as there are in the institutions of our country the great powers of energy and of initiative to conserve the common good, so the Civic Federation presents itself as the conservator of peace and progress and of the wealth and belief of our common country."

RABBI STEPHEN S. WISE expressed the hope that The National Civic Federation may become more truly national in its scope and outreaching from year to year. He argued for a standardization throughout the United States of such laws as make for the amelioration of the lot of the worker. Continuing, he said: "I rejoice in the work of The National Civic Federation because the aims of this body imply your faith in the American democracy, not as an act, not as a process, not as an achievement or consummation, but as a development, as an evolving through education.

"You, gentlemen of The National Civic Federation, are doing a great work insofar as you proclaim anew through the gospel of the Federation the message of an American prophet: 'Thy money perish, if it brutalize thy soul.' Alas! it is not the money of the land that will perish if the soul of America be brutalized; it is America itself that will perish. That money may per-

ish, that prosperity and material greatness may disappear were not the worst of events, but greatly to be feared is the passing of the spirit of Americanism. You, gentlemen of The National Civic Federation, appear to understand, and you are seeking to bring to the American people, the essential truth that bigness is not greatness, that 'size is not grandeur, that territory does not make a nation.' Judea was only a little land, not bigger than the Hudson or Connecticut Valley. Greece was a little land, not very much bigger than are some counties in Montana or Texas. But Judea gave us Moses, and Isaiah, and Jesus, and Hillel, and Amos, and Nathan, and Elijah. And Greece gave us Homer, and Socrates, and Sophocles, and Plato, and a mighty multitude of such heroes of the spirit.

"May it be given to you further to develop and to confirm the teaching that the greatest thing in America is not its wealth, not its power, but the American spirit, the spirit of democracy, the spirit of brotherhood—that spirit of democracy which Henry Demarest Lloyd has pithily summed up in the saying: 'The development of all the resources of the land by all the faculties of man for the use of all the people.' May The National Civic Federation ever be privileged to carry this high message to every part of our land. This is a high hope, a noble mission, a great opportunity. May you be equal to it."

INCOME AND INHERITANCE TAXES DISCUSSED.

DISTINGUISHED SPEAKERS ADVOCATE AND OPPOSE THESE METHODS FOR THE DISTRIBUTION OF WEALTH.

IN opening the second day's session of the annual meeting for the discussion of the "Income and Inheritance Tax," President Belmont stated that these forms of taxation have been frequently alluded to as calculated to cure some of our existing and growing evils. "That we should have evils occurring with our national growth is natural," he said, "but it is highly important that we should not attempt to cure them with an improperly considered or wrong remedy. It must also be remembered that our people have been accustomed to and have grown up under a totally different form of taxation. The income tax and inheritance tax are both direct taxes. We are all of us accustomed to pay an unconscious tribute through the form of indirect taxation—our tariff. It is not a question as to whether the tariff is for revenue or for protection. The question is: What is our habit of thought on the subject? For that reason the sentiment with regard to direct taxation is governed frequently by a man's own feelings and habits, and not from the point of view of an economic question.

"As the short remarks I made on the subject seemed this morning in the newspaper to be more or less misinterpreted, I am saying this to you now in partial explanation of what I there intended to convey.

"No one likes the direct tax in this country, and, therefore, in speaking of it, one always refers to it as a form of taxation that for one reason or another is obnoxious. No one likes to have his private affairs made the subject of publication or discussion or inspection. The income tax naturally involves that, and must necessarily involve it, provided there is any difference of opinion as to whether the return is proper or not. We have experienced it. We had the income tax just after the war. We had an income tax within a few years and though that one was declared unconstitutional, many returns were made prior to that, and I personally did make my return at the time, and felt it to be a wise and perfectly proper method of taxation and one which I would be only too glad to advocate and submit to. But since that the other form, which is also in existence in various States—the inheritance tax—has been discussed by many as a method of checking the growth of large fortunes, which threaten, in the minds of some, our institutions and our general economic condition. And when I said that a wise and just method of taxation, and the solution of that in a proper manner, would be of great good to this country, I meant that punitive spoliation must not be resorted to. In other words, that those who accumulate large fortunes cannot do it dishonestly and improperly; it cannot be done; a man will finally meet his fall if such be his method; there may be isolated cases, but that is not the way the accumulation of fortunes in this great country comes about. The existing laws are complete and searching enough; the methods of reaching wrong-doers are sufficient. But that these fortunes, which it is alleged are accumulated in an improper manner all over this country, must be reduced in a punitive spirit, was what I meant should not be done. I did not mean that a tax on inheritance should not be passed, but that it should be done from the point of view of just and wise taxation and on sound economic grounds. That was all I meant to convey."

MELVILLE E. INGALLS, Chairman of the Cleveland, Cincinnati, Chicago and St. Louis Railway Company, referred to three prolific sources of multi-millionaires which are open to criticism. These, he said, were (1) the tariff, (2) illegal favors and contracts given to shippers by the railways, and (3) the production and the securing by questionable means of contracts at nominal prices for the use of the streets of various cities for the purpose of transportation and lighting, and Mr. Ingalls discussed briefly each of these sources.

Mr. Ingalls expressed his belief that the income tax "is the best and fairest tax that can be levied—a tax not for the purpose of destroying property—that would be contrary to—but for the purpose of making property pay its fair share of the burdens of the people. They will tell you that it is a tax difficult to collect, but no more than taxes on hidden or unseen property. I don't believe in a graduated income tax, for I think that would be putting a tax on thrift and energy, but each man should pay upon his income the same proportion—pay it as a tax for the protection of his property. I would tax all incomes of one thousand dollars or over and have a fixed percentage. Under a thousand dollars the income from the tax would not be enough to pay for the cost of collection.

"The inheritance tax has already been taken up by the different States, some of them with a graded tax and others with a straight tax. I am not in favor of a graded inheritance tax any more than I am of the graded income tax, but I am in favor of the inheritance tax as a tax for paying the expenses of the State like other taxes. The question is whether this is not more of a matter for each State to take up by itself and go on as they are now starting. If it cannot be managed in that way, then the national Government should take it up, and the money that is obtained from these sources will enable it to reduce the burden of taxation in places where it is advisable to do so, and will produce income which may be lost from the modification of the tariff.

"I would also enact legislation—or, if it cannot be done under the present constitution, I would get an amendment—that no man should have the right to dispose of his property by will, and that when he dies it shall be divided equally among heirs. I would take away from any citizen the right to tie up any property in trust for one life or two or more. It is simply a continuance of the old law of entail under another form and holds these immense fortunes together, when, if they were divided equally among the heirs, they would soon scatter and be harmless.

"I know that this will be criticised and people will say that if a man has children and some are weak and incompetent to handle the fortune coming to him or her, that the parents should have the right to put them in trust, but that is the very thing that perpetuates some of these large fortunes. Let them be distributed. If some of the heirs waste their inheritance, the public will gain. The property is not lost by distribution, and nothing, in my judgment, will so protect our future against large accumulations of wealth as this. It seems to be a craze with some men to perpetuate after their death the immense fortunes that they have built up, but it is not a thing that the State ought to allow.

"There is danger in the present condition of public opinion that we will drift into a hysteria that will enact legislation that will seriously hurt our business and produce disaster. Especially is this true in reference to the railways, and you must keep in mind that the railways constitute the largest business force in the country. One-fifth of all the population depends upon them for their existence, either as employes or in the business of manufacturing, or supplies, etc. And while we set our face like a stone wall against any of the illegal conditions of the past being continued, we should give them a fair chance to carry on their business in the future and thus prevent disaster to the community.

"The real menace to my mind is the Sherman anti-trust law, so-called. I happen to know that the distinguished author of this law, when it was passed, did not think it applied to the railways in their conduct of their business. In 1895 the joint traffic agreement among the trunk lines was made. I had the honor to prepare that, and it never occurred to me that there was any danger of violating the Sherman anti-trust law, and we drew the agreement so it would aid and maintain the interstate commerce law. But the Supreme Court thought otherwise, and when in 1897 they made their decision that that agreement was a conspiracy and violated the Sherman law, there was then left no power or right among the railways to contract among themselves—to agree upon rates—to sue and be sued. In other words, that decision had the effect of turning them into a sort of Pariah, with every man's hand against them, and no right to conduct their business legitimately among themselves. To-day it is necessary that there should be stable and fixed rates between points—say, between New York and Chicago—and it is necessary that they should be able to enforce those rates among themselves, and they should be allowed to meet and agree what those rates shall be, and which under the present law should be published and maintained. And yet under the construction of the courts if they should so meet and agree, it would be a conspiracy in restraint of trade and subject to fine and imprisonment under the Sherman law.

"I don't believe it is the intention of the people that this situation should exist; I don't believe it is their idea that the greatest industry in the country, employing more than a million of men, could be conducted without regard to law or in defiance of it. There should be co-operation and agreement allowed, but no unfair competition, nor any conspiracy.

"The same reasoning in many cases applies to other classes of business. Almost everything now is construed to be a trust. A trust is nothing but a combination of people for doing business more cheaply and largely. It is the evolution of the corporation; just as the corporation was the evolution of the partnership; and partnership was the evolution of the days of the shepherd when each man tended his own flock. The trust properly conducted is not the enemy of the people, and in the fanaticism of the hour it should not be condemned if properly managed. The law should be taken up and amended to suit business conditions of the twentieth century."

W. D. GUTHRIE, for whom is claimed the credit of defeating the last income tax proposition before the United States Supreme Court, referred to the recent activities for securing graduated or progressive taxation of income and inheritance successions to the property of decedents. He said: "In discussing these principal measures, it should be appreciated that if they become laws, the result, by reason of existing conditions and the general distribution of property throughout the country, will be to exempt the majority of owners of property and the great bulk of property from this form of taxation and to cast the burden upon those who constitute a very small minority of the population. It should likewise be realized that this proposed legislation, particularly as to inheritance, is conceded only a first step, and that increase in the scale is intended and is certain to follow. Indeed the President declares that 'at first a permanent national inheritance tax need not approximate, either in amount or in the extent of the increase by graduation, to what such a taxation should ultimately be.' As the States also have full power to levy similar taxes on inheritances and incomes, it must be manifest that if the scale of graduation adopted by Congress be high, the resources of the States will be correspondingly curtailed and crippled, that they may be embarrassed in securing the necessary revenue for maintaining their governments and performing their functions, and that within a very short time the national Government could appropriate a great part of the property now owned by the residents of the several States.

"The practical questions which are before us as a nation, then, are the following: Is it wise or prudent in a Republic based on universal suffrage to introduce progressive or graduated taxes as a permanent basis for taxation by Congress? Is it a legitimate function of the national Government, or within the scope of any power delegated to Congress, to regulate inheritances or fortunes or to endeavor to force a redistribution of wealth, as a means of solving social problems or lessening supposed moral evils? Ought unapportioned income taxes be levied by Congress in view of the decision of the United States Supreme Court in the income tax cases without first obtaining an amendment to the constitution authorizing such a tax?

"A graduated or progressive tax is necessarily arbitrary, for there is no definite rule or principle to apply. The rate may be reasonable at first, but will ultimately become little short of confiscation. The appetite will grow. One act of spoliation will lead to another. If twenty-five per cent of large fortunes is but a beginning, where will it stop, and who is to determine what is or is not reasonable and the limit beyond which a temporary majority shall not go? There is no limit, no power to check abuses, and we are at the mercy of the irresponsible majority if we once depart from the only safe and consistent rule, that of approximate equality."

Mr. Guthrie held as fundamentally wrong and misleading the claim that the power of our legislatures over inheritances or successions is unlimited; that the right to inherit or to dispose of property on death is not a property right, and that our lawmakers may grant or withhold the privilege at their will and discretion—the grounds upon which progressive and unequal taxation on inheritance are sometimes sought to be upheld. He claimed that the regulation of a succession to the property of decedents, and of the amount of property which any one individual or partnership or corporation may hold, are matters solely within the jurisdiction of the State and not to be interfered with or encroached upon by Congress. He did not believe that the people will ever conscientiously approve and sanction a policy which might deprive the

States of their present source of revenue and the control of the property belonging to their own residents.

As to an income tax, Mr. Guthrie said there was no doubt that any State may levy an income tax. Nor is there any doubt that Congress may levy an income tax provided it be apportioned to population.

Mr. Guthrie did not believe that the cure for existing evils was to be found in any scheme of compulsory redistribution, but rather in the effective and impartial enforcement of the penal laws, in making it dangerous to be dishonest, in severely punishing corporate and individual breach of trust and unlawful discrimination in enacting new laws whenever necessary, in amending the constitution so as to increase the powers of the national Government, but not in assault upon accumulated property or in fomenting hatred, envy and distrust of the rich. In conclusion he said:

"Our malady is not wealth but morals, want of business honesty, brutality in the fierce strife of competition, breach of trust, proneness to corruption, non-enforcement of laws, abuse of office, lack of the sense of civic duty. The breaking up of fortunes will be no cure for these evils. What we want is a re-awakening of the moral sense and a steadfast and consistent determination to enforce the laws and root out dishonesty and criminality. We need incorruptible legislators and public officials. With wealth and honest public opinion permeating the whole fabric of our civilization and demanding constant and vigorous enforcement of laws against individual and corporate dishonesty, all our schemes of legislation will be futile. We cannot make men honest by statute. In the phrase of the Roman, What are laws without morals: *quid leges sine moribus?*"

ANDREW CARNEGIE began his remarks on "The Income and Inheritance Tax" with stating his belief in the saying of Mr. Gladstone that the income tax "made a nation of liars." "There is no tax so pernicious," he said, "not only from an economic but from a moral point of view, as a tax that requires the struggling young business man, doubtful whether the bank directors will pass his note for a thousand dollars to-morrow, to explain his private affairs to some man in the community who may himself be a bank director or who is or may soon be connected with banks. It penetrates business to the core. The nation will never regret anything so much as attempting to collect a tax upon men engaged in business—bees making money for the national hive—and trying to penetrate into all the minutia of their affairs, rendering them liable to have competitors and bank directors and all other classes made cognizant of their position.

"I have always opposed the income tax. I differ with the President strongly upon that, but I am in a very different position in regard to the inheritance tax and to graduated taxation." Mr. Carnegie referred to his position on these questions as stated in his "Gospel of Wealth," written seventeen years ago, in which he advocates graduated taxation and inheritance tax as the best means of getting a better redistribution of wealth than we can by any other means.

"The term 'equality' which my friend Mr. Guthrie uses—he wants equality in everything—is not equality. If a man, a struggling workingman, struggling along at a thousand or two thousand dollars a year, and another man has one hundred thousand dollars a year, and another one million, it is a wrong use of the word 'equality' to say that they should be taxed the same. Adam Smith, an authority which I commend to you, gives us the right solution: 'It should be the object of law makers to derive from every citizen taxation for the support of government in proportion to his ability to pay.' That is the true equality."

After stating that the subject of wealth distribution will not down, and that it is obviously unequal, strangely so, Mr. Carnegie gave some detailed illustrations as to how wealth arises. In one of these wealth came to the possessor of land near New York City through the increase of population, not through ability, foresight, industry, labor. Said Mr. Carnegie: "It grew while the man slept, and probably the best thing in the world that the man could have done about it was to forget he had it; it would have grown just the same, but he might have sold it too soon if he had been thinking of it." Mr. Carnegie answered his own question, Who made that wealth? as follows: "The community, the population, the people. Then you tell me that wealth is sacred. I say that the community was the leading partner who made that wealth. It was hundreds of people, thousands of people settling around there, and we see millions who have toiled not, neither have they spun, spring forth without effort, live idle lives, and die. I am not in favor of touching the bee when he is making honey. Let the bee work, but when he passes away, then I say the silent partner, the community that made the wealth, should receive its dividend—a large proportion."

Mr. Carnegie's comment upon another illustration was to the effect that society makes a huge mistake if it ever interferes with an organizing man in his lifetime. "Such men," he said, "get very little. As a rule, a millionaire is not extravagant. A man who has made money can usually be trusted to keep it. It is more difficult to keep sometimes than to acquire, but his children are not so constituted. They have never known what it was to figure means to ends, to lead frugal lives, or to do any useful work. They are spenders, not producers of wealth."

Referring to the increase in wealth by means of the steel industry, Mr. Carnegie, mentioning one of his former partners, Mr. John Walker, who was in the audience, said: "Now, it was as plain as A, B, C that Pittsburg was the place where a ton of steel could be made cheaper than anywhere else in the world, and that young man and other young fellows—bright, intelligent fellows—took trips to Europe and saw what Britain was doing. Britain was always ahead, you know, in steel manufacture. And they copied her. They found a supply of raw materials essential. They bought up ore mines on Lake Superior. They bought up coke till they could not rest, all around them, forty thousand acres or more; gas territory by the thousand acres; everything conducive to the making of steel. This country's demands for steel increased. Well, now, who made that wealth? The growth of the American people; that's where that wealth came from, and the people are the partners in every enterprise where money is made honorably.

"And I say when these millionaires, as the time comes, lie down with their fathers, the community fails in its duty and our legislators fail in their duty if they do not exact a tremendous share, a progressive share—if he leaves little, little taken. There is no idea of ever making his children poor, nor interfering with an ordinary testamentary apportionment of his property, but these enormous sums of millions and hundreds of millions really should have a different name from what we used to call 'property.' When a man was a 'man of property,' it meant he had enough for himself and his family to live respectably upon, but now we are under changed conditions, and changed conditions require not radically different laws, but that we proceed to change our present laws to these conditions.

"It isn't the millionaire alone who creates wealth. A man who had mines in Montana and made an enormous fortune did not make the ore from which his fortune came. Who made it valuable? The community wished to use that ore, then it became worth while to take it out of the ground and he made a profit. Gentlemen, wealth is based upon the community. Where a nation does not increase in population and is not prosperous, where wealth does not accumulate you will find no millionaires, but where a nation is prosperous, as we are—a new nation, beyond precedent prosperous—there the millionaire and there only they develop."

After explaining the difference in conditions in the United States and England as to enforcing the income tax system, Mr. Carnegie concluded that in this country an income tax is impracticable and would be intensely unpopular.

"I am with the President," he continued, "in regard to a graduated tax, and a heavy graduated inheritance tax, for many reasons. One is that it belongs to the community that made most of the money, and it should come in and get its dues. The second is that excessive wealth left to children is, as a rule, injurious to the child. We don't want to grow up in this community a class whose members are not compelled to render some service to the community to justify that community in giving them all their privileges and their pleasures. There are exceptions every now and then, and here let me say that the millionaire's son who does spurn the coarse pleasures that we see so many of them indulge in and devote himself to the service of the community in any form is entitled to double honor. But we must legislate not for the exceptions, but for the general."

In concluding his remarks Mr. Carnegie said: "I stand opposed to an income tax as the most pernicious tax that a nation could enact, but I do stand, on the other hand, believing this, that the problem of wealth will never down. The people are becoming intelligent. They see what I tell you is true, that the community makes most of the wealth, and I hope they will persist and tax heavily, by graduated taxation, every man who dies leaving behind him his millions which it was his duty to administer for the public good in his lifetime, and that they will cease to honor any man who does not regard his surplus wealth only as a sacred trust to be administered for the good of the community from which it has arisen."

E. B. WHITNEY, who represented the United States Government before the Supreme Court when the last income tax law was in litigation, followed Mr. Carnegie. He reviewed the attempts by the Federal Government to levy an income tax, and summarized the decisions of the Supreme Court in two cases. Referring to the principle of the graduated tax at the time of our Civil War, Mr. Whitney said that they did not graduate it because they wanted to cut down the large incomes, but because they thought that that made the tax more equal and more uniform. In other words, instead of levying the tax on an absolute rule of so much percentage all the way up from the bottom to the top, they tried to levy it so that the burden as actually felt by the taxpayers should be the same in either case, and that they thought it required to be graduated. When the question of its constitutionality came before the United States Supreme Court, being argued in as many as five different cases, it was decided unanimously that an income tax was constitutional, and that it should be laid on the principle of uniformity over the whole United States. But in 1894 a law, drawn exactly like that of the Civil War period, came before the Supreme Court, which held, by a majority of one, that the law that had been laid down in the first decision was bad constitutional law and that the tax was unconstitutional.

In view of the circumstances surrounding the earlier decisions of the Supreme Court on the income tax, Mr. Whitney stated that the decision in 1894 came as a surprise to the Government. He said: "Now the question is, what is the law? What will the law be if Congress shall pass an income tax statute in the future? That, of course, is going to be a very difficult question, one of the most difficult questions which the Supreme Court ever had to decide. Here are precedents in point, that were unanimous decisions of the Supreme Court, unanimous decisions under the income tax at the time of our Civil War. On the other hand there is a decision which, while not unanimous—a decision on a vote of five to four—is a more recent one. And there are circumstances connected with each that will require special consideration. There was undoubtedly an abler array of counsel in the more recent case. On the other hand, the more recent case was argued with the least opportunity for preparation, and under conditions that were the least conducive to getting the best law, and the best results. It is immensely important that the Supreme Court of the United States should not change its position on questions of constitutional law, because if it changes its position from time to time, then it is the Supreme Court that legislates and not Congress, and we no longer have the distinction between the legislative and the judicial branches of the Government."

In referring to the constitutional amendment as a remedy, Mr. Whitney said: "Do not pass a constitutional amendment like the one that has been proposed, just saying that the income tax shall be levied on the rule of uniformity or anything of that sort. The whole beauty and advantage of the United States constitution is that it deals with great principles and generalizations, and does not go into specific cases." He suggested the right way to amend the constitution is to provide that all taxes shall be uniform throughout the United States; that the present provision should be repealed, and that if there are any taxes to be levied by the States alone, and which the United States Government is not to compete in levying, those taxes should be specified.

PROFESSOR E. R. A. SELIGMAN, of Columbia University, spoke of the general position of income and inheritance taxes in a system of modern finance, and referred more particularly to some of the problems with which any creators of such a system must inevitably deal. Following the statement that "we notice everywhere in modern times, and more especially in democratic countries, an unmistakable tendency toward the adoption or further elaboration of both income and inheritance taxes," Professor Seligman referred to the experience of this and foreign countries in this direction. He believed the question with us is one of special moment because of the universal breakdown of our system of personal property tax.

He said it would be a serious mistake, in considering any question of either income or inheritance taxes, to base the argument on the proposition solely and simply that large fortunes are a menace to society. He conceived this great movement as being an attempt rather to make large wealth pay its equal share of taxation and to reach the fortunes which now virtually escape all taxation. "The only legitimate argument," he said, "on which you can base either income or inheritance taxation is that you are thereby pressing into the service of the treasury aggregations of capital which would otherwise entirely escape. From this point of view, some of the interesting questions which we must all face are these: First, ought an income or an inheritance tax be a federal tax, or should it be reserved to the States? And secondly, what are the particular dangers to be avoided in administration of each system?"

As to the income tax, Professor Seligman did not think it should be a local tax, like our general property tax, and that as far as possible it should apply to the whole country and thus render impossible much of the evasion which takes place under our local tax systems. The income tax might at least be a State tax, and preferably a national tax.

Claiming that the inheritance tax is not needed for national purposes, while in the case of the States it is needed, and needed very badly, he thought the retention by the State governments of the inheritance tax is a matter of very vital importance, and ought to be discussed in detail by any commission that might be appointed.

In referring briefly to some of the problems to be considered in connection with the income and the inheritance tax, Professor Seligman stated that if we ever have an income tax, we ought to frame it in the light of the income tax legislation in other Anglo-Saxon countries. If we are to have inheritance taxes,

he said, one of the important problems that confronts the legislature is as to whether the tax ought to be assessed upon the inheritance as a whole, upon the property as such, or whether it ought to be levied upon the recipient of the particular share. Another point, he said, in which the inheritance tax does not stand alone, is the general question of graduation or progression. He said: "The problem here is, does a progressive or graduated rate in the inheritance tax imply a derogation from equality, or is it really the very sum and substance of equal taxation? It will be found, I think, that when we come down into the details of this proposition, there are very interesting arguments and much interesting experience in all countries of the world, which will tend to throw a light upon this proposition and which will lead us sooner or later to the conclusion that graduation, if carefully devised and carefully limited, is not in opposition to the principle of equality, but is rather an embodiment of that principle." These are only a few, he said, of the multiplicity of subtle points of the large number of different problems, on each one of which there is an abundant literature and a manifold experience.

THE system and methods by which the revenues are raised in the Dominion of Canada with reference to the federal power and to the provincial powers, and the place occupied in them by the income and inheritance tax, were described by Hon. George E. Foster, Ex-Minister of Finance of Canada. He explained that the income tax has been tried by only two of the provinces, and these the smaller ones, and that the amount of money received through it is very small compared with the total revenues raised. "With reference, however, to the inheritance and succession taxes," he said, "that has been adopted gradually by all the provinces, so that each province now has a succession or inheritance tax, graded and graduated in a more or less scientific or common-sense way, the exemptions varying from three thousand to ten or twenty-five thousand dollars, and the rate of tax running from one and one-fourth per cent up to ten per cent. Out of these inheritance taxes a very considerable and constantly increasing part of the revenues of the different provinces has been derived. For instance, the Province of Ontario, the premier province in the Dominion of Canada, this year will get $1,000,000 and a little more from this inheritance tax, which is a little more than one-fifth of all the revenues raised by that province outside of the Dominion's contribution."

Mr. Foster indicated the future probable course of development in Canada as regards securing revenue for the State. On this point he said in part: "There is in Canada to-day a live and growing interest in the matter of ownership, control and distribution of what we call public franchises. This has taken a more or less practical shape for the purpose of securing revenue in most of the provinces, and of late in a somewhat striking way. In Nova Scotia, for instance, with its large collieries, every ton of coal that comes to the surface pays a royalty into the provincial treasury. In British Columbia, where there are large mining areas of gold, silver, lead and copper, on the gross output of every mine there is a royalty or a tax which goes to the provincial legislature. In the Yukon district, a royalty is charged upon the output and goes to enrich the federal treasury. In the Cobalt district, the present Government of Ontario has reversed the policy of the preceding Government, which opened the whole district to the prospector and gave the claim to the individual or corporation who staked it, taxing him or it merely a nominal sum for the license and confirmation of title, and then let the possessor have all that he could make from it. The present Government has adopted the principle of reserving certain areas for competition, so that the man who wants to get it has to say to the Government in his offer what he will pay outright for the area or how much bonus he will give for it, and what royalty he will pay besides upon all that is taken out of the mine. Now, that is a radical change in policy, but a change generally approved, and it remains to be seen how it will work out. And then also, they have gone farther, and withdrawn from prospecting a certain amount of territory in which they will grant no individual license, which they are prospecting and propose to work for the benefit of the provincial treasury, either by the Government or under the control of the Government, the profits of which go to the Government.

"Now these are developments along the line of the distribution of franchises and taxation of franchises which set people thinking upon methods and possibilities still open to the State."

THE work of the State Tax Commission of Wisconsin was described by Nils P. Haugen, one of the members of that body. Among other things he said: "As a result of the recommendations of the [illegible] commission, we have an inheritance tax law in Wisconsin, and we derive from it considerable revenue. It is not of very long standing, and it is impossible to say as yet what that revenue will average in the long run. We have been successful in securing for the [illegible] revenue enough to support the State government entirely independent of local taxation, which is something that has been recommended by economists as generally desirable. The revenues of the State are derived from railroad taxes, which we collect, insurance company taxes, and taxes of other public service corporations of a general character and from the present inheritance tax. I believe that there will be opposition in the States—I am pretty sure there would be in Wisconsin—to the abolition of the inheritance tax for State purposes if the imposition of a federal inheritance tax means that the States will have to abandon it. I say that because I notice the speakers on the question of an inheritance tax have confined themselves largely to a federal inheritance tax.

"Now this inheritance tax question in Wisconsin has been before our Supreme Court. A law was enacted in 1899 which imposed a tax on the inheritance as a whole. Our constitution provides that the rate of taxation shall be uniform, and that taxes shall be levied upon State property as the legislature shall prescribe. The Supreme Court held that first act unconstitutional. It levied the tax upon the inheritance as an entirety. The court said that it was a discrimination between different recipients, although they might be in the same class. It was not uniform within the class. Later, another bill was introduced which is now upon the statute books, which imposed the tax, not upon the inheritance as a whole but upon the share of each recipient. That law has been before the Supreme Court and has been sustained, although it is a graduated tax. Long before this legislation was enacted, our Supreme Court had been somewhat liberal in construing this requirement that the rate of taxation shall be uniform. It had said that it was not necessary that all property in the State should be on a uniform basis, but that all property within a certain class must be taxed on a uniform basis, and it held in the later case of the inheritance tax law that the classification, although it was a graduated tax, was reasonable. The question before the court was whether the classification was reasonable, and the courts sustained the law. So that we now have permanently on our statute books this inheritance tax law."

In speaking briefly of the income tax, Mr. Haugen said he did not know that the income tax would be any more inquisitorial if it is to be enforced than is the personal property tax. "Of course if you shut your eyes to it and do not seek to enforce it, then any system is as bad as any other, but if you try to enforce it you have to be inquisitorial even as to the personal property tax. We have before the legislature this winter, on its second passage, a constitutional amendment authorizing the enactment of a graduated income tax; that is, an income tax law is authorized and the amendment says that it may be graduated. There was some question under our constitution whether such a law would stand the test of constitutionality without some direct provision authorizing it."

A PAPER on the English income tax and its operations prepared by Alfred Mosely was read by Guy Edward Snider of the College of the City of New York. He said in part: "It is intended to tax income derived from every source in the United Kingdom as well as income from abroad received by persons residing in the United Kingdom. It can be said to be, not a single tax but a system of taxes composed of two elements, (1) a tax on income from property, and (2) a tax on income from personal service. The principal strength of the system from a fiscal point of view is found in the stoppage of the revenue at its source, and in the elasticity of the amount of revenue through adjustment of the rate. The tax forms one of the most important sources of revenue for the United Kingdom. In 1903 its total yield was thirty-eight million pounds, or twenty-nine per cent of the total revenue from taxation."

After describing its administrative machinery, the process of assessment, and the operation of the law, Mr. Snider said that the statement that the English tax is not a graduated law, that a man pays on his income from each source, aud that consequently his total income is unknown, needs modification on account of the exemptions and abatements. The tax is graduated but to the point where the abatement ceases, and when a man claims exemption or abatement, he must declare a total of his income from all sources. The paper concluded as follows: "The tax on the income of the individual as distinguished from the tax based on an income producing property forms a minor part in the so-called income tax in England. Even in the case of a tax on salaries and profits the tax is aimed at a source of income rather than at the ability of the individual. Only in the case of exemptions and abatements is there an attempt to regulate the contribution of the individual tax payer with reference to his ability to pay as indicated by the size of his income. The English income tax is based upon the sources of income; it levies on the results of industry at the source. The tax may or may not, according to the circumstances of the case, rest on the individual taxpayer. In effect it is not a tax on the income of the individual, as such; it does not select the individual as a source of revenue, measuring his burden by his ability."

M. W. MEAGHER expressed the belief that a system of graduated income and legacy tax should be adopted primarily for the purpose of preventing a few men from controlling all the wealth of the United States, and not so much for the purpose of deriving revenue. He said that the graduated income tax has been opposed by the preceding speakers on two grounds: That it would induce to lie in order to escape it, and that it would be inquisitorial. "As to the first objection," he said, "it should be borne in mind that lying under oath—which it would be in making false returns on one's income—is perjury; and that as a result of such perjury, the whole community would be defrauded by the perjured. Imprisonment and confiscation of the perjurer's property on which he made no return, or to the extent of concealment thereof by him, would effectually restrain his lying propensity." As to the second objection, that is, that the graduated income tax would be inquisitorial, Mr. Meagher said that is true of every system of taxation except the poll tax. As to the objection that the graduated income tax would remove the incentive to accumulate, Mr. Meagher said that not only should the incentive to such accumulation as is dangerous to our institutions be destroyed, but the power to do so as well. He proposed as a remedy for present conditions a maximum or limitation of wealth, fixed, established and enforced by law, coupled with a graduated income and legacy tax.

EX-GOVERNOR E. BRADFORD PRINCE of New Mexico referred briefly to the claim that the inquisitorial feature of an income tax was an almost insuperable objection. He said that the ability to aid in supporting the Government was the proper criterion for the amount of taxation and that this ability is better shown by the income which a man is receiving than in any other way. "He may have enormous quantities of property," he said, "which produce nothing and which give no present ability. It is the income which gives that immediate financial ability. And yet, while laying that down as a principle, Mr. Carnegie went on to denounce an income tax in general, on account of what he called the inquisitorial character of the information that had to be obtained in order to make an income tax effective." He said that at the present time the listing system for taxation, whereby every man has to produce a perfect list of all his personal property exists in at least thirty-five States, and that in some of the States a list of the man's real estate as well is required as a basis of his taxation.

The claim that it exposes a man's business to the risk of the community and thereby does him a sort of irreparable injury is one, Mr. Prince thought, the contemplation of which in the greater part of the United States, where they have a list system, would be found to be absolutely ridiculous and preposterous. He did not believe there was anything in the objection. He said that the inquisitorial feature was not found to be an insuperable object at the time of the old income tax in the days of the War of the Rebellion, and that no one ever heard of there being any difficulty with regard to a man's having his private matters betrayed to the general public when we really did have an income tax. He characterized this inquisitorial objection as not a practical matter, as entirely theoretical and chimerical; that it is simply a bugaboo, gives no rise to any such objection in the greater part of our country where more than half of the population lives and in seven-eighths of the area where we find that development under existing laws.

FACTS ON IMMIGRATION.

INTERESTING and valuable material on both "sides" of the much discussed question of immigration is contained in "Facts on Immigration," being a report of the proceedings of two conferences on various phases of the problem held in New York City under the auspices of The National Civic Federation.

The introduction is by Frank Julian Warne, who writes of the need for impartially investigated facts, and explains the objects and purposes of the Immigration Department of the Federation. Prescott F. Hall, Secretary of the Immigration Restriction League, discusses various phases of the legislation now pending in Congress. Nathan Bijur criticises many statistics usually accepted as representing the facts as regards immigration. Professor Walter F. Willcox, of Cornell University, analyses immigration statistics and states conclusions as regards our net gain in population through immigration which are strikingly different from those commonly accepted. John Mitchell, President of the United Mine Workers of America, presents a startling view as to the effects of immigration upon coal mine workers, and President O'Connell, of the International Association of Machinists, as vigorously outlines some of the effects among mechanics. Thomas F. Parker, President of the Monaghan Cotton Mills in South Carolina, gives a brief account of the recent experiment in that State in bringing immigrants direct to Charleston from Europe. Charles P. Neill, United States Commissioner of Labor, summarizes briefly some of the results of a recent Government investigation, and Robert Watchorn, Commissioner of Immigration at Ellis Island, gives a clear explanation of what he believes to be the best means for distributing immigrants. There are also other prominent contributors who speak authoritatively on the particular issues they discuss.

NEW ENGLAND CIVIC FEDERATION'S ANNUAL DINNER.

WORKINGMEN'S INSURANCE THE TOPIC DISCUSSED—REPORTS OF OFFICERS REVIEWING THE ACTIVITIES OF THE PAST YEAR.

OF the three general meetings held by the New England Civic Federation since its organization two years ago, that of January 10, marking its second anniversary, held at the Ford Building in Boston, was much the largest and in several respects the most significant. The spirit manifested throughout the proceedings, in which men representing all the different elements included in the Federation took an active part, led one of the guests to remark that if enthusiasm and good feeling mean more after two years of experience with a novel and peculiarly difficult experiment than at the beginning, as we all believe it does, then it is demonstrated that this movement has become a recognized and necessary factor in the industrial welfare of this section.

About three hundred members and guests were in attendance as compared with one hundred and seventy one year ago, and about one hundred and thirty-five at the opening meeting in April, 1905. Opportunity was afforded during the reception hour of meeting President Tuttle and the other officers and speakers of the evening, as well as Governor Curtis Guild, Jr., and Mayor Fitzgerald, who were the guests of honor.

PRESIDENT LUCIUS TUTTLE, in opening the regular program at eight o'clock in Ford Hall, said:

"The Civic Federation of New England appropriately marks by this large assemblage its second anniversary. Of its six hundred members, nearly two-thirds reside elsewhere than in Boston, and while the core of the movement and its main work are in Boston, this widely distributed membership gives satisfactory evidence that it has already become distinctly a New England organization with a constantly widening sphere of influence in that larger field.

"In passing, it may be of interest to note that next Saturday evening a Chicago Branch of the Civic Federation is to be organized under most favorable auspices to carry on in that city and section a work similar in character to that which you are carrying on here.

"In its every act your association has closely adhered to the principles upon which it was founded, by keeping aloof from everything in the nature of partisanship and by never attempting to interfere with the conduct of the business of any interest, whether individual or corporate; and, above all things, it has consistently and persistently refrained from attempting the arbitration of anybody's differences or contentions.

"Its work, which is always quiet and unostentatiously performed, most largely consists in bringing together the representatives of those who labor with their brains and of those who add to the work of their brains that of their hands, and thereby substituting for those wasteful and barbarous methods that are always incidents of the lockout and the strike, the more economical and humane practices of temperate discussion and peaceful negotiation.

"It proceeds upon the assumption that there is no such thing anywhere as an 'irrepressible conflict' between capital and labor, but that the differences and discords that sometimes arise between these two necessary adjuncts of the world's business and progress are nothing more or less than the upspringing of that desire, implanted from the earliest dawn of civilization in every human breast, for a betterment of his or her social and physical condition and environment; and that without this constant and unremitting struggle for individual improvement, which pervades every class of humanity, human progress would cease and civilization lose its virility and become stagnant and senile.

"It does not, however, indulge in any Utopian dreams or theories upon this phase of the world's many-sided social and humanistic problems but, on the contrary, attempts to apply to its solution only the plainest and most common-sense idea that in every disagreement arising between two parties to a common interest, neither may be wholly right or wholly wrong, and that, if the opposing interests may somehow be induced to come together for dispassionate discussion of all the questions at issue between them, each will most likely be brought to a better understanding of the whole subject, and an adjustment become possible that shall make for harmonious action and mutual trustfulness instead of discord and friction, with the well-known troubles that always follow in their train.

"With these guiding theories, the Civic Federation began and has continued its work, and if its custom permitted, our painstaking and able secretary could give us a long list of many important instances in which his intervention for the Federation, at the crucial moment, has been potential in maintaining industrial peace, and has prevented the outbreak of contentions that would have disturbed, for periods of incalculable length, not only the dominant business of great industrial communities, but would have disastrously interfered with the personal comfort of that great host of outsiders who, under such conditions, are powerless to aid in the adjustment either of the troubles or their causes, and whose only lot seems to be that of irreparable suffering.

"With what has been done in this way during the year I have had but little personal connection, but I know of the many splendid results accomplished by our

LUCIUS TUTTLE,
President New England Civic Federation

secretary, and by the members of our committees, particularly those from the side of labor. And I want to impress upon you the work done by the labor men. They have had the laboring oar, and the efforts in behalf of industrial peace have proved many times more effective than could possibly have been the case without their assistance. I know of these things, and out of the fullness of that knowledge I offer you one and all most hearty and sincere congratulations upon the rounding out of the second year of the Federation's useful existence."

JOHN MASON LITTLE, Treasurer of the Civic Federation of New England, followed President Tuttle. Mr. Little said:

"I suppose the reason that President Tuttle introduces me as the only officer to speak is that he wants you all to know me. I will tell you why I think so a little later on.

"With regard to our finances, the fiscal year ends in February, therefore all our funds are not in, possibly, but it is a great pleasure for me to say that our bills are paid to date and there is sufficient money in sight to run the association until the end of the year. The treasurer of an organization like this has to be a gentle beggar, and, while I have gone about hat in hand, I have not been unmindful of certain features connected with the work. While the work has been going steadily on, and increasing, the nature of it is so quiet and unobtrusive in many respects, there is not at present an entire understanding in the community, except among you gentlemen, members of the association, and a few others, as to what it is that is accomplished. But it is an interesting feature to call attention to, that while a year ago the former treasurer collected all the money that was collected from thirty-eight individuals, your present treasurer has collected this year's funds, no larger in total amount, from more than one hundred individuals; which is a very important showing because it indicates that our money is coming in smaller quantities from a larger number, and that proves, I apprehend, that we are beginning to be better known.

"Now, gentlemen, we want all the money we can get within reason, because, while it is necessary to meet the expenses of this association, still the work can be very much enlarged if there is more money in the treasury, enough so that we shall feel perfectly comfortable. I have felt perfectly comfortable in one sense because I believed we should raise enough money, but we shall need more money and I think it will come in increasing quantities from more and more individuals as time goes on. That is the reason, perhaps, why the President introduced me—so that you will know me, and when you meet me in the street you will hand me a dollar, or five dollars, as the spirit moves. Because, as you remember, Dr. Holmes said: 'I only want a little more than I can spend.'

"I cannot sit down without saying that although the President declares this is a thankless job, I do not so regard it. I consider it a great honor and privilege to do my share toward what I look upon as one of the great works of the beginning of the century."

LOUIS D. BRANDEIS spoke on "Wage-Earners' Savings, Life Insurance and Old Age Annuities," a subject of growing importance among trade unions. Mr. Brandeis said:

"The cost of living, properly considered, involves not merely the expense of supplying adequate food, shelter, clothing, education and recreation, but also such pro rata daily contribution as may be essential to provide against the contingency in the future of diminished earnings or unavoidably increased expenses. The contingency that the future may bring in the wage-earner's family extraordinary expenses or to himself non-employment, sickness or accident, premature death or ultimate superannuation, are ever present facts which must be considered, if the amount of wages to be paid and the disposition of them shall be properly determined. The expense of making such a provision should be recognized by the employer, the employes, and the public, as a fixed charge in reckoning the workingman's cost of living, just as repair and depreciation accounts of machinery are now recognized as fixed charges in the cost of manufacturing.

"In Germany, where this principle is accepted, the workingmen's future is largely provided for through paternal and socialistic measures for compulsory insurance. Compulsory thrift is not in harmony with the American ideas of individual liberty. The American spirit demands that such a provision for the future of the workingman and his family be made voluntarily and be made primarily through his own efforts. Those efforts must be directed, first, to securing wages sufficiently high to leave applicable to such purpose a surplus over the day's obvious needs, and, second, to developing the intelligent self-denial which shall induce the workingmen so to apply that surplus.

"Temporary needs in case of sickness and accident of the wage-earner are now supplied to a considerable extent through the trade unions and other voluntary associations of employes; and in such efforts individual employers have shown a readiness to aid. But adequate provision for the future demands in addition: First, the setting apart of funds which shall be immediately available to meet the proverbial 'rainy day' as in the case of non-employment or extraordinary family expense; second, insurance on the life of the wage-earner to protect the family in case of his premature death; third, an old age annuity or like provision against superannuation.

"Trade unions and other voluntary associations, whether managed wholly by employes or jointly by employers and employes, are admirably adapted for supplying temporary relief in case of sickness or accident, but they cannot be safely used as institutions for savings or to provide life insurance or old age annuities. Their management and membership is necessarily shifting; their officers are generally without the business experience requisite for the safe investment of large amounts; and they are properly without governmental supervision. Institutions which shall receive and invest workingmen's savings and provide life insurance and old age annuities demand necessarily stability of organization, continuity in management, business experience on the part of the managers, publicity of accounts, and governmental supervision.

"The need of proper institutions for workingmen's savings, is now adequately supplied in New England, in New York, and in some other States by their system of incorporated savings banks, in which there are no stockholders, and which are managed wholly for the benefit of the depositors by trustees who serve without pay. The record of these savings banks, which are benevolent, quasi-public corporations, has been almost uniformly high. Huge aggregates of the small savings of millions are managed at an extraordinarily small cost. In Massachusetts, the $707,728,733 of assets of 189 savings banks are managed at a yearly cost of 23/100 of one per cent. In New York, $1,405,800,904 of assets are managed at a yearly cost of 28/100 of one per cent. The rate of interest earned on their investments has been such as to enable these banks to pay to depositors dividends of about 4 per cent per annum.

"The second need, proper institutions for providing workingmen with life insurance, does not exist. Prac-

HENRY ABRAHAMS, Vice-President

HAYES ROBBINS, Secretary

JOHN MASON LITTLE, Treasurer

tically the only means of obtaining life insurance open to workingmen are the industrial insurance companies, notably the Metropolitan, the Prudential, and the John Hancock companies, which issue policies in small amounts on which the premiums are collected weekly at the homes of the insured. A vast amount of such insurance has been placed. There were outstanding on January 1, 1906, 16,872,583 such policies, constituting nearly three-fourths of the level premium life insurance policies then outstanding in the United States.

"The result of this industrial insurance has been disastrous to the wage-earner. He is obliged to pay for his insurance at a rate at least double that charged to the holders of ordinary life insurance. For the early periods of the industrial policy, the rate rises to eight times that paid by the insured on ordinary life policies; since in most industrial policies, a provision is inserted that if death occurs within the first six months only one-fourth of the face of the policy will be paid, and if within the second six months after the date of the policy, only one-half of its face.

"The result to the policyholder of this system of life insurance may be illustrated from the following data, based upon the Massachusetts official reports:

"In the fifteen years ending December 31, 1905, the workingmen of Massachusetts paid to the so-called industrial life insurance companies an aggregate of $61,294,887 in premiums, and received back an aggregate of only $21,819,606. The insurance reserve arising from these premiums still held by the insurance companies does not exceed $9,838,000. It thus appears that, in addition to all the interest on invested funds, about one-half of the principal paid by the workingmen in premiums has been absorbed in the expense of conducting the business, and in dividends to the insurance companies' stockholders.

"If this $61,294,887, instead of being paid to the insurance companies, had been paid in to Massachusetts savings banks, and these depositors had withdrawn from the banks the $21,819,606 which they received from the insurance companies during the fifteen years, the balance remaining in the savings banks December 31, 1905, with the accumulated interest, would have amounted to $49,931,548.35; and this, although the savings banks would have been obliged to pay upon these increased deposits in taxes to the Commonwealth more than four times the amount which was actually paid by the insurance companies on account of this insurance.

"Perhaps the appalling sacrifice of workingmen's savings through this system of insurance can be made more clear by the following illustration:

"The average expectancy of life in the United States of a man 21 years old is, according to Meech's table of mortality, 40.25 years. In other words, take any large number of men who are 21 years old, and the average age which they will reach is 61¼ years.

"If a man, beginning with his twenty-first birthday, pays throughout life fifty cents a week into Massachusetts savings banks, and allows these deposits to accumulate for his family, the survivors will, in case of [illegible] at the average age of 61¼ years, inherit $2,265.90, if an interest rate of 3½ per cent a year is [illegible]

[illegible] pays [illegible] fifty cents a week to the Prudential Insurance Company as premiums on a so-called 'industrial' [illegible] the [illegible] of his family, the survivors will be legally entitled to receive, upon his death at the age of 61¼ years, only $820.

"If this same man, having made his weekly deposits in a savings bank for twenty years, should then conclude to discontinue his weekly payments and withdraw the money for his own benefit, he would receive $746.20. If, on the other hand, having made for twenty years such weekly payments to the Prudential Insurance Company, he should then conclude to discontinue payments and surrender his policy, he would then be legally entitled to receive only $165.

"So widely different is the probable result to the workingman if he selects the one or the other of the two classes of savings investment which are open to him.

"Obviously the present industrial insurance companies are not a proper medium through which the workingmen's need of life insurance can be provided.

"No institution whatsoever exists at present which undertakes to supply the third need of the wage-earners, to wit:—old age annuities, and yet a proper superannuation fund is being recognized as one of the greatest of his needs.

"Life insurance is but a form of saving, and life annuities but a form of insurance. The savings banks manage the aggregate funds made up of many small deposits, until such time as they shall be demanded by the depositor—the insurance company, ordinarily, until the depositor's death. The savings bank pays back to the depositor his deposit with interest, less the necessary expense of management. The insurance company in theory does the same, the difference being merely that the savings bank undertakes to repay to each individual depositor the whole of his deposit with interest; while the insurance company undertakes to pay to each member of a class the average amount (regarding the chances of life and death), so that those who do not reach the average age get more than they have deposited (including interest), and those who exceed the average age less than they have deposited (including interest).

"Savings banks, under the system prevailing in New England and New York, New Jersey and Pennsylvania, are admirably adapted for taking care, not only of savings subject to withdrawal, but for providing life insurance and old age annuities. By extending the functions of the savings banks to these new spheres of usefulness, a remedy will be supplied for the greatest of life insurance wrongs—the present system of industrial life insurance—and a solution will be found for the greatest of workingmen's problems, to wit:—the provision for old age.

"With most wage-earners, the need of life insurance ends at the time that the need for an annuity begins; workingmen require life insurance mainly when their children are young. When the children have become self-supporting, the need of life insurance ceases; and, soon after, the need of superannuation funds frequently arises.

"The savings banks have a goodwill which, if only the opportunity were afforded, would without the intervention of expensive and self-seeking solicitors quickly lead millions of their depositors to become policyholders and prospective annuitants. On the other hand, many of those seeking only insurance or annuities would be led on in the road of thrift, and open savings accounts also.

"If life insurance and old age annuities are furnished under the favorable conditions of low expense rate under which these savings banks operate, small regular payments commenced early and persisted in would suffice to provide the workingman with life insurance during middle age and a reasonable annuity when old age overtakes him. For instance, payments of a little more than $1 a month commenced at the age of eighteen, would be sufficient to provide life insurance to the amount of $500 up to the age of sixty and an annuity of $100 a year after the age of sixty is reached.

"Through no other means can life insurance and old age annuities be so advantageously supplied to the workingman as through savings banks. Neither any other corporations now existing or newly organized, nor the State could supply them advantageously.

"Any other corporation would lack the extensive goodwill which in the savings banks has been developed by nearly a century of noble service; would lack the established traditions of economy which pervade their organizations; and would necessarily be subject to the heavy expense entailed in organizing and establishing a new and independent business. A generation, at least, of efficient service would be required before any new Life Insurance and Annuity Corporation could develop the goodwill which is essential to securing the patronage of the working people and which the savings banks now possess and can utilize without expense.

"Nor could the functions of providing life insurance and annuities be advantageously committed to the Federal Government, the State, or to Municipalities, among many other reasons, because the insurance and annuities reserve could not be invested by any government on a basis higher than the interest it pays on its loans—perhaps 2 or 3 per cent; while the savings banks earn over 4 per cent on their investments.

"The demand for a better system of providing workingmen's life insurance and the demand for a proper system of old age annuities are imperative. These demands will be met by extending the functions of the savings banks to these new spheres of usefulness."

IN commenting upon Mr. Brandeis's address, Henry Abrahams told of the work which the Cigar Makers' Union had carried on in the way of industrial insurance, strike and sick benefits. To this he attributes largely the success of the Union, and endorsed Mr. Brandeis's plan as an extension of this work. Mr. Abrahams told of the rise and growth of the International Cigar Makers' Union, which was organized after the Civil war and which was regarded as the finest trades union in the United States. It was in 1877 that the union began to develop strength, when the various benefit funds were first instituted that have later made the union a tower of strength. In case of sickness the members of the union got $5 a week; in case of death a sum varying from $50 to $500; when out of work $3 a week; when on strike $5 a week; when serving on committees $5 a week; in case of the death of wife $40; and the death of a widowed mother $40. A man out of work and wishing to go to another city got his railroad fare and fifty cents. In twenty-six years and two months there had been paid out under this last head, $991,777; for strike benefits, $1,092,104; for sick benefits, $2,201,266.43; for death benefits, $1,514,525.99, and for out of work benefits, $1,045,866.11, a total of $6,845,540.66. In 1880 at the Chicago convention the questions of coolie labor, prison labor and tenement house work came up for consideration and were solved by the adoption of a union label, the first

union label ever adopted by a trade union body. Since then the eight-hour day had been established and a Saturday half-holiday, and the cigar makers were better paid and happier and there was less intoxication than when they worked twelve and fourteen hours a day under the old system. All the reforms in the trade, he said, had been brought about by the trade union movement.

PROFESSOR F. W. TAUSSIG of Harvard University qualified what had been said of the remarkable system of protection for the wage-earner in Germany. "It is true," he said, "that a lower rate of wages has made it necessary, but it is also true that it has accomplished wonders. It provides for the possibilities of injury, sickness and death, and if there were no other way of doing that except by the suggestion of compulsion which it carries, I should not shrink from something like a German system.

"It is also true that in this matter we must admit we Americans are singularly backward. We are a reckless race; we are a heedless race. Perhaps it goes with the optimism of the industrial strides of the country. The carelessness, both of employers and employes, is a disgrace. Furthermore, the position of ours which places the responsibility on the individual and not on the trade in general is, I think, unsound. We have done an immense amount of insurance in the classes of the well-to-do. We have done singularly little for the workingman, who must bear some fault himself in this matter. We may hope to reach a better solution than that which is given by compulsion in the older countries. Large companies should continue to increase their efforts to provide against old age and injury. The same thing is true of labor unions."

AN interesting contribution to the subject was contained in a letter from Stephen H. Rhodes, President of the John Hancock Mutual Life Insurance Company. He said: "The subject suggested as the topic of the evening is not one for controversy, since any practical movement for the protection and benefit of the wage-earner would meet with earnest sympathy from me and my associates. Any system understandingly inaugurated which would supplement my work of the last twenty-five years, which, with devotion to the interests of a purely mutual insurance company and with a previous intimate knowledge of the underlying principles of insurance, have been spent in the practical service of the wage-earner, would strongly appeal to me."

EDWARD A. MOFFETT, Secretary of the Public Ownership Commission of The National Civic Federation, stated that to his mind the subject under discussion, with the possible exception of the matter of wages and hours, was the most closely related to the welfare of the workingman. "How good, how useful it is to provide insurance upon a universal scale, as Mr. Brandeis's plan necessarily proposes, is indicated," he said, "by the great success which has attended the adoption of such ideas upon the other side of the Atlantic.

"But, as Mr. Brandeis has shown you, the plan of industrial insurance which obtains in this country today has invented itself, has proved itself unsatisfactory and unworthy; for insurance, after all, is nothing less than a social necessity. We must not only provide the means whereby we shall live, but by the same token and with the added scriptural injunction, we should always have in mind, we are also under obligation one to the other to bury our dead. In fact, I feel it would not be too much to say that in a civilized community there should be no poorhouse and no potter's field. But the plan of industrial insurance that prevails now is very much like the Indian's gun, it costs more than it comes to. Until the late insurance developments in New York, the wage-earners were very glad to have the insurance agent come to the door. Now they regard him, although he personally may be an honest fellow, with something of suspicion and distrust.

"I have been asked to state what is the sentiment—the probable sentiment—of workingmen towards this idea of life insurance by the savings banks or through them. For that part of the working class which is unorganized, certainly it would be pretty hard to speak. They hold no conventions, and mouthpiece they have not; but so far as it is my privilege to speak for organized labor, I need say no more than this: That at the Pittsburg convention of the American Federation of Labor a year ago a resolution was adopted to the effect that the United States government should provide insurance—some plan should be adopted whereby insurance should be furnished by the government and no longer by the private companies. This resolution bore no special significance, because at the time of its adoption the people of the country were at a white heat of indignation. Now, whether or not the organized workingmen of the country would prefer to drop that idea and take hold of the one so lucidly and engagingly proposed to us here to-night, would depend, in my judgment, upon what merit Mr. Brandeis's plan would show upon further development.

"Another word in conclusion. I ought to say something about the old age pensions or annuity idea. In no country is there such crying need of relief of that particular kind. In other words, in no other country does a man so quickly reach the limit of the period of his usefulness. This fact is due to several causes, chief among which is, in this country, the fact that machinery has more than in any other way displaced the delicateness and finesse of hand labor. The great demand is rather for agility and youth than for mature age and its correlative skill. People will say: 'Oh, such things have the effect of placing a discouragement on thrift. It teaches men to lean too much on that for the support which in their heyday they should lay up for themselves.'

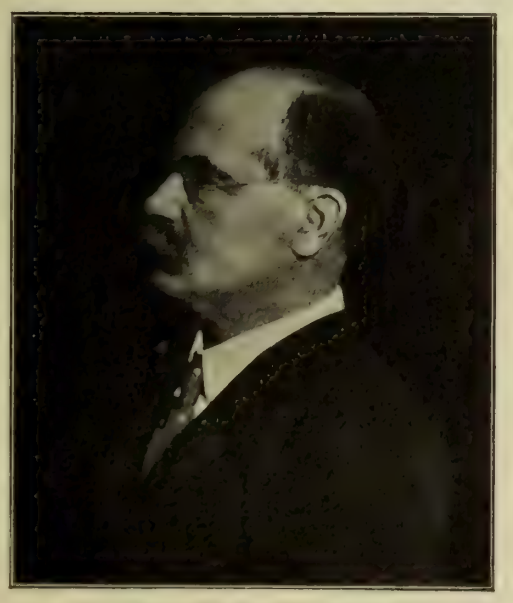
"I will answer that in a very few words by saying to you that under our present system, in the absence of anything like an old age pension or old age annuity, workingmen fear to grow old. Stating it as mildly as I can, the average workingman who does not lose sight of his social duty, who raises a family, is not in a position to lay up for what has been poetically called 'the winter of life.' I can only hope, as I draw to a close, that the very interesting exposition which you have listened to to-night from Mr. Brandeis, and the added words of the succeeding speakers, will result in giving to the masses of this country a form of insurance—let it include an old age pension if that is possible; I should rather insist on it—whereby the accumulated premiums and usufruct of the same on the part of the working class will find a more economical and beneficial repository than these funds have heretofore found."

HAYES ROBBINS, Secretary of the Civic Federation of New England, in his report of the work accomplished the past year, said:

"It is unnecessary to repeat the detailed statement, offered in last year's report, of the objects, methods and scope of the work; all of which may be summarized to-day as accurately as when the movement was started two years ago, under the head of 'promoting better relations between employers and employes.'

"We have steadily endeavored to keep to that object, without intruding on the field of other worthy organizations or scattering our efforts and resources. We have continued in the belief that any association which begins to fulfil its possibilities of useful service in this particular field can have no lack of work to do, or occasion to make many excursions outside.

"This is not to imply that the movement is a narrow one; to treat it as such would be to defeat its very purposes. On the contrary, one of the most important factors in bringing about this better relation between employers and employes is the promoting throughout the community of a broader understanding of the many-sided industrial problem, with special reference to labor conditions; anything but a narrow task. To this end we bring into one common association men of many diverse interests and view-points—employer, labor, professional, educational, religious, civic, governmental. The object in view is definite and specific, but the methods employed must be broad and co-operative.

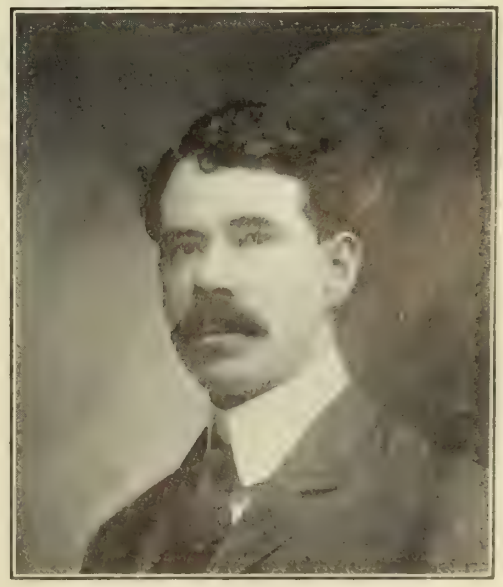


"This unique idea of a widely-inclusive membership rests upon an express recognition of the personal equation, as a factor of tremendous importance, far too little appreciated. Personal acquaintance among men representing so many diverse elements in the community means freer interchange of ideas and experiences, larger respect for the 'other man's' position, and a readier disposition to act from motives of reason and fairness than of narrow exclusiveness or mistaken estimates of self-interest.

"During the year we have rendered service, in one way or another, in connection with about thirty trade disputes, many of them of considerable importance. The two most significant were the teamsters' controversy in March, and the longshoremen's in September, both of which involved unusually difficult and complicated negotiations, but thanks to the co-operation of several members of the Federation resulted in satisfactory settlements. Only those closely connected with these matters realized how near this city was, in both cases, to an experience like that of four years ago; and judging from that experience it is safe to say that these two settlements alone represented a very great saving to the commercial and to the labor interests of Boston.

"The other cases with which we had something to do were in connection with street railway service, textile manufacture, electrical work, carpenters, stationary engineers, newspaper mailing, bleachery and dye works, telephone men, carpet weaving, lathing, woodworking, lithographing, paper and pulp making, hat manufacture and metal workers. In the case of longshoremen, and certain other trades named, matters arose in which we were consulted or called upon several times.

"Our second general meeting (first annual) was held January 11, 1906, at the Revere House, taking the form of a reception and smoker, with discussion on the hours of labor. It was attended by about 170 members and guests, and was apparently regarded by those present as entirely successful. In the absence of President Tuttle, the First Vice-President, Frank H. McCarthy, former President of the Boston Central Labor Union, presided; Mr. Tuttle arriving late in the evening in time to make a few closing remarks. Governor Curtis Guild, Jr., extended the greetings of the Commonwealth, and ex-Governor William L. Douglas delivered an address on Fidelity to Agreements. The question of Hours of Labor was discussed by Mr. Alfred Mosely, of London, England; Mr. James P. Archibald, of the Brotherhood of Painters and Decorators, New York; Mr. Marcus M. Marks, President National Association of Clothing Manufacturers, New York; Mr. James Duncan, First Vice-President American Federation of Labor, Quincy, Mass., and Mr. Louis D. Brandeis, of Boston.



"There have been a number of evidences since that this gathering had a good effect, not only in the educational value of the discussion, but in promoting more general personal acquaintance among men from widely

PROF. F. W. TAUSSIG

LOUIS D. BRANDEIS

EDWARD A. MOFFETT

different walks of life, who, without such acquaintance, often misjudge and misinterpret each other's objects, motives and methods. The indirect influence of these meetings is probably greater from the fact that they are not held often enough to become tiresome.

"The attitude of the Boston press has been cordially friendly to the movement throughout the past two years, and it need hardly be said that this is an important factor in helping the industrial results we have in view.

"The new members enrolled during the year, including those connected with the Workshop Improvement Committee only, number 210; the total now being a little under 600. Names of the new members, up to October 1, appear in Bulletin No. 6. About 225 of our members are in Boston, approximately the same number in Massachusetts outside of Boston, and the remaining 150 are divided among Rhode Island, New Hampshire, Connecticut, Maine and Vermont, in the order named.

"The Committee on Workshop Improvement, which was just being organized a year ago, has now fifty-one members. The chairman is Mr. Frederick P. Fish, president of the American Telephone and Telegraph Company; first vice-chairman, Mr. George W. Brown, treasurer United Shoe Machinery Company, Boston; second vice-chairman, Hon. Charles G. Washburn, Slater Mills, Worcester. Bulletin No. 6 contains the names of the other members, except two, who have been added since October—Mr. Horace S. Sears, of Wellington, Sears & Co., Boston, and Mr. Harry W. Smith, president Wachusett Mills, Worcester.

"Bulletin No. 5 (May), on Better Workshops, was devoted expressly to the work of this Committee, and is known to have exerted a considerable influence, direct and indirect, towards the introduction of improvements in sanitary and other working conditions such as affect the health, comfort, and convenience of employes.

"More specifically the services of the committee have been given, sometimes directly and sometimes in co-operation with the Welfare Department of The National Civic Federation, in a number of cases where employers have desired consultation as to the workings and practical value of various improvements of this character, needed or desirable in their own plants.

"Several of these instances are mentioned in Bulletin No. 6 (October), which also contains an account of the work under way for prevention of tuberculosis in workshops. An illustrated pamphlet has been prepared under the auspices of the committee, and approved by five medical experts, on Sanitary Cuspidors for Factory Use, giving descriptions of types approved, care and cleaning, first cost and expense of maintenance, etc. This has been published, for general distribution, by the Welfare Department of The National Civic Federation. The card notices, described in the pamphlet, warning against the practice of spitting on the floor, and calling attention to the fact that cuspidors are provided, is being called for by manufacturers to an increasing extent. The Workshop Improvement Committee supplies these cards, for posting in workrooms, free of charge in limited quantities and at cost of printing in large quantities. Thus far about 1,500 of the cards have been furnished to forty-five employing establishments in New England, the number required ranging from 2 to 100, in one case 500. The list includes manufactories of shoes, cotton cloth, machinery, electrical apparatus, blank books, rubber hose, furnaces, silverware, thread, clothing, paper, chairs, and even ships; showing the wide range of industries in which this important sanitary feature is found necessary. Bearing upon the practical importance of this effort, it is significant that one of the largest shoe manufacturers in Massachusetts has learned, from a recent investigation, that one-third of all the deaths among employes in his factories during the last few years were due to tuberculosis. One large establishment, near Boston, has just arranged for the supplying of destructible paper cuspidors on a scale which will probably call for the use of more than 60,000 a year.

"We have a good Committee on Organization and Education, its forty-eight members being scattered all over New England. It would be well if the Secretary could visit some or all of the members of this committee and personally consult with them on ways and means of extending our ideas and methods in the various sections represented, but it has proved very difficult to get away from the immediate local demands except at considerable intervals. However, new names for membership are secured through this committee from time to time, and occasional information on local conditions, by correspondence.

"Three Bulletins have been issued this season: No. 4, reporting the annual meeting of last January; No. 5, already referred to, outlining details of the Workshop Improvement program; and No. 6, containing more or less detail information about several features of the work, including a history of the longshoremen's strike and settlement, in September; list of new members, etc.

"The State and national bureau reports, and current periodicals of twenty-five or thirty industrial crafts and commercial bodies, kept on file and indexed for quick reference, have been consulted more freely this year than last by people in search of special information. On six occasions speakers for meetings of other organizations have been suggested or arranged for.

"Mr. Frank K. Foster attended the State convention of the Maine Federation of Labor, in June, on our behalf, and addressed the delegates on the aims and work of the Civic Federation. The convention passed resolutions of endorsement, similar to those adopted in 1905 by the Boston Central Labor Union, and the State convention of the Massachusetts Branch, American Federation of Labor. On the other hand, a similar attitude on the part of leading commercial bodies is indicated by the fact that our membership includes the president and secretaries of the Boston Chamber of Commerce, Boston Merchants' Association, National Cotton Manufacturers, and one or more officers of several other trade associations, wool manufacturers clothiers, hardware, etc.

"Recognition should here be given to a fact upon which a very large part of the success of this improvement rests, namely; that many who cannot give money to its support do give time, thought and personal attention. The relatively small amount required to run the machinery of the Federation gives no proper idea of the scope of its efforts or influence, much being done voluntarily by men of prominence and large responsibilities, in all three of the groups represented in the Federation. An active, efficient organization is necessary, both to propagate our distinctive ideas and to furnish a definite means whereby this co-operation and voluntary service of practical men of affairs can be enlisted and made available promptly at the times needed. But it is a significant and optimistic fact that the personal services so rendered multiply by many times the effectiveness of the funds expended for running expenses and general educational propaganda."

CAPITAL AND LABOR MEET IN CONFERENCE IN CHICAGO.

UNDER THE AUSPICES OF THE NATIONAL CIVIC FEDERATION A REMARKABLY SUCCESSFUL MEETING IS HELD AT THE RESIDENCE OF MRS. POTTER PALMER.

THE National Civic Federation held a meeting in Chicago January 12, at the residence of Mrs. Potter Palmer, for the purpose of presenting its work to employers, employes and publicists. It was distinctly an educational meeting, with the view of forming later a branch of the Federation in the central States, having headquarters at Chicago.

The National Civic Federation, which was organized by Ralph M. Easley, Chairman of the Executive Council, was an outgrowth of the Civic Federation of Chicago, of which he was the first Secretary. The Honorable Lyman J. Gage was the first President of the Civic Federation of Chicago, whose object was the promotion of municipal reform, and Mrs. Potter Palmer was the first Vice-President. She was interested in the organization of the National Civic Federation, and it was but natural that she should encourage the establishment of a branch of the organization by holding the initial meeting at her home.

Mrs. Palmer has been long identified with the interests of labor. She was chairman of the Board of Women Managers of the Chicago World's Fair, and through that position secured diplomas for the wage earners contributing toward the manufacture of products whose excellence was recognized by awarding medals to the manufacturers.

There were present over seven hundred prominent citizens, including members of great industrial establishments, financiers, professional men, labor leaders and representatives of philanthropic agencies.

FRANKLIN MacVEAGH, of Chicago, presided, and in his opening address referred to the fact that this meeting of The National Civic Federation was held under most charming surroundings in the most beautiful environments and under most delightful auspices. "That is due," he said, "to the interest which Mrs. Palmer has ever felt in the purposes and objects of the Federation, and to her well known broad and gracious public spirit.

"The object of this meeting is to explain to the people of Chicago the work and spirit of The National Civic Federation. It is necessary for me to say just a word in description of that organization. It is a central body with its [illegible] New York. It originated in Chicago, but like most things upon which New York prides itself it originated here as a matter of course. But it went to New York when it grew suddenly prosperous; and while you can keep here our people who grow gradually rich, those who grow suddenly rich all go down to New York. In addition to being a general organization, The National Civic Federation is an organization with departments. It has also branches —one in Boston for New England, and it has in New York a local branch dealing with the local situation.

"You may understand it to be an organization dealing purely with labor questions, but that is only one branch of its work. It has an Industrial Department, and that is perhaps its most important single department. It has a Conciliation Department presided over by Mr. Seth Low, who is happily here this evening. The Welfare Department has as its western head our admirable citizen, Cyrus H. McCormick. It is impossible to give you a detailed impression of The National Civic Federation, therefore it was necessary to select some department which would be fairly well represented and they have chosen the Welfare Department, because it is well developed, and of great and general interest. Also because Miss Gertrude Beeks is here, and she has learned, as the executive chief of that department, exactly how to present it to you so that you may understand it."

EX-MAYOR SETH LOW, of New York, Chairman of the Conciliation Department of the Federation, in referring to its work said:

"The Conciliation Department of The National Civic Federation, of which I am chairman, is composed in about equal number of large employers of labor, representative leaders of labor unions, and of citizens who, like myself, are neither one nor the other. So that in all the problems that it has to consider it gets the point of view of the employer, and of the workingman, and of the general public. The object of the Conciliation Department is to bring employers and employes together in such a state of friendship and mutual understanding as to make labor troubles and strikes infrequent; and, wherever possible, to avoid them. You will observe that it is not called the 'arbitration department.' That is not its object. Its object is to conciliate, to bring about good feeling, and to obviate both strikes and the necessity for arbitration.

"The Federation does all of its work in the profound belief that the American men, whether employer or workingman, want to do the fair thing. We know that each one emphasizes his point of view. That is natural. But, after all, we believe that if we can get fair-minded men together and discuss a definite question of disagreement, in ninety-nine cases out of one hundred both sides, with the light that the other can throw upon it, will find the middle path between the two extremes, which all will consider fair. If you really want conciliation it is wonderful to see how often it can be brought about, even when conditions seem to be pretty hopeless.

"Let me give you an illustration of this. Last spring I was called up by telephone at my farm in Westchester County, about forty miles from New York, by a banker in Philadelphia, who told me that he represented a street railway system in one of the southern towns which was threatened with a strike and asked me if I could not communicate with Mr. Mahon, in Detroit, the representative of the street railway employes, and see if, as the head of the Conciliation Department, I could not have this strike put off.

"He said, in answer to my question as to whether I might say that he was willing to arbitrate, that he did not wish to commit himself to that, but that I might say I thought I could bring about conciliation. I called up the office of the Civic Federation in New York by telephone, and in fifteen minutes a dispatch was on its way to Detroit, reading: 'Sorry to learn there is a strike threatened in such a city. I hope it won't be permitted to occur until the Civic Federation has an opportunity to see what it can do. I think we can bring about arbitration.' The reply we received was a model. It said: 'You may be sure no strike will take place until the Civic Federation has had a chance to show what it can do. If arbitration is offered on fair terms it will be accepted.' The result of that was that the trouble was settled without a strike, and both sides wrote to the Civic Federation thanking it for its action. I think that is particularly interesting from the fact that I never saw anybody.

"It is the policy of the Conciliation Department to do its work privately. People often never know the Federation has had a hand in settling disputes that are settled. In the case I am about to tell you of, however, the parties interested gave it to the papers. A strike was in progress on the Southern Railway. Neither side wanted to make the first approach to settlement,

because that would have been a sign of weakness. When the situation was brought to my attention I asked for a conference, which was granted. In the course of a conference lasting two days the question was settled honorably, and, I think, satisfactorily to both sides.

"Not so long before that the Department had been called upon by a large paper manufacturer to settle a jurisdictional dispute between two unions, which between them did all the work in his factory. It threatened to hang up the entire business. Through the agency of the Conciliation Department the two unions were brought together. They talked the thing over in good humor and the thing was settled and all trouble averted.

"In another instance a jurisdictional dispute affecting a railway not far from New York was involved. The two unions concerned were invited by the Federation to come to New York. They came to New York, to different hotels, and that was as close as we could get them together. They went home, and after a little while we got them to come back again, this time to the same hotel, and that was the end. When they met they settled the dispute.

"Now, these are illustrations of the sort of things the Conciliation Department is doing all the time. I hope you feel as we do, that it is the kind of work well worth doing. We think that the more widely it is known that there is such an agency, the more industrial disputes can be settled. And if, after hearing of it to-night, you will be led to avail yourselves of this agency, or of the local one here, which will do the same thing, I am sure you will have no cause to regret it.

"It gives me great pleasure to have had the opportunity to tell you this simple story, and to thank your hostess on behalf of the Conciliation Department for giving me this opportunity."

MISS GERTRUDE BEEKS, Secretary of the Welfare Department of The National Civic Federation, illustrated an address on the subject of its work with stereopticon views. She spoke of the scope of The National Civic Federation and referred briefly to the work of its various departments. Portraits of members of the Executive Committee were thrown upon the screen, among whom were August Belmont of New York, Henry Phipps of the United States Steel corporation, Samuel Gompers, John Mitchell, Andrew Carnegie, and former Secretary of the Interior Cornelius N. Bliss.

She stated that the Welfare Department is devoted to interesting employers in improving the conditions under which employes in all industries work and live, and that its activities cover the questions of sanitary work places, recreation, educational opportunities, homes, and provident funds.

After giving consideration to the first essentials to the welfare of the employes—steady work, an equitable wage, and reasonable hours, the employer's attention should be directed toward meeting the pressing necessities for their physical well-being in the work places.

In taking up the question of ventilation, she spoke especially of the conditions under which the stationary firemen work, and said: "Do we realize that these men, especially in our great buildings in the large cities, sometimes, and I am sorry to say, often work without any ventilation? These men," referring to a picture, "are in the second sub-basement in a large building in New York City, where there is no outlet whatever for the foul air except the door which leads into the next sub-basement, where the condition is exactly the same. The temperature reaches as high as 110 degrees in the summer, and it is almost—I might say it is quite—criminal. It is a simple matter, indeed, to provide ventilation for these firemen. Mr. Belmont heard Mr. Timothy Healy, of the International Stationary Firemen's Union, explain at one of our meetings these conditions. He had just finished a large building in New York City, and asked Mr. Healy to meet him the next day to determine whether or not the arrangements were satisfactory for the stationary firemen. Mr. Healy was amazed to find the system of ventilation so perfect in that great building and how well the stationary firemen were provided for by this busy man, who has something else to think about besides the individual employes. When a man who is so busy can do this there is no excuse for any other man forgetting his employes.

"The glass factories also have, many of them, good arrangements for bringing cool air into the faces of the blowers. The metal polishers are also in many instances protected against accident from the breaking of the emery wheel, as well as from the injurious effects of the dust. But the death-rate from tuberculosis among metal polishers, where there is no contrivance for exhausting the dust, is tremendous, and greater attention should be given to the protection of those workers. Fans sometimes are provided for driving out the fumes of the acid used by the dippers in the silver trade and the brass trade, which otherwise would permeate the entire plant and cause a great percentage of illness.

"I have recently been through many of the mines in the anthracite coal fields, and visited the most remote recesses of some in order to find whether the miners get air where they are working, and in a remote corner of this particular mine shown in the picture I found the air better, I am thankful to say, than in many factories of the United States."

RESIDENCE OF MRS. POTTER PALMER IN WHICH THE CHICAGO MEETING WAS HELD.

Examples of improvements which have been introduced by employers along different lines were contrasted with bad conditions. The many modern conveniences which have been supplied for the benefit of employes were a surprise to all, and as one labor man put it, "Any employer who saw the splendid arrangements which have been introduced by other practical employers would thus be induced to install such improvements, for he would be ashamed not to do so."

PRESIDENT AUGUST BELMONT, of The National Civic Federation, followed Miss Beeks' address. He said in part:

"In 1900, when the Civic Federation was definitely founded, it embraced in the scope of its work a number of subjects of national interest, but the Industrial Department became practically the conspicuous one, because at that time the industrial situation had become so acute that its work in conciliation gave the impression that that was its only office.

"Its object, expressed in general terms, is to promote industrial peace, and there is not one of its departments, as you have been told, but assists in that work. The Conciliation Department finds its work where difficulty in securing an agreement exists. The other departments tend to educate both employer and employe that they may avoid differences.

"A year ago the Municipal Ownership League of New York polled a vote so large that it was apparent that the subject must be studied. The Civic Federation called together about 150 men, representing dissimilar opinions on municipal ownership—those who advocated it and those who opposed; those who had been writing upon the subject and also those interested in transportation and conversant with the operation of public utilities. Their deliberations resulted in the appointment of a committee of twenty-one, charged with the purpose of studying the operations of public utilities both in this country and in Great Britain. They conferred upon a committee of five the preparation of a report on their findings. The Civic Federation did nothing but use its best effort to supply the means to carry out what this committee undertook. It exercised no influence as to the selection, and on that committee were some of the most ardent advocates of municipal ownership of public utilities that we have in this country. They have visited England and have studied the subject in this country. They engaged their own engineers, their own experts, and did their work just as they chose and in whatever manner they thought best, and I am given to understand that within a short time their report will be ready. I understand that it will cover something like 11,000 pages, so you will perceive that a pretty thorough piece of work has been done, and that the Civic Federation folks will furnish teachers and those who are to discuss this subject a proper and thoroughly non-partisan and unbiased text-book. That is only illustrative of how the Civic Federation works.

"I have seen it suggested that a branch of the Civic Federation was to be established here. Of course that must come entirely in a spontaneous manner from you here in Chicago, if you deem such a step wise. In Massachusetts a Civic Federation of New England was organized some two years ago and now is an active and successful organization. They do their work independently of us, but in harmony with us. They have a conference on Thursday to consider this welfare work which has been put before you and the question of old age pensions and insurance of wage-earners. We have taken up that subject in New York.

"I only hope that the suggestion that an active co-operation be started here in Chicago will take form and I am sure with the enormous interests you would have to care for in the Middle West you would soon gain an importance which you can hardly realize and which would tend greatly to solve this subject, so important to our peace and welfare."

WARREN S. STONE, Chief of the Brotherhood of Locomotive Engineers, stated that it was his belief that the question of wages and the labor conditions of our country are the prominent questions of the day. Continuing, he said in part:

"The Civic Federation has enabled capital and labor to sit down and discuss in a friendly way their differences. I am a firm believer in the face to face conference.

"Leaving all question of sentiment out of it, boiling it all down to the basis of dollars and cents—and that is the basis we figure on to-day largely—the Civic Federation has enabled the Board of Locomotive Engineers to make two or three of the best settlements it ever made, and in doing so it has been the means of making settlements that perhaps have brought to our individual members over $300,000. The Civic Federation has done that for us, and I cannot speak in terms too high for the good work that it is doing. It is an educational work all the way through, and when you bring the laboring men together you find that all labor leaders are not demagogues, and that all capitalists are not what they are represented by some.

"I do not believe the time is ever coming when there will be no differences to settle between those who have labor to sell and those who have to buy labor, but I do believe this movement of the Civic Federation will bring us closer together and will enable us to do away with that last resort of the labor organization, the strike. It is a pleasure to me to stand before you to-night and testify to the work the Civic Federation has done."

WILLIAM MAHON, International President of the Amalgamated Street Railway Employes of America, referred to the opposition of certain Chicago labor unions to meeting representatives of capital at Mrs. Palmer's as corresponding to the radicals of the Harriman type in the capitalist class who refuse to go half-way or meet with their opponents. Referring to the trade union movement, Mr. Mahon said that it was here to stay. He said:

"There never has been such opposition against any institution or against any movement, yet the trade union, in spite of all this opposition, has lived. You could not crush it. The whole forces of capital turned against it could not crush it. It is a movement that will not be crushed. You might as well make up your mind to the fact that the trade union is going to live on and on. And to the capitalist and to the man upon the other side I say, you might as well make up your minds sooner or later, as did that distinguished man under whose roof we meet to-night, Potter Palmer, when he told of his struggles against the trade unions by concluding, 'I have changed my mind.' And he came to recognize and deal with the unions, and he found benefit in doing so, and he fearlessly told it to the world in the declarations he made before he died.

"The American workman, schooled in the free schools and taught the rights of American citizenship, realizes that some of the titles to your wealth are as spurious, if you please, as the titles of kings and lords. We recognize that we have the same right to the same conditions, and that as men we are going to have them. We all aspire to have homes like this one if we can.

"The unions have made their mistakes, yes, lots of them, just as you capitalists have made yours, lots of them, but we are going on. We might as well make up our minds to come together to deal with one another and work in harmony and to meet the conditions that are before us. For what is it? The battle of life, after all. What have we gained when we get through by the policy of hoarding and grasping all the wealth there may be? Let us be men, let us realize the battle of life, let us recognize the conditions. You will find the men representing trade unions ready to meet you around the conference board and to take a fair position with you, and they will go more than half-way every time to adjust and settle these disputes upon a broad and fair basis. Meet with them, and by the recognition of them meet the battle of life as it confronts us. Let us deal with it. Let us form our civic federations and our organizations of all kinds that will bring men together.

"When I see the good that the Civic Federation has done, the strikes that it has prevented, the men that it has brought together, and brought peace, I must give it credit for what it has done to assist us in a number of great questions. We have settled a number of strikes that would have been great strikes, that would have involved great cities, and those things no one knew anything about because through the different officers of the Civic Federation those matters have been brought about and settled unknown to the public. And so, when we look at the good it has done, my friends, we are proud of the record it has made along that line.

"Some people say the labor unions want to wipe out the wealth of the world. We want to do nothing of the kind. We want to dynamite the hovels out of existence, if you please. We have no desire to rob you of your wealth. Give us the opportunity with our labor and we will duplicate all the wealth of the world in the next twenty years with our own efforts. I would sooner go down to my grave as poor old Bill Mahon without one dollar to leave my children, and leave a legacy behind of the improved conditions of the street railway men of the country, than to have all the wealth of the Rockefellers, all the wealth of the Morgans, all the wealth of my friend Belmont, rolled up in one pile and doubled ten thousand times."

AN interesting event of the meeting was the action of George A. Schilling, a member of the Coopers' International Union, in calling attention to the remarkable address delivered by Mrs. Potter Palmer at the Columbian Exposition at Chicago. Mr. Schilling stated that the late Governor Altgeld had found the address of so much interest to him that he had re-read it three times. So much of this address was applicable to present day conditions that Mr. Schilling said he was justified in making liberal extracts from it. Some of the quotations were as follows:

"Experience has brought many surprises, not the least of which is an impressive realization of the unity of human interests, notwithstanding differences of race, government, language, temperaments, and external conditions. The people of all civilized lands are studying the same problems. Each success and each failure in testing and developing new theories is valuable to the whole world. Social and industrial questions are paramount, and are receiving the thoughtful consideration of statesmen, students, political economists, humanitarians, employers and employed.

"The few forward steps which have been taken during our boasted nineteenth century—the so-called age of invention—have promoted the general use of machinery and economic motive powers with the result of cheapening manufactured articles, but have not afforded the relief to the masses which was expected. The struggle for bread is as fierce as of old. We find everywhere the same picture presented—overcrowded industrial centers, factories surrounded by dense populations of operatives, keen competition, many individuals forced to use such strenuous effort that vitality is drained in the struggle to maintain life under conditions so uninviting and discouraging that it scarcely seems worth living. It is a grave reproach to modern enlightenment that we seem no nearer the solution of many of these problems than during feudal days.

"It is not our province, however, to discuss these weighty questions, except insofar as they affect the compensation paid to wage-earners, and more especially that paid to women and children. Of all existing forms of injustice, there is none so cruel and inconsistent as is the position in which women are placed with regard to self-maintenance—the calm ignoring of their rights and responsibilities, which has gone on for centuries. If the economic conditions are hard for men to meet, subjected as they are to the constant weeding out of the less expert and steady hands, it is evident that women, thrown upon their own resources, have a frightful struggle to endure, especially as they have always to contend against a public sentiment which discountenances their seeking industrial employment as a means of livelihood. The theory which exists among the conservative people, that the sphere of woman is her home—that it is unfeminine, even monstrous, for her to wish to take a place beside or to compete with men in the various lucrative industries—tells heavily against her, for manufacturers and producers take advantage of it to disparage her work and obtain her services for a nominal price, thus profiting largely by the necessities and helplessness of their victims. That so many should cling to respectable occupations while starving in following them, and should refuse to yield to discouragement and despair, shows a high quality of steadfastness and principle.

"If we now look at the question from the economic standpoint and decide for good and logical reasons that women should be kept out of industrial fields in order that they may leave the harvest for men, whose duty it is to maintain women and children, then, by all the laws of justice and equity, these latter should be provided for by their natural protectors, and, if deprived of them, should become wards of the State, and be maintained in honor and comfort. The acceptance of even this doctrine of tardy justice would not, however, I feel sure, be welcomed by the woman of to-day who, having had a taste of independence, will never willingly relinquish it. They have no desire to be helpless and dependent. Having the full use of their faculties, they rejoice in exercising them. This is entirely in conformity with the trend of modern thought, which is in the direction of establishing proper respect for human individuality and the right of self-development.

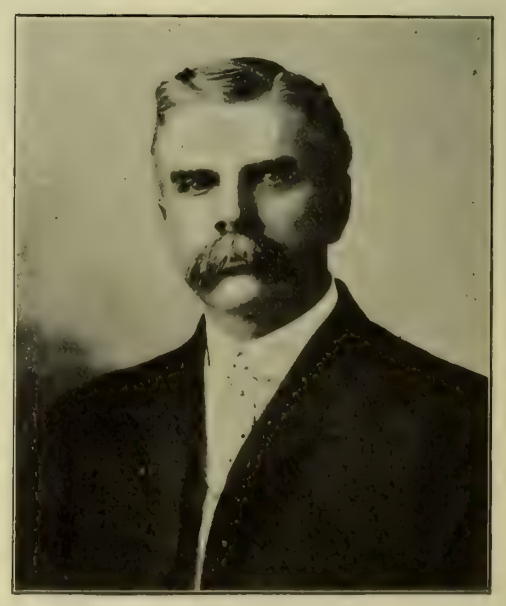
"Our highest aim now is to train each individual to find happiness in the full and healthy exercise of the gifts bestowed by generous nature. Ignorance is too expensive and wasteful to be tolerated. We cannot afford to lose the reserve power of any individual. We advocate, therefore, the thorough education and training of women to fit her to meet whatever fate life may bring; not only to prepare her for the factory and workshop, for the professions and arts, but, more important than all else, to prepare her for presiding over the home. It is for this, the highest field of woman's effort, that the broadest training and greatest preparation are required."

MANY letters were received from those who were unable to attend the meeting, some of which are abstracted as follows:

James Duncan, International Secretary-Treasurer of the Granite Cutters' International Association of America—"It is a happy sign of the times that such meetings are being held in our great industrial centers, and the people from the different walks and positions of life and business are meeting on a common level to discuss subjects which make for national business and progress."

Mrs. J. Ellen Foster, special representative of the United States Department of Justice—"I regard The National Civic Federation as a noble exponent of the best thoughts of modern industrialism. I congratulate the representatives of the Federation in the West that so royal a woman as Mrs. Potter Palmer will be its hostess at the beginning of this year."

Homer D. Call, Secretary-Treasurer of the Amalgamated Meat Cutters and Butcher Workmen of North America—"I assure you that my hearty sympathy is with you in the movement, as I firmly believe that The National Civic Federation is accomplishing a great work in harmonizing labor and capital and the uplifting of humanity."



T. J. Dolan, General Secretary-Treasurer of the International Brotherhood of Steam Shovel and Dredge Men—"The organization which your committee represents is a great institution and has done great work in bringing employers and employes into closer relations. In behalf of our organization, I desire to extend the

WILLIAM D. MAHON

MISS GERTRUDE BEEKS

WARREN S. STONE

best wishes and entire support of our brotherhood throughout the country in its great work."

Michael Colbert, General Organizer of the International Typographical Union—"The question of good sanitary conditions is a very important one from an economic standpoint as well as from the point of view of the health and comfort of the workers. Good light, good ventilation and good toilet facilities mean that the health and comfort of workers are conserved and thereby greater efficiency in workmanship is secured. Less time is lost through sickness and more work is done. The printing offices to-day, from the sanitary point of view, are far superior to those twenty years ago, and I have noticed in offices where attention is paid to light, ventilation, etc., the printer of to-day is superior physically to the printer of other days. He is also more sober and works steadier. The shortening of working hours has had something to do with this, of course, especially in morning paper offices, but improved sanitary conditions account for part of the improvement."

John Mitchell, President of the United Mine Workers of America—"I am so thoroughly acquainted with the splendid efforts that have been made by The National Civic Federation to bring into closer and better relationship the interests of workmen and employers, and indeed the workmen and employers themselves, that I dislike to absent myself from any conference that is held under the auspices of that organization.

"It seems to me that if the best judgment of the capitalists and laboring men would assert itself, assisted by the sympathetic sentiment of public-spirited citizens, much could be done to establish a relationship between these great forces of modern society, which would at least reduce to the minimum the number and severity of industrial disturbances. I believe that this desirable end would be more speedily attained, if there were a fuller recognition by each of the other's rights and responsibilities.

"The time has long passed when either side in the industrial field can say with impunity, 'this is *my* business.' The times has certainly arrived when industries should be regarded as our business. In other words, there must be co-operation and mutual helpfulness in the conduct of business and industry if we hope to have a satisfactory and honorable peace."

The Rt. Rev. Henry C. Potter, Episcopal Bishop of New York—"The Civic Federation began in a high purpose; and has gone forward, as I rejoice to believe, along lines of the utmost value and importance. It has certainly not always (there are some who believe) seen our great social and industrial problems with an infallible eye—but then, you and I don't know any human power that can do that. What it has done, however, has been to help men and women, divided by fragmentary and most imperfect views of their several interests, to see them in a larger light, and with fuller discernment."

RECENT ACTIVITIES OF CIVIC FEDERATION REPRESENTATIVES.

SOME OF THE ADDRESSES DELIVERED BY OFFICERS OF THE WELFARE, INDUSTRIAL ECONOMICS AND IMMIGRATION DEPARTMENTS.

MISS HELEN VARICK BOSWELL has delivered numerous lectures before women's clubs for the Federation's Welfare Department upon the subject of "Welfare Work." Illustrated lectures have been presented to:

A convention of twenty-five women's clubs of Troy, N. Y.

The Woman's Educational and Industrial League of Boston, an organization of large membership, in whose work the leading women of Boston participate.

Civitas Club of Newburgh, N. Y., with an audience of four hundred and fifty men and women; although it is a woman's club, there were present many manufacturers.

The College of Agriculture, Cornell University, Ithaca, N. Y.

The Pine Hills Fortnightly Club of Albany, N. Y., the leading organization of women. The meeting was held at the Urania Club House, the principal men's club, and was attended largely by both men and women interested in public affairs.

During January three lectures were given by Miss Boswell in Washington, D. C., attended by many prominent officials, government employes, and influential residents of that city. The improvements shown as adopted in many of the leading establishments of the country stimulated an interest in such facilities for Government employes as well as those of private enterprises.

The Industrial Session of the State Federation of Women's Clubs of the State of New York, held at Saratoga, was conducted by Miss Boswell. There were other speakers along the same line secured by her.

Lectures were also presented before the Woman's Legislative League, the Woman's West End Republican Association, National Society Daughters of Ohio, and Sorosis, in New York City; the Woman's Republican League of Brooklyn; and the Unity Club at Washington, D. C.

In speaking before the Pine Hills Fortnightly Club of Albany, N. Y., upon "Industrial Conditions of Women Wage-earners," Miss Boswell said in part:

"Every woman in this country is a part of the industrial life of the country, if not through her own efforts, then through those of the men in her family. She should acquaint herself with its conditions, and the fundamentals upon which industrial life is built. We are striving for a higher standard of living. How shall we start to build up that if not by improving the condition of the people who help to create the products of the world? The Welfare Department covers such subjects as apply to the health, the recreation, education, and housing of employes. Under its organization of co-operation employers get together to compare notes, and to plan such improved features as may be worked out. Progressive business men realize the economic strength of their position when they put time, thought and money into the highest development of the conditions surrounding their work-people. Many business men do this without other than their own prompting, but we all know that public sentiment is a great factor in bringing about any needed reform, and it is well that there should be brought before men and women the old and new methods under which work is done, so that we may see improvements, see bad conditions, and judge where judicious suggestions may be made for improvement. Just here is where the clubwomen of this State can, and often do, exert a powerful influence for good by personally looking after the degree of enforcement of laws and endeavor for improving factory and shop conditions. There will be found no greater antidote to the dangerous encroachments of socialism than such welfare work. The cry of the socialist is always that nothing has been done, nothing is being done, and nothing will be done for the amelioration of the working man and woman. To show that much is constantly in progress to improve conditions is the best answer to the socialistic cry, and the way to prevent the making of socialists is to surround workers with such conditions as will make them comfortable in their work, happy in their homes, and appreciative of the form of government under which they live. The real laborers of the country have no socialistic trend. One of the best known leaders, Samuel Gompers, has said: 'I have kept close watch upon your socialistic doctrines and the work of your movement for thirty years, and I am entirely at variance with your philosophy. I am not only at variance with your doctrines, but believe economically you are unsound, socially you are wrong, industrially you are an impossibility.'

"The pessimists of the country have had so much to say of the horrors of our industrial life that I am glad to show some of its brighter sides and to bring before you by means of stereopticon pictures the many advances and improvements that are daily being made for the comfort and health of women workers especially."

MISS GERTRUDE BEEKS, Secretary of the Federation's Welfare Department, has given illustrated lectures on "What Employers in Different Industries are doing to Ameliorate the Conditions of their Employes" before the:

Turn-Verein Von Brooklyn, E. D., at Brooklyn, N. Y.

Institute of the Eighth District of the Pennsylvania Young Men's Christian Association in Philadelphia.

Georgia State Federation of Women's Clubs at Macon.

A meeting of the employers and employes in Chicago, held at the residence of Mrs. Potter Palmer.

The employers of Muncie, Indiana, and their wives, at the home of Mr. F. C. Ball, a prominent glass manufacturer of that city; and before the

City Secretaries of the Young Men's Christian Association at Brooklyn.

Other addresses were before the Massachusetts State Conference of Charities, at Worcester, Mass., on "Welfare Work, a Safeguard to Public Health," and a joint meeting of Women's Clubs under the auspices of the Alta Lita Club of East St. Louis, upon the subject "What Women's Clubs May Do to Prevent Child Labor."

E. STAGG WHITIN, Secretary of the New York Welfare Committee of the Federation, lectured on the topic "Movements for Social Service," before the Woman's Club of Whitinsville, Mass. Mr. Whitin said in part: "The primary institutions, such as the family, the church, the vocation and State, are ever being strengthened and vitalized by many lesser institutions. The industrial revolution brought about changes in these institutions, and created in America many of the more vital problems of our social life today. To their solution, religious agencies, such as missions and other organizations for the 'salvation of souls,' were the first to appear. Gradually, great relief societies have been organized, and the church itself has become socialized. The establishment of the church house and settlement has come as a development out of the earlier forms, and is tending to guide the movement from the religious or salvational to the broader social or educational; thus the extension of public school and other educational agencies to take up the work of social prophylaxis.

"The vocational side, despite its great needs, has been almost untouched by these more social movements. Today, renewed interest in the introduction of welfare work into factories and in industrial education has tended to add a new breadth to the movement, and to point out additional possibilities of advance."

The speaker then showed the recent developments that have been made in this latter type of work; the part the Welfare Department of The National Civic Federation had played in it; how necessary was the work of improving the conditions existing in many factories, and the necessary industrial preparation of those who are to take up factory work now that the increased educational advantages in the schools are tending to bring about a better standard of living.

At the request of the chairman, the speaker answered many questions pertaining to the congested districts in New York City. He showed how exaggerated was the general thought in regard to the conditions existing on the East Side, on account of the many misleading articles which have been written in regard to it. He pointed out that the distribution of the Russian immigrants to other parts of the United States, and the extension of popular education, would very soon relieve the congestion, which is the result of the gathering together of a distinctly foreign population under the influence of Old World customs.

The club honored the speaker with a full attendance for the first time in its history.

J. W. SULLIVAN, of the Typographical Union and a member of the Federation's Public Ownership Commission, in addressing the Home Economics Club, Teachers' College, Columbia University, upon the trade union's attitude toward welfare work, said:

"The trades unionists are observing sympathetically The National Civic Federation's Welfare Department, and its work is upheld by those who understand it. They see that it is discriminatingly promoting certain specific betterments for the working classes, thereby supplementing trade union endeavors and carrying out the good intentions of the enlightened and fair-minded employers who are engaged in the work. It recognizes that the trade unions are chiefly engaged with wages and hours, and the labor laws, and the union regulations associated with wage scales or those laws; that they are busy pushing organization or that they hesitate to bring up with employers new points that may cause friction. Hence they welcome the pacific intervention of a third party. There is a set of betterments for labor in which the employer, seeking to do his full duty by his employes, may engage his energies. I have traveled much over the world in the interests of labor, having been sent out by trades unionists or others, and I am impressed with the general need of well considered forms of welfare work. These betterments, for one thing, result in doing away with shop nuisances, and those inconveniences and burdens of life which factory hands cannot very well take hold of themselves, but through attention to which the employer may make his employe comparatively happy. Working people, laboring separately, may not experience shop nuisances very much, but when brought together by tens and twenties and hundreds and even thousands they find that, in the case of perhaps only one nuisance there may be a menace even to life itself. For instance, drafts of cold air are frequently a source of serious discomfort. The question of whether the window shall be open or closed becomes a vital question in a factory, and factions 'for' and 'against' arise; those far from a window want it open; those near it want it closed. Welfare work suggests a different solution. It brings into play the knowledge of other forms of ventilation.

"Trade unions took part in the establishment of the bureaus of labor. The National Bureau of Labor was not established until the American Federation of Labor again and again passed resolutions in its favor. The State bureaus also came through the unions largely. These bureaus cover the question of factory inspection.

They are also charged to enforce laws as to fire escapes, protection from dangerous machinery, seats for women, weekly payment of wages, abolition of truck stores, the guaranteeing of wages by lien laws, and others. Trade unionists have also proceeded to get the Saturday half holiday, Labor Day, and other holidays. We hold that such reforms were in the main the results of union effort; in any State where the unions are not strong, you do not have them.

"But even after the rules of the unions and the labor laws of the State are in force, something else is needed to improve the conditions of employes.

"The National Civic Federation has gone to the trouble of sending agents about the country, to ascertain what is being done for the betterment of the every-day conditions of the workers without ulterior motive, and one little thing added to another brings up the sum of the betterments in evidence until we have a principle involved that can be recommended highly by union men, a principle that when observed serves to bring about a better spirit and a better relationship between employer and employe.

"Some employers are sincere. Some are self-denying. The most violent radical will concede that much. Employers do not always follow to the bitter end the law of competition. They will stand in the way of it on occasions. They do not even in the majority of cases quote to labor men, 'We can get men just as good as you are at a somewhat lower rate, and men that will never growl.' And on the other hand, union men give full recognition to the good work of considerate and honest-minded employers, and encourage an increase in their number. These two classes of men with hearts, whose pocketbooks destiny has unbalanced, seem to be getting together in the Civic Federation.

"The well-intentioned employer often has to be educated.

"A good man in Chicago said to me not long ago: 'My six hundred garment workers ought to have plenty of ventilation. The air was foul the other day, and I went in and threw up the windows. The next day there were twenty not at work, reporting they had cold.' This was an enlightened man in many ways, but he knew nothing about ventilation.

"Imagine working in a factory where you have not a clean towel except one you may bring yourself, and you have to hide that because some one else may steal it, no soap, no water running regularly, no toilet room, a factory in which you have bad light, poor heat, questionable drinking water, where you must eat your luncheon at your cluttered bench, and where the floors show lack of cuspidors, and the walls covered with clothes for the lack of lockers. It is there that the Welfare Department may aid by representing to the employer what has been done by other employers.

"Certain occupations are open to special forms of welfare work. In the building trades here in New York we have many thousands of men working a bad day like this in the open, with usually no place for storage of their street clothes, and none of the conveniences you would expect in a building. These trades ought to have portable houses for such purposes. Many of the workers are intelligent men, well educated; and there they are working under conditions that take from them their self-respect.

"Trainmen need bunk houses. Formerly, at the ends of railroad divisions, the men had usually no place to go for rest and food but to a cheap hotel. Now bunk houses and railroad club houses are becoming more and more common.

"For molders, gas workers and blacksmiths a necessity is a place for dry clothing.

"In the metal trades, we find this bad example: Sixty-five men in a room with only six windows; the whole force working in acids and amid great machines blowing off an immense quantity of dust. The first question here is not high wages, nor short hours; it is welfare sufficient to make life tolerable.

"My own trade of printing is unhealthful from several causes, yet printing office conditions, in general, continue bad. In a certain office, for example, a linotype machine was in a draft. The man operating the machine contracted a bad cold which ran into consumption. He left the employ of the company. The story was repeated with a second man and a third man. The matter was brought to the attention of the officials and the ventilation of the office improved. If that can happen among printers, what must be the situation as to sanitary conditions among the newly-arrived Russian Jewish garment workers, so much poorer and more helpless? As a fact, it is usually bad in the extreme.

"There is little care taken of teamsters. Many of them in bad weather go into a saloon and get a drink two or three times a day, which is not wise welfare work for themselves. There was once a place in Hudson Square where teamsters could get a cup of coffee or a meal in the while waiting to deliver goods at a [illegible] a good plan, which ought to be imitated.

"[illegible] the room there is for re[illegible] of certain neglected duties in our developing civilization.

"We find as we look into welfare work that with relation to it there are classifications of industrial workers [illegible] American white working people, the negroes who are [illegible] from the white by a [illegible] the foreigners who are in some cases almost as far from the American whites as the negroes. Three different fields for welfare work.

"I would not say one word for welfare work if I thought the outcome would be to develop in the wage worker a feeling of helpless dependency, or to advertise employing class-charlatans, or to modify one worker's demands through the trade unions.

"Employes can occasionally do an acceptable piece of welfare work for the employer. They can make sure that their representatives tell him the truth when conditions are good, and do not ask impossibilities when they are bad. They can show appreciation when the employer really does well by them. They can mitigate in various ways the unpleasantness of the higgling in the labor market. They can put the employer in a frame of mind in which he will say, 'Well, if I have performed welfare work for you I acknowledge in turn that you are contributing to my happiness, too.'

"Welfare work for boys includes the establishing of athletic fields, bowling alleys, gymnasiums and technical and other schools; and for girls, recreation grounds, light athletics, dressmaking, millinery, and above all, cooking.

"If there is one supreme crying need throughout the world it is for better cooking, how to make food palatable and how to be sure of its wholesomeness. If you are studying all that, young ladies, you are on the way to saintship. You are helping in a radical way to make people better. The roots of your labors run down to the stomach, the boiler of human machinery, and up to man's moral nature, the foundation of Society. If you can help the poorer girls of the hard-working classes to study personal health, household economy and be good housewives, you are engaged in a noble work."

FRANK JULIAN WARNE, Secretary of the Federation's Immigration Department, in addressing the South Carolina Cotton Manufacturers' Association at its recent annual meeting at Spartanburg, S. C., said in part:

"Among the impressions I take away after a most instructive two weeks' trip in various sections of your Southland, is that of the remarkable, almost wonderful industrial development or revolution through which you are passing.

"The unprecedented and rapid growth of your industries has already brought to you many vexatious problems new to this section. The building of your cotton mills, for illustration, has brought about within a period of ten or fifteen years a widespread movement of population from your rural districts to the villages and cities. This movement has been so rapid as to impose upon you with startling suddenness pressing issues of a most intricate nature. While it is true that such problems have already been developed through various stages in other sections of the country, yet it does not follow that the same outcome can be prophesied of your section. These problems, while of the same general character, differ radically because of the varying elements that go to make them up, and it is of these differences and the part they play that public opinion should be correctly informed.

"You have your views, and no doubt your own conception as to how these problems should be solved. But at the same time it is highly important that the public should know your views, and I am convinced that The National Civic Federation can be of incalculable service to you as manufacturers and to your section in the upbuilding of your industrial state, for I take it that in your progress public opinion, not only of the South but of the nation at large, is to be a determining factor. And as captains of industry who have fought to your present position over obstacles which to many seemed almost insurmountable, I am sure you recognize the value of a correctly informed public opinion. It is in this connection that The National Civic Federation has its greatest usefulness to you. This organization has 'a decent respect for the opinions of mankind,' be these opinions those of the industrial leaders of the South, or the North, or West. It is a forum where representatives of all interests and all sections can meet and present their views through their leaders. The means which the Federation uses for accomplishing this purpose are conferences for the discussion of questions of public moment. At these conferences all 'sides' are represented and each is given equal opportunity to present its aspect of the issue. As an illustration of this feature of the Federation's work, I call your attention to the recent conference in New York City in December at which the child labor problem, in which you are particularly interested, was one of the questions discussed. You sent able men there to present your views and opinions. I believe that what your representatives said came as a surprise to many who heretofore have not had the opportunity of considering all the phases of this problem.

"In order to give you a general idea of the Federation's work, I might say that the organization is composed of three elements; of employers, representing the larger and more important industries of the country; of employes, representing the great labor organizations, some of them international in their scope; and of representatives of the public, the latter including professional men and public-spirited men from all sections of the country.

"The efficiency and standing of the Federation can probably best be indicated by mentioning the names of some of those who are actively identified in its work. The president of the organization is Mr. August Belmont; one of the vice-presidents is Mr. Samuel Gompers, President of the American Federation of Labor. Up to the time of his appointment by President Roosevelt as Secretary of the Department of Commerce and Labor, Mr. Oscar S. Straus was also a vice-president. Another vice-president is your own fellow-member, Captain Ellison A. Smyth, and another one of your members, Mr. Thomas F. Parker, is Vice-Chairman of the Immigration Department. The officials of the organization also include such public-spirited men as ex-President Grover Cleveland, Mr. Andrew Carnegie, Archbishop Ireland, Mr. John Mitchell, President Eliot of Harvard University, Hon. Seth Low, Mr. Henry Phipps of the United States Steel Corporation.

"In addition to the conference feature referred to, the Federation's work is also carried on through departments organized for the purpose of making special investigations along particular lines. These departments include Immigration, Welfare, Conciliation and Arbitration, Trade Agreements, Industrial Economics, Political Reform, and Public Ownership. The methods under which these departments carry on their work can best be illustrated perhaps by that of the Public Ownership Commission. This body of one hundred men representing public-spirited citizens in various walks of life in different sections of the country was organized more than a year ago to carry on a thorough investigation as to public ownership of such public utilities as water, gas, electric power and light, and street railways. This commission, composed of those who oppose as well as those who favor public ownership, selected a committee of twenty-one to make an impartial investigation and to examine into the conditions and results in this country and abroad of public ownership and operation, public ownership and private operation, and private ownership and operation. Each 'side' selected its own paid experts, and these and the committee of investigation have spent many months in the principal cities of the United States and Great Britain. Such was the attention given to the selection of this important body—every shade of opinion being represented—as to assure an impartial and fair investigation and report, and I believe that when it finally presents its report, it will have a widespread influence in directing public opinion on this pressing issue.

"The other departments of the Federation are selected with the same care and with the sole idea of securing facts that are basal and fundamental. The Immigration Department in which you leaders of the South are greatly interested at the present time is also composed of different elements."

A MOST SENSIBLE VIEW.

WE doubt the efficiency of pity to solve the problem of child labor. A certain value is derived from pictures of the bent shoulders, the contracted lungs, the tired limbs, the sallow faces, the vacant eyes and the dwarfed intellects of those we are banishing from home, playground and schoolroom to the weary tread of our sweatshops, factories and mines. But not all child laborers are "slaves." Those who denounce the evils of child labor in such generalizations as that "two million little, wan and dwarfed child toilers march in the wage-slave ranks of America's industrial army" are a menace to this reform. Intelligent people, seeing many of these two million children who are not "wan" or "dwarfed," and who bear no other visible marks of slavery, discount the whole cry against child labor as sentiment. Many of the two million working children in America are between fifteen and sixteen years of age and are in occupations and laboring under conditions not injurious to themselves or to society. Not all glass houses employ little boys at night. Not all coal breakers are dense with clouds of dry dust. Not all telegraph offices employ little children to carry messages at midnight to houses of vice. Not all children in Southern cotton mills work through a twelve-hour night. Some one tells of seeing a little girl in a Southern cotton mill rudely awakened at night by a dash of cold water in her face. Homilies on child labor followed this incident, abounding in graphic descriptions of numberless little girls cruelly awakened night after night by splashes of cold water.

Nothing is gained by exaggeration; much is lost. It is enough that some of the two million are toiling all night in glass houses; that some coal breakers compel little boys of ten years to work in clouds of dust so dense as to completely hide the light and fill the lungs; that some little girls of eight years toil through a twelve-hour night in Southern cotton mills; that some of the little children of New York are crushed in body and soul in the slavery of sweatshop labor. The truth is bad enough. Let the picture be drawn with simple accuracy, and we may hope to arouse, instead of sentiments of pity, the sense of social justice; an appreciation of the relation of this system to our social institutions. A demonstration of the loss to society, the injustice to the laborer, and the dwarfing of the progenitors of our coming generations, will be more effective than specific pictures of little children who suffer from the wrong.—*Owen R. Lovejoy, Assistant Secretary of the National Child Labor Committee, in the New York Independent.*

The National Civic Federation Review

VOL. III. NEW YORK, SEPTEMBER, 1907 No. 1.

FOR INDUSTRIAL WORLD PEACE.

SPEAKERS AT MR. CARNEGIE'S HOME DECLARE THIS THE REAL BASIS OF INTERNATIONAL PEACE—A WORLD CONFERENCE PROPOSED.

"HAS not the time come for another international conference, to be held at the instance of the United States, to bring about improvements of conditions surrounding labor and promote industrial peace? I think it has."

In this declaration President Nicholas Murray Butler, of Columbia University, sounded the keynote of the "Industrial Peace Evening" at the home of Mr. Andrew Carnegie, New York City. Of the many conferences that have been held under the auspices of the National Civic Federation to consider the improvement of relations between employers and employes, and lessening of industrial strife, this was one of the largest, and in certain respects most significant. The gathering of nearly four hundred representative employers, labor leaders, professional men, educators and publicists under Mr. Carnegie's hospitable roof was in itself a striking illustration of the progress that has been made in recent years toward conditions in the industrial world which now make such a proposal as that of President Butler timely and feasible, as the logical "next step."

Throughout the discussion the analogies of national warfare and industrial disputes were strikingly displayed. Understandings between employers and organized labor are based upon agreements which are in the nature of treaties between the contracting parties. By these quasi-treaties not only are disputes and difficulties terminated but they are also avoided. They are agents of peace not only in fixing the mutual conditions of employment, but in providing a mechanism whereby differences of opinion respecting the contract shall be interpreted.

Equally evident was it that just as good will and kindly intention must necessarily supplement the agreements among nations, so must they animate employer and employed in their mutual relations. It was pointed out that the letter of the contract without its true spirit—a genuine desire to understand and deal fairly with one another—must be ineffective to accomplish good results.

CONFERENCE ON INDUSTRIAL PEACE.

THE PROBLEM STATED.

Mr. Carnegie, as host, extended a hearty welcome, in behalf of himself and Mrs. Carnegie, to the guests assembled, and in referring to the coming Peace Congress remarked that peace, like charity, should begin at home.

"Before we begin next week," he continued, "in a greater assembly of a great many people from different parts of the world, striking forth for the world's peace, it is most fitting that we should do something on the home scale for ourselves and neighbors. Making peace at home is the surest way of spreading it abroad. The great object we have in view is arbitration, and arbitration is a principle that works both abroad and at home.

"It is a fundamental point in law that no man shall sit as judge in his own cause. So it should be with trades unions and employers. Neither the men nor the employers should assume to sit in judgment on their own case, because neither sees both sides of the question. (Applause.) It is very rarely, indeed, in my experience, that one party is entirely right and the other party wholly wrong. You must get a disinterested party to judge between them, and all will be well.

"That same principle applies to nations. Nations should no longer be allowed to disturb the general peace of the world, because all nations are now interdependent and much concerned, materially as well as morally, in the preservation of peace.

"So it is in the industrial system. No branch of employers should be allowed to sit in judgment upon their own case and disturb the operations of the community in which all are interested. And the man or the nation that refuses to submit his judgment to disinterested parties is prima facie in the wrong. The man says : 'What, my honor! Shall I allow a man to insult me and not strike back?' No man ever insulted, dishonored, another in the world. No nation can dishonor another. All dishonors from which we suffer are self-inflicted. The principle of arbitration is what laborers should stand for; is what employers should stand for.

"It gives me a special pleasure to meet the representatives of labor. When I look back I think how much pleasure I have experienced with my interviews with workingmen. I could tell you many stories about strikes, and I wish to say this word: It is not wages, as a rule, that cause strikes—no, it is the lack of recognition on the part of the employer [illegible]. (Applause.) I remember a serious [illegible] we had a committee of sixteen [illegible] committee of thirty-four. [illegible] represented a sliding [illegible] waited [illegible] was at Pittsburg. Billy Edwards rose [illegible] upon the whole we don't object to; that is a fair scale, but what we object to is that it is not rightly divided. Now, Mr. Carnegie, you take my job.' I said, 'No, Mr. Edwards, Mr. Carnegie takes no man's job.' They began to laugh, and I laughed, and Billy said, sitting down: 'We won't have any trouble settling this.' And we did not. (Applause.) It is astonishing what a joke will do to settle difficulties that we meet with in life.

"I want to express the genuine, heartfelt happiness of Mrs. Carnegie and myself for this opportunity of meeting the two branches, equal in every respect, who bargain with each other—the one for labor, the other for satisfactory wages; one just as welcome as the other, and both doubly welcome. It is something we will remember with great happiness all our lives, and it is another instance that I will look back to in after years, when I become an old man (laughter and applause), and I will be telling some other audiences what a glorious time I had with the delegates of the Civic Federation Peace Evening. I thank you, one and all, for giving us the pleasure of meeting you here this evening."

THE ISSUE OF THE HOUR.

Mr. August Belmont, President of the National Civic Federation, followed Mr. Carnegie:

"There is no time more important than this for a gathering of this nature. It is very easy to remain at peace during prosperous times, but sometimes times change, and I feel greatly impressed that the unparalleled development of our country and its prosperity have been so extraordinary that it is undoubtedly time to strike a halt, and not wholly undesirable.

"I do not desire to be either a prophet or an alarmist, nor will I discuss the causes which appear to lead to the beginning of it; but it is unquestioned that we should prepare ourselves through just such gatherings as this to understand and solve the problems with which we are at any time likely to be confronted.

"The trade agreement, in my opinion, is one of the most potent factors toward the solution of industrial peace. Only recently, among others, the typographical unions throughout the United States have signed a trade agreement with the newspapers, carrying them through the next five years, and in so doing the men undoubtedly provided themselves in the immediate future with industrial peace. Only yesterday one of the most stupendous movements among our railroad men in the West was brought to a happy issue through the medium of the trade agreement. Our host, as we all know, is greatly interested in the promotion of international peace. There is no more potent ally than industrial peace in the promoting of that movement, and on that subject I shall have the pleasure later of asking President Nicholas Murray Butler, of Columbia University, to say a few words."

THE TRADE AGREEMENT.

Mr. William F. Coakley, general president of the International Protective Association of Lithographic Apprentices and Press Feeders of the United States and Canada, spoke as follows:

"Industrial peace in anything like an absolute sense, needless to say, would be an utopian dream. I take it that we are here this evening not to discuss an idea at once impracticable and illogical. The industrial peace we have in mind does not mean the substitution of ox-like dumb submission to conditions that call for betterment, but rather does it mean a consideration of methods whereby those differences that must inevitably arise in the relation of employer and employe may be equitably and peacefully adjusted. Trade unionists, no less than employers, have come to realize that the cost of strikes and lockouts, not only to the parties immediately involved, but also to the unprotected public, means a waste of the nation's wealth; also that such unreason and strife afford welcome opportunity to those doctrinaires who from press and platform preach labor and capital are and must be enemies.

"In this enlightened age, war between labor and capital is no less unholy than war between nations. That this truth is forcing recognition I shall in the few moments at my disposal point out to you several unmistakable signs. Here and there strikes and lockouts do occur, and are made much of by the newspapers; but it is no less true that there is at work a powerful influence for a more rational and more equitable method of adjusting the disputes from which these industrial phenomena arise. The strike and the lockout are being discarded for the trade agreement, that most modern of methods for determining the conditions upon which labor may be bought and sold. Not including the agreement entered into in January at Chicago between the locomotive engineers and the principal railroads of the West, and that equally important agreement effected in Chicago yesterday between the companies and their train-service employes, during the past six months trade agreements, covering periods varying from one to three years, have been drawn up between leading railroad systems and the machinists, molders, boiler makers, blacksmiths, pattern makers and other divisions of their employes. And but a few months ago the New York, New Haven & Hartford Railroad signed an agreement with its conductors, trainmen and yardmen; that great organization of workmen, the longshoremen, has made an agreement with the employers; and in most cities throughout the country the street railway employes have entered into similar contracts with the companies that employ them. That large concern, the International Paper Company, and the International Brotherhood of Pulp, Sulphite and Paper Mill Workers have signed an agreement covering all its mills.

"This is but a small fraction of a number of such agreements that have been signed during this period of time. In the great building industry of New York City trade agreements are general; indeed, there are but two or three trades without them. Not only are the many branches of this important local industry governed by trade agreements, but those several agreements are made conformably to a general agreement, one covering the industry as a whole. This general agreement, called the Plan of General Arbitration, through the court of arbitration it has established, has put practically a stop to the strikes and lockouts in the local building industry, which for years has been its chief drawback.

"To say that trade agreements are sometimes broken is to offer no argument against the principle of these contracts. Where is that divinely guarded contract that has not been broken? Men in whatever their relations are limited by their very nature. I am not here to charge that employers break contracts, but I will say that where a violation of contract upon the part of a trade union is pointed out it can be shown that trade unions have been faithful to agreements made with employers even when this honorable course has mightily conflicted with their material interests. Recall the great anthracite strike of four years ago. When the prospect seemed blackest for John Mitchell's men, and when it was apparent that they could win only by calling out the bituminous miners, what did they do? Although engaged in a life and death struggle, reduced to the necessity of depending upon the pennies of their brother trade unionists wherewith to buy bread for their women and children, they said: 'No! Our brothers in the bituminous fields have agreements with the employers. We shall not ask them to join us. Rather than win with dishonor we will fall like honorable men.'

"Labor and capital are interdependent. They are but two different forms of the same thing, the concrete result of human effort directed by an intelligence that is only less than divine. Having the one source they have the one destiny. They must move forward together. Those of us who through choice or circumstances have to do with the relation of the two should strive, as is being done here this evening, to have each understand the other better."

POWER OF PERSONAL SYMPATHY.

Archbishop Farley said:

"I am delighted to see the trend that labor and capital are taking, as evidenced in the union here, under the roof of one of our most hospitable and leading capitalists of the United States. It augurs well. Mr. Carnegie said a few moments ago, in speaking of labor and capital, that much of the trouble comes from lack of recognition on the part of the capitalist. Bearing on that, let me take a tale for my text which will perhaps convey to you what Mr. Carnegie and myself have in our minds as the best solution of these vexed relations between labor and capital. When I was a young man in college a companion of mine told me this story: His father was the employer of some 500 or 1,000 men. Dull times came on, the market was stagnant, material was being turned out by this large body of men and no sales were made. Month after month passed and the conditions promised no improvement. One day the employer was waited on by a delegation of the workers, who stated that they were not contented.

"'What's wrong? Am I not paying you to-day and ever since the dull times just what I paid you before, and you see nothing is coming in?'

"'We know it, but we are not contented, and are sent here to represent the men to make a demand on you in the matter of wages.'

"He said: 'I cannot do anything more for you; I am giving you all I can; I might say I am taking the bread out of my own and my children's mouths.'

"'We know that, and we want you to reduce our wages 20 per cent.'

"Well, this gentleman was completely taken aback, and said: 'I will not do it; you have your families and yourselves to support just as well in dull as in good times.'

"'Very well, then; we will strike.'

"That has stuck in my mind since I was a boy, and it seems to me to contain the solution of a great many difficulties. That man understood his men; he was thoroughly in sympathy with them, and I hold that the source of most of the difficulties between capital and labor, between workmen and employer, is the lack of sympathy. They stand facing one another like two grand armies in battle array, ready to rush at one another; or if it be not that, they stand like two rows of statues in the museum up here, having no sympathy one with the other; whereas there should be a warm current of good, kindly feeling between master and man, since each depends on the other. The capitalist depends as much on the laborer as the laborer on the capitalist. He should, therefore, have a paternal interest in all his employes, in sickness, in health, in death and in life. He should be his men's friend. That was the case in the instance I cited a moment ago. That gentleman was a father to all his workmen, and hence he had their confidence, love and affection. He was willing to make any sacrifice, and they were willing to make one which he would not accept from them.

"Now, I have thought over this problem from time to time, and it occurs to me that the great drawback of the system of corporations (and I recognize the necessity of corporations) is this—that those employed by them never can get at the employer. A corporation has no soul—so it is said, at least—and when a man, or a body of men, have a grievance, they cannot get at the owner, whom they think should feel for them and meet with them. He will always say: 'I cannot do anything in the matter unless it is laid before the board.'

"Now, I hold that if some person in power were given authority, some man with a big heart and a sympathetic nature, to deal with the men as that gentleman I spoke of in the beginning dealt with his men, showing them that he was flesh of their flesh and bone of their bone, that he recognized in them and in their souls the image of God, the same as was stamped upon his own soul, you would hear less of discontent and less of the problems that are vexing the nations to-day between capital and labor. (Applause.)

"I feel that I have a right to speak on this question, and am very happy to have this opportunity of doing so, inasmuch as I am a Bishop of a Church whose supreme head, the Sovereign Pontiff lately deceased, Leo XIII., has put forth the ablest, the clearest and the most solving instruction that perhaps ever has been written on the subject of labor and capital. Doubtless most of you have heard of it. Many of you have read it. There he divides all mankind into two bodies, very properly, workers and employers, and he takes them to task and asks, why should they stand face to face like two armies, ready to fly at one another? He tells the workmen, do not

listen to demagogues who promise impossible things which they never can perform. Do no violence to your employer or to your employer's property. Do your work honestly and uprightly. Then he turns to the employer and says: Do not regard your workmen as slaves; do not make capital out of their needs; do not regard their bone and muscle as so much wood and steel to be turned into money. No; and then he touches, as no man I ever heard on the question has touched it, the solution of the wage problem. He says every man is free to make a contract with another; but there is a law of nature more imperious and ancient than any contract between man and man, and any contract that denies a laborer a reasonable and frugal maintenance is an unjust one."

AGREEMENTS IN PUBLISHING BUSINESS.

Mr. Herbert Ridder then read the following letter from Herman Ridder, president of the Newspaper Publishers' Association:

"Arbitration has secured industrial peace for 200 members of the American Newspaper Publishers' Association, employing four-fifths of all newspaper labor. In six years there has not been a strike or cessation of work in any of the union composing rooms of our association. There has not been a single disagreement which has not been amicably adjusted. We are glad to report that agreements just signed provide for a continuance of that happy condition for an additional period of five years. Neither employer nor employe has been subjected to the wasting effects of warfare, both sides have been gainers. The publishers are paying higher wages. The unions are treating the publishers with greater respect, greater caution, greater justice. Both sides are pleased. Our principal gain is not in the troubles we have settled, but in those we have prevented. Our labor commissioner reported that the past year has been the most quiet of our history. There had been steady improvement of labor conditions and an increase of peaceful methods. We know of no other combination of employers which has succeeded in perfecting a great pact with the labor unions, and in maintaining entirely satisfactory relations. The probable explanation of this outcome and our good fortune in the matter lies in the fact that our employes are more intelligent than any other grade of labor, and are more appreciative of what is right. These unions take pride not in the number of strikes they have ordered in newspaper offices, but in the number of days' work they have provided for their members, and in the fact that they have in their ranks many skilled men to whom employers pay more than the scale to retain their services. These unions pride themselves that their word is their bond, and that their treasuries and authority are behind their agreements.

"The American Newspaper Publishers' Association is a voluntary organization of 270 newspapers, covering every considerable city of the Union. It has no power to compel any member to act outside of his own volition. We employ compositors, stereotypers and mailers who work under our International Typographical Union agreement. We employ pressmen who work under our agreement with the International Printing Pressmen and Assistants' Union. We employ photo-engravers who work under an agreement with the International Photo-Engravers' Union. These national agreements with labor organizations are not labor contracts. They simply provide a way by which each individual publisher may secure arbitration without interruption of his business, the national labor organization with which the contract is made by each publisher guaranteeing the performance of all its contracts by unions under its jurisdiction; in other words, it underwrites local arrangements. Those agreements have stood the practical test of time and of wide application under an extreme range of conditions. They are workable.

"At the outset, we recognized labor unions. We dealt with labor representatives. We realized that when we did so, we ceased to recognize the individual, but in doing so we increased the responsibility of the union and the union admitted its obligation. We accepted the closed shop. We substantially accepted the eight-hour day. We assumed that arbitration is possible only when the parties in dispute approach the question in a fair and conciliatory way. We had interests in common and we dealt on the basis that we were not members of hostile classes. We have not wrangled over trifles. We have explained our relative positions and have avoided many difficulties which arise from haughtiness. We have studied patience. We knew that the labor question was full of complications, and that the leaders of the union men must exercise great patience and tact in controlling the men who elect them to office.

"We started out to promote a better understanding between the association and our employes. We established a labor bureau and elected a commissioner with manifold duties. He assisted in settling labor disputes. He worked to secure the appointment of joint national arbitration committees for the adjustment of labor troubles that could not otherwise be settled. He obtained data upon all subjects pertaining to the mechanical work of newspapers. Publishers were thereby equipped to deal intelligently with the unions. We cultivated friendly relations with the organized wage earners. Our commissioner attended their conventions and addressed them every year. Their presidents came to our conventions annually and talked to us. They send to our commissioner regularly the proceedings of their conventions, the copies of their official organ and their reports. Our dealings have been marked with courtesy, promptness and fairness. Disagreements have occurred and diametrically opposite views have been held, but we have always managed to arrive at some sort of understanding which, while not altogether satisfactory, has prevented friction and trouble.

"The first contract became effective May 1, 1901. It was a tentative agreement with the International Typographical Union for one year to settle differences arising from existing contracts. At the end of that period we entered into a second agreement for a term of five years, adding an important provision for the arbitration of wages and hours. In the settlement of each dispute, we arranged to try first conciliation, then local arbitration, and, finally, national arbitration. It is gratifying to report that more than half of the new scales were settled by conciliation.

"Our third agreement, which begins May 1, 1907, and continues for five years, covers wages, hours and working conditions. In it we have attempted a radical departure, new at least on this side of the ocean, though we understand it has been tried successfully in England. We are doing away with the third man in arbitration. We think it is an advance step. Usually the third man has been unfamiliar with the publishing business. His decision has been more or less of a compromise and it has been described as a 'hit and miss' affair. We have now sought to establish perfect equality of both sides in the settlement of any controversy that might arise, the final judgment to be rendered by three representatives of each national body. If this new arrangement meets our requirements, then we will have brought the settlement of industrial disputes to an ideal plane.

"In working out the amicable adjustment of our differences, we encountered in 1903 a difficulty because we did not have a code of procedure which would guide and govern arbitrators in passing upon questions. Ultimately, a draft was formulated and adopted which facilitated work and minimized the occasion for disputes. Later on, we were confronted by the advocates of the sympathetic strikes. It was contended that our contract could not prevail if a newspaper had a dispute with a union affiliated with those under agreement. When this position was taken by the unions, we refused to make any agreement to do other than pay the scale, and because of our firmness in that respect the sympathetic strike idea was abandoned.

"It is true that under arbitration neither side has obtained what it thought it was entitled to receive, but we have maintained friendly relations at all times. We have produced our newspapers without interruption, and our employes have had the opportunity of work uninterrupted by strike or lockout. The recognition of the principle of arbitration has tended to increase the stability of investment in newspaper property. Its chief value has been the means it afforded us for the settlement of minor contentions which formerly caused infinite trouble, often leading to destruction of property, enormous losses of wages and the engendering of passion. Our payments for the maintenance of our special standing committee have been payments for industrial insurance, just as we pay for fire and accident insurance.

"We look forward to the day when the unions will realize that all union men should be proficient in their work and of good moral character in order that publishers may not want other than union men."

INTERNATIONAL ACTION NEEDED.

President Butler, of Columbia University, addressed the Conference as follows:

"Two of mankind's most important interests and activities are government and the production of wealth. The problems of government are primarily political; the problems of the production of wealth are primarily economic. Both, however, rest upon a common ethical foundation.

"The leaders of thought in all civilized countries are now urging upon their governments that concerted efforts be made to reduce the burdens of the world's armaments, to promote peace between nations, and to advance the cause of the settlement of international differences and disputes by the rational and intelligent method of judicial examination and arbitration as a substitute for the rule of force and the exploitation of men's angry passions in war. To this end one great and highly successful international conference has already been held at The Hague, and the governments of the world are now naming their delegates to a second, and, as many of us believe, a more important conference.

"Why should we not seek to promote the cause of industrial peace by methods similar to those which are now making headway in the interest of political or governmental peace? To interrupt the production of wealth by industrial wars is to spread sorrow, suffering and loss over large numbers of the population, those not immediately concerned in the struggle being affected as well as those directly interested. Industrial wars arise from two distinct causes,—first, from struggles between labor and capital, the two necessary and co-operating factors in wealth-production; and, second, from struggles on the part of labor to free itself from limitations and conditions not primarily imposed by capital, but due to outgrown and outworn methods of work and to the traditions of a time which paid little attention to the moral and educational uplifting of those who work with their hands.

"It is often urged that however strong may be the impulse which leads us to favor the removal of these obstacles and restrictions to a better condition for labor, yet not much can be done by one State or one nation alone, because of the fact that the demands of international trade and of competition prevent reforms being instituted in one nation unless others concur and acquiesce.

"If this objection is sound, and indeed whether it be sound or not, if it is seriously urged, why should not the nations of the earth undertake to forward the cause of international peace by formal international conference devoted to that end, at which the nations shall be severally represented by men as able, as thoroughly familiar with the problems and as representative of all parts of the population as are those who are to assemble at The Hague to discuss the problems of political peace? The National Civic Federation could, in my judgment, do no greater service to mankind at this moment than to urge upon the Government of the United States the making of a formal proposal to other nations of the world to assemble at no distant date in international conference on industrial conditions and industrial peace. The same united force which has made such rapid progress in advancing the world's education and the world's science would then be brought into play to advance the world's industrial peace and to improve, not little by little, but more speedily and in large and generous fashion, the conditions which surround labor in its activity in the production of wealth.

"This proposal would not be entirely novel, for at least one such conference has already been held. In the early part of his reign, the enlightened and progressive statesman who is now the German Emperor, turned his thoughts in this direction. Even against the advice of his ministers, or in the face of their indifference, Emperor Wil[illegible] for [illegible] of the different countries have already established international relations aiming at the improvement of their condition, but that efforts to this end could not meet with complete success until the governments concerned should attempt to come to some agreement on the more important questions relating to the welfare of the working classes. The specific points mentioned in the memorandum upon which international discussion was sought were those relating to Sunday rest, to the restriction of female and child labor, and to the limitation of the length of the working day. When the conference assembled in March, 1890, it met in the Palace of the Chancellor and was as dignified and worthy an assemblage as one composed of trained diplomats or statesmen. The Prussian Minister of Commerce opened the meeting with an important address in which he took high ground as to the necessity of seeking a solution of the human problems presented by industrial competition. Journals of all shades of political opinion supported eagerly the plan for the conference and commented generously and appreciatively upon its discussion. Austria, Belgium, Denmark, France, England, Italy, The Netherlands, Portugal, Sweden and Switzerland were represented, in addition to Germany. Nine years before this Berlin Conference was held Switzerland had made a somewhat similar proposal to the nations of Europe. The conference agreed upon very important recommendations as to work in mines, as to Sunday labor and as to the work of children and women. It can not be doubted that these recommendations have had no inconsiderable weight in affecting public opinion and the formal legislation of the nations concerned. Nearly twenty years have passed since the Berlin Labor Conference was held. Long steps forward have been taken in the meanwhile to better the conditions attaching to manual labor. New problems have meanwhile arisen and old problems have taken on new form. Why should we not, then, seek the discussion, and perhaps even the solution of some of these problems through the medium of an international conference on labor and industrial peace?

"If it should be given to our generation to see the public opinion of the world turning from war to peace in the settlement of international disputes and to see it turning from carelessness to solicitous concern in regard to industrial peace and the condition of labor, then indeed would we be able to lay claim to having lived in one of the world's most enlightened eras.

(Continued on page 20.)

PRIVATE VERSUS PUBLIC OPERATION

COMMITTEE ON INVESTIGATION PRESENTS ITS REPORT TO PUBLIC OWNERSHIP COMMISSION—CONCLUSIONS OF COMMITTEE—SCOPE OF THE REPORT

THE full report of the Public Ownership Commission's Committee of Investigation, with all its appendices, is in the hand of the printer, and some of the general results of the inquiry have already been given to the press. The general conclusions of the committee, reprinted here, have attracted the widespread attention which their importance deserves.

Quite as striking as the results obtained were the methods employed to secure them. The care, the patience and thoroughness of the methods of investigation invest the report with a peculiar significance. The committee entrusted with the investigation was thoroughly representative. It was composed of Melville E. Ingalls, chairman (Big Four Railroad), Cincinnati, Ohio; Dr. Albert Shaw, vice-chairman (Editor Review of Reviews), New York City; Edward A. Moffett, Secretary (Editor Bricklayer and Mason), Indianapolis, Ind.; Talcott Williams (Editorial Writer, the Press), Philadelphia, Pa.; Prof. Frank J. Goodnow (Columbia University), New York City; Walton Clark (Vice-President United Gas Improvement Co.), Philadelphia; Edward W. Bemis (Superintendent Water Works), Cleveland, O.; William J. Clark, (General Electric Company), New York City; Walter L. Fisher, (President Municipal Voters' League), Chicago, Ill.; Prof. John H. Gray (Northwestern University), Evanston, Ill.; W. D. Mahon (President Association Street Railway Employes), Detroit, Mich.; Prof. Frank Parsons (President National Public Ownership League), Boston, Mass.; Timotay Healy (President International Brotherhood Stationary Firemen), New York City; Prof. John R. Commons (Wisconsin University), Madison, Wis.; Daniel J. Keefe (President International Longshoremen's Association) Detroit, Mich.; Charles L. Edgar (President The Edison Electric and Illuminating Company), Boston; J. W. Sullivan (Editor Clothing Trades' Bulletin), New York City; Albert E. Winchester (Superintendent South Norwalk, Conn. Electric Works); F. J. McNulty (President International Brotherhood of Electrical Workers), Springfield, Ill.; H. B. F. MacFarland (President Board of Commissioners District of Columbia); Milo R. Maltbie (Member of the Public Utilities Commission), New York City.

All shades of thought were represented in the constitution of the committee, in order that the investigation of facts might be complete in every particular. For it was designed that the investigation be one of facts and not of theories. As a preliminary, schedules of questions appropriate to each class of enterprise to be examined were prepared by a committee, in which divergent opinions were carefully balanced.

From the outset it was recognized that there were two extreme views on the general question, and the policy was adopted of having these views equally represented in all steps of the investigation. Besides the experts who formed part of the committee, it secured the co-operation of technical experts and accountants. In the choice of these experts again "both sides" were represented.

Having laid out its plan and secured its technical aid, the commission proceeded to a personal and searching inspection of plants, both municipal and private. In America 29 plants were visited, and in Great Britain 24. The results of these inspections were placed upon record and form Part II. of the published report. For the guidance of the commission these special reports were made the object of critical reviews by sub-committees. Upon the basis of these reviews, as well as upon the results of the inspection, other members of the committee made special reports on general aspects involved in the question.

In these preliminary reports both sides are vigorously represented; none the less there was found to be much common ground, and this is presented in the general conclusions of the committee. One member only, Mr. Walton Clark, dissents from its conclusions. Two members, Mr. Charles L. Edgar and Mr. William J. Clark, take exception to the form of certain statements, but are in substantial agreement with the body of the report.

The text of these general conclusions is as follows:

REPORT TO THE NATIONAL CIVIC FEDERATION COMMISSION ON PUBLIC OWNERSHIP AND OPERATION.

Your Committee on Investigation beg to report as follows:

After our appointment on October 5, 1905, we met and appointed a sub-committee to prepare a plan of procedure and investigation. It was decided that the Committee should visit a number of undertakings in certain American cities, and then should go abroad and make a similar investigation in certain cities in Great Britain, comparing the methods and results of municipal and private ownership. Much attention was given to the investigation in Great Britain, because it was felt that the American public was not so familiar with conditions abroad as at home, and because in the contests that have been waged for public ownership, allusion has always been made and prominence given to conditions in British cities.

You Committee decided to employ both company and municipal men as experts, so that when investigating a gas plant, for example, there should be ordinarily one expert who had been employed by a private gas company and another to act with him who had been employed by a municipality. A long series of questions was prepared and various special

MEMBERS OF COMMITTEE ON INVESTIGATION IN SESSION AT DETROIT.

reports were called for, some from the members of the Committee who were detailed for this purpose and some from outside experts employed to investigate specific matters. All of these reports and schedules have been carefully prepared and are published herewith.* While it may appear upon a superficial glance that there is too much of this work, we trust it will be appreciated by the student and by those particularly interested, and that these statistics and report will do great good in the future as works of reference upon this important subject.

We wish here, at the beginning of our report, to tender our sincere thanks to the gentlemen in charge of the public utilities in the cities we visited in the United States and Great Britain for their polite attention and thoughtful consideration. Nothing could have been fairer or kinder than the treatment that they gave us. We examined their plants; we asked for detailed reports upon a long list of matters, which were cheerfully given. Whatever may be our opinion of the merits of municipal or private ownership, we are unanimous that no more courteous treatment could have been accorded any one.

It is difficult to give positive answers of universal application to the questions arising as to the success or failure of municipal ownership as compared with private ownership. The local conditions affecting particular plants are, in many cases, so peculiar as to make a satisfactory comparison impossible, and it is very difficult to estimate the allowance that should be made for these local conditions. For instance, in making deductions from the financial conditions of Wheeling, as affected by its gas plant, as compared with those of Atlanta and Norfolk with their private plants, allowance must be made for the presence of natural gas in Wheeling. Again, in comparing the public water works of Syracuse with the private water works of Indianapolis from the point of view of the success or failure of municipal operation, geographical conditions must be taken into consideration. The situation at Syracuse is extremely favorable to the establishment of an efficient plant with comparatively little effort on the part of its management. At Indianapolis the conditions are unfavorable. In Syracuse the water flows to the city by gravity; in Indianapolis it must be pumped. So we might go through the various cities here and abroad that have been visited and show that the results were affected favorably or unfavorably by special conditions applicable to each city.

Further, the difficulty of reaching satisfactory results by the comparative method is not confined to special or local conditions. It is true, as well, of much broader questions. Thus any attempt to compare municipal with private electric light plants in the United States would be fruitless if allowance were not made for the fact that in most cases such municipal plants are confined to street lighting and may not do commercial business. Allowance must be made also for the fact that many municipal plants have had a struggle to exist in the face of unsympathetic public opinion. Again, in England consideration must be given to the fact that the municipal electric light and street railway plants have permanent rights, while the rights of the private companies operating these particular utilities are limited as to the length of their existence, many street railway franchises expiring twenty-one years after they were granted.

Finally, not only must it be borne in mind that the social and political conditions which characterize the two countries find expression in their private and public systems, but we must consider the difference in the nature of the two peoples which causes them to adopt different ideas and views to the expediency of certain things. In other words, a measure of success in the municipal management of public utilities in England should not be regarded as necessarily indicating that the municipal management of the same utilities in this country would be followed by a like measure of success. Conditions are quite different in the two countries, as will be seen from an examination of the various reports that follow.*

There are some general principles which we wish to present as practically the unanimous sentiment of our Committee.

First, we wish to emphasize the fact that the public utilities studied are so constituted that it is impossible for them to be regulated by competition. Therefore, they must be controlled and regulated by the government; or they must be left to do as they please; or they must be operated by the public. There is no other course. None of us is in favor of leaving them to their own will, and the question is whether it is better to regulate than to operate.

There are no particular reasons why the financial results from private or public operation should be different if the conditions are the same. In each case it is a question of the proper man in charge of the business and of local conditions.

We are of the opinion that a public utility which concerns the health of the citizens should not be left to individuals, where the temptation of profit might produce disastrous results, and therefore it is our judgment that undertakings in which the sanitary motive largely enters should be operated by the public.

We have come to the conclusion that municipal ownership of public utilities should not be extended to revenue-producing industries which do not involve the public health, the public safety, public transportation, or the permanent occupation of public streets or grounds, and that municipal operation should not be undertaken solely for profit.

We are also of the opinion that all future grants to private companies for the construction and operation of public utilities should be terminable after a certain fixed period, and that meanwhile cities should have the right to purchase the property for operation, lease or sale, paying its fair value.

To carry out these recommendations effectively and to protect the rights of the people, we recommend that the various States should give to their municipalities the authority, upon popular vote under reasonable regulations, to build and operate public utilities, or to build and lease the same, or to take over works already constructed. In no other way can the people be put upon a fair trading basis and obtain from the individual companies such rights as they ought to have. We believe that this provision will tend to make it to the enlightened self-interest of the public utility companies to furnish adequate service upon fair terms, and to this extent will tend to render it unnecessary for the public to take over the existing utilities or to acquire new ones.

Furthermore, we recommend that provision be made for a competent public authority, with power to require for all public utilities a uniform system of records and accounts, giving all financial data and all information concerning the quality of service and the cost thereof, which data shall be published and distributed to the public like other official reports; and also that no stock or bonds for public utilities shall be issued without the approval of some competent public authority.

We also recommend the consideration of "the sliding scale," which has proved successful in some cases in England with reference to gas and has been adopted in Boston. By this plan the authorized capitalization is settled by official investigation, and a standard rate of dividend is fixed, which may be increased only when the price of gas has been reduced. The subway contracts and their operation in Boston and New York are also entitled to full consideration.

In case the management of public utilities is left with private companies, the public should retain in all cases an interest in the growth and profits of the future, either by a share of the profits or a reduction of the charges, the latter being preferable, as it inures to the benefit of those who use the utilities, while a share of the profits benefits the taxpayers.

Our investigations teach us that no municipal operation is likely to be highly succesful that does not provide for:

First—An executive manager with full responsibility, holding his position during good behavior.

Second—Exclusion of political influence and personal favoritism from the management of the undertaking.

Third—Separation of the finances of the undertaking from those of the rest of the city.

Fourth—Exemption from the debt limit of the necessary bond issues for revenue-producing utilities, which shall be a first charge upon the property and revenues of such undertaking.

We wish to bring to your consideration the danger here in the United States of turning over these public utilities to the present government of some of our cities. Some, we know, are well governed and the situation on the whole seems to be improving, but they are not up to the government of British cities. We found in England and Scotland a high type of municipal government, which is the result of many years of struggle and improvement. Business men seem to take a pride in serving as city councillors or aldermen, and the government of such cities as Glasgow, Manchester, Birmingham and others includes many of the best citizens of the city. These conditions are distinctly favorable to municipal operation.

In the United States, as is well known, there are many cities not in such a favorable condition. It is charged that the political activity of public service corporations has in many instances been responsible for the unwillingness or inability of American cities to secure a higher type of public service. This charge we believe to be true. However, there seems to be an idea with many people that the mere taking by the city of all its public utilities for municipal operation will at once result in ideal municipal government through the very necessity of putting honest and competent citizens in charge. While an increase in the number and importance of municipal functions may have a tendency to induce men of a higher type to become public officials, we do not believe that this of itself will accomplish municipal reform. We are unable to recommend municipal ownership as a political panacea.

In many cases in the United States the people have heedlessly given away their rights and reserved no sufficient power of control or regulation, and we believe that corruption of public servants has sprung, in large measure, from this condition of things. With the regulations that we have advised, with the publication of accounts and records and systematic control, the danger of the corruption of public officials is very much reduced.

To sum up, certain of the more important of our conclusions are:

Public utilities, whether in public or in private hands are best conducted under a system of legalized and regulated monopoly.

Public utilities in which the sanitary motive largely enters should be operated by the public.

The success of municipal operation of public utilities depends upon the existence in the city of a high capacity for municipal government.

Franchise grants to private corporations should be terminable after a fixed period and meanwhile subject to purchase at a fair value.

Municipalities should have power to enter the field of municipal ownership upon popular vote under reasonable regulation.

Private companies operating public utilities should be subject to public regulation and examination under a system of uniform records and accounts and of full publicity.

The general expediency of either private or public ownership is a question that must be determined by each municipality in the light of local conditions. What may be possible in one locality may not be in another. In some cities the companies may so serve the public as to create no dissatisfaction and nothing might be gained by experimenting with municipal ownership. Again, the government of one city may be good and capable of taking charge of these public utilities, while in another it may be the reverse. In either case the people must remember that it requires a large class of able men as city officials to look after these matters. They must also remember that municipal ownership will create a large class of employes who may have more or less political influence.

EXCEPTIONS.

Messrs. Charles L. Edgar and William J. Clark present the following exceptions to the [illegible] report:

"We the undersigned dissent from the report of the Investigating Committee as follows:

"First—The report says:

" 'We are of the opinion that a public utility which concerns the health of the citizens should not be left to individuals, where the temptation of profit might produce disastrous results, and therefore it is our judgment that undertakings in which the sanitary motive largely enters should be operated by the public.'

"We dissent from this conclusion as having been proved by our investigations. In our opinion, privately operated water systems were, especially as regards their consideration for the public health, as properly and successfully managed as the public operated water systems.

"Second—The report says:

" 'We have come to the conclusions that municipal ownership of public utilities should not be extended to revenue-producing industries which do not involve the public health, the public safety, public transportation, of the permanent occupation of public streets or grounds, and that municipal operation should not be solely for profit.'

"This sentence is so drawn that to a casual reader it implies that the opposite is advisable. From this we strongly dissent.

"Third—The report says:

" 'To carry out these recommendations effectively and to protect the rights of the people, we recommend that the various States should give to their municipalities the authority, upon popular vote under reasonable regulations,' etc.

"The words 'under reasonable regulations' were put into the report at the suggestion of Charles L. Edgar, and were intended by him to mean such regulations as would compel deliberate consideration not only by the people, but by their representatives, and would consequently prevent the superficial attractiveness of the scheme from overriding the 'sober second thought' of the people. We strongly dissent from any definition of 'regulations' which does not cover these points.

"Fourth—The second and fifth conclusions in the latter part of the report, being merely repetitions of previous statements, are of course subject to the same dissents."

AN INQUIRY INTO CHILD LABOR:

NATIONAL CHILD LABOR COMMISSION MEETS AND ORGANIZES AT WASHINGTON, D.C. COMMITTEES APPOINTED.

A DEFINITE organization was effected in Washington May 25 of the commission to investigate the extent and menace of child labor in this country.

It will be remembered that the question of child labor was discussed at length at the meeting of the National Civic Federation, last December, by representatives of the cotton manufacturers, coal operators, the National Child Labor Committee, factory inspectors, trade union leaders and others. This discussion developed a very wide difference of opinion on many points; among others, the actual extent of child labor; how many of the supposed two million are under fourteen years of age; what proportion are working in factories and mines, and what proportion on farms; whether there has been a great increase in child labor since 1900, when the census was taken; what the physical effects of mill labor are upon the children; what shall be done with children if taken out of the mills; whether the schooling opportunities are sufficient; what kind of education should be provided for those who expect to enter the mills as soon as the law permits; what measures are feasible to keep them in school until they reach the age limit for employment and so on.

The many differences brought out, both on questions of fact and on the merits of the problems presented, suggested the desirability of a national commission to undertake a comprehensive and unbiassed inquiry into the whole subject. In furtherance of that plan delegates have since been appointed from the National Association of Manufacturers, the American Federation of Labor, the General Federation of Women's Clubs and the National Civic Federation. The members representing each of these bodies are as follows:

For the National Association of Manufacturers: F. C. Nunemacher, president Nunemacher Press, Louisville, Ky. (chairman); C. W. Post, president Postum Cereal Company, Battle Creek, Michigan; D. C. Ripley, president United States Glass Company, Pittsburg, Pa.; D. A. Tompkins, president D. A. Tompkins Company, Charlotte, N. C.; Ellison A. Smyth, president Pelzer Manufacturing Company, Pelzer, S. C.; James R. MacColl, treasurer Lorraine Manufacturing Company, Pawtucket, R. I., and C. H. Pond, president Scranton Forging Company, Scranton, Pa.

For the American Federation of Labor: Samuel Gompers, president American Federation of Labor, Washington; James Duncan, Granite Cutters' International Association, Quincy, Mass.; John Mitchell, president United Mine Workers of America, Indianapolis, Ind.; D. A. Hayes, president Glass Bottle Blowers' Association, Philadelphia; John Golden, president United Textile Workers of America, Fall River, Mass.; B. A. Larger, general secretary Garment Workers' Union, New York City; William B. Wilson, secretary of the United Mine Workers of America; Daniel Harris, Cigarmakers' Union, Brooklyn, N. Y., and Herman Robinson, Retail Clerks' Association, New York City.

For the General Federation of Women's Clubs: Mrs. Sarah S. Platt Decker, Denver, Col.; Mrs. Mary Morton Kehew, Boston, Mass.; Mrs. Phillip N. Moore, St. Louis, Mo.; Mrs. Clarence Burns, New York City; Mrs. Charles A. Dibble, St. Paul, Minn.; Mrs. Josiah E. Cowles, Los Angeles, Cal., and Mrs. A. F. McKissick, Greenwood, S. C.

For the National Civic Federation: V. Everett Macy, treasurer National Child Labor Committee, New York City; Prof. J. W. Jenks, president American Economic Association, Cornell University, New York; Talcott Williams, National Child Labor Committee, Philadelphia, Pa.; Rev. Dr. Thomas R. Slicer, pastor of All Souls' Church, New York City; W. H. Taylor, anthracite coal operator, Scranton, Pa.; Samuel B. Donnelly, member Board of Education, New York City; E. B. Butler, president Illinois Manual Training School, Chicago, Ill.

NATIONAL CHILD LABOR COMMISSION.

1. DANIEL A. TOMPKINS,
President The D. A. Tompkins Co.
2. SAMUEL GOMPERS,
President American Federation of Labor.
3. ELLISON A. SMYTH,
President S. C. Cotton Manufacturers' Association.
4. MRS. SARAH S. PLATT DECKER,
President General Federation of Women's Clubs.
5. W. B. WILSON,
Secretary United Mine Workers.
6. HERMAN ROBINSON,
Retail Clerks' Association.
7. C. H. POND,
President Scranton Forging Co.
8. MRS. WILLIAM GRANT BROWN,
General Federation of Women's Clubs.
9. RALPH M. EASLEY,
Chairman Executive Council, National Civic Federation.
10. F. C. NUNEMACHER,
President Nunemacher Press.
11. MISS GERTRUDE BEEKS,
Secretary Welfare Department, National Civic Federation.
12. WILLIAM LAUNER,
Glass Bottle Blowers' Association.
13. DANIEL HARRIS,
Cigar Makers' Union.
14. D. C. RIPLEY,
President U. S. Glass Co.
15. JOHN GOLDEN,
President Spinners' Union.
16. B. A. LARGER,
General Secretary Garment Workers' Union.
17. SAMUEL B. DONNELLY,
Member Board of Education, New York City

The following officers were chosen at the meeting of May 25:

Chairman, Ellison A. Smith, of Pelzer, S. C., president of the Southern Cotton Manufacturers' Association; vice-chairman, Mrs. Sarah Platt Decker, of Denver, Col., president of the General Federation of Women's Clubs; secretary, Representative William B. Wilson of Pennsylvania, secretary of the United Mine Workers of America.

The members of the commission visited the White House, after the adjournment of the morning session, and were received by President Roosevelt, who commended the plans of the commission.

A point that occupied much of the attention of the delegates was the relation that should exist between the inquiry it is to undertake and the Government investigation of child labor conditions, authorized last winter, to be carried on by the United States Bureau of Labor. Professor Jenks, in opening the meeting, expressed his belief that the work of each inquiry could be made much more effective through co-operation. He offered the following suggestions:

"It would seem to me that in all probability our most useful work would be in making suggestions to Commissioner Neill as to what we thought might wisely be done in connection with the coming Government investigation of this subject. I suppose he will have machinery to undertake that investigation, and I have no doubt it is the purpose of the Secretary of Commerce and Labor to make the investigation as fair, as broad and as impartial as it can be. I have understood that the chief purpose of this Commission is to secure just that end. We all know there are very great differences of opinion, and the essential thing is that whatever is done by the Government in the way of making that investigation shall be fair, impartial and thorough. It seems to me that all who have experience in the various lines of industry are the ones that can give him suggestions that will help with the investigation.

"It may be, also, that when we have heard from him we shall find that the scope of the investigation at the time being must be limited on account of the funds at his disposal, and it may be possible that along certain lines we can take up work with him. In the nature of the case, I should think co-operation with the Government investigation is something that is extremely desirable."

Mr. Gompers:

"I believe with Prof. Jenks that we should co-operate with the Government in its investigation as authorized by a recent act of Congress, but as the scope of the two investigations are different I am of the opinion that it might not at all be amiss if an independent investigation were made. More than likely some exaggerations have been indulged in with regard to this evil, but I take it that the most acute conditions have been presented, not with any purpose of injury, but for the purpose of rousing the conscience of the people against the continuance of that condition of affairs, even if it is confined to a small number.

"I feel very keenly upon the subject of child labor, and I believe there are few who want such labor simply for the sake of having children in the factories. We are all pretty nearly agreed that it is desirable that children should have the opportunity of growth, development, education and play. There is little room, I think, for division of opinion as to the age limit at which children are allowed to enter upon industrial or commercial pursuits, but none the less that is one of the subjects to which attention should be given."

Mr. Nunemacher:

"I am satisfied that our section of the Committee is in full sympathy with any sane regulation that might be brought about on this question of child labor. I think as a general proposition that the manufacturer from his own standpoint would not employ children under a proper age. I am satisfied that when the matter is fully considered the manufacturer is willing to go as far as anybody in any worthy thing. I had the pleasure of a conversation the other day with Dr. Neill and believe that we will get from him any assistance the government has power to give."

Mr. Tompkins:

"One of the most important things in connection with improving anything is to find its existing status and to begin the improvement from the existing condition. The conditions so vary in different States that I think it very important that the examination which is going to be made by the Government, and which may be made also by this Commission, should indicate how the different conditions may be treated in different sections.

"Take the conditions of living in Philadelphia, where working people nearly all own their homes; again, in the cotton mill villages and in the coal mining districts, where they don't own their homes. In order to bring out the conditions you have to take each one and start from where they are. We all know Mr. Pullman's experience in undertaking to make a model city, the difficulties he met with pointing out just how the balconies for flowers should be arranged and so on. He put in a model sewerage system, model flower yards, model streets, etc. You can regulate people too much.

"None of us wants child labor. Personally I strongly oppose children under 16 years old working in the mills. I think they should be kept in the schools. This subject of child labor is going to involve the subject of education, and I believe there is not a person in this body who would not vote for compulsory education. On the other hand, we must not have legislation that wholly takes from parents the responsibility of their children."

Mr. Ripley:

"There is an important matter to be considered in this investigation, and that is the financial condition of the parents of the children. There are great many families who are not able to send their children to school after they are 14 years old, and a boy that will not obtain a certain amount of knowledge, enough to help him along in his work, by the time he reaches that age never will. From 14 to 16 the way he uses his opportunity will either make a man of him or a loafer.

"To begin with, I am opposed to any children working in a factory under 14 years old; I think they should not become wage earners until their physical condition will justify it. However, there are many boys of 12 years that are better developed than boys at 16 years.

"There has been a great deal said about the wicked glass manufacturers. I forget the name of the man who wrote the magazine article, but he said that the boys were inhaling dust from the glass—you might as well say that you would inhale dust from dough. I don't think that a boy in a glass house is abused at all. Several times I have gone out into the different factories and looked them over, from a little different standpoint than heretofore, and I have not seen boys that have been abused.

"There was a statement made some time ago by a Pittsburg party, who said that he went into a South Side factory and found boys there with their eyes out. Immediately, when I read this, I telephoned the different factories and in an hour's time I got the report that they did not know of any and couldn't find any. Why a statement of that kind should be made I cannot understand. It is not fair, and has the tendency of prejudicing the minds of people against others who are trying to do a fair business. I think that this is a subject to which we all should give a great deal of study."

Hon. Charles P. Neill, United States Commissioner of Labor, addressed the afternoon session as follows:

"I wish that I were able to outline for the committee in a definite way the work which we expect to do in our investigation of child labor. We realize that we have a very hard problem—one of extreme difficulty.

"We have an appropriation of $150,000 to be divided between working women and children. Take $50,000 of that to make an investigation—that would probably allow 25 or 30 investigators—just ask yourselves what kind of a dent that would make in a problem of this kind.

"We are particularly anxious that as far as it goes the investigation be thorough. I feel that if our investigation simply adds fuel to the fire, we would better leave it where it is now. I want to report here and every place I have the opportunity that our object is to get the facts and all the facts, and we are going to show these, no matter what the showing may be.

"I know that an investigation of a subject like this will not escape criticism, but we are absolutely indifferent as to the criticism made, as we propose to go out and get such facts as exist. Now I think that this committee will approve just that kind of a report. It does seem to me that a commission of this kind, representing the biggest organizations, ought to be able to work out the child labor problem. I believe that all of you want the actual facts concerning child labor, and if we can get those in such a way that there is no dispute there will then be no difference of opinion as to what ought to be done. I believe that as the result of the investigation and the result of this committee's work, we shall all join hands on the right kind of policy to correct these evils.

"Child labor is a subject upon which, a year from now, I could probably talk much more intelligently than now. I hope we shall have the co-operation of this committee, and if we have any data or anything that will be of use to this committee to further its investigations we shall be only too glad to give any help or aid we can."

Mrs. Decker:

"In the organization that I represent, the General Federation of Women's Clubs of the United States, we have forty-three State Federations and a vast number of clubs—800 to 1,000—and we have in every state a Child Labor Committee. We are not biassed—we do not wish to discover that there are children working under age—we want to know the truth. Almost every day I get clippings, speeches, etc., setting forth the two sides; we hear first one side and then the other, and we know nothing at all as to the true state of affairs.

"It is not simply statistics that we want. We need a complete investigation of the children working in the mills from the sociological, industrial and educational standpoint. We want to know if working in the mills better their condition; if so, we think that it is better to keep on. Just simply to be told how many children work will not satisfy us—we have been told that. We want to know whether they are better off than they were five years ago, and whether they will be better off five years hence. Now will some one tell how we can also get the real merits of the matter? We are not smart—are not considered so, but we are industrious and are willing to help."

Mr. Neill:

"I fully agree with Mrs. Decker—it is not merely statistics that we want, but to find out if they are better off than they were, and to learn if they are as well off now as they ought to be. I must say that it is perfectly impossible to try to find out the number of children that are working; there may be children working under age, but how can we find that out? Of course, you can get statistics which you may claim are correct; then some one else will take the statistics and claim they are all wrong. As far as we are concerned, there will be very little money and time wasted merely to find out how many children are working.

"I should be very glad to be able to outline a plan whereby we could work together, but it is too early to do so. We want the co-operation of your committee, and we want it understood that everything we are doing is perfectly open. We will be glad to have you come in, singly or collectively, and make any suggestions that you have to offer."

Mr. John Golden:

"I believe that we should work hand in hand with Dr. Neill, but at the same time I don't think we ought to sit still and just act by making suggestions. To put it plainly, I think we are big enough to do something to satisfy ourselves in this inquiry. I believe that this will be a most valuable investigation. We all know that statistics in regard to women and children vary greatly. You can go into the mills in one section of the South and find all good results, and then go farther and find the conditions very much worse. What we want to do is to lay bare these facts ourselves.

"On the question of education the chairman of the Cotton Manufacturers' Association made the reliable statement that in the state of Rhode Island sixty per cent. of the wage workers were in the textile industry, and yet they had not an institution outside of the School of Design, which taught anything about technical matters. All of us would like to see the day when we could keep our boys and girls out of the mills until they are 16 years of age. They would then be more valuable to themselves, and, I think, would be more valuable to the State and to the community.

"In regard to the curriculum of the public schools; would it not be better to teach these boys and girls something that will fit them for their life's work than to fill their little heads full of Latin and Greek? When they are thus cramming their heads they are beginning to wonder how soon it will be before they are 14 years old, so that they can get out. I think that one of the most important phases of this investigation is the subject of education.

"We have here represented several large organizations and we are capable of doing a great amount of good; we all work along our different lines, but I think that when we, as one body, can sit down at one table and plan out a joint line of work we can do some of the greatest work on the subject of child labor in America."

It was suggested that the work of the Commission might well be carried on under different heads, in charge of sub-committees, for example:

Committee on Investigation,
Committee on Legislation,
Committee on Compulsory Education,
Committee on Industrial Training.

An Executive Committee was elected and instructed to prepare a plan of work and submit it to the Commission in writing at a later date. D. A. Tompkins was chosen chairman of this Committee, the other members being Samuel Gompers, Mrs. Sarah Platt Decker, Ellison A. Smyth, William B. Wilson, Prof. J. W. Jenks and Ralph M. Easley.

THE SANCTITY OF AGREEMENTS.

"If there is one thing above all others that should be held sacred by organized labor, it is the strict adherence to all agreements entered into between our International Alliance or our local unions and their employers. No matter if errors have been committed, mistakes made in framing such agreements, they should be held inviolate during the period they were designed to cover. Any breaking of faith on our part only tends to weaken our influence and to strengthen the position of those opposed to us. The best asset of any organization is the honor and integrity with which it observes its obligations, the good faith with which it keeps its pledges."—M. O'Sullivan, general president Amalgamated Sheet Metal Workers' International Alliance.

EXECUTIVE COMMITTEE

On the Part of the Public:

GROVER CLEVELAND, Ex-President of the United States, Princeton, N. J.
ANDREW CARNEGIE, Capitalist, New York.
CORNELIUS N. BLISS, Ex-Secretary of the Interior, New York City.
NAHUM J. BACHELDER, Master of the National Grange, Concord, N. H.
BENJAMIN I. WHEELER, President University of California, Berkeley, Cal.
CHARLES W. ELIOT, President Harvard University, Cambridge, Mass.
NICHOLAS MURRAY BUTLER, President Columbia University, New York City.
SETH LOW, Publicist, New York City.
ARCHBISHOP JOHN IRELAND, of the Roman Catholic Church, St. Paul, Minn.
BISHOP HENRY C. POTTER, of the Protestant Episcopal Church, New York City.
CHARLES J. BONAPARTE, Attorney-General of United States, Washington, D. C.
DAVID R. FRANCIS, Ex-Secretary of the Interior, St. Louis, Mo.
ISAAC N. SELIGMAN, of J. & W. Seligman & Co., New York City.
JAMES SPEYER, of Speyer & Co., New York.
V. EVERIT MACY, Capitalist, New York.
JOHN M. STAHL, President Farmers' National Congress.

On the Part of Employers:

HENRY PHIPPS, Director United States Steel Corporation, New York City.
AUGUST BELMONT, President August Belmont & Co., New York City.
W. A. CLARK, President United Verde Copper Company, Butte, Mont.
CLARENCE H. MACKAY, President Postal Telegraph-Cable Co., New York City.
LUCIUS TUTTLE, President Boston & Maine Railroad, Boston, Mass.
FREDERICK D. UNDERWOOD, President Erie Railroad Company, New York City.
M. H. TAYLOR, President Pittsburg Coal Company, Pittsburg, Pa.
MELVILLE E. INGALLS, Chairman C. C. C. & St. L. Ry. Co., Cincinnati, Ohio.
H. H. VREELAND, President New York City Railway Company, New York City.
SAMUEL MATHER, of Pickands, Mather & Co., Cleveland, Ohio.
CHARLES A. MOORE, Manning, Maxwell & Moore, New York City.
FRANKLIN MacVEAGH, of Franklin MacVeagh & Co., Chicago, Ill.
FRANK A. MUNSEY, Publisher, New York City.
ELLISON A. SMYTH, President South Carolina Cotton Manufacturers' Association, Pelzer, S. C.
CHARLES H. TAYLOR, Jr., Ex-President American Newspaper Publishers' Association, Boston, Mass.
DAN R. HANNA, of M. A. Hanna & Co., Cleveland.
MARCUS M. MARKS, President National Association of Clothing Manufacturers, New York City.
OTTO M. EIDLITZ, Chairman Board of Governors, Building Trades Employers' Association, New York City.

On the Part of Wage Earners:

SAMUEL GOMPERS, President American Federation of Labor, Washington, D. C.
JOHN MITCHELL, President United Mine Workers of America, Indianapolis, Ind.
WARREN S. STONE, Grand Chief International Brotherhood of Locomotive Engineers, Cleveland, Ohio.
A. B. GARRETSON, Grand Chief Conductor Order of Railway Conductors, Cedar Rapids, Iowa.
JAMES DUNCAN, General Secretary Granite Cutters' International Association of America, Quincy, Mass.
DANIEL J. KEEFE, President International Longshoremen, Marine and Transportation Association, Detroit, Mich.
P. H. MORRISSEY, Grand Master, Brotherhood Railroad Trainmen, Cleveland, Ohio.
WILLIAM D. MAHON, President Amalgamated Association of Street Railway Employees of America, Detroit, Mich.
TIMOTHY REGAN, President International Brotherhood of Stationary Firemen, Boston, Mass.
WILLIAM J. BOWEN, President Bricklayers' and Masons' International Union, Indianapolis, Ind.
H. F. BAUSMAN, Grand Master, Brotherhood of Locomotive Firemen, Peoria, Ill.
JAMES O'CONNELL, President International Association of Machinists, Washington, D. C.
JOHN F. TOBIN, General President Boot and Shoe Workers' Union, Boston, Mass.
JOSEPH F. VALENTINE, President Iron Moulders' Union of North America, Cincinnati, Ohio.
JAMES M. LYNCH, President International Typographical Union, Indianapolis, Ind.
JOSEPH A. BAILEY, President Glass Bottle Blowers' Association of United States and Canada, Philadelphia, Pa.
WILLIAM HUBER, President United Brotherhood of Carpenters and Joiners of America, Indianapolis, Ind.

Conference on Trusts and Combinations.

In view of the tremendous interest, financial, industrial and political, which now centers in what is termed the "trust problem," the conference on combinations and trusts to be held under the auspices of the National Civic Federation in Chicago, October 22-25, will be one of the most important gatherings of the year. Coming at a time when the whole country is aroused over the many questions involved in the enforcement of the Sherman anti-trust law and the amended Interstate Commerce act, this conference, it is to be hoped, will serve to give direction to public opinion in reaching a final judgment.

Delegates have been named by Governors of forty-one States and Territories and by national labor, agricultural, manufacturing, financial, economic and trade organizations, by chambers of commerce, boards of trade, bar associations and shippers' organizations. Governors, Attorneys-General, members of the Interstate Commerce Commission, members of Senate and House Committees on Interstate Commerce, the Commissioner of Corporations and two members at least of the Cabinet will participate. The delegates appointed by the Governors represent the best interests of their respective States, and include United States Senators, Congressmen, former governors, manufacturers, labor leaders, farmers, merchants, lawyers, clergymen, bankers, etc.

The first day will be devoted to the problems involved in the controversies between State and Federal Government, respecting jurisdiction over interstate commerce, now pending in Minnesota, Missouri, North Carolina, Alabama and Arkansas.

The second day will be devoted to a consideration of the corporation. How should it be constructed? Should there be national corporations as well as State? What should be the basis of capitalization of corporations? their internal control? the provisions looking to the protection of investors and stockholders, as well as fair dealing with the public? Should there be a distinction between public service and other corporations? Should quasi-public utilities, like gas, electric lighting and street railways, be considered natural monopolies to be regulated by the municipality?

The third and fourth days will be devoted to a discussion of the just and practicable limit of restriction and regulation, Federal and State, of combinations in transportation, production, distribution and labor. Shall the Sherman anti-trust act be amended? If so, how?

Hundreds of letters from all classes of people have been received expressing gratification on the calling of this conference, from some of which the following are extracts:

LYMAN ABBOTT, *Editor of "The Outlook"*:

"I am very glad that the National Civic Federation is calling such a conference. It seems to me fundamentally true that the interests of the railroads, the shippers and the general public are essentially one, and that it is of the utmost importance that men representing all three classes should get together, compare views and endeavor to come to some agreement as to the general principles by which those common interests can be best served. I think what we most need on the subject is just what the call indicates this meeting will endeavor to secure—light, not heat. What we need to understand, and what only experience can teach us, is the relation between competition and combination—the one the centrifugal, the other the centripetal force of society. He who believes only in combination will logically be led to socialism; he who believes only in competition will logically be led to nihilism. Neither of these results can possibly furnish the solution of the problems which now confront us. We must learn how to secure the advantages of combination without destroying the individual; to maintain brotherhood in practical forms without sinking, obscuring or belittling personality."

RICHARD WATSON GILDER, *Editor of "The Century"*:

"There is a sign over a shoemaker's shop in the village where I go in Summer which has this inscription above it in large letters: 'CALL IN AND TALK IT OVER.' I am glad the Civic Federation has put that sign up over its shop precisely at this time, and that the subject of talk is to be the burning question of the day—the question of the Trust. So many of the Federation's talks have proved no less useful than timely that I am sure this new talk will help to bring calmness and coolness to the public mind, and Heaven knows it needs them!"

PETER G. GROSSCUP, *Judge U. S. Circuit Court, Chicago*:

"The corporations of this country have grown up as developments of our business life, without much reference to their relations to the people as institutions of, and for, the people. It is time that they be looked into as institutions of, and for, the people. The Sherman act was passed before the regulation of interstate carriers was seriously attempted or foreseen. Now that 'regulation' has come it is time to inquire how far the old 'prohibitions' should remain. The whole matter—corporate reconstruction, and a restudy of the anti-trust act—should be gone over carefully with a view to bringing some kind of order out of the disorder that now prevails!"

N. J. BACHELDER, *Grand Master of the National Grange*:

"I do not know of any meeting more opportune or more needed at this time than the one called by the National Civic Federation at Chicago, October 22-25, to discuss combinations and trusts. The confusion in the public mind to-day is very great on many of the phases of the problem. It certainly is time for serious people to discuss the subject when President Roosevelt and the law officers of the Government, whose duty it is to enforce the Sherman anti-trust act, openly state that the business of the country to-day cannot be done without violating the law."

RT. REV. HENRY C. POTTER:

"I am profoundly thankful to hear of the proposed conference for the purpose of considering the relations of trusts to the public welfare and interest. There is no subject concerning which a wider ignorance, or more curious misapprehension, exists in the public mind, and it is greatly to be desired that, in bringing the whole subject of the administration of corporations into the light, we may be assisted by the best intelligence of the land."

JOHN S. MILLER, *Peck, Miller & Starr, Attorneys, Chicago*:

"If the Sherman act is to remain upon the statute books, it should be amended, if it is to be a beneficent act, and not one hostile and injurious to the industries and prosperity of the country. It should be made specific and definite, so that the men who are conducting the commerce of the country may know from the act itself, or at least have some means of learning with certainty, what acts or conduct is forbidden by the law and made criminal, and what is not. The present law lacks this definiteness. It does not discriminate, in its terms, between that which is good and that which is evil. It furnishes no rule for the guidance of merchants in the conduct of their business. I think the idea of holding a National Conference to discuss this subject and to try and come to an agreement on some general principles will be very valuable."

HAMILTON HOLT, *Editor of "The Independent"*:

"There is no more pressing problem before the business people than what to do with the trusts. If recent developments demonstrate anything, they demonstrate that under modern methods of production and distribution the *laissez faire* policy carried out to its logical conclusion means economic monopoly, business corruption, swollen fortunes and social discontent. The trust question, therefore, at the present moment is a question of how far the American people are prepared to go in the way of regulation, for surely, if regulation fails, the alternative is Government ownership. In my opinion our chief trouble arises from the fact that we have not developed our trust ethics as fast as our trust economics. If the forthcoming Trust Conference of the National Civic Federation can shed any light on the ethical aspect of the trust movement, it will have rendered a lasting service to the country."

JOHN MITCHELL, *United Mine Workers of America*:

"My judgment is that this conference will prove of the greatest interest and will be productive of good results, as it will give opportunity for full and free discussion upon a subject that concerns the well-being of all our people."

CHARLES G. DAWES, *President Central Trust Company of Illinois*:

"I regard the calling of this conference by the National Civic Federation at this time as a highly useful piece of work. It is always wise to say, "Come, let us reason together.' The industrial problems confronting us to-day in this country demand consideration by the best brains of the nation. The commercial, manufacturing, labor, agricultural and financial interests demand a solution of the great trust and combination problem that will protect all the people. Personally, I believe that combinations are absolutely necessary in conducting the business of the country; but they should be restricted and the rights of the people safeguarded by strict supervision and regulation by the Government—State and Federal."

JOHN M. STAHL, *President Farmers' National Congress*:

"The questions to be discussed at the National Conference on Trusts and Combinations are certainly the most important pressing for solution before our people to-day.

1. What is the division of powers under the Constitution between the nation and the State?

2. How should the corporation be constructed and supervised to protect investments of capital on the one hand, and the consumers on the other?

3. What are combinations in restraint of trade? Are labor organizations that seek to fix the price at which they will sell their labor; employers' organizations that seek to fix the price they will pay for labor; farmers' organizations that seek to fix the price at which they will sell their wheat, their tobacco, and their cotton; organizations of buyers that seek to fix the price they will pay for such products; are the innumerable wholesale and retail organizations dealing in all kinds of merchandise that seek to secure what they allege to be fair profits—are all of these organizations, or a part of them only, prohibited by the Sherman anti-trust act? In considering the trust question, we should look at it, not from our own particular interest, but from the standpoint of society as a whole."

SAMUEL GOMPERS, *President American Federation of Labor*:

"I participated in the Civic Federation conference in 1899, and am sure that its educational value was great. The forthcoming conference, I feel sure, will also be productive of much good to the nation, in that it will allow all sides to meet and freely express their opinion on one of the greatest subjects this country has to deal with to-day."

Public Ownership. The publication of the report of the Committee on Investigation to the Public Ownership Commission marks an important step in the discussion of public utilities. The high character and representative composition of the committee give to its conclusions a significance which does not attach to those of an individual investigator. Nor could the latter enjoy the same opportunities for forming a judgment as were possible for the committee. The investigation was extraordinarily extensive, painstaking and impartial. These volumes record the results of personal inspection by a highly qualified body of examiners. The careful study of the plants visited, both by the committee itself and by its technical and accounting experts, gives a high and enduring value to the record and to the conclusions.

The conclusions of the committee are set forth so succinctly at the close of the report that to recapitulate them here would be a needless repetition. No one who reads the report with care can fail to be impressed by the judicial tone, by the careful weighing of evidence, and by the luminous insight into the varying issues of the problem which it reveals. Its measured words are the fruit, not of excessive caution, but of fulness of information. Each of its postulates is capable of an almost indefinite elaboration, and the very compactness of the statements themselves forbids further condensation.

The reception given to the report by the press has been a full recognition of the importance and seriousness of the inquiry. The *Philadelphia North American* designates it as "the most carefully considered and exhaustive report on the subject of municipal ownership ever presented to the American people." The *New York Times* speaks of the report as "a happy surprise and an authoritative contribution to a subject so disputatious that it has seemed really impossible to point to any expression of opinion which should be of determining weight with those unable to make up their minds." The *New York Globe* finds the most remarkable thing in the report is the fact that nineteen out of twenty members of the committee signed, and says: "To have a body of experts practically unanimous is most amazing." The *New York Evening Post* sees in the caution of the committee a proof of "the serious and painstaking nature of their inquiry." Commenting upon what it terms the "real significance" of the report, the *Springfield Union* says: "The report may be accepted as an expression of advanced public sentiment in the matter, a sentiment which is cautious while alive to the progressive tendencies of the times." The *Providence Tribune* expresses the hope "that with this strong and comprehensive report on the subject of municipal ownership by a commission of unquestioned ability that has given a great deal of time and thought to it, there might be an end to most of the loose talk thereupon which has served only to create unintelligent discontent."

The *Saturday Evening Post* believes that "the conclusions about coincide with the sober judgment of the country." *Collier's Weekly* says: "When twenty members of the Civic Federation, including representatives of public service corporations, labor union men, editors and sociologists, went to Europe to study the practical workings of municipal ownership, it seemed impossible that they could reach any sort of agreement. It appears, however, that they have not only accumulated a body of facts accepted by all, but that they have been able to agree with almost perfect unanimity upon certain important conclusions." *Charities* finds that "with its varied membership the committee has offered an interesting example of what might be called investigational psychology. Members of the committee represented oftentimes diametrically opposed points of view with respect to certain phases of public service operation, but when it came to a practical programme of recommendations, the members got together again, and the amount of agreement, considering the make-up of the committee, is marked."

The conclusions of the committee will be placed before the Public Ownership Commission and will no doubt be subject to a searching analysis by the larger body. In the meantime the members of the National Civic Federation may be justly proud of the important public service which has been rendered in the publication of this comprehensive and valuable report.

Conditions in the Canal Zone. An investigation of labor conditions of the employes of the United States Government on the Isthmus of Panama has recently been made by Miss Gertrude Beeks, Secretary of the Welfare Department. It was appropriate that this should be the first undertaking of the new Committee on Welfare Work for Government Employes, whose organization and purposes are fully set forth elsewhere in this issue. Nowhere does the Federal Government employ so large a number of persons under circumstances which impose upon it so great a responsibility for providing proper conditions of life as in the Canal Zone.

It is a large body of workers, some 40,000 strong, which has been gathered there. It includes all grades of skill and experience. It is drawn from all quarters of the globe and includes not only Americans, but Europeans, notably Spaniards, Greeks, Italians, and also West Indian negroes.

The investigation covered a period of five weeks from June 7 to July 12, twenty-three days being spent upon the isthmus. Armed with letters from the Secretary of War to Colonel Goethals, Chairman of the Isthmian Canal Commission, and to the Chief Engineer, Miss Beeks was shown every courtesy by the officials in charge, who afforded her every opportunity to secure the information desired. By means of letters from prominent citizens, including leaders of labor organizations whose crafts are represented on the isthmus, and the Secretary of the Industrial Committee of the Young Men's Christian Association, Miss Beeks was placed in direct communication with engineers, foremen, mechanics, clerks, physicians, nurses and others who represented the viewpoint of the actual workers. The inquiry covered a wide range, including questions of labor, wages, hours, holidays, the houses provided for the employes and laborers, their sanitary arrangements and furniture, the water supply, the food furnished in the eating houses, and that for sale in the commissary department; the general stores, the hospitals, the opportunities for rest and recreation—in short, all the conditions of existence. An account of the results of the investigation will be published in the next issue of *The Review*.

Opposing Forces in the Industrial World The spectacle of reactionaries and radicals alike struggling against the forces of progress is not a new one. Nor is it so incongruous as it seems. The one would fain restore the old order of things and fortify what he deems his prerogatives. The other thrives on discontent and has no patience with solutions which disregard his own special and copyrighted panacea. But the reactionary and the radical are engaged in a futile struggle. They are not the men who make history. It is as fruitless to seek to impede the course of orderly evolution as it is to claim a far-reaching insight into the future and seek to twist the progress of the world to a visionary ideal.

The industrial world just now offers a case in point. On the one hand we find a certain group of manufacturing interests which has banded together for a fight to the finish with trade unions. It would smash them despite the fact that it loudly proclaims its friendship for the "good union." It says, "We believe labor has a right to organize; we believe that through organization labor has accomplished great good for itself, and, therefore, for the people, but"—then comes a string of "ifs" and "buts" that would eliminate every organization from consideration, except those which are dead.

A recent attempt to form a "great federation of national employers' organizations" to bring about "industrial peace" was attended only by organizations which will have nothing to do with unions; in fact, several of them boast that they do not employ union men, when they know it, while one of them insists that every man before going to work for any member of that particular association of employers shall sign a paper resigning "without reservation" from his union, the resignation to take effect immediately, and in the circular letters sent out to the members of that Employers' Organization it boasts of the number of resignations it has thus compelled. This proposed Federation of Employers will not countenance in any way the making of trade agreements with organized labor. It would restore the old-time status of the individual labor contract, which was a one-sided affair dominated entirely by the employer.

On the other hand, we find an element among the laboring men of the country which, though organized in unions, is bitterly opposed to dealing in any manner with employers. We refer to those groups which have been poisoned by the virus of socialism. They denounce trade agreements as "chains forged to fetter the workingman." The Industrial Workers of the World antagonize the American Federation of Labor and the railway brotherhoods on such issues. The Western Federation of Miners, allied with the Industrial Workers, in their recent convention, amended their constitution to prohibit the making of any further contracts with employers. In a speech in Chicago their prophet and martyr, Haywood, told his hearers: "If any of you have an agreement with any employer that compels you to work while the other fellows are out of work, break it. There never was an agreement that was so sacred as to compel one workingman to scab on another, and after you have broken that agreement, let me urge you men not to enter into another one."

We thus have a group of employers and a group of workers who unwittingly in one case and wittingly in the other are struggling to foment discontent. But these two forces, while radical and rabid in their respective attitudes, fortunately do not represent the great body of employers, on the one side, or the masses of workers, on the other. The American Federation of Labor and the great railway brotherhoods represent 95 per cent. of organized labor, and their attitude is voiced by Mr. John Mitchell in the following statement:

"I advocate not industrial revolution, but industrial progress. The deadening blight of socialism would wither progress. The virile, active forces of industry enlisted in the wage system under the form of capital and labor can be brought to work mightily, through sane and radical agreement, for that means the advancement of civilization and the lightening of the burdens that still oppress humanity. The socialists abhor all such progress and denounce every method that has been discovered, including the trade agreement, for its encouragement. That is why the socialists seek, either by assault or by 'boring from within,' to destroy or disintegrate our trade union movement, because its aim and effect are the betterment of society as a whole. The instinct of individual self-improvement is the life blood of labor unionism. The control of all industry by the State, being against that instinct, could result only in either anarchy or despotism."

On the other hand, all the great railway systems, the coal operators, the large building contractors, the great shipping interests that handle the iron, coal, grain, and lumber of the country, 95 per cent. of the daily newspapers of the country, the manufacturers of printing paper, stove manufacturers, the large breweries, and many other employing interests meet with the respective crafts represented in the labor organizations above referred to and form what are known as trade agreements, providing for the hours of work, prices and general conditions of labor, with provisions for arbitration in case of disagreement.

The socialist unions and "smash-the union" employers' organizations heartily agree on three propositions; first, they would like to prevent employers and employees entering into contractual relations; second, they would smash the American Federation of Labor and the railway brotherhoods; third, if they should succeed in the first two efforts, they would like to smash each other.

WELFARE WORK FOR GOVERNMENT EMPLOYES.

CIVIC FEDERATION ORGANIZES COMMITTEE WITH SECRETARY TAFT FOR ITS CHAIRMAN.

THE Welfare Department of the National Civic Federation announces the organization of a national committee on "Welfare Work for Government Employes." The object of this committee will be to create an interest in improving the working conditions of Federal, State and municipal employes.

The officers of the committee are:

Chairman, William H. Taft, Secretary of War.
First Vice-Chairman, John C. W. Beckham, Governor of Kentucky.
Second Vice-Chairman, George W. Guthrie, Mayor of Pittsburg.
Third Vice-Chairman, William R. Willcox, Chairman of the Public Utilities Commission of New York City.
Secretary, Miss Gertrude Beeks.

The committee is composed of State and municipal officials, who have to do with the working conditions of public employes, chairmen of boards of health, heads of departments of public safety, leading physicians connected with public hospitals, heads of charity boards and others.

Some improvements needed are indicated by complaints of public employes and department heads with reference to crowded workrooms, bad light and ventilation, lack of emergency hospitals, of lunch rooms and of proper washrooms. Recreation for employes who not only work but live in State and city institutions, should be provided more generally.

The business of the Government has practically doubled in certain departments within the past five years, which has resulted in unfavorable working conditions. Employes in the Patent Office, for instance, claim that it is not pleasant to be obliged to read of improvements in ventilation devices and other conveniences for which patents are asked, when they are forced to work in close, dusty basement rooms previously used only for the filing of records. In the Winder Building the accumulation of dust since the time of Lincoln, it is claimed, has caused serious irritation of eyes and pulmonary affections of employes required to work constantly among the records. Former Secretary Shaw spoke of the Bureau of Printing and Engraving as "a first-class sweatshop," the machinery being crowded compactly into the workrooms and the ventilation bad.

New buildings erected by the Government, such as the Library of Congress and the one for public printing, contain modern washrooms and spacious, properly lighted and ventilated workrooms.

Congressman Bennet, who learned at a meeting of the Welfare Department of the National Civic Federation of the emergency hospitals installed in many factories, introduced a resolution of inquiry in the House of Representatives with reference to facilities in Government buildings in the city of Washington for administering first aid to employes. President Roosevelt immediately asked for reports from the various departments, and it was found that such provision was made in only one. An employe of the Government, a compositor in the Department of Public Printing, whose sympathy was stirred by the sight of employes lying on the floor awaiting the arrival of an ambulance for the purpose of carrying them to a hospital had fitted up a small room in which to care for such employes. As there was no

HON. WILLIAM H. TAFT.

appropriation for supplies, he personally paid for drugs, surgical dressings, bandages and other necessities. The Public Printer reported to President Roosevelt that the arrangement had been very beneficial to the employes, as some of the cases were very urgent and need immediate attention; that one thousand two hundred and fifty cases have been treated since this emergency room has been installed; and that previously it was necessary to send out for a physician, and if he were not at home the employe was left lying on the floor of the workroom, or toilet room, suffering until one could be located.

In some of the public buildings there are very good lunch rooms, while in others the employes will be found sitting upon their machines, at their desks or standing outside of the building, eating cold lunches brought from home.

Treasurer Treat does not hesitate to denounce the conditions in his own department, where scores of women are working in dark, unhealthful basement rooms. The dust and germs where the old money is counted are a constant menace to health.

Many improvements are being made at military posts in providing sanitary arrangements, for gymnasiums and amusement rooms.

In New York, within the past year, through the efforts of Postmaster Willcox, several new postal stations were provided, displacing ill-ventilated, unsanitary workrooms, and in these new structures there are comfortable rest rooms in which the postmen may spend their idle hours reading, smoking or playing games between "swings." Some stations are crowded, unclean and unsanitary and contain swing rooms unfit for occupancy, the corner saloons proving more attractive.

The care of the sick and insane in State and city institutions, with its constant association with suffering and emaciation, is exceedingly depressing to all classes of attendants in such institutions. To maintain health among the men and women helpers periods of rest and recreation are as essential as proper food and sanitary dormitories. Where such provisions for employes are not provided there is a decided disadvantage to the State or municipality in administering the institutions, for only the lowest type of help can be secured.

While connected with some State hospitals there are model dormitories for the employes, and there are club houses, providing wholesome amusement, in many institutions the conditions of the employes not only are deplorable, but a disgrace to communities which should be model employers.

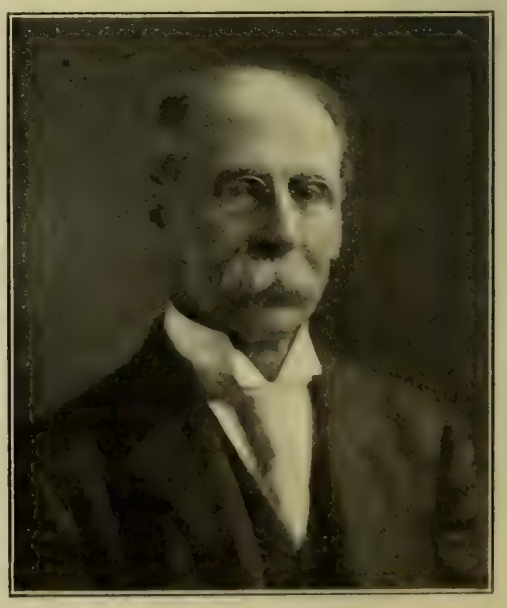
No private employer would be allowed to subject his employes to the unhealthful conditions which have been endured by policemen, notably in the stations in New York City, where they have been crowded into small, unsanitary sleeping apartments. Through the efforts of the Welfare Department of the Civic Federation, the Commissioner of the Police Department recently modified the platoon system, in order to obviate the inhumanly long working hours of the policemen.

There are many type of employes to be benefited by the efforts of the new committee on Welfare Work for Government Employes. Among those employed in the different departments, the navy yards, arsenals, State and city institutions to be affected are: clerks, sailors, soldiers, printers, machinists, carpenters, postmen, firemen, policemen, bricklayers, iron workers, moulders, painters, plumbers, pattern makers, engineers, chemists, blacksmiths, boiler makers, crane men, hospital orderlies and trained nurses.

The subject of pensions, in which all Government employes are keenly interested, will be given consideration. In every department this is a live issue, and there are organizations of Government employes which were formed for the purpose of securing Congressional action.

Mr. Willcox, during his incumbency as Postmaster of New York City, said regarding the question of pensioning postmen after a service of twenty-five years, that sooner or later the Government will have to recognize the fact that, having, under the Civil Service regulations, created a permanent Civil Service force, it will be as necessary to pension such employes as the men who serve in the army. In the matter of pensions, letter carriers should not be segregated from other Government employes, for any man who gives loyal service for twenty-five or thirty years, the best part of his life, and usually for very small compensation, should be given a moderate pension.

A national conference, at which will be discussed the subjects above mentioned, will be held under the auspices of this committee in the Fall.



The Welfare Department of the National Civic Federation is composed of employers in different industries throughout the United States. Its object is to interest employers in improving the working and living conditions of their employes. The topics covered, representing the voluntary efforts of employers

HON. WILLIAM R. WILLCOX.

HON. JOHN. C. W. BECKHAM.

HON. GEORGE W. GUTHRIE.

HON. WILLIAM S. BENNET.

for the benefit of their employes, are sanitary work places, recreation, educational opportunities, housing and provident funds.

The Committee on Welfare Work for Government Employes is the logical result of work already promoted by the Welfare Department for public employes in connection with charity hospitals, for policemen and postal employes. Its importance was also emphasized by the investigation and report of the Welfare Department, two years ago, upon the conditions of the employes of the Government engaged in the construction of the Panama Canal, many of the recommendations being put into effect.

EMERGENCY HOSPITAL, GOVERNMENT PRINTING OFFICE, WASHINGTON, D. C.

IS THE CITY OF NEW YORK A MODEL EMPLOYER?

THAT a great and progressive community like the City of New York should be a model employer will be accepted without argument, but what are the facts? How does it treat the fifty thousand or more human beings which compose its business organization?

HOW DO THE POLICEMEN FARE?

After making a study of platoon systems in other cities in this country and abroad, the New York Committee on Welfare Work of the National Civic Federation felt warranted in asking that the hours of policemen be reduced, and the Sub-Committee on Welfare Work for City Employes addressed the following letter to Commissioner Theodore A. Bingham in October:

"Sir—As it is our desire to see all our municipal employes well cared for, both for their own sakes and for the honor of our city, we have organized a committee of citizens to stimulate improvement in the conditions surrounding our policemen, firemen, letter carriers and institutional employes.

"In your department we find that the hours of service are abnormally long. We learn that in their regular routine men are permitted to go to their homes only for twelve hours every other day, and to be in service for as much as eighteen hours at a stretch—from 6 a. m. to midnight.

"This is in direct antagonism to the spirit of the age, which is favorable to a reduction of the hours of labor that will permit all men to have a fair opportunity for social, intellectual and physical culture; time to be with wife and children, time for religious observance, time for reading, time for exercise and fresh air. Such opportunities make better men, more intelligent in the discharge of their duty, and better citizens. And who should give an impetus to movements in the direction of better citizenship if not the city itself? The city should be the ideal employer; the city should set the example to employers among the people, who, though hampered by the restrictions of competition, will, in a measure, be influenced by this practical example. The city should adopt short hours for its employes and surround them with ideal conditions, both physically and morally. But how New York does fall short of this!

"The present hours we consider criminal from an ethical standpoint, tending, as they do, to degrade the men; and, further, they are not in the line of good policy, for the citizens look to the police for the protection of life and property; they expect good service; and what man can do good service who works such excessive hours? You are undoubtedly restricted by financial considerations in handling the question of hours. Shorter hours mean more men, and your appropriation does not reach.

"The alternative is larger appropriation. The citizens will not object to the extra tax which this will entail. Any man who does is extremely short-sighted and will be overruled by the fair and humane citizens, who are in the majority. Full protection is certainly required. More men working shorter hours will do better service, and only so can safety be insured.

"We have encouraging statistics from the police departments of many other cities, both in the United States and abroad, which show good results from a shorter workday, and we assure you that you will have a strong backing if you endeavor to secure an appropriation which will enable you to bring about a radical change in the hours of service and improvement in other conditions in your department.

Respectfully yours,

Marcus M. Marks, Chairman.

V. Everit Macy, August Belmont, Jr.,
John DeWitt Warner, Isaac Guggenheim,
Samuel B. Donnelly, Charles A. Moore,
E. A. Moffett, Thomas R. Slicer,
Timothy Healy.

The Commissioner gave the matter immediate consideration, and now the policemen work only six hours on tour, giving them twelve hours a day off duty, and every five days they are permitted twenty-four hours off on a stretch.

The Civic Federation undertook to direct public attention to the disgraceful condition of the police stations when former Commissioner William McAdoo was asked to speak at a recent meeting of the organization. Among other things he said:

"In many of the station houses the men sleep in overcrowded quarters, the beds being so close that in some instances they have to crawl over each other to reach them. In some of these buildings the dormitories are old and the walls have sunken, so that the windows are never thoroughly closed. They are freezingly cold in Winter, and, being unprotected from the sun during the day, are heated like ovens in the Summer. In the older station houses there is no proper provision made for heating and ventilating them. The waiting rooms, in which the men spend many hours while on reserve, are, as a general rule, dingy, dirty, uncomfortable, noisy and in every way unattractive. In nearly all of the station houses will be found an insufficient number of chairs for the men to sit on. The common sight is an old rickety table and a few old worn-out chairs, dirty and soiled walls, blackened ceilings and a rough board floor, saturated and stained with years of use.

"They even cut down the appropriation for keeping these wretched and tumble-down barracks in somewhat decent order. Many of them need painting and cleaning; some of them have panes out of the windows, and it is difficult to get the money to replace them. In some cases the city has really no station house at all for the men, but houses them in stables, as in the case of the sheepfold in Central Park. The best part of that building is given to the horses, and the part where the horses could not be put with safety to their health is turned over to the men. A great sewer opening is within three feet of where the men have to eat their meals. That the police in New York look so healthy, and are in the main a well-conditioned body of men, is owing to the fact that they spend so much of their time in the open air and are compelled to take exercise. The mounted men, for instance, in Central Park, would probably all have been dead long ago from the sewer gas which pours into the horse barn where they have to spend their time when not in the saddle but for the fact that they get so much fresh air and healthy exercise when on active duty. They thrive just as sailors do at sea, who stand the horrors of the fo'castle because they have to spend most of their lives on the deck, where the air is the best. Were it not for this the sick list of the police would be appalling.

"There are no proper bathing facilities for the men. In the army and navy the shower bath is universally used. Tubs are dangerous and out of date. Well tiled bathrooms which would admit half a dozen or a dozen men at a time ought to be provided with hot and cold showers. The bedsteads are some of them fifty years old, and are very uncomfortable and of a primitive type. Except that they are higher up, the dormitories are sometimes not much better than the prisons.

"Dormitories to be erected should be well ventila'ed, have modern plumbing facilities, and, above all, should be so constructed as to be capable of being thoroughly washed and hosed and lighted with electricity.

"It will probably cost two or three million dollars to tear down and reconstruct a number of the station houses and renovate and in some instances radically change the character of the others. A smaller sum would make a beginning. The expenditure of this money could go on, however, over a period of years, but the plan ought to be a systematic one. All of the station houses should be constructed on the same general plan. It is a criminal waste of the city's money to have a lot of architects drawing different sets of plans, some of them perfectly grotesque and foolish. The station house should have a distinctive, individual character, so that you would know at once what it was intended for. This is the practice of governments in Europe with regard to public buildings of this kind. The station house should be as distinctive as the green lamp in front of it."

Comptroller Metz aptly remarked recently that the shocking conditions of the police stations permitted, for instance, twenty-four men to sleep in a room no larger than his office, and that such treatment of employes by a private employer would place him in jail!

But relief seems at hand, for the Commissioner has taken hold of the problem energetically. An appropriation of two million dollars for the repair of old and erection of new station houses has been made. One is already in process of construction, and plans for two others have been drawn and approved.

EMPLOYES IN THE HOSPITALS.

AN inspection of the condition of the [illegible] one of the hospitals under the Department of Public Charities, made by representatives of the New York City Visiting Committee of the State Charities Aid Association and of the New York Welfare Committee of the National Civic Federation, two years ago, brought to light ill-ventilated, badly-lighted fire traps used as dormitories for helpers connected with the Metropolitan Hospital on Blackwell's Island. It also revealed poor kitchen and dining-room service, inadequate, unsanitary toilet facilities and an utter lack of recreation.

This led to thorough investigation of all city hospitals, recently, which resulted in a commendatory letter to Commissioner Hebberd, of the Department of Public Charities, upon improvements which have been made since January 1, 1906, with comments on general conditions and suggestions for further developments, in reference to dormitories, dining rooms, work places and recreation. In replying, the Commissioner said: "I am in full sympathy with the suggestions, and shall be glad to do anything that I can toward carrying them out."

COMMISSIONER ROBERT W. HEBBERD.

OLD WOODEN PAVILION, JUST DEMOLISHED.

It is not too much to say that the present needs should have been met ten years ago. Until a few weeks ago, at the Children's Hospital, Randall's Island, for instance, an old shed on the dock was used as a dormitory for forty men. The only washing facilities consisted of a trough at the end, accommodating but two men at a time. Ventilation could be secured only by causing the occupants to suffer from draughts through the windows near the cots. The light being inadequate, reading was impossible, and the men's recreation was merely to gather about the stove and smoke. Through the efforts of Commissioner Hebberd this dormitory has just been displaced by reconstructing an old prison building with cells in which one hundred paid men helpers had been obliged to sleep. The remodelled building contains six light and airy dormitories, making provision for one hundred fifty employes under sanitary conditions.

A new dormitory for men helpers at the Metropolitan Hospital, Blackwell's Island, permits the destruction of some of the unsanitary old wooden pavilions, but this modern structure should be duplicated immediately, for it is a disgrace to the city that human beings should be herded together in

NEW MEN'S DORMITORY, REPLACING WOODEN PAVILION.

cheerless frame shacks, erected at the time of the civil war as temporary shanties. Even more deplorable is the continued use of the skylight attic dormitories, without any windows, in the main hospital building. During the past few months it is true that the number of men and women helpers thus exposed to fire risk has been diminished, but provision elsewhere should be made at an early time.

The single, dark, steep and winding wooden stair leading to each attic would be speedily cut off by fire from below. Slight ladders, some of wood, loosely placed under the small skylights, afford the only other means of escape—to the roof. Smoke would quickly fill these rooms, the ceilings of which range from four to about seven feet in height, and the smoke and flames would soon seek and obscure or render impassable the skylights. The occupants would have the very slightest chance of escape from death by flame or smoke.

Within the past eighteen months the fiscal authorities have made reasonably liberal appropriations in proportion to what has been devoted to benefits for employes in the past.

The first moneys for such modern improvements were awarded during the administration of Mayor Low. Former Commissioner of Charities Homer

INTERIOR WOMEN'S OLD WOODEN PAVILION.

Folks, at that time, undertook to correct the worst abuses. With reference to conditions as he found them, and efforts at reform, he stated at a meeting of the National Civic Federation recently:

"The city provides for the employes' board and lodgings, such as they are. A few years ago the lodgings were, almost without exception, just about as bad as they could possibly be. Herded together in unventilated, dilapidated, unsanitary, cheerless buildings, with practically none of the creature comforts of life, it was little wonder that these employes soon entered once more the ranks of either prisoners or patients. Progress has been made in some directions.

"During the administration of Mayor Low a very comfortable dormitory was erected for the male employes of the City Hospital in place of a wooden rookery which had formerly housed them. This dormitory provides a well-lighted and comfortable dining room, a good sized room for reading, smoking, games, etc., a considerable number of individual rooms and two well lighted, well equipped dormitories.

MEN'S DORMITORY, ERECTED AT TIME OF CIVIL WAR.

NEW MEN'S DORMITORY.

A DISGRACE TO THE CITY OF NEW YORK: ATTIC DORMITORY.

"At the Kings County Hospital a large kitchen and dining-room building was erected, providing well lighted, well equipped dining rooms for the various grades of employes, so situated that food can be served quickly, easily and reasonably attractive."

During the present administration a dormitory for women helpers has been added to the accomplishments at the City Hospital, and contracts have been let for a nurses' home and training school and for additional facilities for women helpers at the Metropolitan Hospital, as well as a staff house for internes and a large and well-equipped dining, kitchen and service building at the City Hospital. Other dormitories, nurses' houses and staff houses are needed at the Children's Hospital, Metropolitan Hospital, City Hospital, Cumberland Street Hospital, Kings County Hospital and Coney Island Hospital.

A modern structure to contain every facility requisite for the proper handling and serving of foods should replace the old kitchen building, and also the dining rooms for the helpers at the Metropolitan Hospital.

The great need of additional accommodations for patients at the several institutions requires large appropriations, but essentials for the humane treatment

ATTIC DORMITORY.

of the employes are just as imperative. This is necessary to aid in securing a permanent class of helpers. At present some of the forces must be practically reorganized each month, the helpers remaining frequently but long enough to draw one month's pay and depart for a drunken spree. No private enterprise could be operated successfully with such a changing force, and it is impossible to give the city's poor and sick proper or economic care under such conditions. Compensation for helpers in the Department of Charities being ridiculously low, contributes largely toward the difficulty in attracting competent, permanent workers. It is worthy of note that the splendid arrangements which have been provided for the convenience of the employes in some city institutions, such as Gouverneur Hospital, are offered in addition to an adequate wage just as they are by employers in many commercial enterprises, and, fair wages and good working conditions combined secure more competent helpers. The economic principle "create a proper environment, and you make for good discipline" also has been thoroughly proved.

INTERIOR OLD WOODEN SHACK, JUST ABANDONED.

Some of the comments and suggestions made to the Department of Charities by the Joint Committee on Welfare Work for Employes of New York City Charitable Institutions follow:

Physical Conditions.

Toilet Arrangements: In the construction of all new dormitories we approve heartily of locating the toilet arrangements, including baths, in separate rooms. Hot water and towels should be provided in addition to soap.

Furnishings: An effort toward having the dormitories homelike and more attractive would be desirable. We believe that there should be some form of decoration, simple but artistic, and it would be very appropriate to call upon private citizens for contributions of pictures for the walls.

Individual Sleeping Rooms: It is desirable where possible to have individual rooms and equipment. While the present low grade of employes may make open dormitories more desirable for supervision, we submit that until individual rooms are provided it

ILL-VENTILATED, BADLY-LIGHTED KITCHEN, METROPOLITAN HOSPITAL.

MODEL KITCHEN, KINGS COUNTY HOSPITAL.

will be exceedingly difficult to secure a higher type of helpers, which in the interest of the patients and of economy is most desirable. Where several occupy one room there is great discomfort; for instance, one will desire to read in the evening, one will wish to sew, and another, especially if not feeling well, will want to sleep, which is impossible with the light burning and the noise from conversation. Such interruption of needed rest naturally causes irritation and ill health, which must prevent the rendering of good service. Another point to consider is that those sleeping near the windows complain of the draft, while those remote will suffer from poor ventilation. Such dormitories afford a miserable existence, not attractive to self-respecting workers, who frequently ask for single rooms.

The use of the present sanitary iron beds should be continued, and we believe that where there are open dormitories there should be not less than one bureau and one wash bowl for two persons, a chair for each and separate lockers for the clothes.

WRETCHED DINING ROOM, METROPOLITAN HOSPITAL.

Janitor Service: In order to maintain throughout the institution the excellent standard of cleanliness obtaining in some, there should be regular janitor service instead of expecting the employes to care for their dormitories and other facilities.

A Comprehensive Plan: We understand that a survey of Blackwell's Island is being made, showing present permanent buildings and contemplated improvements. We commend the idea of having a definite plan for improvements, not only to meet the present needs, but those which must come with the growth of the city, and decidedly do we consider that the sporadic meeting of temporary needs is very uneconomical.

Recreation and Social Conditions.

A systematic study of forms of recreation which would be applicable to the different local conditions should be made.

To aid in securing permanence of employment, the following recommendations are made:

MODEL DINING ROOM FOR HELPERS, KINGS COUNTY HOSPITAL.

Social Halls: There should be special recreation rooms in the dormitories where feasible. If not, special buildings should be erected for that purpose in connection with each of the hospitals.

Writing, Reading, Smoking and Sewing Rooms: In the men's and women's dormitories there should be reading and writing rooms equipped with neat desks, tables and chairs. (At Gouverneur Hospital the end of each corridor, well lighted, with five or six windows, is utilized for that purpose. The writing and rest rooms are especially appreciated by the help during the evenings.)

In the women's dormitories there should be sewing machines and classes for the purpose of instructing the women in dressmaking. In the men's dormitories the reading rooms could be used also for smoking.

Libraries: Arrangements might be made with the New York Public Library for branch libraries in connection with the different hospitals, from which books would be furnished to the nurses and help, working in non-contagious hospitals.

MEN'S READING ROOM, CITY HOSPITAL.

Illustrated Lectures: Illustrated lectures could be provided for the benefit of all employes. The Board of Education might be prevailed upon to supply lecturers and lectures. Some plan of co-operating with the Public Education Department of the State of New York would be worthy of consideration. It has to lend at least eighty lectures, including such subjects as travel, art, science, history and literature. Especially would stereopticon lectures on travel appeal to all classes of employes.

Dancing: In the men's dormitory of the City Hospital we find that the employes now have dancing. If social rooms are provided at all the institutions series of dances can be given.

Physical Culture and Basket Ball: Classes in physical culture could be gradually organized as a further utilization of the space provided for dancing, and there could be basket ball.

Billiards and Bowling: There should be billiard rooms in the men's dormitories and bowling in the general recreation buildings.

NURSES' RECREATION ROOM, CITY HOSPITAL.

Game Rooms: In the women's dormitories there should be game rooms, containing, for instance, checkers, equipment for ping pong or indoor tennis.

Theatricals: The general recreation rooms should be so equipped as to provide for amateur theatricals, as well as the lectures above mentioned. Roller skating also would be enjoyed.

Music: Among the provisions might be included the phonograph and arrangements made for circulating the discs among the different institutions in order that the employes might not tire of the tunes.

Outdoor Games: There should be developed gradually and in so far as feasible, outdoor games such as baseball, quoits and tennis.

Summer Outings: It is hoped that the plan of Summer boating excursions and other outings already inaugurated will be extended.

Verandas: Verandas for lounging should be included in plans for new dormitories, similar to those at the City and Metropolitan hospitals.

Decorations: Citizens might be appealed to for contributions of pictures for the walls of the social rooms, which should be made as attractive as possible without being elaborate. A good utilization of paint, such as dull red walls and Pompeiian green woodwork, beautify with proper simplicity. The buff walls of the recreation room at the City Hospital are very attractive and well hung with pictures.

Clubs: Clubs of employes may be formed and contribute toward the support of recreative places, as has been done in some State institutions. We note with pleasure that the club at the City Hospital of its own initiative purchased a piano, the funds therefor being contributed entirely by club members.

Premiums Upon Length of Service: Series of games such as baseball and handball for the men and other games for the women could be arranged between different dormitories to create a spirit of rivalry. A rule might be made that only employes who have been with the institution for at least six months could compete in the games. This would be one means of encouraging permanence of employment.

A further effort toward securing a more permanent force of employes would be prizes at the end of each year for those who have been the longest upon the payrolls.

Provident Funds: Branches of the Penny Provident Savings Society we believe should be stationed at all the hospitals in places daily visited by the employes, and especially should those branches be easily available to the employes upon pay day.

Arrangements should be made to enable employes to make deposits in savings banks with ease. At the time pay is distributed a properly authorized person might accept deposits.

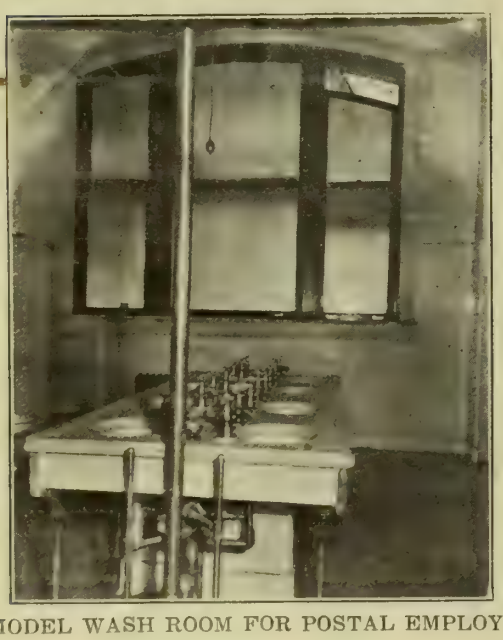
Welfare Manager: To ensure the successful and continuous operation of the plans proposed under the head of recreation and provident funds, it is essential that there should be one person in the Department of Charities held responsible for the conduct of this phase of its work. His duties would be to plan systematically all such activities for the benefit of the employes, and, when approved, to put them into operation in co-operation with the superintendents of the hospitals. All activities for the benefit of the employes naturally would be included in the scope of the work of the Welfare manager, such as systematic investigations of the dormitories and dining rooms. The operation of the dormitories and dining rooms would be left under the general management of the hospitals, but the Welfare manager could offer recommendations for improvements without in any way entering into conflict with the superintendent's duties.

He could also aid in securing pure drinking water, easily accessible to all employes, the cooling of superheated places, such as the laundries and quarters of the stationary firemen, and the provision of shower baths for stationary firemen, and such other workers as would require them.

It would be very proper for the Welfare manager to organize a more thorough system of securing new employes.

NEW YORK CITY'S POSTAL EMPLOYES.

A STUDY of the postal stations in New York City before the recent resignation of Postmaster Willcox revealed conditions so sharply contrasting as to make it difficult to believe that a single employer—the United States Government—could be responsible for such varying types of work places. Some of the carrier stations are models of perfection, which should serve as a standard to be generally copied. The conditions at others, however, are intolerable, a reflection upon the Govern-



A DAMP, UNVENTILATED BASEMENT LIVING ROOM.

ment and a menace to the physical well-being of its employes. Credit is due to former Postmaster Willcox for an energetic campaign which he waged against the stations in the latter classes. During his administration he succeeded in obtaining new quarters for six of these stations, besides improving the conditions at others. He also gave close attention to the sanitary conditions in the main post office, where improvements have been made which are vital to the health of the workers. The ventilation has been radically improved through the introduction of numerous electric fans, blowers, and fresh air shafts, by which the atmosphere is cooled in Summer and warmed in Winter. In addition to this, large steam radiators have been installed, which greatly add to the comfort of the employes. Systematic watchfulness maintained over workrooms, clothes closets, and in fact, over all parts of the main office, has done much to secure good sanitary conditions at that point. Congestion certainly exists, but this is due to inadequate space, which will, however, be remedied by the completion of the fine new branch post office at the Grand Central Station until the new general post office is erected.

A NEW SWING ROOM

A MODEL WASH ROOM FOR POSTAL EMPLOYES.

What are the especial needs of postal employes? Obviously for the clerks who sort the mail, light and ventilation are of primary importance.

In the performance of this work the men labor with great rapidity and under high tension, and to read the addresses good light is a necessity. Under the present conditions, however, artificial light is necessary in many of the workrooms. Usually it is supplied by having gas jets placed in rows at the tops of the sorting cases, a little above the heads of the men. The gas not only increases the temperature in Summer, as it must be burned the greater part of each day, but its consumption of oxygen serves to vitiate the air to a startling degree. The buildings recently leased or especially erected for use as postal stations are well lighted.

Excellent ventilation is possible in some of the stations which are well equipped with windows and transoms, but in others, especially in basements, radical changes are demanded for the preservation of the health of employes. Perhaps the worst instance is a basement with no inlet for fresh air except the stair case to the floor above. In another case, it is a narrow shaft running to the fourteenth story. Hot water pipes along the ceiling cause such intense heat

WHERE A LUNCH ROOM IS NEEDED; EATING LUNCH ON MAIL SACKS.

in Summer as to add greatly to the discomfort of the men. The purchase of electric fans by the employes in one room illustrates a need of devices to purify the air.

Conspicuous for its wholesome, sanitary condition is a new station equipped with the pneumatic sweeping system. The condition of basement rooms demands greater attention. Dirt collects in them more readily than in upper stories, and only the most scrupulous cleanliness can make such quarters passably habitable. In fact, the extreme cleanliness of some places, and the apparently neglected condition of others, evidence the need of a sanitary corps to maintain a single standard of healthful conditions.

The dirty and dusty condition of mail sacks is applicable to all stations, but this is due to the uses to which such sacks are put in the transporting of mails in cars, wagons, trucks, etc. Except in the case of foreign bags coming from regions infected with cholera or other contagion, there is no provision for the fugimation of mail bags. Employes of the Department know of no provision for ever cleaning the bags, and it is only as they wear out that new, and, for the time being, clean bags are substituted.

GOOD LIGHT AND VENTILATION FOR POSTAL CLERKS.

These old pouches and sacks naturally emit odors far from agreeable, which suggest the existence of dangerous germs. However, the small absenteeism on account of ill health would not appear to confirm this view, and the department is constantly at work replacing old equipment with new.

Drinking water, rendered pure by distillation, will be found in one model station, whereas the lack of such attention to health is shown in an old one where the water is piped from a storage tank at the top of the building with no system of filtration.

For the carriers who are frequently subjected to inclement weather other conditions arise. For instance, no provision is made for the drying of wet garments. It is against the rules for postmen to

POSTMEN PROVIDED WITH OUTSIDE RESTING BENCH IN SUMMER.

linger in the workrooms between tours of duty. During the incumbency of Postmaster Willcox, however, pleasant swing rooms, with tables and chairs, were arranged in some of the stations, in which the postmen may spend their idle moments, although there is no evidence of opportunities for wholesome recreation, or adequate luncheon facilities in any. The most attractive swing room has a high ceiling, is perfectly lighted with four large, outside windows during the day, and groups of electric lights in the evening. It is so partitioned that the men are enabled to read or rest with perfect comfort; this room is finished in oak and tiling. Cleanliness and order prevail. In the rear are ventilated metal lockers. A decided contrast to this is presented in a basement swing room, which receives its only daylight through the grating in the sidewalk. The window underneath was, at the time of the investigation, so unclean as to exclude even such light as might come from that source, and the accumulation of filth in the space outside the window created an environment which would not appear to cause the men to voluntarily seek it. However, this was very materially improved under the direction of Mr. Willcox. The superintendents, who are not allowed to permit the postmen to loiter in the workrooms, find it difficult to force them into the gloomy, damp, basement rest (swing) rooms, where the dilapidated furniture does not invite comfort. That there is a need of combination rest, game and smoking rooms above the basement floor is fully recognized.

In neighborhoods where there are no good restaurants with moderate prices, simple lunch facilities, including cafeteria lunch counters and coffee urns, are needed.

Modern lavatory and toilet facilities, have been introduced in new stations and, with the exception of two of the old ones, health regulations are observed with all devices, although ventilation is inadequate in the majority.

It is the custom for the post office employes to pay for soap, towels, toilet paper and shoe blacking, each man contributing ten cents a month toward this fund. When progressive employers in private enterprises supply free to employes the first three essentials named the question arises why the Government should be behind the foremost in furnishing the "common decencies."

In many cases, locker and dressing rooms are placed in the swing rooms, which makes it impossible to have privacy when changing clothes. Dressing rooms should be entirely distinct from swing rooms as in one of the newer offices.

There is complaint against the rule which requires that the men shall be docked when absent and not be paid for overtime. Consolation may be had in the knowledge that through the persistent efforts of Mr. Willcox salaries, commencing on July 1, were raised. For seventeen years, the law has required new postmen to start at $600, and that the maximum salary should be $1,000. The new schedule makes the minimum $800, which sum he considers to be as little as a man can live upon to-day, and the maximum salary is raised to $1,100. Proportionate increases have been made in the salaries of the clerical force which it is believed will tend to increase the efficiency and satisfaction thereof.

BENEFITS FOR ATTENDANTS IN SOME NEW YORK STATE HOSPITALS.

THE watchword of the Welfare Department of the National Civic Federation, with reference to the desirability of introducing efforts for the benefit of employes is, "Prove by Example!" Somewhat discouraging was the first reply to letters of inquiry lately sent to superintendents of New York State hospitals seeking data relative to dormitories, dining halls and recreation: "The employes of this hospital receive medical and surgical treatment free when required. The facilities of the institution for treating medical and surgical cases are similar to those in the average general hospital."

That such limited consideration is given to all employes of State institutions is disproven by other evidence secured. The excellent arrangements portrayed below, while not introduced generally, pertain to a sufficiently large number of cases to prove their efficiency:

ROCHESTER STATE HOSPITAL.

DORMITORIES.

The Nurses' Home of the Rochester State Hospital is a new building of three stories, occupying a pleasant portion of the hospital grounds. The building consists of a central portion and an east and west wing.

In the center are rooms for all of the married employes, and five very pleasantly located sitting rooms used for the benefit and social purposes of all hospital employes.

THE AMUSEMENT HALL, HUDSON RIVER STATE HOSPITAL.

Picture taken at the time of Christmas festivities. Hall used for dances, theatricals and concerts.

Of the two wings, one is used for the unmarried women employes and the other for the unmarried men employes. The wing for the women employes has a girls' writing and sitting room and a large veranda. The centre has four verandas and the men's wing two large verandas.

Married couples are all provided for so that husband and wife room together. Besides these there are some employes who room together, mostly through their own preference. These rooms are all fully equipped for two persons, with two each of beds, dressers, wardrobes, etc.

All the other employes, which constitute about 75 per cent. of the total number, have single rooms, well furnished and pleasant, with lavatories, wash and bath rooms conveniently located.

LARGE BILLIARD, POOL AND SMOKING ROOM, HUDSON RIVER STATE HOSPITAL.

In this room are card tables, checker and chess boards. It is open to employes at all times.

RECREATION.

In the basement underneath the men's wing are located two large and two medium-sized rooms and a hall, which are used for employes' club rooms. One large room is used by the employes for meetings and a card room, the other for a billiard room. Of the

BOWLING ALLEY, HUDSON RIVER STATE HOSPITAL.

In which have been developed teams able to contest with some of the best bowlers in the Hudson River Valley. This is open to the use of employes every evening.

GRAND STAND, HUDSON HIVER STATE HOSPITAL.

On one side of the athletic field. The picture shows a portion of the one-quarter mile track, and a portion of the baseball diamond. On th's field there are ball games, races and contests of all kinds.

PAVILION IN THE GROVE, HUDSON RIVER STATE HOSPITAL.

Where there are held dances, picnics, clambakes and receptions.

smaller rooms one is a cozy room, with a large fireplace in one corner; the other small room is used as a writing and reading room. These rooms have an east and south exposure and are very pleasantly located.

BINGHAMTON STATE HOSPITAL.

DORMITORIES.

The employes have single or double rooms, so that dormitories in the ordinary sense of the word are not in use.

RECREATION.

The men employes have very fine club rooms, consisting of three large connecting rooms, with billiard and pool tables; also tables for cards and other games.

The women have also a club and excellent club rooms, although less extensive than those of the men. Plans have been made, however, for new accommodations for the women, which will be satisfactory in every respect.

INTERIOR AMUSEMENT HALL—GYMNASIUM—TWO ATTENDANTS, MEMBERS BASEBALL TEAM, GOWANDA STATE HOMEOPATHIC HOSPITAL.

CENTRAL ISLIP STATE HOSPITAL.

Thus far the superintendent has not been able to secure a sufficiently large appropriation to carry out all his aims in this direction. He claims no particularly striking features at the institution that pertain to employes' welfare, but makes an effort to furnish what is possible for their entertainment and diversion while off duty.

ATTENDANTS' BAND, GOWANDA STATE HOMEOPATHIC HOSPITAL.

DORMITORIES.

There are two large attendants' homes which house a majority of the employes comfortably.

DANCING AND SKATING.

About two years ago there was completed a large amusement hall, 70x140 feet, in which there are dances several times a week, and on two nights a week it is used as a skating rink. This latter feature has proven a very popular one, and it has been found that, while previously a large number of men and women left the grounds in the evening after duty, they now attend the skating rink.

BILLIARDS.

In one of the attendants' homes and in two of the dormitories there are pool and billiard tables for the amusement of the men employes.

BASEBALL.

For several years there has been one of the best amateur baseball teams in the State, with at least one game of ball each week during the season, attended by the major portion of the employes.

GOWANDA STATE HOMEOPATHIC HOSPITAL.

DORMITORIES.

The hospital employes live in a Nurses' Home somewhat apart from the institution, arranged in the form of a letter "T."

The right and left wings are for single men and single women respectively.

The rear portion of the building is arranged for the married employes.

DINING ROOMS.

The dining room for employes is distinct from the patients' dining room, and is divided into a department for nurses and attendants and another for mechanics and outside employes.

RECREATION.

A room in the basement of the Nurses' Home is used as a club room and smoking room. There is a piano in one of the reception rooms, and it is hoped to supply pool and billiard tables later.

The Amusement Hall, a short distance from the Nurses' Home, is used for entertainments for both patients and employes.

Aside from their dances, the employes have one or two amateur plays during the Winter, while in the Summer months they have, as a rule, a baseball team, and in the Fall a football team.

BUFFALO STATE HOSPITAL.

DORMITORIES.

The nurses ,attendants and employes are cared for, with the exceution of a very few who must from the nature of their work be in the main building, in two large homes.

The women's home accommodates about seventy-five persons; the rooms are comparatively large, and two nurses occupy each room.

The men's home contains one hundred rooms; these are single, viz., one for each person.

DINING ROOMS.

The dining rooms for each are located in the main building.

BILLIARD AND READING ROOM AT MEN'S HOME, BUFFALO STATE HOSPITAL.

RECREATION.

The employes have music and reception rooms and the use of the library. They also have a reading room, and in connection with it a billiard room.

ST. LAWRENCE STATE HOSPITAL, OGDENSBURG.

DORMITORIES.

In this institution the employes room apart from the patients, either in buildings wholly detached or in wings separated from the wards. The older employes and those occupying superior positions have rooms alone, others room two together, and in some instances dormitories are provided, accommodating from three to eight or ten.

EMPLOYES' BUILDING.

RECREATION.

In each employes' building there is a sitting room where attendants may spend the evening together.

In addition there is a club maintained by employes, consisting of two large rooms, one a reading room and the other a billiard room. There are provided a number of illustrated magazines and news papers, and the expenses are met by a monthly assessment of twenty-five cents on each employe. The club is self-governing and has a surplus in the treasury. The hospital furnishes light, heat and repairs. The cost of furnishings, rugs and current running expenses are met by the club's treasury.

There is a bowling alley, maintained by the hospital, and dances are given in the Recreation Hall during the Winter. The employes have also the use

WHERE EMPLOYES' DANCES ARE HELD, ST. LAWRENCE STATE HOSPITAL.

of the hall for basketball, there being several organized clubs. No restriction is placed upon the mingling of the sexes when off duty, except very obviously necessary ones.

KINGS PARK STATE HOSPITAL, LONG ISLAND, N. Y.

DORMITORIES.

The Employes' Home is occupied by as many of the employes of the hospital as can be accommodated and spared from the wards, and except those provided with accommodations elsewhere, such as those in clerical positions.

BARBER SHOP, KINGS PARK STATE HOSPITAL.

It accommodates three hundred employes. There are rooms in each wing for single men and women, while the larger rooms in the centre are for married couples.

The third floor of each wing is occupied by night employes, and they are thus removed as far as possible from the noise and other distracting surroundings, the first and second floors being assigned to day employes. There are baths at the end of each wing.

On each floor there is a reception room, with two additional entrance halls furnished as parlors, all being open during the day and until ten o'clock at night for the use of the employes when off duty.

In the basement of the Home is the lecture and recitation room of the Training School for Nurses.

BOWLING ALLEY AND CARD ROOM, WOMEN NURSES' HOME, MANHATTAN STATE HOSPITAL.

RECREATION.

Membership in the organization known as the "Employes' Club," is open to all employes of the hospital on payment of a small initiation fee together with small monthly dues. This entitles them to the use of the club house at all times when they are off duty, and certain additional privileges, such as a late pass Saturday night, a reduction in barber's fees and admission to dances given under the auspices of the club from time to time. They elect their own officers and select their own employes, with the approval of the superintendent.

The building and original furnishings were provided by the hospital. Renewals and additional furnishings are purchased by the Employes Club, which

Continued on Page 17.

TRADE DISPUTES.

THREE METHODS OF SETTLEMENT ILLUSTRATED BY EXAMPLES IN UNITED STATES AND CANADA.

WITHIN the last few months practical illustration has been given, on a large scale, of three distinct methods of dealing with serious differences between employers and employes—direct negotiation, meditation, and official investigation with certain compulsory features. The first method brought about a settlement of demands by the locomotive engineers employed on about forty Western railroads; the second achieved the same result in the case of the conductors and trainmen on the same roads, and has been called into use in the telegraphers' strike; the third was employed with respect to strikes in the Canadian coal mines.

HON. MARTIN A. KNAPP.

The Locomotive Engineers' Settlement.

Of the three, the case of the locomotive engineers attracted the least public attention, perhaps because the methods were the simplest and most direct—nothing more, in fact than ordinary business conferences between the parties immediately concerned. The joint session of the engineers' representatives and railroad managers' committee lasted about two weeks, and a settlement was reached in January which granted certain wage increases to the men and adjusted minor differences to the reasonable satisfaction of both parties. The issues were not easy of solution and the sessions were for the most part day and night affairs, but it was found possible to reach a conclusion without resorting to the mediation of any third party or arranging for arbitration. This is the ideal method of settling industrial disputes.

The Train Employes' Settlement.

The conductors and trainmen employed on these same forty railroads submitted demands for increased wages and shorter hours, and committees representing both sides met in joint conference for many weeks, without making practically any headway toward a settlement. Late in March the railroad companies resorted to the Erdmann Conciliation and Arbitration Act, which empowers the Chairman of the Interstate Commerce Commission and the United States Commissioner of Labor to act in a mediatory capacity when requested, for the settlement of disputes between railroad companies and their employes. Chairman Martin A. Knapp and Commissioner Charles P. Neill went to Chicago and held several sessions with representatives of both parties, finally submitting a proposition which was accepted and signed on April 5 by the committee representing the companies and by Grand Chief Garretson of the Order of Railroad Conductors and P. H. Morrissey of the Brotherhood of Railroad Trainmen.

The settlement includes a guarantee on roads not having mileage limitations in their agreements for passenger men that the mileage will not be increased for the purpose of offsetting the increase in wages, as was done on several lines following the 1903 settlements; and provisions that overtime be allowed for passenger service and that 100 miles or less, ten hours or less, shall constitute a day in

HON. CHARLES P. NEILL.

through or regular freight service. Local freight working time has been reduced to ten hours, or less, on all roads that worked more than ten hours. The day for work trains and helpers will be ten hours or less. On eighty per cent. of the roads it was twelve hours. Many roads had the one-half day minimum in work train service. The principle of pro rata overtime in through, regular, local and work train service was established. The increase in wages will average ten per cent for the entire territory and in certain instances will reach fifteen per cent.

The demand for a shorter working day on all of the lines was dropped, but this feature was also omitted from the settlement made with the yardmen last November and the engineers in January.

At the time of the mediation by Messrs. Knapp and Neill the prospect of making a settlement seemed remote, except perhaps to those whose faith in the admirable methods that have long prevailed in the adjustment of differences in the railroad world was too strong to be shaken by even the discouragements of this prolonged negotiation. It is significant that this settlement, through conciliation, was reached after arbitration offered by the railroad managers had been declined by the trainmen, a circumstance which prompts the Railroad Trainmen's Journal to say that: "It was the sensible thing for the committees to do as they did. . . . . At best the outcome (of a strike) would have left the organizations responsible for whatever would have resulted to business progress. As it is, a substantial increase was secured and many questions brought closer to standard."

The Railway Conductor remarks that: "The method followed in this case is an innovation in the history of railway labor dealing. There were no precedents established by which we could be governed. The very magnitude of the movement itself created conditions with which we had never been confronted and attracted to it public notice and attention that were before unheard of and would have created conditions, had it become necessary to call our membership in that territory out on strike, that would never have had a parallel in the history of the labor movement. The men on the committee took these facts into full consideration, recognizing the interests of the public in the question, and, by their judgment in accepting a settlement below that to which, they believed, they were honestly entitled, fully demonstrated the fact that even when admittedly possessing the power to absolutely enforce their demands they were governed by a spirit of moderation and not by that spirit of tyranny which had usually been ascribed to organized labor when placed under the conditions here outlined."

RAILWAY CONFERENCE.

This photograph, taken especially for the Review, shows the Chairmen of forty-seven Committees of Engineers and the managers of forty-seven railroads just after they had signed their agreement.

Telegraphers' Strike.

Dr. Neill was called in to the telegraphers' strike through a petition having been sent to the President from several commercial organizations. He brought about a settlement which was regarded as fair by the Executive Board of the Telegraphers' Union and accepted by them, but the President of the organization, who was in San Francisco, was not satisfied with the matter and called a strike on the Pacific Coast. Dr. Neill immediately took up the matter again and finally went with the Executive Board to San Francisco and brought about a second settlement of the controversy, which was satisfactory to all parties. Ten days later a strike occurred at Los Angeles, California, which was unauthorized by any officials of the organization. That strike at once spread until the union was involved all over the United States and all the men were finally called out. Dr. Neill at once took hold of the matter, but at this writing it seems as though it will have to be fought to a finish.

The Canadian Coal Mine Strike.

The recent troubles in the mining districts of Canada have attracted widespread attention because of their relation to the "Industrial Disputes Investigation Act," which became a law in March last. This measure provides that "Employers and employes shall give at least thirty days' notice of an intended change affecting conditions of employment with respect to hours and wages," and requires that in the event of any dispute in any industry known as a public industry it shall be illegal to resort to a strike or lockout until the dispute in question has been made the subject of an investigation before a board of Conciliation and Investigation, to be appointed by the Minister of Labor.

During April, before the provisions of the act had become clearly understood throughout the Dominion, strikes occurred in the coal mines of Nova Scotia and in Alberta and in Eastern British Columbia. In the Nova Scotia case, the issue was a demand for the closed shop; in the other, it was on the renewal of a working agreement which had expired in March. In both cases application was made to the Minister of Labor for a board of conciliation and investigation, under the provisions of the new law. In the Nova Scotia case, as the strikers had returned to work before definite steps had been taken under the law to bring about a settlement, no real test of its efficiency was afforded.

In the Western case again, though there was a violation of the law, and an effort on the part of the Government to secure compliance with it, through persuasion, there does not appear to have been any attempt to enforce its provisions. The conference between operators and men during the month of March having failed to come to an understanding, the month of April opened in an unsettled state. Application for a board of conciliation and investigation was made by each of the parties, but technical objections interposed only added to the unrest. Notice of an intended reduction of wages had been posted by some of the companies. Thereupon some of the miners ceased work and by the 21st of April work at all the mines had terminated.

A board of conciliation and investigation was appointed, but in the meantime the Deputy Minister of Labor was sent to the scene. He exerted his utmost endeavors to secure a return to work. He believed that the cessation of work had been due to a misunderstanding of the purposes of the act and so convinced the local leaders, who agreed to put the question of a return to work to a vote of the men. The men, by a vote April 27th, rejected the proposition, but it is pointed out that the negative vote came from places away from the center of the disturbance which had not had the benefit of any of the discussions. The Deputy Minister did not consider the vote in any sense a symptom of open rebellion against the provisions of the act.

Pending the constitution of the official board, the Deputy Minister took the matters of dispute in hand, and by a series of conferences with both parties secured finally an agreement which, after ratification by referendum, went into effect May 5th, 1907. The board adjourned without having organized.

It is to be noted that the negotiations for a settlement were carried on as if the provisions of the law were being regularly complied with in all respects, whereas it had failed in what was supposed to be its vital feature, namely, the requirement that no strike or lockout should occur until the dispute had been finally dealt with by the board. The law expressly provides that:

"In every case where a dispute has been referred to the board until the dispute has been finally dealt with by the board neither of the parties nor the employes affected shall alter the condition of employment with respect to wages or hours, or on account of the dispute do, or be concerned in doing, directly or indirectly, anything in the nature of a lockout or strike, or a suspension or discontinuance of employment or work, but the relationship of employer and employe shall continue uninterrupted by the dispute or anything arising out of the dispute."

Apparently the government was not prepared to test the question of fine or imprisonment to compel the strikers to remain at work, but preferred to ignore the point and work for a settlement as best it might. In fact, this aspect of the law has not been definitely tested. Proceedings were indeed undertaken against certain miners at Texada, B. C., for causing a strike which was initiated March 25, 1907. In the course of the trial it appeared and was brought out that the act was approved March 22, and that the miners at the time of causing the strike had no knowledge of its provisions. Discussions before the Court led to an adjustment of difficulties between the men and their employers and the prosecutions were dropped.

Just what the effect of an enforcement of the law would be it is difficult to foresee. As President John Mitchell, of the United Mine Workers, commenting upon this case in an interview at St. Louis June 7, says: "The question that immediately arises is that of involuntary servitude. If the miner wanted to quit work surely he would be permitted to do so without being fined by the government because he didn't want to work. When a man works at mining who doesn't want to and is forced to do so by the government we would call it involuntary servitude in the United States."

While the Canadian law does not establish compulsory arbitration, in that it does not prohibit a strike or lockout after the report of the conciliation board has been made, but attempts only to compel unbroken relations during the negotiations, nevertheless analysis shows the extreme difficulty of making the compulsory feature workable in any form. Desirable as the object of the law may be on its abstract merits, it is quite possible that an attempt to fine or imprison a large number of workingmen for refusal to remain at work would create a new problem of such magnitude and bitterness and possible social consequences that, by comparison, a strike over the original dispute would drop into significance.

WELFARE WORK FOR GOVERNMENT EMPLOYES.

(*Continued from page 16.*)

also meets the payment of salaries of the club employes, three in number, man janitor, woman janitor and man barber. The building is in charge of a man and woman, who are selected by the employes with the approval of the superintendent of the hospital. They have general charge of the building, and are responsible for conduct and order. It is open to all until 10 p. m.; Saturdays, 11 p. m.

A small store is conducted at which candy and tobacco are sold. The profits go to the club.

There is a beautiful reception room and a splendid billiard and a pool room. There are reading and music rooms beautifully furnished. The reading room is supplied with daily papers and magazines. Adjoining this room is the hospital library, comprising several hundred volumes, open to both employes and patients.

The Employes' Club House contains a well-equipped barber shop.

THE COUNCIL OF THE GENERAL FEDERATION OF WOMEN'S CLUBS, NORFOLK, VIRGINIA, JUNE, 1907.

1. Mrs. Sarah Platt Decker, *Colorado.*
2. Mrs. Philip N. Moore, *Missouri.*
3. Mrs. Charles A. Perkins, *Tennessee.*
4. Mrs. Percy V. Pennybacker, *Texas.*

25. Miss Kelso, *New York.*

A meeting of the Council of the General Federation of Women's Clubs was held in June, 1907, at the Jamestown Exposition, Norfolk, Va. Thirty-eight States were represented among the 165 women present, who are prominently identified with the club movements of the country.

While the General Federation of Women's Clubs meets every two years, sessions of the Council are held in alternate years to receive reports from chairmen of standing committees and the committee charged with preparations for the next meeting of the Federation.

Important reports presented to the Norfolk meeting were those of Mrs. J. H. Dibrell, on "Civics;" Miss Anna Lewis Clark, on "Civil Service," and Mrs. Clarence Burns, on "Child Labor." Especial interest was awakened by the report on the co-operation of the Federation with the National Civic Federation and other bodies on the proposed investigation into the problems of child labor.

THE PACIFIC COAST IN LINE

INDUSTRIAL PEACE CONFERENCE AT SAN FRANCISCO PROPOSES TO ESTABLISH BRANCH OF THE NATIONAL CIVIC FEDERATION

EMPLOYERS, labor leaders and citizens one thousand strong by newspaper report, met together in San Francisco on July 24 in an important conference in behalf of Industrial Peace. Professor Adolph C. Miller, of the University of California, was chosen president, and W. J. French, president of the Allied Printing Trades, secretary of the meeting. During the three days of the session there was much forceful discussion of the issues at stake. The representatives of all phases of thought united in expressing the belief that every effort should be bent toward maintaining peace with honor.

The conference was addressed by the Hon. Oscar Straus, Secretary of Commerce and Labor, who urged the formation of a permanent organization in behalf of conciliation. Mr. Straus said in part:

"I had hoped that in this part of the country, where [illegible] where industries are profitable, I would find both labor and capital living in happiness under their own vines and fig trees. I understand that they do live under their own vines and fig trees, but, unfortunately, they throw brickbats from the vines and fig trees on the one side to the vines and fig trees on the other side. (Laughter and applause.) I am going to address myself now to the brickbats. I have found among the labor leaders as intelligent and patriotic men as exist among any class of our people. (Applause.) I have found as much ignorance and as much arbitrariness arrayed on the side of capital as I have on the side of labor. (Applause.) We must be willing to make mutual concessions for the sake of right and justice. To demand a higher wage than the industry can afford to pay is to clog the wheels of that industry. In saying that when labor 'makes an uneconomic demand,' those demands deserve to be denied, I am quoting the language of the president of the American Federation of Labor, Samuel Gompers.

HON. OSCAR S. STRAUS.

"I am told that one division of your labor bodies in this city is not represented here. I am sure that this section of labor, when they find out with what spirit of fairness and what spirit of justice you are endeavoring to find the middle way for the purpose of adjusting these difficulties, will come and join you.

"If it were possible for me to remain here longer I would address myself to that body, and I have never addressed myself to labor without finding a reasonable response to reasonable demands. (Applause.) I hope that the permanent committee that you will name, the organized body that will grow out of these meetings, will confer with all the sections of labor, and I know that they will succeed, even against the advice of some leaders, if such leaders they have, who are misleading them, and that the rank and file will join you in building up an organization and a body that will deal fairly and justly with all classes of labor and all classes of capital regardless of every consideration but of fairness and justice.

"This industrial question must be absolutely divorced from all political considerations (applause). Politics has pitfalls and evils enough without mixing them up with the economic relations between capital and labor. (Applause.) This is in no sense a political question and must not be made the tail of any political fight. This is a humanitarian and an economic question pure and simple. The benefits that result from it are even greater to labor than they are to capital, because they are more in need of industrial peace than the paying class is in need of it."

The constitution of a Conciliation Committee met with favor, and at the conclusion of the conference the Committee on Resolutions, of which Mr. Harris Weinstock was the chairman, submitted a report recommending it. The report was unanimously approved and is as follows:

Whereas, One of the great problems of the hour is how best to maintain industrial peace with justice to employer and employed; and

Whereas, Disputes between labor and capital are serious hindrances to the peace and prosperity of our city and our commonwealth; and

Whereas, It is the consensus of opinion of thoughtful men that the best method for the prevention of such disputes is a better understanding between the industrial forces; and

Whereas, It is imperative that immediate efforts be made to remove friction and to bring into harmonious accord the employer and the employed; and

Whereas, The National Civic Federation, by its disinterested and conciliatory methods, has been eminently successful in averting and adjusting great numbers of strikes and lockouts; be it therefore

Resolved, That we, the representatives of various walks of life, assembled in conference in the city of San Francisco, after the fullest interchange of viewpoints and opinions, firmly believe that great good can be made to follow the bringing into life in our midst of a branch of the National Civic Federation, which shall have for its purposes:

(a) The adjustment and prevention by conciliation and arbitration of industrial disputes which may hereafter arise within our commonwealth.

(b) The furthering of any movement which shall have for its purpose the bringing into closer touch and greater harmony the wage earner and employer.

(c) The investigation of and action in such other matters as may from time to time affect the welfare and the relations between employer and employed; and be it therefore further

Resolved, That the chairman of the conference, with the approval of the executive committee of the Civic League, shall appoint a committee of forty-five members, not necessarily delegates to this conference, fifteen representing labor, fifteen representing employers and fifteen representing the general public, who shall elect a chairman, vice-chairman, secretary, treasurer and such other officers as may be required, and shall draft rules and regulations, and in whom shall be vested full discretionary power in the government of the federation and as to the time when the foregoing purposes shall be carried into effect; and be it therefore further

Resolved, That this conference recognizes that in the organization of labor and capital lies the most effective means of securing and maintaining the objects herein set forth; and be it therefore further

Resolved, That we, the delegates to this industrial peace conference pledge ourselves to give such branch of the National Civic Federation our hearty support.

HARRIS WEINSTOCK, Chairman.
DR. FRANK GALE.
JAMES G. MAGUIRE.
THOMAS MAGEE.
DR. GEORGE EVANS.

The committee, whose appointment was approved, has not yet been announced. Professor Adolph C. Miller, president of the conference, is in consultation with the Civic League in regard to the matter. On behalf of the National Civic Federation Dr. Benjamin Ide Wheeler, president of the University of California, Vice-President of the National Civic Federation, is representing the national organization in its relations to the proposed branch.

PRIVATE VERSUS PUBLIC OPERATION.

Continued from Page 5.

MINORITY REPORT OF MR. WALTON CLARK.

I agree with my associates on the importance of directing attention to the dangers and difficulties attending municipal ownership. I do not dissent from their conclusion that companies entrusted with franchises and charters for the operation of so-called public service industries should be subject to regulation. I write a minority report because, if I correctly understand your instructions to your investigating Committee, the majority report does not, in its form and scope, answer your reasonable expectation, and because I am not able to agree with what I understand to be the meaning of some few of the statements made therein.

Recognizing the almost supreme importance of an adequate and cheap supply of pure water, I dissent from one of the recommendations of my associates, in effect that water works should be operated by public bodies. I dissent for the reason that my study of the report of the water works expert employed by your committee, and my personal investigations, lead me to the conclusion that the water companies have made the more intelligent efforts toward adequacy and purity of supply, and that, all conditions considered, the result of their efforts has been and is a better and cheaper water supply and service than that maintained by the municipal water works departments.

I agree with the majority that such governmental conditions as exist in Glasgow, Manchester and Birmingham are "distinctly favorable" to municipal ownership, as they must be to every urban activity, public or private. The fact that the results of the investigations we have made in these well-governed cities have not led my associates to commend municipal ownership as we have there observed it, or to recommend that our American cities adopt municipal ownership, is pregnant with meaning, and indicates another point upon which we are in accord.

My knowledge of the question, had from personal investigation, and from a study of the reports of the experts employed by the Commission, and of the writings of its members leads me to the conclusion that the city and citizens of Glasgow, Manchester and Birmingham, as well as of the other municipalities investigated, are not so well served by their public service trading departments as the cities and citizens of London, Newcastle, Sheffield, Dublin and Norwich are by companies operating similar trading industries, and that there is no element of blessing in the municipalization of the former cities to compensate for the indifferent character of the service rendered.

I dissent from the statement of my associates that "we take no position on the question of general expediency of either public or private ownership." I come from the study of this question, and from the investigations in which I have had a share, including that of the municipal plants selected as being the most successful in Great Britain and in this country, ready, and with confidence, to take a position on the question of general expediency.

Because the investigation, in which, through your favor, I have had the honor to have a part, has convinced me that municipal ownership has not proven equal to private ownership in benefits to the consumer, citizen or city, I am not able to agree with the majority of the Committee that the way should be left open for any municipality to undertake any trading operation, without special authorization by the Legislature of the State wherein it is located. I cannot believe that the prescribed remedy for any ill should be a worse ill, and I cannot recommend that a municipality suffering, or believing that it suffers, under company administration of a public utility, should be given the right to engage in the operation of such utility for itself, without such a course of procedure as will make sure that the sober second thought of the people shall have ample opportunity for development and expression, before the community is committed to municipal ownership, with the accompanying dangers and difficulties, of which you are warned in the majority report.

Because I believe that the general credit of municipalities should be conserved for the benefit of public and necessary improvements, from which, in the nature of things, private enterprise is excluded; and because I believe that a municipality should not be permitted in any event to engage in any trading enterprise that will not pay its own way, and have the confidence of the citizens as financially sound, I recommend that municipalities be prohibited, by statute, from making investments in trading operations, except with money borrowed on mortgage, or otherwise, the loan being secured by a lien on the plant in which it is invested, and on the right to operate the same, and on these only.

Because I believe that it is practically impossible to secure private funds for investment in an enterprise subject to purchase by a municipality, at a date to be selected by the municipality; and because I believe that the impossibility of so securing private investment may, and often will, work a social harm to a community, I dissent from the opinion of the majority that a city should have the right to purchase, at its option, the property of public service corporations for operation, lease or sale.

I believe in State regulation and protection of public service companies. I do not understand that your Committee was charged with the duty of recommending to you a form of regulation. I know that your Committee made no special study of this subject. Therefore I am not prepared to propose any detailed plan of regulation.

Finally, regretting to be in any degree in conflict of opinion with my associates, I may still satisfy my sense of duty to my fellow-citizens and my sense of obligation to you for the honor of a share in this important work, by recording the conviction I am under at the close of this investigation.

I am convinced that the condition of the British people, individually or collectively, has not been improved by the municipalization of the industries we have investigated.

I believe that political and social condition in the United States are less favorable to the success of municipal ownership than are the same conditions in Great Britain.

I find this conclusion strengthened by our investigation into municipalized industries in the United States.

I am convinced that, under American conditions, the system of private ownership of public utilities is best for the citizens and consumers.

I recommend State regulation and protection of public service companies, provided by statute, and as far as possible automatic in its application and operation.

I realize that in the main the majority and the minority of your Committee are in accord. Wherein we differ, the minority appeals with confidence to a careful reading of the records of your Committee for judgment as to the reasonableness of its conclusions and recommendations.

SCOPE OF COMPLETE REPORT.

The full report of the Commission will appear in two parts, one containing conclusions of the Commission and of individual members, and the other containing the expert reports on plants visited. While the first part will contain more of interest to the general reader, the second will be of especial interest to accountants, engineers, managers of public utility corporations, city officials and members of legislative committees. It will be of special value to those seeking a comparison between American and British conditions.

The contents of each division of the work will be substantially as follows:

Part 1, Volume 1.

General Conclusions of Commission;
British Municipalities, By Frank J. Goodnow, author of "Municipal Home Rule," "City Government in the United States," etc.
American Municipalities, by Walter L. Fisher, Traction Counsel to ex-Mayor Dunne and to Mayor Busse, of Chicago, and author of the franchise plan adopted by the voters of that city.
A Critical Review of the Experts' Reports, in two sections, by Edward W. Bemis and Milo R. Maltbie, and Walton Clark and Charles L. Edgar.
Certain Phases of the Labor Investigation, by John R. Commons and J. W. Sullivan.
Verbatim Reports of Conferences upon Municipal Trading Held at London with Rt. Hon. Lord Avebury (Sir John Lubbock), Mr. Sydney Morse, President of London Chamber of Commerce; Hon. Robert P. Porter, author of "Dangers of Municipal Ownership"; Hon. T. McKinnon Wood, Progressive Leader, London County Council; Hon. J. Allen Baker, Chairman London Municipal Tramways, and Mr. Robert Donald, Editor of the London Daily Chronicle.

Part 2, Volumes I. and II.:

Volume I., the United States:
Reports of Experts on Gas Lighting:
Alf. E. Forstall, Fred Burnett, John H. Gray, John R. Commons, J. W. Sullivan, Marwick, Mitchell & Co.
Special Report on Philadelphia Gas Works, by Leo S. Rowe.
Reports of Experts on Electric Lighting and Power:
Theo Stebbins, Chas. E. Phelps, Jr., John H. Gray, John R. Commons, J. W. Sullivan, Marwick, Mitchell & Co.
Report on the History of Chicago Municipal Electric Lighting, by Marwick, Mitchell & Co.
Report on Water Works Systems, by Dabney H. Maury, John H. Gray, John R. Commons, J. W. Sullivan, and Marwick, Mitchell & Co.

Volume II., Great Britain and Ireland:

Reports of Experts on Gas Lighting:
Milo R. Maltbie, J. B. Klumpp, Wm. Newbigging, Robert C. James, E. H. Turner, John R. Commons, and J. W. Sullivan.
Reports of Experts on Electric Lighting and Power:
J. B. Klumpp, A. E. Winchester, Milo R. Maltbie, Robert C. James, E. H. Turner, J. W. Sullivan, and John R. Commons.

Reports of Experts on Tramways:
Norman McD. Crawford, Milo R. Maltbie, J. H. Woodward, E. H. Turner, Robert C. James, John R. Commons, and J. W. Sullivan.
Report on Taxation of Public Utilities, by Milo R. Maltbie.

A limited edition only will be published. Send advance orders to Isaac N. Seligman, treasurer, 281 Fourth avenue, New York.

The price is:

Part 1, Volume I. (about 500 pages), paper, $1.00; cloth	$2.00
Part 2, Volumes I. and II. (about 1,000 pp. each)	8.00
Complete, cloth	$10.00

Postage prepaid.

FOR INDUSTRIAL WORLD PEACE

(*Continued from page 3.*)

A PLEA FOR FORBEARANCE.

Mr. T. V. Powderly said:

"I am one of those who have had some experience in the labor world, and the experience gained during that fifteen years of leadership causes me to say that if men on both sides of the industrial question would keep one thing in mind, while we would still have disputes, their settlement would be easy, and when settled hard feelings should not exist; and that is for each man, if he owes a dollar, to pay it, and if he owes a grudge, to forget it.

"During that period I never ordered one strike, although I was engaged in four or five large ones that others ordered; but on going over my books three years ago I found the record of eleven hundred cases settled, each one of which might have been a strike had not common sense—which, by the way, is the most uncommon kind of sense—been called into play before the chip had reached the shoulder. You have read of the four cases that I didn't have anything to do with, but the other eleven hundred cases never broke into print. And if among the things we can do here to-night is to cause the newspapers to give the exact truth (Laughter)—— Wait a moment, this is no laughing matter. I have seen homes made desolate by an ill-considered report in the papers; I have seen men of capital ruined because of matters contained in the papers; and if only the men who write the daily history could be brought to write it truthfully and not exaggerate—there is always enough of the truth to tell—the troubles between capital and labor would be far fewer than they are.

"I feel it to be the duty of every man who has held a position in a labor organization to be ready to respond to the call. Nothing will give me more pleasure than to lend my weight, no matter how little it may be, to the furtherance of industrial peace. One day I met a man with whom we had a controversy, and he said to me: 'Powderly, I don't want to see you at all; get out.' I said, 'You will like me better if you see more of me.' He said, 'I don't want to see you,' and I replied, 'Well, you may; think it over. I am stopping at such and such a hotel.' Then he shoved me out of the door, and said things not written down in the Holy Book, and I went away to the hotel. Two hours afterward I got a note and went back; the whole thing was settled in twenty minutes. And here is a caution to some of our labor men and to those on the other side as well: In the struggle you are engaged in, it is not personal. You may think you are working for yourself on the side of capital, but you are not; and you who represent labor are not working for yourselves. No insult, no indignity, and no contumely should find a resting place on you. Wipe them all aside, and keep in view the interests of the great body of people that look to you. And if you remember that, you will always meet the fellow on the other side in the right spirit and in the spirit of rightness." (Applause.)

PEACE AND JUSTICE SYNONYMOUS.

Dr. Lyman Abbott, editor of the Outlook, said:

"What is the proper relationship between the tool owner and the tool worker? What should be the participation of each in the control and in the profits of the common industry? Every demand for a recognition of the union is, at the bottom, a demand to have something to say respecting the control of the industry; every demand for shorter hours or larger wages is, at the bottom, a demand for a share in the profits.

"There are some extreme socialists who hold that the tool owners have no rights, that rent and interest are robbery; and there have been some political leaders on the other side who have claimed that the strike days or the eight hour was performed when he paid the tool worker a living wage. But I think that both of these classes may be regarded as out of the question here to-night, and the real question before us is: How shall the question of participation in control and in profits be decided? In the past it has been decided by war; not so much a matter of guns and pistols on the one side and dynamite and stones on the other, but it has been war. But, ladies and gentlemen, the lockout and the strike never determine what is right. (Applause.) They only determine who has the greatest endurance.

"War between nations never yet in the history of the world decided which was right; it only settled who was the strongest. The Hague Tribunal means this: We may not in the future appeal to force, but we mean to appeal to the conscience and reason, not to determine which nation is the most powerful, but to determine which nation is right. What we want to do here to-night is to set in motion in matters industrial the appeal to reason and conscience, the appeal which shall determine what is right, and not merely who is powerful.

"If this be done, it should be done by an international gathering, for two reasons: In the first place this is a very complicated, difficult problem, and we need to bring to bear upon it the greatest minds and best thought of the world. Now, Europe needs, I think, the energy, enterprise, initiative and audacity of us Americans; but we must acknowledge that we audacious and enterprising Americans need also the experience of the Old World. We can learn something from Germany, France, Italy and England, and they can learn something from us.

"We are working in this twentieth century not merely toward peace in place of war, but toward the reorganization of a hitherto disorganized world. To bring that about the organization must be not merely political; it must also be industrial, because if we organize politically for peace, and organize industrially for war, we shall have war in spite of all the politicians may do for peace.

"So, gentlemen, I am very glad of the honor of seconding this suggestion which has been made, that the Civic Federation invite a conference that shall stand in the history of the world, in respect to industry, where The Hague conference has stood in respect to international relations. We are fortunate to-night in meeting under the roof of a gentleman whose name, happily, is identified with the cause of international peace—a gentleman whose name I hope may be identified also with the cause of industrial peace throughout all the future, because under his roof and at this meeting there was born that movement which shall secure good will and peace between labor and capitalists. (Applause.)

PREVENTION OF STRIKES.

Hon. Seth Low said:

"I have said to myself always in approaching these industrial questions: If each side will only put itself in the place of the other man and look at it from his side, there would not be half these troubles. I have always felt that if I were a workingman, earning my living by my hands, I would certainly join a union, and therefore I never could understand why the employer was so unwilling to recognize the union. If the employer were to work in the shop I think he would feel that it was a part of what was due to him as a man to have something to say as to the conditions under which he was called upon to work. Children go where they are sent because they are children, but when a man becomes a man he wants to have something to say about the conditions that affect his life, and I have always felt that if the employers would only think of it from that point of view instead of so exclusively from the point of view of the rights of property they would have avoided a great many of the difficulties into which they have fallen. The moment they admit that they are willing to treat with them, and the moment they begin to treat with them, they find out, as my experience goes, that they are a very much more reasonable set of people than they thought when they had never seen them.

"The first time I ever came in touch with a labor dispute was when I was arbitrator between the Typothetae and Big Six back in this city about ten years ago. I remember perfectly well the immense interest I felt in seeing how each side conducted itself, and in what a courteous and reasonable manner, and how cheerfully they both accepted the decision. And from that day to this I have used my influence whenever I had the opportunity to promote arbitration, because it seemed to me an educational process as well as a means of settling most of the disputes much more reasonably than otherwise would be possible.

"The function of the Civic Federation, in this department, is not so much to settle strikes as to prevent them, and it would amaze every one here to know in how many instances serious labor troubles have been averted by bringing together those who have never met before. That, I think, is the best way and the wisest way by which industrial peace is to be advanced, to bring together the disputants and let them talk it out." (Applause.)

The following telegram was read:

"'Kindly express to conference my regret at my inability to attend. I trust that discussion may lead to further progress in establishing industrial peace on lines being followed by National Civic Federation. The trade agreement recognizing capital and labor's rights and obligations assures guarantee of industrial tranquillity. John Mitchell.'" (Applause.)

Before adjournment the entire company arose and sang "America" and "Auld Lang Syne."

INDUSTRIAL ECONOMICS DEPARTMENT.

Appointment of Secretary.

DR. ROLAND P. FALKNER, who for the past three years has been Commissioner of Education of Porto Rico, has been appointed secretary of the Industrial Economics Department, and entered upon his duties August 1.

DR. ROLAND P. FALKNER.

After graduating from the University of Pennsylvania in 1885, with the degree of Ph. B. in the newly organized course in Finance and Economy, he immediately went to Germany, where he studied Political Economy and Philosophy, at the Universities of Berlin and Halle, taking the degree of Doctor of Philosophy at the latter institution, near the end of the year 1887. He thereupon went to Paris, where he spent three months in studying Political Economy at the College de France. While studying abroad he was appointed instructor in accounting and statistics at the University of Pennsylvania, upon announcement of which he returned to Germany and spent the Summer semester of 1888 at the University of Leipzig, engaged in the study of German Commercial Law. His work as instructor at the University of Pennsylvania began in September, 1888. He was made associate professor of statistics in the University of Pennsylvania, in the Spring of 1891, at which time he declined a call to the professorship of political economy at the Northwestern University, Evanston, Illinois. In 1900 he was appointed to a staff position in the Library of Congress. In 1904 President Roosevelt appointed him Commissioner of Education of Porto Rico.

During this period of academic work, in addition to teaching, Dr. Falkner made frequent contributions to the scientific literature in his chosen subject, and was conspicuously identified with two important pieces of public service:

First, as statistician to the sub-committee to the Committee of Finance of the United States Senate, which was charged with the investigation of prices and wages in the United States. The materials for this work were gathered largely through the agency of the United States Department of Labor, but the analysis of the figures was confided wholly to Dr. Falkner, who began the work in the Fall of 1891. The results were the well-known Aldrich Reports, devoted respectively to "Retail Prices and Wages," (three volumes), and "Wholesale Prices, Wages and Transportation," (four volumes). The report is, perhaps, the most important contribution of its kind to the history of prices and wages in the United States, which has been made by our Government.

Second, in the Fall of 1892, Dr. Falkner was appointed secretary of the American delegation to the International Monetary Conference, at Brussels, where he also acted as one of the secretaries of the conference. The translation of the official French text of the proceedings, published as a part of the American report, was prepared by Dr. Falkner and Mr. Smith, the English secretary.

Dr. Falkner has been prominently identified with the American Academy of Political and Social Science, the American Economic Association and other scientific societies. Perhaps the most significant of all was the honor conferred upon him in 1894, when he was elected a member of the International Statistical Institute, whose membership is limited to two hundred, drawn from all parts of the world.

PANAMA EDITION

The National Civic Federation Review

VOL. III. NEW YORK, OCTOBER, 1907 No. 2.

EMPLOYES' WELFARE ON CANAL ZONE.

LABOR CONDITIONS, HOUSING, FEEDING AND SOCIAL LIFE AT PANAMA.

An investigation of the conditions surrounding the employes of the United States Government on the Isthmus of Panama, including arrangements for housing, feeding, amusement, social life and regulations affecting employment, has been made by Miss Gertrude Beeks, secretary of the Welfare Department of the National Civic Federation, and the report has been submitted to Secretary Taft. This effort to aid in improving the condition of the men engaged in our great national enterprise was naturally the first undertaking under the auspices of the Federation's new Committee on Welfare Work for Government Employes. The officers of the committee devoted to bettering conditions of Federal, State and Municipal employes, are:

Chairman, William H. Taft, Secretary of War.
First Vice-Chairman, John C. W. Beckham, Governor of Kentucky.
Second Vice-Chairman, George W. Guthrie, Mayor of Pittsburg.
Third-Vice Chairman, William R. Willcox, Chairman Public Utilities Commission of New York City.

Nearly every feature of life on the Isthmus is touched upon in the report. Many things are highly commended, others are condemned and recommendations are made for the betterment of conditions. The principal topics covered are the climate, housing, drying rooms, walks and roads, street paving, sewerage and water systems, electric light, food, farming, commissaries, laundries, ice plant, bakery, hospitals, rain sheds, recreations, schools, churches, regulation of liquor traffic, jails, passes on the Panama Railroad, transportation service, some of the labor conditions, the "Canal Zone News," a suggestion system and boat service. The investigation covered a period of five weeks from the time of leaving New York, June 7, until the return, July 12, twenty-three days having been spent on the Isthmus.

The opportunity of securing accurate official information was made possible by Secretary Taft. His letter of introduction and recommendation to the Chairman of the Commission assured the investigator the most complete access to facts and documents. The members of the Isthmian Canal Commission, whose cordial cooperation was extended, are: Lieutenant-Colonel George W. Goethals, chairman, Chief Engineer and President of the Panama Railroad Company, and the following, who are heads of the departments enumerated: Major William L. Sibert (Lock and Dam Construction), Major D. D. Gaillard (Excavation and Dredging), H. H. Rosseau, U. S. N. (Municipal Engineering, Motive Power and Machinery, and Building Construction), Hon. J. C. S. Blackburn (Civil Administration), Colonel W. C. Gorgas (Sanitation)

LIEUTENANT-COLONEL GEORGE W. GOETHALS.
(Clinedist.)

and Jackson Smith (Labor, Quarters and Subsistence). Letters were supplied by prominent citizens to friends on the Isthmus and by national labor leaders to members of their respective organizations, those furnishing such credentials being, Samuel Gompers, President the American Federation of Labor; James O'Connell, President, the International Association of Machinists; Warren S. Stone, Grand Chief, International Brotherhood of Locomotive Engineers; Daniel J. Keefe, President, International Longshoremen, Marine and Transportworkers' Association; John Mitchell, President the United Mine Workers of America and Joseph F. Valentine, President, Iron Moulders' Union of North America. Personal inspection of the many points and features mentioned in the report was supplemented by individual testimony. Information was gathered from officials, superintendents, foremen, mechanics, clerks, nurses, doctors, secretaries of the Young Men's Christian Association, railroad engineers and conductors, their wives and children and in fact every type of resident on the Isthmus, the negroes included. But in no case was testimony sought or received from discharged employes.

It is clearly recognized that never before have there been as good conditions in American construction work, but in view of the climatic conditions, length of time to be consumed in the building of the Canal and the fact that the Government should be a model employer, it is urged that the surroundings of the employes should be made as comfortable as possible. While to a casual reader many of the criticisms and suggestions might seem trivial, Miss Beeks's experience in dealing with employes of many of the largest concerns in the country has taught that it is the accumulation of petty things which causes discontent. The report brings out the fact that it is not alone technical engineering problems—for of course these are not touched upon in it—which confront the United States on the Isthmus. Without a contented force of employes progress in the construction of the Canal must be dilatory and results unsatisfactory. Perfection is not expected, but all the recommendations are for improvements essential to health and good cheer, important factors in promoting efficiency and stability in the working force. In providing for the welfare of its employes, naturally, more can be expected from the Government than from a private employer with limited capital and restricted by competitive conditions.

Some of the recommendations have already been adopted. Secretary Taft immediately requested the Agricultural Department to start a Government farm and made arrangements with Secretary Wilson to have all food stuffs inspected before shipment from the United States; he also authorized the purchase of blankets for the negroes and refrigeration plants for mess halls. A tentative draft of the report was presented to Lieutenant-Colonel Goethals before Miss Beeks left the Isthmus. He at once had plans drawn for drying rooms, and ordered that

metal cots be covered with canvas. He has indicated his intention of putting into effect such suggestions as available funds will permit and of calling the more important recommendations to the attention of the Congressional Committee on Appropriations, which will visit the Isthmus in October, with the view of securing funds for their adoption. The Commission also has started the publication of the Canal Zone newspaper and has accepted the services of a representative of the Welfare Department of the National Civic Federation—Miss Helen Varick Boswell—to organize women's clubs and she is now on the Isthmus. The report has been sent officially to the Isthmian Canal Commission for comments, which will be published later. President Roosevelt has requested Miss Beeks to return to Panama within eight months and report upon progress made.

The equipment of Miss Beeks for making such an investigation has been acquired by a wide and practical experience in dealing with all phases of the problems connected with the employment of labor. For the past six years her entire time has been devoted to investigating industrial conditions throughout the United States, and making and carrying out plans for the well-being of men and women in stores, mills, factories, mines and on railroads.—**The Editor.**

CULEBRA, SHOWING ADMINISTRATION BUILDING, QUARTERS, CLUB HOUSE AND MESS HALL.

CONDITIONS OF EMPLOYMENT AT PANAMA.

By GERTRUDE BEEKS

CLIMATE.

The rainy season extends over eight months, ending about the first of January, the following four being the dry season and said to be most delightful. While there is a short period when, for days at a time, it rains constantly, that is not true during the entire wet season. It rains less at Ancon, on the Pacific Coast, than along the Isthmus, and at some places it is usually clear mornings, but showers are to be expected afternoons. When it does not rain during this season there is, much of the time, a cloudiness which makes out-of-door work quite endurable. Generally there is a good breeze, and nights, mornings and evenings are cool. At noon it is quite warm. Although there is continual moisture, the atmosphere is not oppressive and the climate is much more pleasant than in many parts of the United States in summer. Some also prefer it to snow and ice in winter.

There is something about the light which begets nervousness and the climatic conditions generally cause energy to be sapped, which makes it imperative that there should be vacation periods. With the observance of certain health precautions this is in some ways a more agreeable place to live than certain sections of the United States, but it is felt by some that health would be undermined after an extended residence.

Many who go there expecting to find only marshes have been agreeably surprised. The scenery is beautiful. Colon, on the Atlantic Coast, is quite low, but along the Isthmus there are hills, and they attain quite a height at Ancon, near the City of Panama. The palms are disappointing, but the hills, with their verdure, and, on the coast, the combination of hills and water, and wonderful cloud effects, afford beautiful pictures.

IMPROVEMENTS ADMITTED—MANY COMPLAINTS WARRANTED.

"Things are improving right along!" This sentence was heard constantly, as well as, "There will be no kick coming as long as it can be seen that needed changes are being made." It is recognized that "everything cannot be accomplished in a minute."

Many of the complaints with reference to housing, food and conditions of employment, in addition to those about bad boat service, have undoubtedly been warranted; but it is most gratifying to learn that Colonel Goethals has been energetic in informing himself of the details in connection therewith, since his appointment as Chairman of the Isthmian Canal Commission and Chief Engineer. His policy of making personal investigations of messes and of listening to all complaints of injustice relative to wages, dismissals and other matters, has inspired confidence. There is a general feeling that he intends to do "the square thing," due to the fact that now the men can get a hearing and to the prompt action taken when fully convinced that some wrong condition has obtained.

In view of the changes transpiring at the present time it seems unfair to offer criticisms, but an effort will be made to present conditions as they are today, giving credit for contemplated changes and offering some suggestions for further improvements.

HOUSING.

The camps in the Canal Zone are located along the railroad between the Panamanian cities of Colon and Panama wherever construction work demands a large number of employes. There are seventeen main camps at which the American whites reside and there are forty-six contiguous settlements in which are the barracks of the European and West Indian laborers.

In the settlements there are postal stations, fire departments, telephone service, band stands in front of the hotels and news stands at the railway stations. At several of the large camps Government 'buses meet the trains, while at the stations of Colon and Panama many vehicles will be found for rental by Panamanians and other enterprising individuals.

QUARTERS OF CLERKS, MECHANICS, FOREMEN AND OTHER WHITE EMPLOYES.

The quarters of the employes are of several types. There are houses for married employes, American whites, Europeans and West Indian negroes; barracks (for bachelors who are clerks or American mechanics) which contain several rooms,

each holding from two to four men; dormitory barracks for Europeans, in which there are cot bunks—sixty, seventy-two or eighty-four in each house—and similar separate dormitory barracks for West Indians. Adjacent to the mess halls or "hotels," as

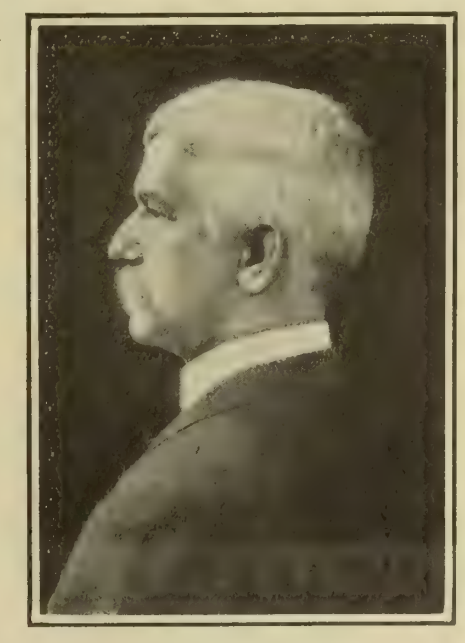
Major D. D. Gaillard.
(Harris & Ewing.)

they are called, there are separate barracks in each camp for the hotel help. At the hospitals, located at Ancon and Colon, there are separate dormitories for bachelors—doctors and clerks—for women nurses, for men attendants, orderlies, maids and other employes.

The newly constructed buildings are exceedingly attractive. There are not many manufacturing villages presenting an appearance so beautiful, and it is certainly an innovation in construction work. Many of the old French houses have been remodeled and painted the standard color used on the Zone—gray with white trimmings, and red roofs. The houses are built on posts. The Government supplies garbage cans, not only for its employes at all the camps, but also throughout the cities of Panama and Colon. Streets and grounds, even under quarters, are kept perfectly free from rubbish of any description. Would that our streets and back yards in the United States were as clean! The settlements are so attractive that one making a short stay upon the Zone, and thus getting a superficial view would most likely exclaim: "These men are getting all that there is coming to them," which expression was made recently by such a casual observer.

All quarters, both "married" and bachelor, for Americans, have wide verandas. One type of married quarters contains two rooms across the front—one a living room and the other a sleeping room. In the left-hand corner of the rear there is a bath;

Hon. J. C. S. Blackburn.
(Harris & Ewing.)



in the right-hand corner a small kitchen, and between them there is a large open dining room, the end often affording a beautiful view, and being covered with wire screen. The windows and verandas are screened.

The bachelors' quarters, as well as the "married" quarters for Americans, contain shower baths, although with cold water only, and toilet arrangements with modern plumbing. Cold shower baths are not advisable for family use. Tub baths should be installed in all married quarters constructed in future, and it would be well to have for sale at the commissaries movable bath tubs for those who already have shower baths installed. Families may have water heated on their cook stoves. All men cannot use a cold shower bath, for it chills them, especially if overheated at the close of the day's work, and that is the time when the bath is most needed, because shop men, engineers and others find it difficult to remove grease with cold water, and bachelors have no way of obtaining it hot. Even in the morning many men cannot endure the cold water showers. One said: "I wake the boys every morning, 'holler-

H. H. Rousseau, U. S. N.
(Clinedist.)

ing.' If I couldn't 'holler' I wouldn't be able to get a bath." It would be too much to expect that hot water should now be conveyed to all quarters, but there should be some special bath houses, conveniently located, equipped with hot water for American bachelors.

Colonel W. C. Gorgas.
(Clinedist.)

All partitions are of wood and the present rule is to stain interior walls a moss green and paint doors and framework white. This is very attractive, pleasant and restful to the eyes in the tropical light. In repainting, it would be well to make it the general plan, if possible.

The Government furnishes quarters, furniture and light free to all. The married employes also receive free fuel, and distilled drinking water is delivered to their homes in some of the camps. It should be provided in all. Ice is carried to each camp from the Colon commissary every morning. It is sold to the employes. There is a great deal of complaint about short weight.

The allotment of furniture for homes and bachelors' quarters is:

Family Quarters.

1 Range.	1 Dresser.
1 Refrigerator.	1 Bedroom table.
1 Double bed.	1 Towel rack.
2 Pillows.	1 Bedroom mat.

Major William L. Sibert.
(Harris & Ewing.)

1 Kitchen table.	1 Bedroom mirror.
2 Kitchen chairs.	1 Mosquito bar.
1 Dining table.	3 Parlor wicker rockers.
1 Sideboard.	1 Parlor centre table.
1 Chiffonier.	2 Porch chairs.

Bachelor Quarters.

1 Single bed.
1 Dresser.
1 Chiffonier (for room two bachelors).
1 20 x 30 table.
1 Rocker (for room two bachelors).
1 Towel rack.
1 Mosquito bar.
1 Student lamp (if no electric light).
1 Mattress.
3 Chairs.

Mission and wicker furniture are used to a great extent in both married and bachelor quarters for Americans. It is agreeably surprising to find the artistic and beautiful thus given consideration. All are required to buy blankets, sheets and pillow cases and pay cost of laundering them. Married employes furnish their own kitchen utensils and china.

The appreciation of the recently arrived housewife upon finding pleasing quarters may be illustrated by the experience of a bride of two months, the wife of a locomotive engineer. This sweet, cultivated woman, previously a school teacher in the State of Ohio, arrived upon the Isthmus the thirteenth of

Jackson Smith.
(Harris & Ewing.)

June, expecting to endure rough camp life. When she entered her pretty cottage, she simply sat and looked at it, "because it was so beautiful"; and yet it was not as attractive as some, for she had golden oak instead of mission furniture.

A Two-Family Flat Building.

To give the impression that all are so agreeably surprised would be incorrect. For instance, a steam shovel man, after the endurance of early hardships and two years of service, took down his family in June. They transported many of their household effects from the States, looking forward to a long residence on the Isthmus, so well satisfied was this man. The wife—a gentle, refined woman—met cruel disappointment, for, in this case, the assignment of married quarters was a box car!

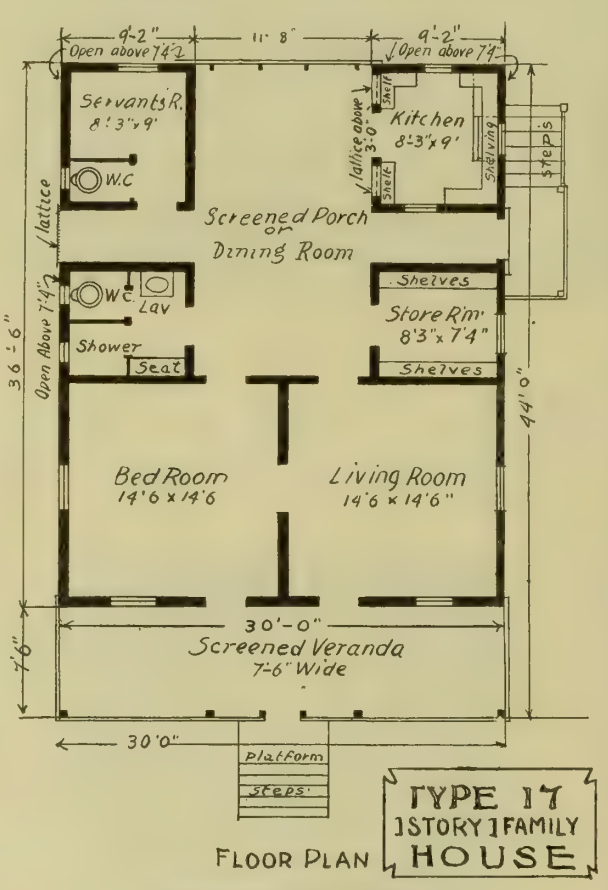
Still, phenomenal changes, during the past two years, have been made, and it is granted by all that even during the last six months there has been great improvement in conditions.

SOME EXPERIENCES OF PIONEERS.

The experience of some of the "pioneers," those who have been there two years, may afford an idea of the transformation which has taken place in that period. To be assigned an old French house, without mosquito netting, without plumbing and with an attic containing bats and rats and all sorts of objectionable creatures which "had a merry-go-round every night," was common, and it was necessary to walk through the jungle, coming in contact with its dangerous fungi and bugs, to reach the house.

The sixth American woman to take her residence upon the Zone stated with reference to conditions two years ago: "In going from Colon to Culebra the train brushed the jungle and the odor from the rank vegetation was sickening. I was away for a time and when I came back and saw the new houses, the sanitary arrangements, the double railroad track, and the jungle cleared away, it seemed miraculous. When I was here the first time I could not even buy such a thing as a wash tub, and one of the carpenters took a crude oil barrel, cut it in two and burned it out for my use. I had the first cook stove, but when it was set up I could not get a stove pipe and so the men made one of solid copper from portions of machinery which had been left by the French. I was fortunate enough to bring with me a meat chopper and it went around the entire Isthmus as a loan. When I went away I sold my effects and everyone was so anxious to get the meat chopper that it was run up to five dollars before I knew what was happening, although I had only paid eighty-nine cents for it, and the rest of the women were all so angry at each other and the lucky purchaser that they would not speak!"

One woman took down a mirror and found that her neighbor, who borrowed it, had not seen her likeness during her residence of three months! Such incidents, both serious and amusing, are related of early conditions. Ice was unheard of, and yet we took down one hundred sets of wire snow brushes for use on the railroad, but, unlike the French, who, it was authoritatively stated, provided snow plows, we were able to put the erroneously ordered utensils to good use in the foundries.



Bachelors, three, and even two years ago, were glad to get quarters at very high prices in the City of Panama or Colon, which would seem to the average individual to be quite uninhabitable. One said: "When I came here, two years ago, I slept on the floor for three nights. Sometimes the men would have to wait fifteen days for mosquito netting. There have been vast improvements." Water was so scarce that it was necessary to pay from forty to sixty cents a can, even for bathing purposes, and to arrange the night before for the morning's bath. The price of board was excessive, and yet one nearly starved. Employes stated that food contained maggots, and eggs had to be fried or scrambled because it was not "safe to boil them." As one superintendent said, "A man was lucky to have a tent in which to sleep. A common remark was, 'We'll never have any homes!' It is a different world now. The only music we heard was, 'Lead, Kindly Light.' I took care of a man three days without knowing that he had yellow fever, and was pallbearer six times in three weeks." As another put it: "To ask for a man and learn he had died from yellow fever the day before was a constantly unnerving experience. The depressing effect of frequent funeral processions caused one to stand on the wharf and think, 'Shall I go or shall I stay?'"

Conditions are, indeed, miraculously changed, but there are improvements yet to be made for health and comfort.

QUARTERS INADEQUATE.

Although the quarters are inadequate, and will be, it is estimated, for a year to come, it is now possible to shelter all Isthmian Canal employes without the use of tents, except in a few instances, and especially when opening up a new piece of work. But it is unfortunate that one thousand men in the construction gangs of the railroad are quartered in box cars, sixteen being the number allotted to each, although it is admitted that more sometimes "crowd in them." It would be expected that small numbers required in maintenance-of-way crews could be quartered in no other way. A few men live in house boats on the old French canal, where there is dredging to be done.

There is great need for additional family houses. Married men are not contented to remain upon the Zone, as a rule, without their families, and through inability to get married quarters there have been lost many competent men. Applications for married quarters still unfilled have been on file for more than a year. Attention was directed by competent investigators to the special need of married quarters two years ago and they should have been constructed in larger numbers more rapidly. It has been proven that the Isthmus is not altogether an undesirable place to live, and many men are anxious to take down their families. There was a rule requiring each

A One-Story Family House.

employe to have an application on file for six months before being awarded married quarters, assignments to be made in chronological order as filed. A new rule has just been adopted permitting the men to make application for married quarters upon taking employment, but its effect cannot be felt for some time unless a supreme effort is made to provide additional quarters, and the notice just posted is not cheering, for it states: "Experience shows that about ten months elapse between applications for and assignment of married quarters."

The outlook is very discouraging owing to the shortage of lumber. One boatload of 1,300,000 feet has just been lost en route from New York. It is estimated that it will take six months to duplicate that shipload, because lumber is in such great demand in the States. The law requires the advertising of proposed purchases and securing of bids. It is necessary to plan six months ahead on materials, for so far it has taken that long to complete transactions and secure delivery. Shortage of materials seems to be due partly to slow methods of purchasing and lack of foresight in ordering; and according to sentiment at Panama the Purchasing Department in Washington too remote to be able to judge of Isthmian needs, has interfered by cutting requisitions. Until we can catch up a little, it would be well if a way could be found to pay the premium which will secure early delivery. As it is, the purchaser in the States gets the preference in deliveries because he

Dining Room in Family House.

is "on the spot," and the seller finds it less disagreeable to be upbraided for failure to deliver on contract time by the Canal authorities two thousand miles away! It is very difficult for the onlooker to have patience with the long delays which are being endured in this and other connections, and how much worse is it for those who are participating in the discomforts attendant!

In view of the fact that it must be admitted that the Canal Zone has become a community and no longer simply affords construction camp life, it is urgent to provide adequate quarters for American families and bachelors at the earliest possible moment. It seems as though some extreme measures should be taken to meet this need and that the United States should not be obliged to wait a year to provide living accommodations. It costs the Government large sums to take new men constantly to the Isthmus, transportation fare and wages from time of embarkation being met by it.

To save expense, the present plan in constructing family quarters is to place four flats in a building. It is quite an item of saving, but anything which promotes content is the greatest item of economy, and there is no doubt that all greatly prefer single houses. It is claimed that a building for four families can be constructed for $4,000.00, while a single house will cost $2,000.00. One hesitates to urge the erection of single family houses in the face of that, and yet inferior single houses will be taken in preference to flats, so great is the desire to be alone; and it is not to be wondered at, for there are so many different types and nationalities concerned. It is difficult to find four congenial families in that heterogeneous population. The four-family houses now being constructed contain two flats upon the first and two upon the second floor; and double floors, with felt between, are being laid, thus providing against some of the causes of discomfort to be met in older buildings. In the joint family houses previously built, and necessarily still in use, with no method of deadening noise, several children overhead make life miserable for those underneath. The shrinking of the single floors in the dry season, causing cracks between the boards, makes it impossible to scrub without having water drip into the apartment below.

The need of married quarters is evidenced, not only by the number of married men who desire to take down their families and the number constantly leaving the Isthmus because unable to secure family houses, but by the growing number of bridegrooms and would-be bridegrooms. If the men stay for a few months, they grow enthusiastic about living upon the Isthmus, but they become disheartened and ill when unable to get houses in order to have their families with them. Families happily located encourage their relatives to go down and this helps to secure competent workmen. Many of the families are living better that they ever did in the States and it is a good place for young people to begin housekeeping, not only because of the attractive quarters, but because so much is furnished free that there is opportunity of saving and thus getting a good start in life. But homesick married men and young fellows with sweethearts in the States will not remain indefinitely unless able to establish homes. A man is much more contented in his own home not only because of the sentiment attached to it, but because there is someone to look after his personal needs, to provide wholesome food suited to his taste, and the wife's companionship prevents him from growing discouraged or taking impulsive action when things all seem to go wrong. There is no doubt but that the further development of home life will aid in securing a more permanent force of workers. Men with families there say they "would not stay ten minutes without them!" A man off for his vacation exclaimed: "I have had my application for quarters in since January 7. I'll probably take my family back and rent because I can't stand it sleeping four in a room and no place to keep my clothes free from mold." But the rules will not permit him to obtain the Government rate upon the steamship line until he has secured quarters! An engineer asked, "Do

American Bachelors' Quarters.

you like it here?" replied, "Yes, I'll stay if I can get my wife down." "How long have you had your application in?" "Five months." Both had been there six months before applying for married quarters. Many such instances could be cited.

MORE BACHELOR QUARTERS REQUIRED.

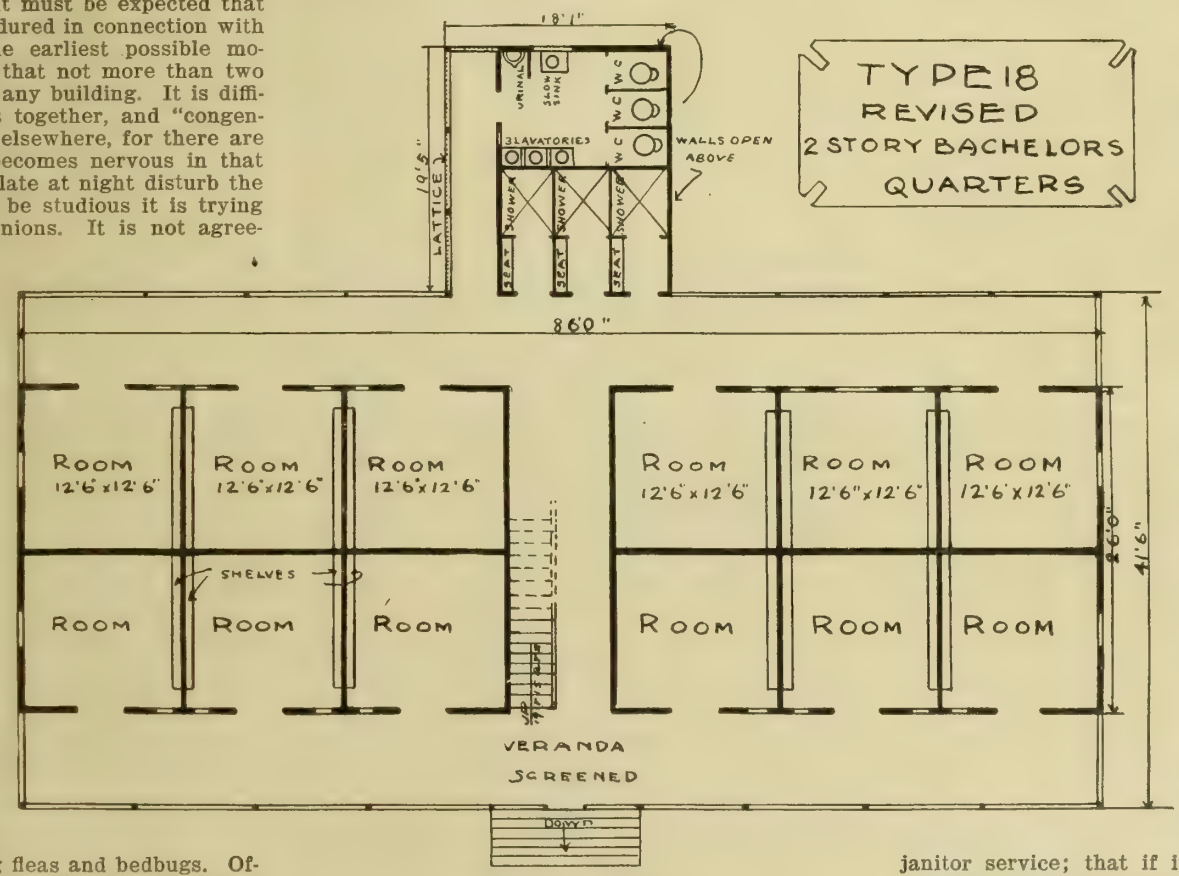
The first bachelors' quarters to be constructed have permitted four beds in a room of good size. The recently adopted standard type allows but two in a room, which is a great improvement, each building containing twenty-four rooms and accommodating altogether forty-eight men. But many are sleeping four in a room. While it must be expected that some hardships are to be endured in connection with such an undertaking, at the earliest possible moment it should be arranged that not more than two men shall occupy a room in any building. It is difficult to place congenial ones together, and "congenial" there means more than elsewhere, for there are many types of men. One becomes nervous in that climate, and men coming in late at night disturb the sleeper. Then again, if one be studious it is trying to be interrupted by companions. It is not agreeable for one who does not drink to be placed with those who have more liberal views upon that subject. If a man be ill in the night he will disturb the others. All this reacts upon the work, for the men cannot be in a cheerful frame of mind or in the best condition to labor when so irritated and suffering from lack of sleep, and it seems to be more necessary to have plenty of sleep in that climate than elsewhere. It helps to prevent nervousness and ill temper. A few have no objection to sleeping four in a room, but, for the most part, it is obnoxious. Occasionally a man will have a room alone, but very few are so favored. The inclination to be alone is well illustrated by the case of one man sleeping in a room containing fleas and bedbugs. Offered quarters with four in a room elsewhere, he chose between the two evils to room with the vermin. Bachelors who work nights and sleep during the day should be given quarters remote from the railroad, notably at Paraiso, where they are now very near the tracks and disturbed by the incessantly passing trains. Conductors and engineers in the passenger service of the Panama Railroad Company have rooms above the station at Panama for rest between runs and an old house a few blocks away serves for the permanent quarters of some. It is very difficult for the men to secure rest in the rooms above the station owing to the incessant noise, and the permanent quarters referred to are not up to the standard of those supplied to the majority of the employes. Improvement in this connection is desirable. The railroad employes, working on passenger, freight and dirt trains, live for the most part in the standard type of quarters.

The hotel helpers—negroes above the type of common laborer—sleep three in a room in special dormitories adjacent to the hotel. The rooms are too small for three and there is some expressed dissatisfaction. Ventilation is not adequate.

QUARTERS FOR HOSPITAL EMPLOYES.

The doctors at the main hospitals have excellent homes and bachelor quarters. One waiting for a home is the Chief Sanitary Officer, Dr. Gorgas.

The nurses are quartered very pleasantly and comfortably at the Ancon Hospital, their reception room being pretty and homelike in appearance. It is unfortunate that at the Ancon Hospital the women nurses' quarters are across from the fire department, which prevents them from having the privacy which they should enjoy, for the firemen naturally sit around most of the time outside of their building.



At the Colon Hospital the sleeping rooms are small and the reception room is very unattractive and bare in appearance. The nurses' dormitory at the Colon Hospital should be better protected from rain. During severe storms the apartments on the first floor on the ocean side are pretty well drenched, and on the top floor it was authoritatively stated that nurses have been known to sleep with umbrellas over them because the rain beats in through ventilators.

Better arrangements should be made for nurses on night duty, it being the custom, except in the case of favored individuals, for each to have one month's night duty every four or five months. Since night duty lasts for one month, night nurses could easily move to separate quarters. As it is, they cannot sleep well in day time because of noise. It was claimed at one of the hospitals that two rooms are reserved to which nurses may go if they so desire, but it is certain that the nurses do not so understand it, and, besides, no one would care to go to a room remote from personal effects to sleep. Furthermore, two rooms would not accommodate the number on night duty.

The quarters for orderlies, attendants and maids, which are separate places, are above reproach. The end of each contains a partitioned room, with shower baths and wash bowls, and there is an attendant constantly present to maintain order.

DRYING ROOMS NEEDED.

The housewife finds her greatest difficulty in combating dampness. The airing of garments and bedclothing, which soon become moldy and musty, is constantly necessary in the wet season. It is exceedingly disagreeable, if not unhealthful, to lie upon a musty pillow, for instance, and it requires perpetual effort to care for woolen clothing, shoes and other apparel.

It is even a greater hardship for the bachelor, who has no way of drying his wet garments after being at work in the rain daily eight months in the year. The housewife may dry the garments of the husband at the kitchen stove, but the bachelor has no way of caring for his. At the homes of the officials there are drying rooms over kitchens, receiving the heat therefrom. It is vital to health that there should be arranged some system for drying bachelors' clothes. For the American bachelors there might be a shanty constructed, centrally located, and heated periodically for this purpose. It would be better to have in each building where American bachelors reside a room set aside for that purpose. A good arrangement would be ventilated metal lockers with heating apparatus underneath. In this way the garments could be kept locked in individual compartments to prevent stealing. The quarters would have better appearance than now, for, as it is, the clothes must be kept, if hung at all, on the walls in the sleeping rooms or on lines above the beds. Otherwise they are in trunks. A rule provides that there shall be no clothes' lines on the verandas. A man cannot hang his clothes out of doors and leave them there while at work because rain is almost sure to fall during the day. If left in the quarters damp they soon accumulate mold. The lockers would have to be of material so treated as to endure moisture in the atmosphere. The recommendation relative to drying rooms was presented, with others, to Colonel Goethals and is receiving consideration.

Bedding of bachelors—pillows, mattresses and blankets—should be aired periodically. It grows very offensive from musty odors. Some resort to the sprinkling of perfume upon their pillows at night.

VERMIN.

Another serious difficulty is the existence of bed bugs to such a degree as to cause serious discomfort. A man cannot endure such discomfort at night and be in a contented frame of mind during the day while at work. Cockroaches and fleas are also very numerous in the quarters, and flies are exceedingly troublesome in the mess halls. One wonders if the subject of eradicating vermin in the tropics might not receive such scientific consideration as has been directed to pests which have annoyed farmers. The ordinary methods of fumigation are pursued. The men claim that much of the trouble is due to poor janitor service; that if individuals clean their own rooms bugs go from other quarters in the same building, and that it is only by paying the janitors extra that they secure good service. An illustration given was this: "All the janitors do is to sweep the dirt under the beds and straighten the bed covers. The other fellows have bed bugs and fleas. In our buildings we got rid of them by having our own janitor. He cleans up after the other man gets through each day." Bed bugs are troublesome on the boats also. The presence of scorpions and lizards in the quarters, according to some accounts, is erroneous. They are found sometimes where jungle is not cleared away, but where there is no vegetation they are not frequently seen.

THE SERVANT QUESTION.

During the rainy season mud is accumulated upon the boots to such a great extent as to make housekeeping exceedingly difficult. This necessitates much scrubbing. The difficulty of securing servants among Jamaicans willing to undertake general housework necessitates very hard work on the part of the housewife. If one will wash she will not iron. One who will iron will not cook, etc. By keeping two servants, the housework will be lightened, but, as almost all have gone there to save money, or, as they put it, "to make their stake" and "be able to take it a little easier when they return to the States," few care to meet the expense of two servants.

It is complained that janitor service is far from satisfactory in the bachelors' quarters. In addition to illustrations given, perfectly reputable men claimed

that a mop had never been used in their rooms. It was stated that there never had been so much cleaning done as during this investigation, and that everybody had been kept "hustling." Such activity was probably due to the introduction of a more rigid system of inspection of camps, i. e., the military system. Owing to the difficulty of securing efficient help, as servants and janitors, through the services of West Indian negroes and of getting good cooks for the mess houses, it would seem desirable to effect some understanding with the Government of Panama, which is always ready to accede to reasonable demands, whereby Chinese laborers might be secured for such work. Then, a corps of janitors might also scrub periodically the married quarters, a charge for such service being made. Wages of Chinese servants might be higher than those of the negroes, but, especially in the matter of janitors and cooks, an extra expenditure would be warranted if necessary. The wives of the high officials, as well as mechanics, are experiencing a distressing time over the difficulty and sometimes inability to secure domestic service of any description.

SHORTAGE OF FURNITURE.

There was much dissatisfaction among American bachelors who were sleeping upon cots. All were promised beds, but many had not yet received them. In some instances when beds have been vacated by men leaving the service those with cots have simply taken such beds, and this custom of "robbing vacated quarters" has also obtained among the married residents. This should not be necessary, with proper supervision of quarters. Promises are made which are as quickly forgotten, it is claimed. Some who have been there for a year have not their full quota of furniture yet. Families have been given houses containing a portion of the furniture required with the assurance that they would get the balance at once, and it is claimed immediately afterward part of what they had would be removed. While it is generally conceded that there always will be grumblers, no matter how great is the attempt to be fair in assigning quarters, many of the conditions existing to-day are certainly unnecessary. Some American bachelors said: "The worst thing is having to sleep on cots;" that "after a hard day's work a man needs a mattress, and after six months' waiting a fellow gets tired of it and leaves."

The hotel helpers have cots. They should have mattresses. It would be very desirable to substitute double deck iron beds for such cots. These helpers rank above common laborers, although negroes, and are entitled to as much consideration as orderlies and attendants in the hospitals who are so well housed.

There is dissatisfaction among Americans because of the inability to get furniture, and it does seem as though when bids are courted bidders should be requested to state whether or not they have stock on hand, to prevent the necessity of waiting until furniture can be manufactured. There were beds, chiffoniers and other articles upon which the contract time for delivery had expired six weeks and two months previous to this investigation, not received. It is to be hoped that the army method of purchasing now being adopted, with the larger corps of inspectors appointed to follow up orders and urge deliveries, may aid in relieving the situation. Again, the idea of paying premiums, as private purchasers do, to insure early delivery, presents itself. Our prosperity has made it difficult to secure the filling of orders made by citizens in the United States, which emphasizes the necessity of special effort on the part of the Government in connection with its purchases for the Isthmus.

An estimate of the amount of furniture which will be required to care for the greatest number of employes, which is now about determined as a permanent force, should be made and furniture for that number secured. In making this estimate additional married quarters to a liberal extent and more bachelors' quarters to obviate having more than two in a room should be taken into consideration.

There must be a poor system of inspection of materials, for types ordered are not received. For instance, copper screen is required in that climate, where everything rusts, and yet iron screen has been received largely. It was observed on new quarters and hospitals to have split in a few weeks. It has been accepted in a spirit of desperation as better [illegible]

Glued furniture cannot be used there because of [illegible] and yet it has been substituted by the best firms for the "knock-down" type ordered, which [illegible] a great drug company has sent adulterated medicines for our sick.

Now, bad screen and furniture are put into temporary use, but contractors are being informed that [illegible] at their expense, with the hope that they will be taught an effective lesson.

COMMON LABORERS' QUARTERS.

[illegible] are segregated, and so are the West Indians. The quarters are identical in construction, each house being one large room, containing from sixty to seventy-two and eighty-four cots. According to modern tenement house laws the air space should be not less than four hundred cubic feet for each adult. In only one type of houses has that number been allowed, according to the following estimate:

"At Cristobal, 84 bunks per house, allowing 353 cubic feet per man; at Tabernilla, 72 bunks per house, allowing 412 cubic feet per man; the French Barracks at Rio Grande contain 60 bunks per house, allowing 330 cubic feet per man. It is claimed, and perhaps properly, that it is unfair to make a comparison between city tenements and these buildings having wide openings at roofs, which are supported by posts, leaving a space between the walls and roofs, but this is submitted as worthy of expert advice, especially as those laborers fall such a ready prey to the pulmonary malady of pneumonia.

The bunks or cots are arranged one over the other in tiers of three. The majority of the cots are canvas, but many are made of metal lattice work, the ends of the flat pieces of metal being joined to side rods and front and head rods with springs. The men lie on this metal lattice work with nothing underneath them, and it is about as cruel a system as could be devised. It was officially stated that one thousand metal cots were secured as an experiment, that they have now been adopted as the standard type, and that more metal cots had been ordered. They should be abolished. All the cots are too narrow, and when new ones are purchased they should be wider.

For the purpose of cleanliness the common laborers are obliged to keep their clothes on a wide shelf around the top of the rooms. Sometimes they have them in bags on their cots. It is very desirable that the floors should be kept free to be scrubbed, and they were quite clean invariably, but the clothing should be more accessible. The shelves above are supposed to be reached by ladders, which do not always exist. One of the supervisors, when asked how the men were expected to get their clothes, stated: "Well, that is up to them. They climb over the bunks."

It would be very desirable to have ventilated metal lockers surrounding these dormitories, in which the men might keep their clothes, or to have additions built to the dormitories for that purpose. One of the greatest causes of illness is the wearing of wet garments. The Sanitary Department is urging the men to wear dry clothes. How it can be accomplished under the present conditions it is difficult to understand. By providing a system of lockers, as suggested, steam pipes could be put underneath for drying the clothes frequently, or this could be done in the rooms added for the keeping of the garments. Men who are out in the rainy season and get wet daily, as they do eight months in the year, should be provided with drying rooms for the clothes. The placing of damp clothes in the morning upon the warm body chills it and causes illness. When it was asked if steam could be provided for such drying rooms it was said that it would be impossible. Colonel Goethals, however, took up the matter and found that it would be feasible and had a plan drawn, adding a splendid feature of his own conception for the common laborers. It is to place laundry tubs in one end, where they may wash their clothes. Now they may be observed washing outside their quarters. He agreed that the drying rooms should be supplied. It is to be hoped that there may not be experienced, either due to scarcity of materials or shortage of labor in the building department, the delays of the past, for this is of urgent importance.

There is no furniture whatever, not even benches, on which to sit in the common laborers' dormitories when changing clothes, or when it rains daytimes. It would be well to have wooden benches. Evenings the Europeans are allowed to sit in the mess halls, where they are provided with paper, pen and ink for letter writing, but the negroes have no place to sit.

The common laborers are required to buy blankets, and, consequently, comparatively few have them. In the interest of maintaining health for all the Government should supply such blankets—at least for this class, which must be taught how to live. They should be provided with two blankets—one for underneath the body, which now has no protection from cold, and one for a covering. This is a matter of the utmost urgency. It is hard to understand why a matter of such importance should not have received earlier attention. Aside from its consideration from a humanitarian standpoint, it will be economy in the end. It will save in hospital expenses and in the cost of securing fresh supplies of labor. It is possible that the common laborers are better off than they were in their own countries, but that does not excuse us for neglecting to provide essentials for health.

It is the intention to send the married Spaniards out into the country and give them materials to put up their own quarters. This is an unfortunate move, due, it is said, to an inadequate building force. It is very important that quarters should be constructed by the Government for all, and especially for the ignorant.

There are baths in only a few of the married quarters for the common laborers. In an early type of bachelors' dormitories for this class baths and toilets were placed in the end of each, as in the dormitories of hospital attendants. Now there are separate buildings for bath houses and separate closets. This was done to make sure that sleeping quarters would be sanitary, for they cannot now be affected when plumbing is out of order, but it does not seem a wise arrangement. The laborers would be more likely to bathe if the places were more accessible; at least there should be wash basins in a space as an addition to barracks. It is probable that the cold water shower baths cannot safely be used by all negroes and Europeans, just as is the case with Americans, and yet there is no other provision for cleanliness. As a safeguard to health toilets should be more accessible for night use.

With the exception of one camp, where they have two rooms, the families of common laborers live in one room and cook in braziers. There are special buildings for such married employes, each containing as many as eight rooms, surrounded by verandas. Each family should have two rooms.

LOCATION OF NEW CAMPS.

In the location of camps the recommendations of the Sanitary Department have not always been adopted, and they have sometimes been placed on low ground, which would make them unhealthful, because proper drainage was not feasible. A board has just been established, consisting of the chief sanitary officer, a representative of the Department of Labor, Quarters and Subsistence and of the Municipal Engineering Department (which has charge of sewers and the water supply), to act upon the location of new camps. There is unnecessary illness of employes at one camp now because floors were not placed in tents upon the request of the division engineer; but after several months of urging they have been secured. It does not seem possible to screen tents which have to be used in pioneer work.

HOTEL TIVOLI.

In the discussion of the question of quarters a description of the Hotel Tivoli should very properly be made. This building was erected by the Government at a cost of more than a quarter of a million dollars. It is located on the Pacific side of the Isthmus and is a beautiful structure, on the order of a modern summer hotel. It is used by transient guests from different parts of the world and for employes who cannot be given quarters in that vicinity because of their inadequacy. The rates for transient guests are high considering the service received. They were so set to appease Panamanian hotelkeepers, who complained that they were losing trade. That is an error. If they cannot keep their trade because of inferior accommodations, they should make improvements which would enable them to compete, and the Government should make its prices not only commensurate with the services rendered, but to set a standard for that locality. For transients one room with bath and meals may be had at $6.75 a day. There is no hot water in the bathrooms, which are absurdly large. There are telephones in the sleeping rooms. The maid service in the chambers was found to be good, with the exception that the bedding was not aired, and the musty odor emanating therefrom was exceedingly obnoxious. The service of the bellboys was very satisfactory, and of the waiters, on the whole, good. The method of handling the desk in the office is very crude, and there are so many clerks on duty at one time that there is confusion. There is not the attention to the needs of the guests which should be accorded. In the effort to secure accommodations two guests were allowed to stand waiting at the desk and finally obliged to ask to be served. A request was made for two rooms with a connecting bath. There were offered two rooms with a bath at the end, necessitating the disturbance of one occupant by passing through her room to go to the bath, and the price set for these accommodations was fifteen dollars a day with meals. It was then suggested that there might be two beds in one room with bath, and the price set was six dollars and fifty cents a day for each. The absurdity of the situation may be realized when it is stated that two rooms, each having a bath, were secured at six dollars and seventy-five cents a day each.

Employes residing at the Tivoli pay seven dollars and a half, ten dollars or fifteen dollars a month for one in a room without bath and twenty-five dollars a month with bath, table board being thirty-five dollars a month in addition. Table board is eight dollars a month more there than at the mess halls along the line. Employes would expect to pay more for the service, which is better than at the messes, if the food were good. For two in a room without bath resident employes pay ten, fifteen and twenty dollars, and with bath thirty-five dollars a month, board being in addition as above. Resident employes are charged for accommodations at the Tivoli, although quarters are free elsewhere, to meet the expense of furnishing bed linen and towels, which

A Typical Camp for Laborers.

is not done generally. There is discontent among high officials and other employes because they are obliged to pay so much for quarters in that hotel for the reason that other accommodations cannot be provided. Commutation, amounting to about eight per cent of the salary, was at one time allowed under such conditions, but that was discontinued because, it was announced, there were adequate quarters, which did not prove to be the case.

Employes going to the hotel for separate meals may secure them on the following basis: Breakfast fifty cents, lunch fifty cents, dinner seventy-five cents. For rooms without baths transient rates for employes are from $1.50 to $2.50 a day. With baths they are from $2.50 to $3.50 a day. In addition meals are two dollars and twenty-five cents a day. This seems absurd in view of the fact that by paying for single meals, as above stated, they would amount to one dollar and seventy-five cents a day. Rooms at the lowest rates are not often available. One official stated that he never goes to the Tivoli with his wife but that it costs him fifteen dollars for the night. The officers of the Marines from Camp Eliot cannot secure rates at the Tivoli unless they own coupon books, which are of no use to them at any other time, and yet, the expense of stopping for a day for such an officer and his wife has never been less than fourteen dollars.

If one were obtaining value received the rates for non-employes would not seem so excessive, but the food was absolutely abominable. For breakfast sometimes there were delicious pineapples to relieve the monotony of cereals miserably prepared, musty eggs and poor quality of breakfast bacon, served day after day. It is not too extreme to say that breakfast coffee was vile. Luncheons and dinners were table d'hote meals with indifferent soups, flat meats, unseasoned canned vegetables and uneatable desserts. After a few days of such meals the mere sight of the food was repulsive and one would involuntarily screw up the face in disgust. It then became a matter of making selections in an effort to get some article which could be consumed. After dinner coffee was good, which demonstrated that there was no excuse for the kind served at breakfast. The drinking water is secured from the steam coming from the water used in cooking utensils. It should, therefore, be pure, but its care must be improper, for it was so unpalatable as to be undrinkable.

The hours of the telephone operator are long. There should be relief for her. The hours of the waiters are from 5:30 a. m. to 9:00 p. m., with an interval of rest in the afternoon. The waiters complain of their quarters, which are the same as at the other hotels, separate dormitories with three crowded in each room.

It is intended that the Hotel Tivoli should be made a congregating place for employes, but it is of small benefit to them in fact. Such a congregating place is greatly needed at that point, especially Sundays and holidays, when employes from down the line visit Panama. If it were made more attractive they would spend less time in the evil resorts of that city.

There is a large hall used Saturday evenings by different social clubs, composed of employes, for dancing, and this is its most beneficial feature. Unfortunately employes of the hotel are not permitted to attend such dances, and, therefore, they have not the opportunity of going to parties because they can never get off duty long enough to go down the line for that purpose. There is a fine billiard room, but there, again, employes receive small benefit as the charge is forty cents an hour for games.

A first-class hotel man should be placed in charge of the Tivoli under such a contract as would ensure certain privileges for the employes.

WALKS AND ROADS.

In the rainy season the mud is not only deep, but exceedingly slippery, and pedestrians fall in going up or down hill where walks have not yet been laid. In speaking of conditions, eleven months ago when he first went to the Isthmus, one man said: "It used to take a tight rope walker to get up to the quarters." Since that time board walks have been widely constructed, some cinder paths have been made and crushed stone has been used for thoroughfares through the camps. The crushed stone is large and uncomfortable to walk upon. Owing to the scarcity of lumber, so much needed for quarters, the question arises as to whether it could be crushed finer and used more largely for new walks, at least until sufficient supply of cinders is assured. The objection to be raised is the expense to the Canal Commission of freight for carrying the stone over the Panama Railway, but it does not seem as though this should be a deterrent. At present cinders are being saved for paths, as it is claimed that board walks rot. It is also said that cinder paths are readily washed away. Therefore it would seem that persistent effort will be required to maintain walks.

Requests were made for a walk in Gorgona from the camp to the shop. It is claimed that there is great danger at noontime in walking railway tracks for trains are traveling both ways at that period.

STREET PAVING, SEWERAGE AND WATER SYSTEMS.

The streets of the City of Panama, not in the Canal Zone, have been paved with brick and a five mile drive has been macadamized from Panama to the summer homes of the first Panamanian families. In Colon, where the city is built in a swamp, houses have been raised for the Panamanians, and many streets paved. The work is progressing in side streets. It is a gigantic undertaking as there must be about two feet of filling. Curbing, filling and paving are being carried on in all the streets. One side of a street will be paved for use of vehicles, a railroad run down the center to carry dirt, and the other side left free to receive the dirt to be used as filling.

There are drainage canals and channels leading to them. No criticism can be justly offered as to an unhealthful condition. Even in the drainage channels water was not stagnant. It was authoritatively stated that this is due to the fact that evaporation takes place night and day, and there are constant fresh rain falls. It may have been a mistake to use

Water Carriers.
(Photographed by Daly.)

macadam, through which it is claimed the moisture seeps, in Colon, but it is claimed that brick can be laid over it. It is but natural that some errors should be made in the various departments where much is experimental in a new country, but there is nothing critical in the situation at Colon, although it is quite likely that the work might have been more expeditiously prosecuted. Paving is one of the contributions to the Panamanian Government for the privilege of constructing the Canal.

A sewerage system has been installed from one end of the Isthmus to the other, all the main work being completed. It will take a year, according to estimates, both in the water and sewerage systems to finish making all connections and the extending of pipes to new camps, but there will be no serious inconvenience on that account.

Water, for all purposes, bathing and drinking, for the majority of the camps, is furnished by four reservoirs, the last one just being completed. At one it is believed that the supply, directly received from the river, will be ample. There are parts of camps where there is no water because of delay in receiving pipe. While it is true that purchasers even in the United States have found it difficult to secure materials, delays seem more vexatious on the Isthmus where nothing can be bought for temporary expedients. As one official said, "It does not matter whether you have $100 or $1,000, you simply can't get articles needed."

Although not germane to this subject the following incident affords an interesting illustration of that fact: At Gatun, one of the largest camps, the main cooking for the local hospital was done in receptacles set upon two steel railroad rails, with the fire between them. The loss of the stove ordered for that hospital in a bad fire at the main storehouse was the first chapter in this story. The one ordered by cable to replace it was lost a few weeks ago when the entire cargo of a stranded ship was swept away. To meet the emergency, the City of Panama was scoured, but only two small stoves could be found, which were added to the ingenious devise described.

The water supply grew very scarce toward the end of the dry season, but the increase in the capacity of the reservoirs will, it is expected, obviate that inconvenience next year. At the present time there is an adequate supply, although at the new reservoir at Gorgona, the water has been very offensive, due to rank vegetation.

It is not pleasant to drink the water without boiling or distillation any place. In fact, it is quite offensive. It is claimed, however, by the Sanitary Department that it is not unhealthful, and that there is less disease from impure water there than in the States. Typhoid fever at present is confined to the district between the camps of Empire and Gorgona, attributed to negroes drinking from streams into which sewage flows, instead of securing water from the hydrants.

Distillation and sterilizing plants have been placed in some camps to supply pure and palatable drinking water. At the time of this investigation it was the intention to install one system or the other at all camps except where removed from danger of contamination from sewage. Distillation should be adopted in preference to sterilization, and the work of installing distillation plants should be pushed.

In the camps where there are plants for distillation of drinking water it is carried to the married quarters in jugs, each house being supplied by a man carrying a single jug at a time. This seems to be an absurd system, as he is required to walk a considerable distance. It would be well to have carts for this purpose.

Distilled water is supplied in but few instances to bachelors' quarters during the day for their use at night. Employes cannot get drinking water after the evening meals at the hotels, but it would be of little advantage if they could, as the hotels are too remote from the majority of the quarters. Undoubtedly, palatable drinking water at bachelors' quarters would reduce the number of convenient liquor bottles said to be carried to them. It is not difficult to understand the statement that: "If a man can't get water, all he can do is to go and buy a bottle of beer and carry it to his quarters." The Chairman of the Commission stated that a water cooler would be placed upon each floor of the bachelors' quarters and supplied with drinking water, the men to furnish the ice. It is to be hoped that there will be no unnecessary delay in meeting this need.

Drinking water, pleasant to taste, would reduce tea drinking at meals. In a climate where nervousness is so general it is not well for such quantities of tea to be used. It is now placed on the tables in water bottles. In that connection it would be well more largely to use Ceylon tea, which is decidedly better for nerves than other kinds.

Especially should there be drinking water cans on all engines for the engineers and firemen. This is entirely feasible with the use of a little ingenuity. Some have jugs upon the passenger trains, but drinking water is a crying need generally. The Sanitary Department has urged that instead of water upon the engines air-tight barrels be placed a mile apart along the railroad, the ice to come in direct contact with the water. This is not a good plan, as there is danger of contamination in handling the ice, but more particularly because no matter how thirsty a man may be it is not usually possible to stop his train to obtain a drink. The engineers are under orders "to move." Dirt trains must be kept constantly traveling, that steam shovels may be continually in operation. There might be used a bottle now on the market, guaranteed to keep water cold seventy-two hours. It is made of two glass bottles, one within the other, and sealed at the neck leaving a vacuum, which is a non-conductor of heat or cold. It is expensive, but probably would cost no more in the end than other devices which would require cost of labor for handling ice. Tank steel cans, with inside cases of galvanized iron and an interlining of cork, can be used.

There are excellent kegs with faucets for drinking water in the shops, but an effort to secure distilled drinking water at the Gorgona shops has not met with success. It would be well to have a good system of distillation installed in all shops. The Gorgona plan of having the water circulate in pipes around the ice, preventing its direct contact with the water, would be most desirable, for it removes dan-

Family Quarters for Laborers, Each Family Having One Room.

Mess Hall for Americans.

ger of cooling water to an unhealthful temperature for men overheated, and of impurities being conveyed. This method is successful in factories in the States, and the failure at Gorgona should not discourage a further effort in that direction.

ELECTRIC LIGHT.

An electric light system was completed two months ago. Some of the camps have all of the houses wired and there are arc lights in some streets. It is intended to develop the electric light plant further, as it is necessary to reduce danger of fire from lamps. It is important that streets in all villages, no matter how remote, should be so lighted in the interest of morality. There is no twilight. When there is no moon the darkness is so dense that it is exceedingly difficult to go about. There is much to be done in connection with artificial lighting and the work should be rapidly pushed. It does not seem as though it should have taken two years to reach the present stage of development, due, it is claimed, to inability to secure delivery of requisite machinery.

FOOD.

The meals which were eaten during this investigation at the various mess houses were good. It was voluntarily stated by many American employes who are eating at the mess houses that the food has greatly improved within the last two months at most of the camps, although not at all. There is reason to believe that the meals were better at some of the places when visits of inspection were made than they are day after day, but it was gratifying to find that the food could be so well prepared. This indicates that there is small excuse for badly prepared meals at those places when plenty of good materials are furnished.

The testimony was ample to prove that before Colonel Goethals began his trips of investigation the meals were exceedingly bad, except at one camp, which is generally conceded to have a first-class mess. Many employes left the Government hotels (mess houses) and now patronize private messes. Their testimony indicates that they were obliged to take such action in order to maintain health. Statements with reference to conditions but two months ago were "rotten meat," food not well prepared, swimming in grease, insufficient served, no variety (steak often tainted, potatoes and red beans daily), no relishes, flies in soup, dishes and table linen unclean, service bad, negroes wiping their faces with dish towels and then using them on dishes, absurdity of paying the Government thirty cents for a poor meal when a good one could be secured at a private mess for twenty-five cents, et cetera.

The Colonel has insisted that there shall not be a "ten-cent meal" sold for thirty cents, and that while an effort will be made to have hotels self-supporting, losses will be cheerfully borne if necessary to provide wholesome food.

The general impression that profits were made at the mess houses is correct. There is no advantage to the Commission in having profits, for such funds cannot be applied toward construction work, but for January, February and March they were considerable.

The profits, beginning with January, for messes and kitchens were:

January	$4,008.04
February	3,118.88
March	10,624.69

The present Commission took charge March 10.

On the first of April orders were given that the [illegible] be run on a self-[illegible] basis.

In April the profits were reduced to $1,193.15.

During May the profits were but $261.09.

There was great dissatisfaction because the sum of $37,000.00 was cleared on food last year, and good food was not supplied.

The mess houses for Americans are attractive and well arranged. Frequently there are separate rooms with table linen for those who eat with coats on, and sometimes the broad, screened verandas are so equipped. In adjacent rooms, men coming directly from shops and other work places may eat in shirt sleeves. There tables are covered with white oilcloth, so that shop grease may readily be washed from it. Kitchens are equiped with modern appliances and large ice chests are provided. Kitchen ranges are usually in dark, unventilated corners.

Dishes are good—even pretty. Silver is of a very cheap grade, is practically unfit for use and possibly a menace to health. There is no economy in buying such cheap ware. Experience in lunch rooms of manufacturing establishments has shown that stocks of high-grade silver seldom need replenishing. A much better grade should be purchased in future.

District physicians are now required to inspect food and kitchens at least three times a week, and this has brought improvement in food and greater cleanliness. There is a certain smokiness in the kitchens, however, which indicates that utensils are not cared for properly. To provide good food there is nothing more necessary than careful attention to kitchen ware. The water in the dish-washing machines at some places was found to be clean and it was very unclean at others. Conditions vary according to the efficiency of the hotel stewards. Linen and dishes are not universally clean and improvement should be made.

Monotonous, cold breakfasts and inability to be served form the burden of a complaint which is general: "Daily egg breakfasts, eggs—eggs—eggs every morning!"

Breakfasts are composed always of a cereal, eggs, bacon, coffee and cakes. There is no reason why they should not be varied. Plenty of foods appropriate for breakfast could be procured.

Those who tip waiters get quick service, and many who have tried to get along without tipping have found that they could scarcely get breakfast. Although there is a rule against tipping, and waiters have been discharged for accepting fees, it is not likely that that system can be changed upon the Isthmus since it has been impossible to enforce such regulations elsewhere. But it should be possible to require the managers of the mess halls to give personal supervision at breakfast time. It is especially complained that they do not appear and that the negro waiters do not care whether they render service or not. The fact is that they could not be expected to do so without guidance.

The following are some of the expressions with reference to breakfasts:

"I do not eat any breakfast at all simply because I can't. The pancakes are so tough I cannot eat them and the coffee is not fit to drink."

"Eggs are cold, the cakes would make good sole leather and the coffee is awful."

"A man will not pay thirty cents for nothing to eat."

"I pay the waiter a dollar a week—God knows I had to get something to eat. The pancakes are hard."

"It is not one time in ten a man can get anything in time to go to work."

It is against the rule for bachelors to prepare breakfast in their quarters, but some do, and claim they are much better off than when obliged to eat the notorious egg breakfast at the mess houses. While there is danger of fire if bachelors have oil stoves and of refuse accumulating as a menace to health, it is too much to expect the observance of this rule unless breakfasts are made less monotonous and service more prompt. It would also be desirable to institute what are called "club breakfasts," as some care for small and others large morning meals. Those who care for little should not be required to pay thirty cents for breakfast.

At the majority of the camps, with the exception of the general complaint about breakfast, such expressions as the following were heard: "The food has been improving for the past two months. Before the new administration took hold it was something fierce."

There is no doubt but that great improvement has taken place. It is equally true that there is still room for betterment.

At one of the camps, where it is claimed that no improvement has taken place in the food, it was said: "You can wait for some improvements, but you can't wait for food. We are getting the same things over and over again. Meat has some kind of sauce, it seems Spanish, over it. Turkey tastes flat and has a queer dressing over it."

At another camp, where it was complained that conditions have not changed, the following statements were made:

"They do not even have ice on the table. You go all the forenoon without water, and then you come in at noon and can't get it cold." "It is a wonder to me that the men keep their health with the food they are getting." That can well be believed in view of the number of complaints offered by perfectly reputable employes, for much of the testimony indicated conditions similar to those experienced at the Tivoli Hotel, which has been under the same management as the mess houses. The lack of nutritious food undoubtedly has been the cause of dysentery and other ailments. Plenty of wholesome food is more essential in the tropics than elsewhere. The body perspires so freely that a generous supply of good fuel is required to replenish waste material. Strength very soon wanes if meals are unsatisfactory. Unpalatable food seems more repulsive there and one soon finds it almost impossible to eat. It is hard to be cheerful under such conditions. The whole world seems wrong and one becomes resentful.

There is one mess, in the opinion of the men, beyond criticism. Engineers will run their engines down to that camp for meals instead of eating where they live. Such expressions as the following were heard: "Why is it they can feed like that at one place and at ours it is impossible to get anything fit to eat?" "That place has been fine for four months, and if every other were as good there would be no kick."

It was learned that at that place the manager was cutting the rations of the negroes short in order to provide such good meals for the Americans. (The supplies for the negro kitchen at that place are sent from the mess hall for whites).

At the Ancon Hospital there is undoubtedly justified complaint with reference to food for employes of the hospital and patients. It is claimed that it is "cold every day in the year." It is cooked in a central kitchen and distributed throughout the grounds to the wards, mess halls and nurses' quarters, patients and employes eating the same food. The vehicles for conveying the food could be improved, and there should be steam tables to warm it at the wards. There is no complaint about food at the Colon Hospital, partly because it is on the Atlantic Coast and secures food fresher, immediately after the arrival of steamships. At Ancon, on the Pacific Coast, cold storage orders must be depended upon entirely, and the trouble is also, as at the mess halls, bad preparation of foods. One of the nurses said: "Tell the President I not only want a 'square deal,' but very particularly a 'square meal.'" At Ancon Hospital it is complained that night nurses have very poor and monotonous midnight lunches, and that in order to get along they must purchase additional supplies and prepare them.

At present the marines are stationed at Camp Eliot. One of the absurdities is that, owing to the fact that the law requires all purchases for the marines to be made by contract, they cannot be benefited by our commissaries, provided for other Isthmian Canal employes. The marines must eat native beef, even though it costs more than cold storage beef at the commissaries, and purchase bread baked by Panamanians, paying six cents a loaf, whereas, it may be had at our own commissaries for four cents. Potatoes, onions, canned goods and other provisions, are contracted for in the United States and sent down.

EFFICIENT COOKS NEEDED.

Where there is such a variety of tastes it is difficult to please and there will always be some complaints about food, as there is everywhere. But if the food were as well prepared and as neatly served at all messes as at a few popular ones, certainly there would be less grumbling. At such messes there will be found preserves, catsup and pickles constantly on the tables. One steward said that he "could not afford to pursue that plan, as a man would empty a jar of preserves at a meal." That is not the experience of others, and such relishes are greatly appreciated.

Kitchen help at present is principally Jamaican and very unsatisfactory. Chinese are noted for being

Room in Mess Hall Where Americans May Eat Without Coats.

good cooks. They might be secured for such service, and use of the other type entirely discontinued. That health and content cannot be insured without wholesome living arrangements was demonstrated by one foreman, who said: "I have to kinda humor the boys when they don't get good food or comfortable quarters, for they get irritable and fault-finding in the shop." Cooks are paid from seventy-five to one hundred and twenty-five dollars a month. They have quarters free in addition. Six were cabled for in the States at the maximum salary, so thoroughly is the need for good cooks realized. Is it not possible that some of the trained cooks from the army or navy could be detailed to the Ishtmus? There should be one chief cook, competent to command a much higher salary than now paid, who would devote his time to supervising and training the cooks, with a view to placing all mess halls on an equally good basis.

MESSES FOR COMMON LABORERS.

The European laborers are fed in separate mess halls, which are splendidly arranged, the dining-rooms containing uncovered tables and benches for seats. They are carefully cleaned daily. Enamelled ware of the appearance of granite makes an excellent type of dishes. Italians, Greeks and Spaniards have their tastes consulted and their favorite foods are furnished. At every plate half a loaf of bread is placed, and each is liberally supplied with a meat stew, macaroni or other vegetables, fruit or other dessert and coffee or tea. Meals are furnished at forty cents a day gold, but Europeans may eat elsewhere if they so desire. They are allowed to take their little bottles of light wine, which they are accustomed to have with meals, to the mess halls.

KITCHENS OF NEGRO LABORERS.

The West Indians, until the first of February, cooked their own food in any sort of fashion, in utensils on the ground, at their barracks. Owing to malnutrition it was decided to erect cook houses and prepare their food, which is now made a part of their wages. Employes file in front of a counter,

Europeans in Front of Mess Hall.

their rations of meat, vegetables—yams, sweet potatoes or rice—and sometimes fruit are handed to them from the kitchen behind.

This system was recommended by the Sanitary Department a year and a half ago. The delay in establishing it seems as unnecesarily great as do delays in other matters.

Under the old haphazard plan negroes would secure food from the commisaries at noon, usually canned. By the time individual purchases were made, fires built and food prepared the time allowed for lunch and siesta would be consumed. Therefore they were insufficiently nourished, and it was found that when ill in the hospital, after fever had disappeared, they would eat as ravenously as starved creatures.

The new scheme is a great step in advance, but there is still room for improvement. There is no place for them to sit when eating except under their barracks, like animals, or upon the floors in them. Shelters, no matter how simple, should be built and provided with benches and tables.

There is no way to insure cleanliness of dishes, as they are allowed to wash their own crude utensils and leave them at any convenient place. Granite dishes should be supplied. It would facilitate service to have such dishes in the kitchens, some filled and others handy to fill quickly at meal time. They could be carried to the eating shelters recommended, left to be collected after meals by kitchen help and washed.

FOOD SUPPLIES.

There should be a more rigid examination of food supplies before being shipped from the United States. It is inconceivable that any one should be asked to drink coffee which is now sometimes supplied on the Isthmus. Probably it is not coffee at all, and quite possibly not even chicory.

Eggs cannot always be of the best cold-storage type and certainly sometimes there is something radically wrong with cold-storage chickens. Housewives who had delicious chickens, at meals personally enjoyed during the investigation, purchased them from native markets.

During one week of the visit there was no cold-storage meat upon the Isthmus. It was known by the Commission that such would be the case, and it made arrangements, to avoid a repetition of the hardship, with a commercial line of steamers for the transportation of additional lots. Native beef is more expensive than cold-storage beef from the States, and is tough. At a Government West Indian mess it was found to be sickening, but at a private mess of some engineers it was not found to be repulsive.

FARMING SHOULD BE PROMOTED ON THE ISTHMUS.

In addition to needed improvement in transportation facilities between New York and Colon to assure an adequate supply of meats and other eatables, it is recommended that the Agricultural Department should be called upon at an early time to promote farming upon the Isthmus in order to meet the urgent need for fresh vegetables, milk, chickens, fresh eggs and fruit. There is no reason why this cannot be done. Almost anything can be grown upon the Isthmus. The soil is not very good, but it can be fertilized. Some individuals (Americans) at the present time have corn, tomatoes, egg plant and chickens. During the dry season there can be irrigation. This is a matter of such vital importance in maintaining health and content that it should have immediate consideration. The natives do not exert themselves to any extent in farming. There is one mechanic, employed upon the Isthmus, who had experience in profitable farming in the South when with the army, and there are others who are doing a little farming at this time. It would doubtless be possible to enlist the interest of such employes, already familiar with conditions, in farming.

The only dairy is that in connection with Ancon Hospital, it having a few cows to provide milk for patients. The cows of natives are so poorly pastured that they give little milk. Our employes have principally evaporated cream and condensed milk.

No one can know what it means to be deprived of fresh vegetables until obliged to subsist on canned foods altogether. Then an onion, a cucumber or a radish is indeed a luxury. A recent effort to meet this need has been to make arrangements for taking fresh vegetables from Jamaica and New Orleans, but this is not an assured success. There is some likelihood of conveying mosquitoes and germs endangering health from Jamaica. There are no cold-storage facilities on the steamships. It is believed, however, that fresh vegetables may be taken from New Orleans as deck freight, if not too ripe when purchased. The first consignment in June was a loss on that account, and, therefore, an experienced buyer is to be stationed at New Orleans. But there must always be uncertainty if shipments are to be depended upon for the sole supply.

CONSTANTLY CHANGING FORCE OF EMPLOYES.

Successful construction work upon the Isthmus is hampered by the constantly changing force of employes, and there is no doubt but that this is largely due to discontent, resulting from unsatisfactory housing and feeding. Improvements needed will require time for accomplishment. Tactful, considerate attention on the part of the representatives of the Department of Labor, Quarters and Subsistence would do much toward maintaining content under adverse circumstances. If effort were made to explain that everything possible is being done, with the base of supplies two thousand miles away, it is more than likely that the majority would be reasonable and patient. There is no department against which complaint so likely would be aimed as this one, for it has to do with creature comforts. While there is reason to believe that its representatives are interested in the welfare of the employes, and in many respects have striven hard to serve them, it is apparent that obnoxious and arbitrary methods too frequently have been pursued. This is public sentiment on the Canal Zone: "It has not been the rule to explain inability to improve conditions as rapidly as desirable, but to refuse the hearing of complaints and to suggest that the next boat be taken to the States if not satisfied."

Some complaints are favoritism in assigning married quarters, the convenient forgetting of promises to supply full quota of furniture, no memorandum kept of requests made, confiscation of property when on leave, keeping of men on cots for six months or more, refusal to permit private messes or individuals to eat at homes of friends, bad food at hotels, and the upholding of discourteous and unaccommodating managers of mess halls.

The new rule of the commission, in force July 1, enables a man to apply for married quarters when taking employment (assignments to be made in chronological order, as previously), and provides that lists of applicants are to be posted for general inspection. This should prevent suspicion that favoritism is shown if it is made known generally.

The old rule required a man to wait six months after taking employment before making such application. It was made because it was deemed unwise to have men take their families to the Zone until they were reasonably sure of remaining, and to give time to construct quarters. The rule, it is claimed, would have been regarded as reasonable if it had been justly applied. Instead, it is generally believed that recent applicants have been given married quarters in preference to those who have been long upon the list. This has been claimed not only by mechanics, but clerks and men holding high positions.

If specific cases of complaint are taken to higher authorities, it is found that all the papers in such cases have been "lost."

No obligation is felt to care for furniture of married employes on leave, nor have they been notified that their quarters would be given to others. The rule just adopted will help to correct that condition. It provides that such quarters will be held six weeks and notice is given that they may be temporarily assigned. There should be storage facilities for belongings of families and bachelors on vacations.

Property of negroes has been confiscated, but the department recently was required to recompense them for their losses.

A sign posted in quarters of American bachelors requires all to purchase sheets and pillow cases for their beds or they will be removed and "cots supplied instead." That is treating an American of responsible age as though he were a child. Some prefer to sleep next to blankets because of the dampness. It may be essential to require sheets for sanitary reasons, but the request could be more courteously worded.

There has been an obnoxious rule against the securing of table board at private homes by bachelors. One reason that the rule was established was the fear that larger quarters and bigger stoves would be asked for by families having boarders; another was that neighbors would be disturbed. The complaint that a man is now prevented from eating with a family of friends where he would get food more to his taste than he could possibly under the best

Interior Europeans' Mess Hall.

conditions at a public mess, was general, and was regarded as interference with personal liberty. When the statement was made that that rule has been changed expressions of unbelief appeared upon the countenances of the men. This again proves the necessity of having some medium for informing employes of their privileges.

Doubtless many complaints against the Department have been unfair. For instance, where men were found sleeping on cots at one place, beds were stored in the same building awaiting delayed mattresses from the States. Monotonous food may be attributed partly to failure in arrival of supplies, and houses can't be assigned if they are not in existence. The Department has labored under serious difficulties, but its policy of dealing with the human family has been erroneous and is the cause of general dissatisfaction.

COMMISSARIES.

Dry Goods Department.

The main commissary is located at Colon and there are local branches at the largest camps along the line of the Canal Zone. An inspection of the goods at the main commissary revealed a lack of such shoes, overalls, and other goods as would be desired by American workmen. At one of the local commissaries, a cheap and badly made shirt and two pairs of equally poor overalls were purchased. The materials are very coarse and they could not be more wretchedly manufactured. Many of the articles of wearing apparel are purchased in England and do not come up to the standard of the best garments manufactured in the United States. The men claim that the shirts have small sleeves, which readily split, are tight across the shoulders and the collar bands are marked with the wrong sizes. It is especially inconvenient for bachelors to have clothes which tear so easily, as they have no way of mending them. Somehow the Chairman and a few other officials were able to purchase satisfactory shirts at the main commissary, but there were no such garments found at the local commissaries along the line. The general testimony was: "I can get noth-

How the West Indians Cooked for Themselves Until February 1.

ing in the line of shirts which will come anywhere near fitting me," or "I would prefer to pay more and get a good quality of shirts." The stock is not kept up. For instance, white duck suits were found all to be size No. 42, required by few.

A dress suit case was presented to the Secretary by a man just leaving for his vacation. He purchased it at the commissary for five dollars and twenty cents, and when he undertook to buckle the strap it tore out, showing that the case was made of pasteboard, covered with a thin skin.

It is impossible for the Americans to get satisfactory shoes at the commissaries, and they are obliged either to patronize the Chinese merchants along the Zone or go to the expense, as well as loss of time necessary for a trip to the City of Panama, where prices are somewhat higher than in the United States.

When taking vacations, employes make large purchases for themselves and friends for the coming year. One said, on the boat coming up: "I am going to take down eight pairs of high boots. They have some at the local commissary, but they won't stand water because so thin. Why do they sell only ——'s shoes? They do not wear any time." Another stated: "I shall, as usual, take back eighteen shirts, six suits of underwear and three pairs of shoes." The destruction and loss of clothes in the laundering necessitate large supplies of shirts. Heavy rains and inability to dry shoes make several pairs necessary. And this is true of other garments.

Ample stocks of standard makes should be kept at the commissaries. It would seem as though there might be introduced advantageously brilliantine, alpaca or other coats of light materials. It seemed odd to find serge suits worn quite generally.

Good toilet articles are sold at the commissaries, but with that exception, it is very seldom that anything which is wanted by the men can be found.

Furthermore, there are no goods or garments, whatever, for women and children.

TAILORING SHOULD BE UNDERTAKEN.

Linens and woolen goods to be made up there are purchased in better quality and at lower prices from England than the States, and this would be a benefit to the employes if there were tailoring establishments in connection with the commissaries at the large camps. There should be one, not only for the men, but also for the women, where ordinary dressmaking could be carried on. There is no way of having garments made except by natives. It is quite doubtful as to whether the negro tailors with their small shops along the line and in Panama should be patronized by Americans as a matter of danger to health, even if they could render satisfactory service, which is not the case. There are at least twelve hundred American women and children on the Isthmus, and it is decidedly a hardship to be unable to purchase or have garments made. While the need of tailor shops has not received consideration it is recognized by the Chairman of the Commission.

Shoemakers should be encouraged to open shops for repairing, perhaps by giving space at the commissaries.

THE GROCERY DEPARTMENT.

The local commissaries are not always as clean as they should be. The platform at the main commissary, where the cars are unloaded, was exceedingly dirty, smelling from an imbedded accumulation. Meats are delivered along the line daily. For families they are placed in packages which are delivered to the homes by the local commissary wagons.

There is complaint that meats are not always received in good condition, and that they will be left in the sun after being taken from the refrigerator car. It is quite possible that families have been sold bad meat as the testimony was offered by thoroughly reliable and worthy citizens and, furthermore, the secretary herself was frequently served with it at the Tivoli, and once at a mess. Some offer no complaint about the meat now, while others say they have received it in such bad condition as to be obliged to bury it. Meats are not properly cut.

It has been suggested that there should be cold storage plants at the large camps and meats for both families and mess halls distributed as from butcher shops. Local commissaries are not equipped with refrigerators for keeping butter and eggs, and purchasers at present must include such articles in cold storage meat orders from the main commissary.

The Panamanians double the charges at their markets when Americans make purchases. Therefore, some housewives send negro servants to their markets, where better chickens may be had than can be secured from the commissary.

PROFITS.

In April the profits of the Commissary Department, including ice plant, bakery and laundry, were $52,000.00. As there is no desire to make anything more than a return on the investment of $300,000.00 in order to reimburse the Government at the end of fifteen years, the prices have just been lowered. There is now no complaint among employes with reference to charges for groceries and meat. It was common to hear: "Since these army officers have taken hold we are getting a square deal."

CHANGES MADE OR CONTEMPLATED.

The management of the commissary has been placed recently under the Panama Railroad Company, and a new man has been put in charge. Attention now is being directed toward improvement in foods, and it was stated: "We shall take up the question of shoes and shirts later."

The objection to black managers of commissaries has been recognized, and whites are being placed in those positions. It is claimed that the wives of American workmen frequently were rudely treated by such colored managers.

The retail portion of the main commissary at Colon, used for both colored and white employes, is very small and at the close of the work day is completely packed. This is to be enlarged and there should be separate counters for negroes and whites. The retail grocery division, although much larger, is inadequate. Blacks and whites should not be required to mix in making purchases at any of the branch commissaries. But they are receiving a thorough overhauling and this change may be under consideration.

In view of the good plumbing in all concentrated camps, it scarcely seems worthy of comment to mention the abominable toilet arrangements at the main commissary, both for women and for men.

NO CASH PURCHASES.

There is no money allowed to be taken for purchases at the commissaries. Employes may buy commissary books, similar to the meal books used at the mess halls, from timekeepers and make their payments at commissaries by tearing off coupons in different denominations.

LAUNDRIES.

There are two laundries. The one at Colon is equipped with electrical appliances, even the irons being heated by electricity. At Ancon the laundry is also a very comfortable work place and the irons are heated by gasoline carried in pipes from one iron to another. The laundries are open at the sides, making the ventilation good, and in every way excellent work places.

They are wretchedly managed. Clothes are constantly lost, torn and frequently returned so yellow as to be unfit for wear. It is undoubtedly difficult to manage and train the negro help, but if satisfactory service cannot thus be rendered Chinese should be taken into this work. Certainly improvement should be made.

The laundries have but lately been established. They are very necessary, owing to the fact that previously along the line clothes were laundered entirely by native women, who wash in the rivers. They beat the clothes upon rocks, causing them to be torn and buttons to be lost. The most unfortunate result of that method is the spreading of garments upon the vegetation to be dried, frequently causing dohbie

The Government's Bakery at Cristobal. Capacity 40,000 Loaves a Day.

West Indians Carrying Food from Typical Kitchen Where It Is Now Prepared for Them.

itch. Only those who live near Panama may have their laundry work performed by Chinamen, who give better service, but charge accordingly. The list prices at the Government laundries, if adhered to, would be very fair indeed.

The delay in securing the return of the garments seems to indicate need of increased facilities. Bad work may be due likewise to inadequate plants. Consideration should be given to the establishment of another laundry at an inland point, such as Empire or Culebra.

ICE PLANT.

At Colon there is just being completed a fine refrigeration plant for the manufacture of ice.

BAKERY.

There is a bakery with modern machinery. While the bread is spoken of as being "good," it has not the excellent flavor of the bread baked on the boats. It certainly could be much improved.

HOSPITALS.

The main hospitals are located at each end of the line, Colon and Ancon, the latter being near Panama. They are splendidly equipped. All the men speak enthusiastically of their treatment in the hospitals. The wards are immaculate. The operating rooms are fine. The only complaints which have been made are with reference to the treatment of obstetrical cases, the food and the use of hypodermic needles of extraordinary sizes.

At the various camps there are dispensaries where employes are given medicines if but slightly ill, and there are beds for such patients as must be cared for until they can be taken to the main hospitals. There are also rest camps for common laborers who are not very ill, but who would be more comfortable in beds, with mattresses and bed clothes, than in their barracks on cots without covering.

The hospital at Colon has the advantage of being near the sea, but the environment is not pleasant. The hospital at Ancon is most beautifully located upon high hills, and floral gardening has been introduced, making the premises exceedingly attractive.

The capacity at the Colon Hospital is five hundred and fifty, and it can, in a pinch, be used for six hundred, while that of the Ancon Hospital is six hundred, and it can be made to care for seven hundred and fifty.

Each ward, so designated, means a separate building, containing several dormitories. There are separate wards for Americans, for Europeans, for West Indians and for women, in which also there are both private and dormitory arrangements, and wards for the insane.

There are wire cages in which suspect cases are placed until it can be learned whether or not the disease is yellow fever. The object is to prevent the carrying of contagion, by mosquitoes, from such patients to others. There had not been a case of yellow fever for a year and a half until the first of July, when one was landed at the City of Panama from a boat which had made a stop at a port in the Pacific Ocean, where the disease existed.

In all the wards there are sanitary shower baths, wash bowls and closets.

There are separate mess rooms for nurses, for the different types of patients and for orderlies and attendants. Americans have table linen, while Europeans and Jamaicans have white oil cloth upon the tables. All are neat and well arranged.

At Taboga, an island twelve miles from Panama, where there is no malaria, there is a convalescents' sanitarium.

There is also a colony of lepers in a remote location.

Employes are treated at the hospitals free. If they prefer to remain at home no charge is made for medical visits. It is not understood that married men may remain at home when ill, and complaint was heard on that account. This is another new rule to be explained through the bulletin hereinafter recommended. The remark frequently heard was: "Married men can't stay at home if sick, but are

forced to go to the hospital!" The members of the families of the employes making more than fifty dollars a month are treated at the hospitals for one dollar a day in wards, and one dollar and a half a day in private rooms. The members of families making less than fifty dollars a month are treated for thirty cents a day at the hospitals.

In each camp there are emergency physicians, expected to call at the homes in cases of sudden illness, when a charge of one dollar is made.

Quinine is offered free to all at the different messes daily.

The principal ailments are malaria, pneumonia and typhoid fever.

The Sanitary Department is working to prevent the breeding of malaria mosquitoes, which carry the disease from one afflicted person to another. Pneumonia is caused largely by the wearing of damp clothes, which chill the body, and by the lack of proper bedding among the common laborers. Typhoid fever is due to drinking impure water. There are other minor maladies and all kinds of cases of operations.

The highest mortality is among the negroes. During the month of April the total number of black employes of the Canal Commission and Panama Railway was 27,995. There were 114 deaths for that month. The total number of white employes was 10,170, and there were nine deaths. During the month the total number constantly sick in hospitals and sick camps was 822. Quite a number of white employes of long residence who never have been ill there were met.

Just before arriving at Colon the physician on the boat vaccinates all new employes. This is compulsory. It is objectionable to many, and therefore new employes should be informed before leaving New York of this rule, if its practice is continued, for some would not go to the Isthmus under that requirement.

Many suffer extremely and are in no condition to take up new work in a climate where, if one is going to be ill, it is usually within the first three months. Vaccination aggravates, causes nervousness and reduces ability to resist tropical diseases. Very serious cases of bad arms and sides were known to be endured by Americans.

New employes are handed, upon leaving the boat, circulars with reference to the cause of malaria and how to obviate it.

CIRCULAR HANDED NEW EMPLOYES.

WAR DEPARTMENT

ISTHMIAN CANAL COMMISSION,
OFFICE OF THE CHIEF SANITARY OFFICER.

Circular No. 13.

This circular is handed to each new arrival upon the Isthmus for the purpose of instruction as to how to avoid the disease most prevalent in Panama and the Canal Zone—MALARIA. Its cause is now well known and each one, with a little care, can do a great deal toward keeping free from this disease.

It has been proven that malaria is only given to man by the bite of a female mosquito of a certain species (ANOPHELES). This female mosquito must always bite some human being suffering from malaria before she can become infected. In biting she draws blood from the person suffering from malaria, and in the blood thus drawn, she takes in the malarial parasite. Within a few days this parasite infects the mosquito herself, and when she next bites a well person she injects her spittle into the bitten place. In this spittle the malarial parasite is injected, and thus the healthy person contracts the disease.

Now, if every one would use a mosquito bar, so arranged that no mosquitoes could get into the bar at night, much protection would be secured from this disease; for, while it may be contracted during the day time, it is not so likely to be. Probably nine-tenths of the malarial cases contract the disease during sleep, because the malarial mosquito is a night biter and the person is quiet at this time.

Absolute protection from mosquito bites is impossible, but it is known that quinine is a deadly poison to the malarial parasite after it gets into the blood of a human being. If, therefore, every one would take three grains of quinine once a day any malarial parasite that has been introduced during the day would almost certainly be killed. The best time probably to take quinine is before going to bed at night.

W. C. GORGAS,
Colonel Medical Corps, U. S. A.,
Chief Sanitary Officer.

A Ward at Ancon Hospital.

Circulars are issued from time to time in different languages, a sample of the type for negro laborers is quoted below:

Ancon, C. Z., August 2, 1906.

"Our negro laborers are suffering from a very severe form of pneumonia. Pneumonia, like consumption of the lungs, is a disease caused by a very small plant, which takes root and grows in the lung. I speak of it as plant because it has the characteristics of plant life rather than of animal life. It is exceedingly small, very much smaller than the point of a needle, and very much too small to be seen by the naked eye. This plant, as I have just said, takes root in the lung, and the juice which it makes poisons the patient and causes the disease in the lung.

"This plant is very common in the spittle of those who do not have pneumonia; on an average about one-fifth of the people who are not sick carry this plant around in their spittle. Now, if a man having this plant in his spittle becomes much depressed from any cause, such as a bad cold, or attack of malaria, or any other severe exposure, the plant is enabled to take root and multiply very rapidly. When he is strong and in good health the plant when it gets into the lung is destroyed and eaten up by the lung cells themselves, but to do this the lung cells must be in good condition, and to have lung cells in good condition a man must be strong and vigorous."

"One of the most common causes of depression among our laborers is catching cold. He works all day, gets his clothing thoroughly wet with sweat or from the rain, goes to his quarters, sleeps in the same clothing, and as the night grows cool and chilly he becomes chilled and wakes up next morning with a cold. His vital forces become depressed, and the pneumonia plant that is already in his spittle takes root, grows, produces its poisonous juices and gives the man pneumonia.

"To avoid this every laborer when he goes to bed should have a dry suit of underclothing to put on. If he can afford only two suits he had much better keep one dry to be worn at night, and wear his wet one during the day. He is working and exercising during the day and is not near so likely to take cold.

"He should also avoid sleeping in drafts during the midday hour of rest, though he is not so likely to take cold at this time of day.

"Malarial fever is the next most common cause for pneumonia, and is also dangerous in itself. It kills every month a certain number of our employes, both black and white, but is far more fatal to the blacks than to the whites. This disease is not like pneumonia and lung consumption, caused by a plant, but is caused by a very small animal. This animal lives in the blood of a sick man, eats up his blood, and at the same time urinates and defecates into the blood, causing the man to be poisoned. This condition we call malarial fever. This little animal is placed in the veins of a man by a certain species of mosquito. The mosquito puts her bill into a man's vein and injects her spittle just as does the rattlesnake when he bites. Now if this little animal swallows the least particle of quinine it is killed, but quinine does not hurt a man at all. Therefore, if a man will take a little quinine every day—three grains—there will be some in his blood all the time, and when the little malaria animal gets in, it is at once killed.

"These are not theories, but well known facts. A doctor with a microscope can see in the blood of a man sick with malarial fever the malaria animal eating up the blood of the sick man; and so in the spittle of the man sick with pneumonia, he can, with his microscope, see the little plant growing.

"I feel pretty sure that a man who sleeps in dry clothing and takes three grains of quinine every day will not have pneumonia.

W. C. GORGAS,
"Chief Sanitary Officer."

Although malarial fever is "far more fatal to blacks than to whites," mosquito netting is not furnished the former while it is given free to the latter. Other openings are screened, but the doors of the barracks of negroes are not and, as it is not possible to keep the doors closed constantly, they are not protected from mosquitoes.

In one circular issued three grains of quinine daily are recommended to maintain health, while in another not quoted herein it was perplexing to find a daily dose of six grains urged.

CLEARING AWAY JUNGLE.

Vast tracts of jungle have been cleared, principally with the slow and tedious use of the machete and sometimes the ax. The rapid growth of new vegetation is cut with the machete and shears. Only one mowing machine was observed. No scythes are used because the native laborers prefer machetes.

Vegetation preserves moisture and thus creates breeding places for mosquitoes, endangering health. The Sanitary Department has charge of the drainage of damp places, and where that is not feasible oil is poured upon the water. There is constant effort on the part of that department to keep vegetation near quarters reduced. It may be impossible to use mowing machines in marshes, but it would seem that they could be used on many tracts and hills, as they are by farmers in mountainous regions. Surely scythes could be introduced if a serious effort were made to train the natives in their use. The present method is not only slow but requires the uncomfortable posture of constant stooping. The cleaning of streets and removal of garbage are performed splendidly under the Sanitary Department.

Entrance to Ancon Hospital.

STRETCHERS AND EMERGENCY BOXES.

The desirability of having stretchers in the engines of steam shovels and first aid to the injured boxes in convenient places where excavating is going on, as well as in the shops, is worthy of investigation and consideration. Sometimes men have to be carried up hills with great difficulty because stretchers are not near at hand. This is not as serious as it would be if there were not dispensaries at all the camps, but there is no reason why there should ever be any unnecessary loss of blood when emergency boxes are so easily equipped.

RAIN SHEDS NEEDED.

Along the Canal where excavating work is being carried on there should be constructed rain sheds, in which employes could keep coats, and to which they could retire during heavy showers. There are some small sheds on one division, although not enough. Where the main work is being done there are no sheds. One superintendent has been trying for two months to get permission to use old material, where buildings are being torn down, which would be perfectly satisfactory for the construction of such rain sheds, but he has been unable to get any reply with reference thereto. The men become soaked during the storms. This not only threatens health, but, if it occurs mornings, the men go to their quarters and do not return afternoons, which causes delay in the work. This need, with others, was taken up with Colonel Goethals.

RECREATION.

Club Houses.

In some of the camps there are small club rooms above the mess houses, containing billiard and pool tables and dance halls. These are used by voluntary associations which have been formed by the employes and are supported by them. At each of these places there is need of an additional room for library use and of reading matter. There should be appointed a general man to cooperate with the presidents of all the clubs to keep various activities operative and initiate attractive features of entertainment.

There have been four handsome club buildings constructed at as many of the large camps, and they have been placed under the management of the Young Men's Christian Association. These buildings are surrounded by wide verandas, which are screened; the first floor of each contains in one wing a billiard and pool room and in the other a game, smoking and lounging room, while in the rear there is a bowling alley and small gymnasium. In the second story there is a hall, used for dancing and other entertainments, and a library. The use of the social hall is given free to organizations of employes, who arrange their own dancing parties. The Canal Commission has authorized the expenditure of five hundred dollars for books greatly needed for each club house.

These clubs have just been opened and they are much appreciated. Five excellent young men, on duty Sundays and holidays, as well as week days and evenings, are devoting their time in a most enthusiastic and self-sacrificing spirit to this work.

The bowling alleys, which are very popular, are inadequate. Bowling tournaments are held. The gymnasiums are not large enough. The men seem to enjoy boxing, fencing and wrestling, even though they work hard. Up to the present time the greatest effort has been devoted toward organizing chess, checkers, glee and Sunday afternoon "hiking" clubs, as well as camera and dramatic clubs. One minstrel show has been given, with an attendance of two hundred and fifty. Sunday afternoon meetings of a semi-religious character have been held with music and speakers on general topics. Checkers, chess, cribbage and cards are allowed Sundays, but bowling and pool have been prohibited because of the noise.

The present plan is to charge fifteen cents an hour for billiards, two and a half cents a cue for pool and five cents a game for bowling. This is regarded as unfair by some of the men, who claim that otherwise the twelve dollars in dues entitle them only to read and play games, which they can do in their own rooms. It may prove advisable to reduce dues, but the charges for games are reasonable and wise for various reasons.

At present there are about one thousand members in the four associations. Among those who have enjoyed the privileges of the Young Men's Christian Association Clubs the consensus of opinion is that they do not know how they stood it so long without them. Previously there was nothing to do but read, write and play cards in the quarters evenings.

Attractive programmes for a series of entertainments have been arranged, and artists, such as magicians and monologists, are being taken from the United States. Soda fountains are being installed and barber shops and hot baths are contemplated. Sea bathing is under consideration in connection with the club at Cristobal.

There is a good deal of discussion among women who desire to be allowed the privileges of the clubs oftener than the two afternoons a week set aside; especially do they desire opportunities for bowling and to be permitted to attend, in addition to public entertainments, some evenings with their husbands, as well as Sundays. They should be made family clubs as much as possible. Frequently husbands do not care to leave their wives at home alone. Women might be given additional privileges, although debarred from some of the rooms evenings. Wives should be allowed all privileges weekdays when the men are at work. Exception should be made during the two hours' siesta, when the men may enjoy the rooms.

Club for Americans Managed by the Young Men's Christian Association.

DANCING.

There are plenty of opportunities for dancing Saturday evenings. There are social clubs, such as the Kangaroos, the Red Men, the Texas and the Tivoli Clubs, which hold dances at the Young Men's Christian Association and other club rooms, at the Tivoli Hotel or at the hospitals. There is a scarcity of unmarried women, but the married women enjoy dancing, for they say they "are driven to it, as there is nothing else to do."

BASEBALL.

Several baseball parks have been equipped by voluntary organizations of employes, stock having been sold to create the necessary funds, the Government merely draining the land. Baseball teams have been organized and they compete Sundays and holidays at the parks at Empire and Ancon. There should be practice places at other camps and a park equipped for games at Gorgona.

TENNIS.

There are only three tennis courts—one at Ancon Hospital, one at the Colon Hospital, and one at Empire, where there is also a croquet ground open free to families of employes. Tennis courts should be provided at all of the camps, and it would be quite desirable to light them with electricity. The athletic fields could also be so lighted for practice work.

BOATING.

At Panama there are occasional launch parties for doctors, nurses and clerks. There should be Sunday boat excursions. Different sets of employes could be taken from time to time, thus giving those who enjoy such trips an occasional sea outing. It would not be essential that the boat should land at any place. Such a sea excursion should be arranged for every Sunday and tickets issued to the capacity of the boat. At Panama there is at least one boat which can be so used. A charge to cover expenses of coal and service could be made. All enjoy the opportunity of a trip to the Island of Taboga in the Pacific Ocean. On the Atlantic Coast there are beautiful water trips from Colon. There should be at least one excursion boat there. One small group of employes is arranging to purchase in the United States a sail boat. Some individual might be encouraged to provide boats and opportunities for sailing as a private enterprise at Colon. It may not be impossible for the Navy to furnish one or more boats for the use of the marines at Panama, which could also be placed at the disposal of other employes occasionally. Practice on shipboard would pleasantly interrupt monotony for the marines.

HORSEBACK RIDING AND DRIVING

At Ancon Hospital five nurses own horses and are allowed to keep them at the Government corral at the cost of maintenance—about thirteen dollars a month. Steam shovelmen and other employes have horses and the privilege of boarding them at the corrals is accorded whenever their capacity will permit. But thirteen dollars form a large proportion of the month's salary, of a nurse for instance, to be expended in order to enjoy an occasional horseback ride.

At Panama, where the Government has constructed a five-mile road, affording a beautiful driveway, it should back or in some way encourage an enterprise for renting good riding horses at lower rates than they can now be secured, and thus set the standard of prices within the means of the employes. The establishment of such a livery should include in its plan carriages for rental. The ramshackle vehicles to be rented from Panamanians are unclean and simply better than nothing. The Government very properly places at the disposal of some chief officials at Ancon and Cristobal splendid vehicles left by the French. It is essential that they should be enabled to get about without loss of time, and those vehicles are as necessary to the performance of their duties as are the horses provided for the men whose work requires constant riding about. Such carriages are used for the pleasure of officials indicated and their families, and doubtless that privilege should be one of the perquisites of office; but opportunities to drive should be arranged in some way for other employes. At Ancon Hospital some nurses are spared long walks from dormitories to wards, and they are protected from rain, for there are conveyances for that purpose. In several camps free buses, intended pricipally for women, are run to and from railway stations, stopping at all homes and public buildings. To walk from stations up hill, especially when it rains and there are packages to carry, is very arduous. The bus system is excellent, but it has not been perfected because there are not enough carryalls. Two were ordered more than five months ago but have not been received. Considering the high railroad rates (five cents a mile), an adequately free bus service for all trains would not be undesirable. If rates for employes and families are changed upon the Panama Railway, a general bus service at five cents a ride would be very advisable. It is neither wise nor necessary to give too much.

SEA BATHING.

It has been suggested that sea bathing should be made possible at Colon by the driving of piles and construction of bath houses, and at Panama, toward the savannas, by blasting, thus providing tanks which would be filled with water at low tide. It should be given consideration.

HUNTING.

Some employes enjoy hunting deer and wildcats in the jungle. Hunting parties might be organized.

MUSIC.

There is an Isthmian Canal band, composed of Canal employes, and a marine band at Camp Eliot. They do not supply the need of good music. Probably nothing would be appreciated more than concerts with good artists. This longing is evidenced partly by the private phonographs to be heard along

the line evenings. (Phonographs do not last long in that moist atmosphere.)

LABOR DAY CELEBRATION.

It would be desirable to get Damrosch there for an al fresco entertainment Labor Day, or for some future holiday. He goes to Southern States and doubtless could be secured on the Zone. At such an occasion an address by some national leader of the labor movement would be greatly enjoyed. It would be especially appropriate for Labor Day.

FOURTH OF JULY.

The celebration this year was held at Ancon, with the Tivoli Hotel as headquarters. It was gorgeously decorated in the three colors, inside and out. The driveway leading to the hotel was lined on each side with palm leaves upon a framework, there being arches here and there covered with bunting and containing electric lights underneath in red, white and blue.

In the ball park, back of the hotel, there was an address in the morning and there were athletic contests and a ball game in the afternoon. There was contributed by the employes the sum of three thousand dollars for expenses, one thousand dollars being for cash prizes presented to winners of such contests as races of various kinds, tug-of-war, pole vaulting, bucking horse and wall scaling.

The entertainment in the park was free to all. There was an exhibition of the fire department in front of the hotel and at night fireworks were displayed before the conclusion of the celebration with a dancing party at the Tivoli. Music was furnished by the several bands. Special trains were run from all the camps, transportation being free. The day was pleasantly spent and there was no disorder of any description.

RECREATION NEEDED SUNDAYS.

There are baseball games Sundays and the four Y. M. C. A. club rooms are open for reading, chess, checkers, cards and afternoon talks. But comparatively few are provided with recreation upon the one day free for such enjoyment. There should be started a large amusement park, a Coney Island scheme. There could be a hall for dancing, racing track for ponies, with archery and golf croquet inside, a circus ring, bowling alleys, shooting galleries, a small theatre, side shows and possibly a lake for boating. There should be shelters for resting and for light lunches.

Such a scheme undoubtedly can be made a private enterprise, but the initiative must be taken by the Government and some inducement offered, such as land rental free or other concessions to be proposed. There are open spaces such as the Savannas at Panama, La Boca, Empire and Colon which could be utilized.

The Savannas would seem to be the best location because it rains less there; and if the marines are moved to that district, as contemplated, there would be an additional reason for building a street railway line in that section. Doubtless some financier would be willing to make an amusement park a part of a tramway enterprise. Again, boats used by the marines would be convenient for Sunday use of all, if permissible.

La Boca has the advantage of being near the Tivoli Hotel, which could be made a resting place, and that village also is visited with less rain than Empire and Colon.

Empire can be recommended as the centre of population.

At Colon there is so much rain that to locate the entire park there would be unwise, but the ground available might be utilized for some entertainment features, at least during the dry season, one side to be filled in with dirt removed from the other for the formation of a lake with the approval of the Sanitary Department.

It would be necessary to develop transportation facilities from the railroad to either of the tracts available for such an amusement park, and that does not appear at all impossible. It is feasible to run plenty of passenger trains Sundays up and down the Isthmus. In arranging for Sunday entertainments the railroad fare should be reduced greatly, but not until ample recreation opportunities are offered. The present excessive fare to Panama undoubtedly deters many from going Sundays, which is desirable until there are attractions other than the present resorts.

SUNDAY BOWLING AT THE CAMPS.

There should be erected simple structures for bowling and card playing Sundays. At the large camps there should be several alleys and at the small villages at least one. The desire for bowling is so great that such places could be made self-supporting and to pay for themselves in time.

The Young Men's Christian Association has already adapted itself, as far as could be expected, to the peculiar needs of the men at the four clubs under its management. It would not seem fair to ask further infringement upon its rules, but Sunday is the time when the men need recreation and there would be less drinking in Panama and Colon on that day if there were other ways of spending the idle hours, which are very irksome and cause the men to grow restless.

There never was a place in the world where recreation was needed more than on the Isthmus. It is almost impossible to convey an idea of the dreadful monotony of existence. It was interesting to learn that one trades union, now very active in craft matters, was brought into existence for social pleasure primarily.

THEATRICALS.

A stock company with good talent should be induced to spend a season upon the Isthmus, expenses being guaranteed, to go from camp to camp giving dramatic performances. They would be self-sustaining if properly started. At each camp there might be evenings for whites and evenings for West Indians. The halls in the different types of clubs and the lodge rooms could be used, although the scenery would have to be very simple. If additional halls of the kinds mentioned are built, stages should be constructed in them.

A Sunday Ball Game at Empire.

WOMEN'S CLUBS.

One great need is the organization of women's clubs at each camp with definite objects. These clubs could be organized into a Canal Zone Federation of Women's Clubs, to be allied with the General Federation of Women's Clubs in the United States. In the camps where there are Young Men's Christian Association clubs they could co-operate with that organization and hold their meetings in its buildings and in other camps at the general club or lodge rooms. These clubs could organize into "Ladies' Aid Societies" to take an interest in public schools, in the entertainment of patients at the hospitals, in organizing bureaus for mending bachelors' garments, children's playgrounds and centres for securing servants. There could be study clubs, musicals, card parties, bowling contests, afternoon teas and small groups to entertain bachelors at dinner occasionally and thus give them a little taste of home life. It will be necessary to have a woman give her entire time toward organizing and directing these clubs. If clubs were organized the women would become acquainted and less self-centred, for there would be something interesting to talk about; and they would be a wide influence for content.

RECREATION FOR NEGROES AND EUROPEANS.

In the matter of recreation the negro has been overlooked almost entirely. At Culebra, one of the large camps, they have a dance hall, which is greatly enjoyed, but it is merely a room without decoration and no assistance whatever is given them. There are at least twenty-five thousand negroes. They are very desolate. There is no reason why they should not have simple club houses with dance halls. Work ceases when it rains and such congregating rooms could be used then as well as evenings and Sundays. They would enjoy pool, baseball and cricket and a system of recreation should be evolved for them.

At Gatun, for instance, there are seven hundred Greeks. Forms of amusement suited to them and the other Europeans at the various camps should be introduced. Nothing whatever is done for their entertainment, although they are led to believe, before leaving their countries, that there are plenty of opportunities for recreation. The Southern Europeans, in their native places, largely patronize halls containing tables, at which they sit in small groups to play checkers, listen to music and very moderately drink their light wines.

The marines should be provided with a clubhouse, for which, it is understood, tentative plans have been drawn.

Free libraries containing late books should be placed at the disposal of nurses and hospital employes generally.

SATURDAY HALF HOLIDAY.

The Saturday half holiday cannot be recommended at this time, owing to the lack of adequate recreation. It would be a detriment rather than a benefit, for the time would hang heavily upon the hands of the employes, or they would find a ready excuse to seek the saloon. However, work in that climate, after some length of residence, is bound to sap energy and cause excessive nervousness, and it is important that the Saturday half holiday should be instituted just as soon as recreation can be provided.

A RECREATION DIRECTOR REQUISITE.

It may seem that a very pretentious outline for recreation has been sketched. There is a variety of activities presented for a population of many nationalities, creeds and different tastes. There can be no more cosmopolitan aggregation of people than is now upon the Isthmus.

A permanent force of workers depends largely upon content, and recreation will materially aid in securing it. When asked, "What do you for recreation?" the average man replies, "That's the worst of it; there's nothing to do."

The Young Men's Christian Association is a Godsend to many, and it should be encouraged in every possible way. There are such clubs in but four of the seventeen camps. If that organization is able to hold the interest of the men after the novelty wears off, its field of endeavor should be extended to other camps. Even so, a single club would not accommodate all in any camp, even if that form of recreation were to appeal to every one, and if each were willing to join that organization.

But how can additional activities be secured? Only by organizing a Recreation Department with a thoroughly competent man at the head. He, in turn, might have an assistant especially devoting his energy toward the supervision of athletic sports for which position a man with West Point training would be desirable. There would gradually appear need of other assistants.

A high class recreation director, giving his whole attention to that work, would estimate costs and put into operation gradually a systematic scheme. Only by such special supervision of present and future activities, can they be kept operative.

Every precaution to make life upon the Isthmus as attractive as possible is essential not only to hold those who would return to their homes, where forms of amusement to which they are accustomed may be enjoyed, but to aid in preventing loss in the force through depredations of other nations in that vicinity.

SCHOOLS.

Schools have been established for whites at but five of the camps and for blacks at most of them. Teachers have been brought from the States and wives and daughters of employes have been placed in such positions. At the inception of this work it was very fortunate to be able to secure such assistants. For the colored children the instruction seems to be adequate; for the whites the course is not meeting present needs. Children of all sizes and ages will be in one class under a single teacher, the older children especially not receiving proper instruction.

Inability to educate their children has caused competent men to return to the States, deterred others from taking employment on the Isthmus, and there are those who have had to separate their families, leaving the older children at home in private schools or with grandparents and other relatives. Illustrative of the situation is the large camp of Empire, where there are more than fifty white children and no school has yet been opened for them. One has just been constructed. At some camps the white children have been obliged to receive instruction jointly with the blacks because the location of schools for whites necessitated the crossing of the railroad tracks, which danger could not for a moment be entertained by the parents. Where there are no schools for whites, children could only receive education by going to those for blacks or to other camps, requiring travel by rail with trains so infrequent as to make that course undesirable, were there no element of danger from accident or falling into evil company. Some have placed their children at boarding school in the City of Panama, but progress has been so unsatisfactory that parents are taking or sending the children back to the States. Others have "put up with bachelor quarters and left their families in the States rather than deprive the children of educational opportunities." One touching case on the boat returning was a man who said: "I would rather let the children stay up there and go to school. I ain't seen my family for eleven months and this boat can't go fast enough for me!" Case after case of a similar nature was observed.

The first course of study adopted for the blacks, which includes spelling, language, numbers, physiology and hygiene, meets the requirement. The Superintendent of Education stated that from the beginning there have been added to that elementary course advanced arithmetic, geography, United States history, penmanship and drawing. He also stated that it is contemplated next year to include mechanical drawing, elements of agriculture for boys and needlework for girls, and that the course will be added to by including the more advanced subjects of algebra, elementary geography, physical geography, bookkeeping and Spanish. Unless measures are taken to secure an adequate force of competent teachers and to systematize and grade the work, it is impossible to see how those subjects can be properly taught. Think of one American teacher undertaking to instruct eighty unruly negroes who have no idea of order or discipline!

It has been decided by the Commission to improve the school system by securing teachers entirely through civil service appointments, and a census is now being taken to determine how many white children must be provided with educational opportunities. The Superintendent frankly admits that with the whites no effort for advancement has been made, the object of instruction having been merely to keep the children "from falling behind grades in which they were when they left the States!" The new commissioners recognize that the school question must be thoroughly thrashed out and educational facilities provided for children of American citizens. There is no reason why we should attempt to do more for the Jamaicans than has been offered so well by the British Government in the West Indies, especially when our own are neglected for their benefit. Adult Jamaicans can read and write, frequently, perfect English. It is related that one left the employ of a previous official because he could not "stand his English!" If we provide reading, writing, arithmetic, and hygiene for the colored children our obligation will be fully met, and, apparently, there is no reason why teachers of their own nationality cannot be furnished.

In the program for improvement in the schools there arises the problem of providing proper quarters for teachers. Unless they can reside with private families, in the camps where the schools are located, young women justly cannot be invited to undertake this work. Unless so protected in that territory, a woman immediately is subject to criticism. School teachers, who live with their parents in certain camps and go elsewhere to [illegible] are suffering from long hours, for one must take the early morning train, shortly after six o'clock, and return by the late evening train, sometimes reaching home as late as seven-thirty. Passenger trains cannot run frequently without interfering with canal construction work and everything must naturally be subordinated to it. Therefore, it would be impossible to arrange for a special teachers' dormitory and mess at any central point. But this knotty question will be solved as are all others in that "place of emergencies," for the emergency habit is apparent everywhere.

In the school buildings it is complained there are no conveniences for teachers who must spend the entire day therein because of poor train service. The children drink hydrant water and have range closets. The plan for furnishing distilled drinking water should be extended to the schools and toilet arrangements for teachers furnished.

It is imperative that the schools should be improved to attract and keep competent men with families. Family life has become a fixed thing upon the Isthmus. Even though it may be but for a matter of ten years, the Department of Education should be scientifically organized; but it is likely that there will be a permanent result, for a citizenship must be built, perchance with some European race as a basis, for the protection of the Canal when completed.

CHURCHES.

In each large camp the Government has constructed a very attractive building for church services and lodge meetings. The first floor is a chapel and even contains facilities for the use of such denominations as baptize by immersion. The lodge hall above is given free to the Knights of Pythias and other orders, as well as the trades unions.

The Isthmian Canal Commission has upon its payroll ten ministers of different denominations, who give their services at the hospitals in clerical capacities and in the writing of letters.

Hotel Tivoli, Decorated for Fourth of July Celebration.

The duties of a resident hospital chaplain are as follows:

"To hold religious services every Sunday at the hospital to which he is assigned;

To visit all the wards of the hospital at least once a day, giving any patient, who wishes to talk with him, an opportunity of so doing;

To write letters for patients when opportunity is presented therefor;

To hold services, upon the request of the Superintendent of the hospital, over the bodies of all patients dying in the hospitals."

There is one Evangelist who preaches in the different camps periodically; at the Ancon Hospital there is a Catholic Chapel, in which beautiful services are held, and there is an Episcopal Chapel. There is a clergyman sent by the English Government who works among the negroes. There have been church services of some description on the Zone for more than two years. It seems odd to some that various denominations have not directed special effort to that section.

THE REGULATION OF THE LIQUOR TRAFFIC.

On the Canal Zone the Government has gradually reduced the number of licenses from over two hundred to thirty-four. In some of the small camps there are no saloons. The annual license is twelve hundred dollars gold. The requirements are, among other provisions, that there shall be no seats except for the saloon help behind the counter, that the doors shall be left wide open and that there shall be no interior rooms used for drinking. Billiards and bowling alleys must be in separate front rooms also exposed to complete observation. The breaking of such rules is cause for cancelling a license.

In the City of Panama the United States Government has no control of the liquor question. In the City of Colon the Panama Railroad Company owns all but about one hundred lots and, as fast as leases expire, which had been made before the American occupation, new ones require that no liquor shall be sold and no disorderly house shall be allowed.

The testimony from laborers, officials and wives of employes, as well as physicians and the secretaries of the Young Men's Christian Association, prove conclusively that vice and intoxication are no more extensive in this than in any other territory. There is drinking, and undoubtedly, it is a curse, just as it is everywhere, and especially after pay-day, but there is no more orderly a community in the world than that and it is to be regretted that the residents of the Zone as a whole should be misrepresented. There are all types and kinds of men from every section of the world, but those who have been on construction work in other places where there was a certain amount of riff-raff claim there is none there. It is perfectly evident that it would be hard to get together a finer lot of men. An unfortunate result of such misrepresentation is that young fellows are deterred from going to the Zone where they might get a splendid start in life, for salaries in general are good, quarters are free and there is opportunity to save. Some weak young fellows may fall into the habit of drinking on the Isthmus, when temptation would be resisted at home where there are more opportunities to spend idle hours pleasantly; but there are no gambling dens nor resorts of vice upon the Zone, the United States territory where the majority of the employes are located, and it is only possible to go Sundays to the cities of Colon and Panama, which are governed by Panamanian laws. Therefore, anxious mothers with well trained sons need not influence their boys to refuse employment on the Canal Zone, for they will be quite as safe as in any other district away from home influence.

The writer could not better express her feelings on this matter than by saying that she would not hesitate, in so far as this question is concerned, to recommend, in choosing between New York and any other large city and the Canal Zone, that her two brothers should select the last named place.

A splendid fellow who came up on the same boat, after an absence of six years, has since stated: "There is more vice in one block in New York than on the whole Isthmus. If a man had no one in the city for whose respect he cared, he would soon become demoralized."

Gambling is forbidden by the Panamanian Government, but poker rooms, patronized by Americans, are known to exist at Colon and Panama. It could hardly be expected that it could be entirely abolished there any more than it can be in American cities; and, furthermore, the United States Government cannot control conditions in those two places. There is a lottery in Panama entirely unrestricted. The large number of drafts and money orders sent home by employes indicate that money is saved more generally than foolishly spent. During the last fiscal year two million dollars were forwarded in money orders alone, according to the figures of the Post Office Department.

Although restrictions for saloon keepers in the Canal Zone are severe, it is difficult to ensure the selling of liquors of good quality. Especially are the Chinese proprietors of rum shops expert in adulterating. Cases of drinking to excess are largely due to the fact that bottles purchased at negro or Chinese rum shops, are carried to lodgings. It was said: "When a man gets started on a bottle he is pretty apt to finish it." While it would be desirable to have prohibition, that is impossible, for there are those who will have liquor and it could be had in Panamanian territory and carried to the Zone were there none to be had in that district. There is no doubt but that as a temperance measure, it would be better to provide good beer and wines at proper rates, under supervision, in the men's clubs. There they would drink a social glass or so and generally stop at that as they do in employes' clubs in certain western mining camps where there is a "no treating" rule and it is required that liquor may not be sold to one in danger of over-drinking. Those clubs have operated to offset the evil influence of the saloon. Gambling is not allowed in such employes' clubs, but billiards, pool, and poker at small stakes—penny ante and ten or twenty-five cent limit—are permitted. The men on the Zone now play poker in their rooms, simply

One of the Stations Built by the Government Along the Line of the Panama Railroad Company.

to pass the time, unrestricted. There would be less danger of unfortunate losses if allowed to play in their own clubs, for while they have been known to play only for meal tickets, or twenty-five cents, others it is said: "Play the sky limit."

A university club which has been organized in the City of Panama and is modestly housed, has among its privileges a bar and billiard room.

Liquors are sold on the boats to and from Colon, but in six days each way not a case of intoxication was observed nor was there an ungentlemanly act on board.

JAILS.

The jails at the camps are of the regular type of Canal construction and sanitary, but the prisoners are required to sleep on wooden beds without mattresses or coverlets. This is unnecessarily cruel. Beds should be provided.

The crimes for which prisoners have been arrested are of the same variety as would be found in any community, the principal ones being violation of sanitary regulations, disorderly conduct, intoxication, petit larceny, forgery, and burglary.

Many arrests are deemed necessary as a form of educating the ignorant foreigners, but they are for very trivial offenses. In May there were five hundred thirty-five, twenty-two being Americans and the balance represented by thirty-eight nationalities. It is believed that order could be as well maintained by making fewer arrests.

There are Supreme and Circuit Courts covering three districts. There is a penitentiary. The number of prisoners in March was seventy-one. The judges do not find enough criminal cases to keep them occupied.

SAVINGS.

The employes are able to and do save large sums. Inasmuch as they pay no rent and have free fuel and light, the cost of living is reduced to the hire of servants and scrub women, the expense of ice and food. Many buy money orders to send home, especially married men who have to support their families in the States, as well as meet their own expenses there. Bachelors, fearing to leave money in their quarters, buy money orders, which are at the rate of thirty cents for one hundred dollars. There should be some system of savings started, enabling the employes to deposit and receive interest at the rate of three per cent., instead of having to pay the Government, their employer, to take care of their savings. It is not likely that employes would have faith in a savings bank plan unless conducted by an American. The International Banking Company, which has an office at Panama, and claims to have but four hundred depositors among Canal employes, is not sufficiently accessible and does not send agents along the line. Many buy drafts from that Company, but there is not a general feeling of confidence in it as a depository for savings.

PASSES ON THE PANAMA RAILROAD.

There has been great dissatisfaction caused by the issuing of passes indiscriminately. It has been particularly aggravating for the mechanic and his wife, without free transportation, to sit next to a clerk and his wife, who have passes upon the railroad. In the clerical department the pass book is handed around every Saturday night and passes indiscriminately issued; whereas, in the track, excavating, transportation and mechanical departments generally, favoritism is shown.

There have been instances where engineers have left their trains at certain stations and had to pay their fares back to the camps where they resided. Until quite recently, conductors, engineers, yard men, and trainmasters had to pay half rate if they wanted to go any place. There is intense feeling against the courtesy shown clerks in preference to mechanics and this unfair provision should be corrected. Passes should be given to all or to none and that fact is recognized by the Chairman of the Commission. It would be very advisable to limit passes to two a month and let all have them. In this way there would be no imposition upon the Government, as has been the case where it was claimed that the wives of the employes have pretty well spent their time riding up and down the road. The plan, above outlined, together with half rates for families of employes, is under consideration.

TRANSPORTATION SERVICE.

There are few passenger trains each way, crossing the Isthmus daily, as they would interfere with the dirt trains and excavation work. Now that there are so many married women upon the Zone it would be very desirable to limit smoking to one car, or at least rear seats, and require that there shall be no spitting upon the floors. Attractive stations have been built at the camps, but at Panama the terminal facilities are so inadequate as to be dangerous. The platform, upon which passengers alight, is altogether too short. It is exceedingly bad to get off in the ditch beyond the platform at seven o'clock in the evening when it is so dark that it is impossible to see. There should be electric lights at that place pending the improvement of the station. One portion of the platform is so high above the car steps and far away that it is very difficult to reach it. It is remarkable that there are not serious accidents. There should be benches under the awnings at all stations, as there is now no place to sit while awaiting trains.

Consideration should be given to the advisability and practicability of inviting capital to build a street car line from Colon to the city of Panama—out to the Savannas for excursions and up Ancon Hill, and to construct the proposed amusement park in connection therewith. Such a traction line would connect homes—enable women to visit—and aid in recreative efforts. As all types ride on the Zone, such a line would apparently be assured patronage. While an electric street car line across the Isthmus might be found impractical by men experienced in such matters, to the lay person it appears to be a proposition no more unreasonable than the erection and operation of the tramways in the Berkshire Hills.

An "automobile" road—for horseback riding and driving across the Isthmus might be too great an undertaking, but it has been suggested for consideration.

SOME OF THE LABOR CONDITIONS.

There are two sets of employes, those of the Isthmian Canal Commission and those of the Panama Railroad Company. The term "laborer" on the Isthmus indicates the type of employe performing the work of a "common laborer." It is not applied to the American mechanic or any other kind of employe. The number of employes is given in the following tabulation:

Isthmian Canal Commission	American clerks, foremen, employes in Sanitary Department and all others not mechanics,	1,000	
	American Mechanics,	4,000	
	West Indian Negroes (Laborers),	25,000	
	Europeans, including Spaniards, Italians and Greeks,	4,500	34,500
Panama Railway	Clerks (Black and white),	1,244	
	Laborers (Black and white),	4,384	5,628
	Total,		40,128

WORKING HOURS AND INEQUALITIES IN VACATION AND SICK LEAVE PRIVILEGES.

A long work day is undesirable in that climate since greater fatigue is felt at the termination of a given number of hours there than in the United States, and yet the majority of the employes work more than eight hours and do not come under the operation of the eight-hour law. It applies to mechanics, and there is comparatively little overtime now for such employes as molders and machinists, except as the shortage of equipment necessitates the repair, after working hours, of steam shovels and locomotives used in excavating. Common laborers are now, according to official statement on the Isthmus, engaged for a nine-hour day but frequently work ten, twelve and fourteen hours. This is a hardship on foremen who must work as long. Construction locomotive engineers work nine and one-half hours at least, with certain compensations, in order to keep steam shovels going eight hours. Judicial decisions have excluded from the operation of the eight-hour law all employes paid by the month. Many monthly employes have a long work day—telegraph operators on the railroad always work twelve hours, track men and yard masters, foremen, clerks in the disbursing and time keeping offices, and others often work ten, twelve and longer hours. Mechanics in the shops of the Isthmian Canal Commission were working on an eight-hour basis, whereas men in the same crafts in the shops of the Panama Railroad Company were working on a ten-hour basis. Both are under one master mechanic and concerned in the construction of the Canal. The President has issued an order requiring the work day in those shops to be made identical and it should be put into effect at an early time, for this inequality has long contributed toward discontent. There are other strange inequalities. For instance, men paid by the hour in the shops of the Panama Railroad Company have vacation with pay and unlimited sick leave. The same type of men among the Isthmian Canal Commission's employes have vacation without pay and sick leave for a definite period, which, however, has but recently been granted after persistent petitioning upon the part of such employes. American employes paid by the month are granted vacation with pay. Monthly men, who are not Americans, feel that it is unfair that they should not be given vacations with pay. They come under the local government of the Canal Zone just as do the natives of Porto Rico employed by that Insular Government who receive a vacation of thirty working days in addition to time for travel between that country and the United States, the same as American employes there. Another inconsistency is the fact that vacation with pay is granted employes of the Panama Railroad Company on the Isthmus and yet captains of the steamships owned by it are not allowed vacation with or without pay although they are on the monthly pay-roll. Since hourly men are paid when required to work overtime and the monthly men are not, it is considered by the Commission as a fair arrangement to grant the latter vacation with pay while denying it to the former. However, as monthly employes are allowed six weeks' vacation* with pay *because the physicians consider an annual change of climate essential for the average man not accustomed to work in a tropical climate*, the hourly men consider that if vacations are necessary for the health of monthly men, they are likewise for them. Americans do not want to work overtime for that is regarded as "blood money." Furthermore, since it is expected that overtime will be limited to emergencies and reduced to a minimum there is of course no guarantee that the income so earned would be a fair substitute for vacation. While monthly men work longer hours, frequently, than mechanics and, sometimes, endure greater hardships, working out of doors, than men protected from sun and storm in the shops and, therefore, may be entitled to special consideration, the reason given for granting vacations to one and not to the other type of employes is certainly open to criticism. Another argument is that all such employes of Navy Yards and Arsenals in the United States, where climate is not a consideration, receive fifteen working days' leave with pay. An additional claim made by the hourly men is that one would be more likely to return from a leave if there were a vacation with pay to look forward to and that it would be economy to offer this inducement to employes to return rather than to be obliged to train "green" men in their places.

Men who live in the western part of the United States object to the change in rules which makes it impossible for vacations to be cumulative for two years except when an employe is prevented by the Government from taking such leave when due. The reasons given are the heavy expenses in taking such a long journey from the Isthmus and the short time to be enjoyed at home when vacation must be taken annually and completed within six weeks. It is the intention of the Chairman to take up such cases individually, but that is not known. Others complain because this change takes away a privilege which was a part of the terms of employment.

There were regulations entitling certain employes to

* This leave of six weeks is considered as an allowance of 12 days for travel to and from the United States and as 30 days' vacation. It may be noted that the usual leave allowance in the United States is 30 *working days* exclusive of Sundays and holidays. The Porto Rican Insular Government allows all employes 30 working days' leave as in the States, and allows 12 days for travel when they visit the States. It would seem well to bring the Canal regulations into better harmony with the rules of the United States by adopting the Porto Rican method.

The Result of a Hard Rain.

thirty days' sick leave, with pay, for each year's service. There was imposition upon the Government by some who were known to take sick leave when not ill. It was stated by employes that after very short service some had indulged in this abuse. To correct this evil a drastic ruling was made in February allowing but fifteen days' sick leave for each six month's service and providing that it should only be granted when the employe had worked ninety-six per cent. of the legal working days or hours. It also provided that no man should be paid for sick leave until after six months' service. This was regarded as a hardship because they claim it is not usual that recovery may be had from an attack of malaria within fifteen days and one may be ill only once during the year. Furthermore, if one were going to be ill, it would most likely occur within the first three months of service and it would be a hardship to wait six months for sick leave pay under such circumstances.

NEW RULES.

A new ruling effective July 1 provides for the payment of sick leave compensation the first pay period after the employe returns to duty, which is an acceptable correction. The following is the present rule:

"To assist the Government in maintaining a skilled force on the Isthmus, all regular employes above the grade of laborer, unaccustomed to a tropical climate, may be granted fifteen days' sick leave with pay for each six months' service, on the certificate of an authorized physician in the service of the Department of Health of the Isthmian Canal Commission that the employe has been unable to work on account of illness contracted through no fault of his own, or because of injury.

This leave may be cumulative to an amount not exceeding thirty days, and payment for same shall be made the first pay period after the employe returns to duty; but no payment shall be made for time lost in excess of the sick leave due at the time of such illness or injury."

If the intent is to restore the privilege of sick leave for thirty consecutive days at any time during the

A Native Village.

year, the reference to fifteen days for each six months seems unnecessary. Rules often are not clearly stated.

The new rules effective July 1 contain some other changes which will cure certain grievances and others which have generated new ones.

Some of the improvements are:

"A former employe from the United States, who served less than one year, re-engaged for duty on the Isthmus, will receive pay only from the date of his re-entry into service on the Isthmus, and he will be charged the Government rate on the steamers of the Panama Railroad and Steamship Company operating between the United States and Cristobal."

This is taken to indicate that former employes having served one year will receive pay from the time of embarkation from New York when re-engaged and also free transportation. Employes consider that this should be the case inasmuch as former employes are undoubtedly more useful than new ones who must be trained.

The following is intended to indicate that new employes no longer have to wait six months before puting in application for "married quarters" and when this is made plain, it will be appreciated:

"Where practicable and in the best interests of the service, an employe will be provided with such quarters on the Isthmus as may be available from time to time. Family quarters will be assigned when available, assignments to be made in accordance with the date of application. Experience shows that about ten months elapse between application and assignment."

The [illegible] to the second sentence in the following because it is felt that it places whites and negroes on the same basis:

"The Commission reserves the right to pay in any [illegible] the salary or portion of which is guaranteed by the United States, during the [illegible] will not in future [illegible] special privileges."

It has been the custom to grant a twenty dollar rate on the steamers of the Panama Railroad Company to employes leaving Cristobal. The new ruling simply states that the Government rate shall be granted. Employes object to the uncertainty of expression, believing that the rate may be changed any time.

Employes above the grade of the common laborer, entitled to sick leave, may be granted additional leave on account of injury not exceeding thirty days in any year. Common laborers are granted leave on account of injury and both receive free medical care and attendance at the hospitals.

It has not been the custom to pay mechanics and other hourly employes on the Isthmus for holidays although that is the custom in the United States at arsenals and navy yards. The following, one of the new rules, and an exceedingly liberal proposition, caused satisfaction:

"All employes whose compensation is fixed on an hourly basis and who work on the days prior and subsequent thereto, will be allowed pay for the following holidays:

January 1,
February 22,
May 30,
July 4,
Labor Day,
Thanksgiving Day, and
December 25.

"All hourly employes above the grade of laborer, who render actual service on these holidays will be allowed time and one-half in addition to pay for such holidays."

It was found that common laborers from other countries did not care for our holidays and were dissatisfied at the attendant lost of pay, therefore, the following is a part of the new regulations making for content:

"If actual service is rendered on the days prior and subsequent thereto, pay will be allowed for the following holidays: January 1, February 22, May 30, July 4, Labor Day, Thanksgiving Day and December 25. If actual service is rendered on these dates double pay will be allowed."

THE WHOLESALE DISMISSAL OF EMPLOYES.

There are also improvements in regulations relative to the assignment of "married quarters" specifically stated but the "straw which has broken the camel's back" in the new regulations effective July 1 is the provision for the wholesale discharge of employes at the end of their next leave period in order to bring all under the same rules and regulations. This is regarded as a breaking of contracts by the Government. The provision reads as follows:

"All provisional appointments will, at the end of each leave period, be so modified as to make such appointments correspond to the then existing rules and regulations of the Commission.

"All appointments made prior to this resolution are hereby terminated, to take effect at the end of the next leave period accruing under such appointment. Conditions of service thereafter will be in accord with the rules and regulations of the Commission.'

It is true that the Commission was entirely within its legal right in making this ruling insofar as employes who have had increases are concerned, because under a decision of the Comptroller, made many months ago, all original contracts are rendered null and void by the acceptance of promotions. It does not seem fair to the men that, because they are raised in pay and accept such increase, all privileges conferred by their first contracts should be lost. All appointments are made "provisionally." If that means that a man is appointed to serve provided he gives satisfaction, it should be so stated but if it means that the appointment is made provisionally in order that the Government may make changes at any time it deems fit, employes feel that it is unjust. Nothing tends to create discontent as much as uncertainty about conditions of employment.

The labor problem is serious with such a changing policy as has been pursued. The men feel that there is no stability and that "they never know when an order is going to be issued with some new provisions affecting their employment." Furthermore, there are those who threaten to take up such conditions with their congressmen and this will still further complicate matters by bringing into general discussion grievances which could be readily adjusted.

There is intense feeling among certain hourly men that they have greater skill than some classes which have recently been awarded an increase in wages. This will doubtless be eliminated by the introduction of a system, now under consideration, by the Chairman of the Commission, under which a certain percentage will be added to the price paid for different types of labor in the United States to make up for discomforts suffered through employment on the Zone.

There has been adopted recently a "longevity plan" providing certain percentages of increase in pay each year for twenty-four types of employes. There is a feeling that it should have been made to apply to others such as time-keepers, and rock drillers, powder men and quarry men, who, although in the most hazardous work, have been overlooked. It is claimed that they work now nine hours for eight hours' pay, compensation being by the month. Others having had verbal promises in the States of rapid promotion, complain because salaries have not been increased, although they have been employed more than a year. There is dissatisfaction because engineers and conductors working for the Commission do not receive overtime pay whereas engineers and conductors working for the Panama Railroad Company do receive overtime. The engineers recognize that certain concessions have been made in lieu thereof but if they have to work overtime, which is not desired, they prefer pay for it.

The marines complain that others in the military service get fifty per cent. increase for colonial service whereas they on the Isthmus get only ten per cent.

Even the captains of the boats, responsible for the lives of so many, receive less than engineers and steam shovel men on the Isthmus and the stewardess receives the pitifully low stipend of twenty dollars a month in service where there is small opportunity for fees.

It is felt that one of the most unfortunate conditions is due to the fact that men are not selected by the employment department in the United States with reference to the positions which they are expected to fill and consequently great injustice has been done both the work and the men employed. For instance, if a man, who is a skilled machinist on civil engineers' gauges is sent down and placed on the repairing of locomotives, he is very likely to be dismissed for incompetency. Men in different lines undoubtedly have been sent away under a cloud when perfectly competent to fill positions for which they applied. Others have, in a few cases, been transferred to positions which they have filled satisfactorily. Many have returned from the States under assumed names or resorted to that means of securing employment at other points on the Zone.

Another cause of discontent is the fact that in the stress of getting men of different types to go to the Isthmus promises have been made prospective employes, which could not be kept. For instance, one might be promised that he would be able to get married quarters in sixty days. Upon complaining that the promise was not kept, it would not appease a man to call his attention to the written contract that such quarters would be given "when available." As one said, "It takes the heart out of a man to be told in the States that he can get married quarters and then he gets here and finds he must have his application in many months before they are assigned."

Natives Bathing in the Usual Way.

In the printed matter distributed among Europeans there are misrepresentations; there is a picture of a hotel for American whites which would lead common laborers to infer that they would eat in such buildings; there are mentioned in a misleading way pretty and hygienic houses for workers and the opportunity of taking families and of purchasing clothes at the commissary made in the best factories of the United States as well as alluring statements with reference to recreation and other matters.

Misrepresentations to prospective employes only react against the Government.

There have been complaints at one point that members of the union were discriminated against and this has caused a great deal of dissatisfaction. There seems to be no doubt but that some good men have been dismissed who were members of the union but it is claimed by the master mechanic that non-union men have also been discharged. In other trades in the same shops the men are entirely organized and there is of course no question of discriminating against unionists. Certain it is that the official complained against has tried honestly to live up to his convictions that there should be no recognition of unions on a Government job. While he may have been vexed by leaders who have taken the Government's time in trying to secure members for their unions, it seems to be begging the question of recognition when a committee of boilermakers will be listened to, although not as representatives of the union, as all of the boilermakers belong to the union, and especially when Secretary Taft meets the national officials of these same organizations and confers with them relative to matters concerning their men upon the Isthmus.

There is no general discrimination against unionists on the Isthmus but there is a strong anti-union sentiment among officials and an unwillingness to deal with union committees. There is need of a clear and well defined policy in reference to dealing with committees or representatives of unions.

OPPORTUNITY NOW FOR GRIEVANCES TO BE HEARD.

Great credit is undoubtedly due to the preceding administration for organization work but there was a

policy of refusing to hear complaints of any kind which has brought to this administration an accumulation of grievances and serious problems with which to deal.

The Chairman of the present Commission has spent Sundays and the major portion of week days listening to complaints and making personal investigations. Confidence has thus been inspired and there was a general feeling of hopefulness.

A CONCILIATION BOARD AND LABOR COMMISSIONER NEEDED.

Discontent due to bad food, favoritism in awarding "married quarters," uncomfortable bachelor quarters, and such matters as dismissals, inequalities in wages, hours, or vacations, and relative to sick leave provisions, will be reduced greatly without doubt by the forming of a board to consider all labor grievances. Such a board is now contemplated by the Chairman whose intention it is to have upon it a representative of the Commission, a representative of the trade involved, and a representative of the foreman under whom the complainant works.

However, the situation is so complicated that it would be impossible to equalize conditions unless a careful study were made by an expert labor commissioner whose sole duty would be the consideration of labor matters.

In the operation of the Conciliation Board to be established, the principle should be adopted that where a majority of the men belong to a union, that organization shall have the right to be heard by its committee. That principle was established by the Anthracite Coal Commission appointed by President Roosevelt and the same rule has been adopted by many employers' organizations making contracts with unions. Nearly every railroad in the United States has a contract with its engineers, firemen, trainmen, conductors, machinists, molders, blacksmiths, et cetra, notwithstanding the fact that there are non-unionists in every class.

If, in establishing the policy of having grievances heard by a conciliation board an experienced labor commissioner should be employed, many grievances would be adjusted by him in the same manner as they are in the bituminous coal fields, in the building trades in New York, the Newspaper Publishers' Association, and many other organizations. If unable to personally adjust grievances, final appeal could be made to a joint board. The policy and practical operation of such a board could be determined readily by an experienced labor commissioner, after looking over the field. The board contemplated by the Chairman of the Commission could well be made such a body for the final disposition of matters which could not be settled by the labor commissioner.

That the plan of having a permanent conciliation board to which grievances may be taken will allay discontent and resentfulness has already been proved by the result of hearings granted personally by the Chairman of the Commission. This board also would enable him to give more time to construction problems.

Such a conciliation board would prevent interruption of work if it is thoroughly understood that grievances should be presented before and not after "striking" for nine times out of ten they would be adjusted.

Appeal to such a board of conciliation should be final and remove the necessity of distressing the President and the Secretary of War with such details. Furthermore, it is impossible, owing to the length of time which it takes to send communications from the Isthmus and secure replies, to satisfactorily adjust grievances if decisions must be so awaited.

The establishment of a conciliation board with the resultant assurance that justice may be had would serve to attract a good class of laborers, for friends bring friends from the States if conditions are such that they write favorably of them.

SHOP WASH ROOMS.

It was a pleasant surprise to find excellent wash rooms, with individual enamelled iron wash bowls most neatly arranged and hot water wisely provided in the shops; but the wash rooms are located so inconveniently as to make them useless. The men would appreciate the opportunity to wash before going to the noon meal, but, being hungry, due to light breakfasts, they will not climb through inconvenient and obstructed places to do so. These wash rooms should be placed at the exits of the shops, or near the mess halls and roller towels, soap and hot water should be provided.

PROTECTION OF SAWS.

Circular saws should be guarded. There is no more dangerous tool used by workmen, and yet in the carpenter shop visited the saw was unprotected.

EMPLOYERS' LIABILITY.

There were nine men blown to pieces during the investigation. They were employed in blasting where there is excavating. While in this particular case, the best powder foreman was in charge (and was killed), there is feeling that in general such foremen are not proficient. In any event, it brought to mind the query as to whether the Government should provide for dependent families of the injured and killed. Now collections are made among the employes for such funds. Damages are not recoverable from the Government in such cases as they are from private contractors in the United States. As recently as April, one suffering from pulmonary tuberculosis *contracted* in the *service* was denied the amount of compensation for leave of absence, when obliged to depart from the Isthmus permanently.

THE "CANAL ZONE NEWS."

There should be published weekly a bulletin, which might be called the "Canal Zone News," in at least English, Spanish, Italian and Greek, in parallel columns. This has been undertaken by private employers advantageously. Through such a channel employes could be informed, for instance, of the loss of a ship containing vegetables, which has just occurred, or the sinking of a ship load of lumber, which likewise has just happened, and of rulings or changes which have been made with reference to mess houses or the assignment of quarters, commissaries or the employment of labor, including vacations, sick leave and other matters affecting the employes. It would be well, through such a paper, to explain exactly the conditions in a trade such as that of the engineers, which called for the raising of wages, and caused feeling that others were not given proper consideration. Those explanations would appeal to the average man. All conversed with were found to be reasonable and if various matters were understood there would be fewer grievances and less complaining. Health suggestions could be made. Care of range closets, explaining to foreigners the result of throwing old trousers, shoes, etc., in them, could be recommended. Danger of drinking water from streams receiving sewage could be explained. Such health suggestions from time to time, would be much more effective than the circulars now issued and placarded in the Post Offices, which cannot be generally read. An illustration of ignorance relative to new regulations superseding objectionable rules was the remark of a high class man who voiced the sentiment expressed by others. It was: "A married man can't stay at home if sick but is compelled to go to the hospital." It is not known that that is not required.

This paper could be supplied with Associated Press dispatches, affording the employes, eager for news from home, something more to relieve the dreadful monotony of that life.

The "Canal Zone News" should be distributed free of charge because it is important to have it read by all.

SUGGESTION SYSTEM.

There should be inaugurated a system of courting complaints and suggestions. "Suggestion boxes" could be placed at railway stations, in the post offices, shops, mess houses and clubs. The fear of the loss of position if complaints or suggestions are offered seems to be justified by past experiences and is so *great* that all asked in giving information that their names should be suppressed. This applies to doctors, nurses and men in *official positions*, as well as mechanics. Through the "Canal Zone News," if established, or some other printed circular, the suggestion system should be outlined explaining just what is requested. In addition to complaints of all kinds, suggestions for improvement in mess houses, quarters, commissaries and in construction work should be asked. Cash prizes might be awarded for suggestions which could be utilized. Valuable points could be culled from many suggestions which doubtless would be useless.

For instance, in one department six-inch boards were greatly needed, but the supply was exhausted; the need could have been met by the loan of such six-inch boards, of which another department had an over supply. The department in distress had plenty of two-inch boards and, failing to secure the loan desired, had to spike them together and the head of the department did not feel very agreeable when later he learned that the ungracious department had had to have all of its six-inch boards run through a planing mill and cut into two-inch boards for which he would have been happy to exchange his two-inch boards.

Another illustration, given by a steam shovelman, is: In the excavating work an empty train, unused because the steam shovel has broken down, could be sent along to another place where it could be used. (Quite recent improvements in the excavation work will prevent such delays in future, it is officially stated.)

The following suggestion, which was made during this investigation and seems worthy of consideration, is offered as an example of what might be received: "Some men lay off a day now and then to rest up and get paid for sick leave. A premium should be put on honesty. For instance, if a man is only away five days ill, he should be awarded as an addition to his vacation a percentage of the balance of the thirty days' sick leave."

Group of Employes and Wives.

BOAT SERVICE BETWEEN NEW YORK AND COLON, PANAMA

The Panama Railroad Company, owned by the Government, operates a line of steamships between New York and Colon, there being five vessels. The conditions under which employes are transported to and from the Isthmus are simply intolerable. The boats are overcrowded, some staterooms poorly ventilated and badly located, the food is awful and some of the ships, undoubtedly, are not safe.

The voyage was made on the "Panama" going, and on the "Colon" returning. They are considered the best boats. The journey from the Isthmus would have been taken upon the "Finance," but it was regarded unsafe. When the question was asked: "How can you afford to take the risk of sending employes to the States on it?" the reply was, "We would not if this were the hurricane season, but it will most probably reach New York safely under the present weather conditions." It is now undergoing repairs and will be put in service again early in August. The sailing time between New York and Colon is advertised to be five and one-half to seven days. The "Finance" takes ten to eleven days and employes so unfortunate as to strike it going upon and returning from vacations have spent twenty-two of their forty-two days upon it. If they live in the Central or Western States, it will be seen that but a short period may be spent at home. It is very doubtful whether this boat should be put into commission again. Its temporary relinquishment cuts down the service to four boats at the vacation season

when there were, already, inadequate accommodations. The "Allianca," another doubtful ship, is in dock for repairs and to be somewhat enlarged. The "Brunswick" has been chartered for use until it is released. The "Advance" is the third boat regarded as unsafe.

If objection were raised to the purchase of good English ships when the "Panama" and "Colon" were secured instead from the Ward Line, as is understood, certainly the American people will withdraw such an objection when it is known how the employes suffer; and that the boats are overcrowded and so unfit for service as to be a disgrace to the Nation.

There is constant travel between New York and the Isthmus, due, not only to the securing of new employes, but to vacation trips. It is of tremendous importance that the Government should secure at the earliest possible moment some new boats, improve some now being used and abandon others. Preferable to purchasing boats would be to have some especially constructed for this service were the present needs less pressing. This may be advisable in making plans to meet all future requirements.

Description must be limited to personal experience upon the "Panama" and "Colon," each having cost the Government $650,000.00.

STATEROOMS.

There are staterooms, good in appearance on the steamship "Panama," containing a stationary bowl, two bunks and a couch used as a berth frequently. Each stateroom would be comfortable for two persons if the upper berths were wider and if there were adopted some other means of softening them than the present type of mattress. The lower berths have springs and are comparatively comfortable but better springs should be placed therein. The upper berths are narrow, wooden bunks. One, therefore, not only suffers from a hard bed, but the constant fear of falling out. Were the upper berths so hung as to have the outer edge slightly higher than the inner, instead of being inclined downward, and covered with woven wire springs they could be made usable. They could not be closed, probably, but that would be an advantage really as when put up like a Pullman berth, they cover the ventilating perforations. These berths could easily be made as comfortable as those in the boats plying between New York and Providence or Fall River. The couches, with the exception that there is not the fear of falling from a great height, are just as objectionable, hard and narrow. Even to add the mattress from the upper berth to the one belonging to a couch, as was done by a few so fortunate as to have but two in a room, did not prevent the sleeper from arising with backache and a general feeling of fatigue which at the end of the trip was excessive. Each stateroom should be used for two only, but three are crowded in, causing great discomfort.

However, that is not the worst phase of the sleeping arrangements. On the same deck, which is the upper one, in the stern there are staterooms, each containing six narrow bunks, crowded into the smallest possible space; and there is still a more abominable arrangement, for, on the deck below there are rooms called intermediates, in front of the steerage, there being barrels of potatoes and other unsightly freight between those quarters. Here there are staterooms containing as many bunks as possible, some having no ventilation, some very close to the boilers, which uncomfortably heat them, and others being ventilated by somewhat remote port-holes or an air shaft which carries in cinders. In the last two types of staterooms there is no place to hang clothing.

On the "Colon" the majority of the staterooms are identical. An annex contains a few new ones with comfortable stationary upper berths having woven wire springs. The conditions upon the deck below, however, are even worse than on the "Panama." The bunks in the stern have comfortable springs but the ventilation is poor. These are second cabin rooms, adjacent to the second cabin dining-room. Next are the standee steerage cots upon the open deck. Ahead are the intermediates, partly used by steerage passengers on this trip and quite as bad as the same quarters on the "Panama," with adjacent side rooms containing bunks very narrow and simply made of canvas loosely hung on two iron rods. Six were assigned to one such room containing four bunks. The ventilation was very bad and across there was such an *inside* room with two negroes placed with white men.

Employes on the "Panama" and "Colon" unable to sleep in quarters assigned them, spent the nights lying on deck, in chairs on deck, in the smoking-room and in the social hall upon the seat surrounding it.

There were one hundred and eighty passengers on the "Colon" and it was claimed by one of the chief officials that it was built for eighty. In the Proceedings of the Isthmian Canal Commission, both these boats are claimed to accommodate one hundred first-class and fifty second-class passengers. With forty-two first-class staterooms on the "Colon," accommodating comfortably but two each, it is difficult to reconcile that statement with the conditions.

It has been proven that complaints of employes, who claimed that they had been given steerage quarters, are warranted.

Until the service is improved "first-class" tickets should not be issued to employes who cannot occupy the best type of staterooms. At present such staterooms are assigned until exhausted and then other quarters are given later applicants. All holding tickets *marked for first-class passage* feel that injustice has been practised and that they are entitled to accommodations as good as those secured by others paying the same.

Worthy of attention is the complaint that owing to inadequate service, employes, who have been granted vacation, are unable to secure, immediately, accommodations in returning to the United States. There should be a system of notifying employes, granted leave of absence, that definite reservations have been made. There is a rule requiring applications to be put in ten days in advance of the sailing of the boat selected for the trip. It is officially claimed that, if reservations cannot be made because of previous applications, employes are assigned accommodations on the next boat and that it is a part of the regulations that they shall be so notified, *but that is not done.* This is especially important in the interest of fairness for the Government requires that vacations shall be taken in a country affording necessary change of climate which means the United States and travel upon Government boats unless willing to pay rates on commercial lines. Some lately have paid the fare of $70.00 on a private line rather than endure the hardships attendant upon a voyage on Government boats. Employes granted leave of absence for a particular period are given by the local official of the Department of Labor, Quarters and Subsistence orders for transportation. Many go to Colon the night before the sailing of the boat to be on hand early the next morning in order to secure staterooms. The morning of the sailing of the "Colon," July 6, many who were at the head of the line at nine o'clock were told to return at one and accommodations would be arranged if possible. Such employes saw tickets sold to others in the original line. Some secured good staterooms; others did not know what they had until the boat had sailed and they found themselves in the abominable quarters above described, and some, who had previously been on the boat, accepted bad accommodations with the full knowledge of what they were receiving rather than to postpone going. For instance, a ticket marked room "M" would mean nothing to a man who had never been on the boat, whereas a previous traveller upon it would thus know where he was placed. Some would not have gone had they known that they did not have one of the best staterooms. Several had had applications for vacations on file from six weeks to two months and they had never heard whether they could be accommodated on that boat or not. Such treatment does not make a man feel very agreeable, especially if he has given faithful service for two years and "never been sick a day, nor away except on vacation."

Cases were cited of employes with families, who, after closing their homes and taking their luggage to Colon, were obliged to board at that place or go back to camp and stay with friends until the sailing of the next boat. All who failed to secure accommodations at the first attempt lost at least that day's time. It is claimed by officials that when employes are obliged to wait over for another boat that they are allowed to go back to work, but this is not understood. Some are known to have lost the first five days of their vacation when they would have preferred to be at work and have that time applied upon the period spent in the United States.

Complaint is made that the employe's craft is marked on the back of each steamship ticket, and, when application is made for accommodations the agent immediately looks at that inscription and the clerk is given the preference over the mechanic in assigning staterooms. This is a very general criticism.

The baggage of employes must be checked from the camps to Colon and then re-checked to New York, which causes great confusion at the wharf. If the assignment of accommodations were made before employes leave the camps baggage could be checked through to New York. As it is now, vacations are granted and employes are left to get off as best they can.

It is claimed that it cannot be known until the last moment what may be the ability to accommodate employes as reservations are held for possible South American travellers, but surely it is possible to approximately determine the capacity of the boats in so far as it pertains to employes and to notify them of reservations in advance.

Employes leaving for vacations are given letters to the Isthmian Canal Commission at Washington where they must be sent by employes and orders are forwarded to them wherever they may be visiting. These orders must be presented to the Panama Railway Company in New York. It would seem to facilitate matters if direct orders on the Panama Railway Company were made. As it is, employes frequently must take their chances on reaching New York, of securing return accommodations. Then they will accept anything to get back within the prescribed time, else the vacation pay is lost.

QUARTERS FOR ATTENDANTS.

The sleeping quarters on the boats for the attendants are very bad. The bunks for the waiters are crowded together on the lower decks, inside where it is impossible to get good air. The firemen's quarters are worse, indeed awful, as they are simply packed in the space provided for standee cots in tiers. The sailors have the best ventilated quarters, in the bow of the boats, there being portholes next to their wooden bunks, which have no springs. They are not enclosed; the bunks simply line the bow, The quartermasters have nearby rooms similarly ventilated. They have the luxury of enameled iron wash bowls in sanitary frame stands. The chief cook on the "Colon" has an inside room across from bins of potatoes and cabbages with a port-hole above through which the breezes blow and waft the odors of those vegetables into his sleeping place. He is obliged to take his mattress aft. Many employes of the boat, there being one hundred three on the "Panama" and one hundred seven on the "Colon," carried their blankets to the portion of the lower deck which had wide openings opposite each other, sleeping upon boards, for the purpose of getting air.

There is an inside room containing four narrow bunks for as many cooks and there are but six bunks for seven kitchen employes on the "Colon."

The waiters and cooks, so wretchedly quartered, suffer most during the five days spent between each trip in the dock at Colon where there is little air stirring and they grow ill.

The stewardess has a small inside room upon the upper deck, there being no means of ventilation on the "Colon" except the perforations at the top. On that boat the steward of the second cabin had to sleep on a pile of mattresses on the dining salon floor because he was required to give up his quarters to passengers.

These boats have no bath or toilet accommodations for their captains whose cabins naturally are in the bow on the top deck and they must go to the rear of the deck below no matter how necessary it is for them to be near the post of duty constantly. There is only one bath for women and one for men passengers on each boat. There are shower baths for firemen. It was pleasant to find such consideration no matter how crude the arrangements, but more adequate baths with warm water, soap and towels should be supplied.

It has been suggested that a naval constructor should be assigned to thoroughly overhaul these boats. Long has it been pointed out how staterooms for the top decks could be built and placed in position during a regular layover in the port of New York without encroaching upon a sailing period, it is authoritatively claimed. This would add some comfortable quarters for Isthmian Canal employes, at least, and enable re-arrangements on the lower deck by releasing quarters used for them to be properly prepared for boat attendants and thus to alleviate conditions somewhat until the whole service can be improved.

FOOD ON BOATS.

Complaints with reference to food on all the boats must be justified, for it was exceedingly bad on the "Panama," which is the most popular boat. When in commercial service it was officially stated that the "Panama" accommodated but fifty passengers; and that it is now licensed to carry two hundred. There were one hundred fifty-five passengers on the boat leaving New York June 7. This necessitated three sittings in the dining salon. Those at the third sitting had to take what was left and some never saw a napkin during the entire trip. The table linen at times was so unclean as to be repulsive, at the first table.

Even one so favored as to be placed at the right hand of the Captain and given the best of everything, found it almost impossible to eat. The meats were simply awful, eggs musty, vegetables entirely unseasoned, and the desserts wretchedly prepared. Nuts were stale and oranges were bad. Bread and butter were good and occasionally an article of food was well prepared, but on the whole it was dreadful.

While one might expect to find poor food upon the Isthmus, it seemed utterly inexcusable that a boat just sailing from the port of New York should not supply first-class food in every particular. The table service was bad, the food unsightly and unpalatable; and the employes complained of discourteous waiters. (It is believed that wages are not high enough to attract efficient men in view of the fact that many of the travelers are not in a position to fee liberally.) The dumping of unclean silver into a large pan in the hallway, between the dining salon and serving room, presented a sickening sight.

The drinking water, carried in a tank in the hold, is New York Croton water, unfit to drink without being boiled or distilled and it is not so treated.

Employes who were forced to eat food, either spoiled or not properly prepared, do not reach the Isthmus in the best condition to endure its climatic change.

While many really suffer from the lack of nutritious food, one extreme case is that of a nurse, going to the Isthmus for the first time on the "Colon," who, finding herself unable to eat in the salon, asked to have her food served upon the deck, but was refused that privilege for it is against the rules of that boat, because it is believed that the force of employes is not adequate for that purpose. After attempting to eat unpalatable food for a few days, it is a fact that "one becomes prejudiced against it" the moment the dining salon is

entered. (On the "Panama" the stewardess is allowed to serve on deck to those unable to go to the salon.) After four days of struggle, on the part of the aforesaid nurse, a fainting spell convinced the steward of the necessity of yielding to her request and she was served on deck raw eggs, all she could take by that time. Not having good food, on which to build up, after reaching the Ancon Hospital, where she was assigned, she fell a ready prey to malaria and was suffering from that fever during the last week of this investigation.

Returning from the Isthmus some articles of food on the "Colon" were prepared better, but on the whole conditions were the same as experienced going down, except that table linen was cleaner. To many of the employes the food on this boat "seemed good in contrast to that on the Isthmus." Soups and fish were fair. Meats unpalatable, vegetables unseasoned. Bread was good and delicious preserves were served occasionally which, like olives on the "Panama," "helped to cover a multitude of sins." There were also on that boat stale, moldy nuts. Why nuts should be served out of season, it is difficult to understand. It was learned that one purchasing agent furnishes supplies to all the boats so they must fare alike.

In the hallway between the dining salon and serving room on the "Colon," large tin receptacles upon the floor receive unclean dishes and present an offensive scene.

The serving rooms are inadequate and inconveniently placed. The kitchens, below with dumb waiter service, are not supplied with soup or vegetable boilers or (on the Colon) proper bake ovens. The butcher shop on the "Colon," off the kitchen, is entirely unventilated.

RAIL GUARDS, STEAMER CHAIRS, RATES AND DELAYS IN TRANSPORTING PROVISIONS.

Undoubtedly the officials of the boats make all as comfortable as possible with the facilities available.

Not only are doctors, nurses, clerks, and mechanics subjected to bad transportation service, but also wives and children of employes now going to the Isthmus to live, or taking vacations.

At the ends of the lifeboats on the "Colon," the railings leave spaces through which a little child playing on deck could be swept into the sea instantly. Guards should be placed there and other boats inspected with the same end in view. Wire screen, covering the upper deck rails would also be available for the same reason. With the sudden lurch of a vessel a child could easily slip between.

The use of old, rickety steamer chairs should be discontinued and plenty of good ones furnished at a reasonable rate. One of the two chairs required for the trip down had no foot rest and the seat had been repaired by nailing a rough board, a quarter of an inch in thickness, across, making it impossible to sit thereon. That experience led to a written request for two good chairs ten days in advance of embarking upon the return trip. The result was: one cane chair with no foot rest and one framework with separate pieces of canvas on back and seat. The frame seat was so uncomfortable as to make it impossible to use the chair, and yet a bill for $2.00 was presented, but payment was refused. There were some very good chairs but the supply was inadequate.

The Government grants a rate of twenty dollars on its lines to employes on vacations and to adult members of their families, the full fare being ninety dollars. The Government steamship line is a common carrier and required to transport freight and passengers, other than employes, under its charter. It is difficult to explain why it should charge more for bad service than is asked for good service on another line ($70.00) even though its price may be raised to discourage tourists from seeking its service in order to place the majority of the accommodations at the disposal of the employes.

A further point for consideration is the fact that provisions for the Isthmus are carried by these boats and their delivery is delayed frequently because the boats do not reach there on schedule time, due largely to their bad condition.

MEALS OF ATTENDANTS.

In the serving of food the employes of the steamship line are treated much worse than the other employes of the Government, travelling as passengers. One class has a very unattractive, warm, inside dining-room on the lower deck of the "Panama" and "Colon," but sailors and firemen have no place to eat and must simply stand on deck in a most savage and uncivilized fashion, getting their food as best they can from two or three large receptacles.

An employe on the "Panama," who had good credentials, and who had been in the service of the Government for many years, gave a picture of the conditions on the Transports Sherman, Logan, Sheridan and Thomas with reference to care of boat attendants, which affords a severe contrast. He stated that the sleeping quarters are excellent and the mess rooms for the sailors and firemen perfectly white, clean and attractive. If this be a true picture, that standard should be generally applied.

In any event the accommodations on the line operating between the United States and the Isthmus of Panama, are inexcusably bad, both for passengers and boat attendants. It may be asked why they have gone so long unnoticed by officials? The President went to the Isthmus on a special boat and so did the Secretary of War. Special quarters were arranged for commissioners who never took the trouble to investigate those of other employes. The present chairman happened to go down with a Congressional party when, doubtless, special effort was made to have table service good and the question of crowded accommodations for employes would not likely arise under such circumstances. Complaints have been made by employes to superintendents but, if they have been carried to higher authorities, apparently no impression as to their import has been made.

WELFARE DEPARTMENT THE NATIONAL CIVIC FEDERATION

The Welfare Department is devoted entirely to interesting employers in giving especial consideration to improving the conditions under which employes in all industries work and live. In extending the practice of Welfare Work, the Department has found of especial value conferences of employers, held under its auspices in different parts of the country, for the interchange of experiences. Illustrated literature is widely distributed and stereopticon lectures are given. A bureau of exchange is maintained at headquarters, where descriptive matter, plans and photographs relating to betterments in different industries may be obtained by employers.

Some of the subjects involved are:

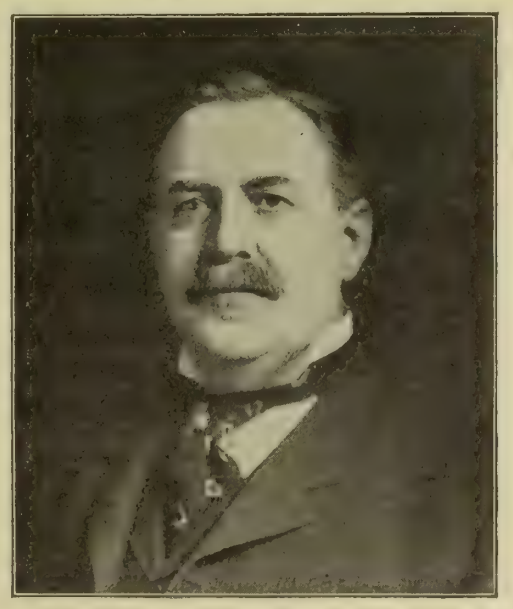
Sanitary Work Places: Systems for providing pure drinking water; for ventilation, including the cooling of super-heated places, and devices for exhausting dust and removing gases; for lighting work places; and for guarding machinery; wash rooms with hot and cold water, towels and soap; shower baths for moulders and stationary firemen; emergency hospitals; locker rooms; seats for women; laundries for men's overalls or women's uniforms; the use of elevators for women, and luncheon rooms.

Recreation: The social hall for dancing parties, concerts, theatricals, billiards, pool or bowling; the gymnasium, athletic field, roof garden, vacations and summer excursions for employes, and rest rooms or trainmen's rest houses.

Educational: Classes for apprentices; in cooking, dressmaking, millinery; first aid to the injured; night classes for technical training; kindergartens and libraries.

Housing: Homes rented or sold to employes, and boarding houses.

Provident Funds: For insurance, pensions, savings or lending money in times of stress.



In promoting the work of this department it is recognized that the first essentials to the welfare of employes are, steady work, an equitable wage and reasonable hours of labor; but that the employer has a further obligation.

OFFICERS

CHARLES A. MOORE, Chairman.
CYRUS H. McCORMICK, First Vice-Chairman.
NATHAN STRAUS, Second Vice-Chairman.
ELLISON A. SMYTH, Third Vice-Chairman.
ISAAC N. SELIGMAN, Treasurer.
WM. H. TAFT, Chairman Committee on Welfare Work for Government Employes.
B. J. GREENHUT, Chairman Ways and Means Committee.
MISS GERTRUDE BEEKS, Secretary.
DR. THOMAS R. SLICER, Chairman N. Y. Welfare Committee.
ALEXANDER LAMBERT, Physician.
HAYES ROBBINS, Secretary New England Workshop Improvement Committee.

EXECUTIVE COMMITTEE

F. C. BALL, President Ball Bros. Glass Mfg. Co., Muncie, Ind.
JOHN BANCROFT, Joseph Bancroft & Sons' Co., Wilmington, Del.
SAM'L J. BLOOMINGDALE, President Bloomingdale Bros., New York City.
CHARLES F. BROOKER, President The Coe Brass Manufacturing Co., Ansonia, Conn.
GEORGE W. BROWN, Treasurer United Shoe Machinery Co., Boston, Mass.
H. M. BYLLESBY, H. M. Byllesby & Co., Chicago.
W. A. CLARK, President United Verde Copper Co., Butte, Mont.
FREDERIC S. CLARK, Treasurer Talbot Mills, North Billerica, Mass.
W. L. CLAUSE, President Columbia Chemical Co., Pittsburg, Pa.
GEORGE OTIS DRAPER, Secretary Draper Co., Hopedale, Mass.
PIERRE S. DU PONT, Treasurer E. I. Du Pont De Nemours Powder Co., Wilmington, Del.

Charles A. Moore, Chairman the Welfare Department.

CHARLES L. EDGAR, President The Edison Electric Illuminating Co., Boston, Mass.
G. E. EMMONS, Manager Schenectady Works General Electric Co., Schenectady, N. Y.
EDWARD A. FILENE, Treasurer Wm. Filene's Sons' Co., Boston, Mass.
FREDERICK S. FISH, Chairman Executive Committee, Studebaker Bros. Mfg. Co., South Bend, Ind.
W. C. FISH, Manager Lynn Works General Electric Co., West Lynn, Mass.
HARRY B. FRENCH, Vice-President Smith, Kline & French Co., Philadelphia, Pa.
ORRIN S. GOAN, Manager National Biscuit Co., New York City.
WM. C. GREENE, Treasurer Peace Dale Mfg. Co., Peace Dale, R. I.
B. J. GREENHUT, Treasurer Siegel-Cooper Co., New York City.
F. R. HAZARD, President The Solvay Process Co., Syracuse, N. Y.
H. J. HEINZ, President H. J. Heinz Co., Pittsburg, Pa.
EDWIN M. HERR, Vice-President Westinghouse Electric and Air Brake Companies, Pittsburg, Pa.
CHARLES W. HUBBARD, Treasurer Ludlow Mfg. Associates, Boston, Mass.
CHARLES H. HULBURD, President Elgin National Watch Co., Chicago, Ill.
JOHN S. HUYLER, President Huyler's, New York City.
W. B. JANSEN, Vice-President Atchison, Topeka & Santa Fe Railway System, Chicago.
G. GUNBY JORDAN, President Eagle and Phenix Mills, Columbus, Ga.
J. KRUTTSCHNITT, Union Pacific System, San Francisco, Cal.
JOHN F. P. LAWTON, Gorham Mfg. Co., Providence, R. I.
WM. W. LOBDELL, President Lobdell Car Wheel Co., Wilmington, Del.
ARTHUR T. LYMAN, Treasurer The Boston Mfg. Co., Boston, Mass.
MARCUS M. MARKS, President National Association Clothing Manufacturers, New York City.
W. H. MARSHALL, President American Locomotive Co., New York City.
W. G. MATHER, President Cleveland-Cliffs Iron Co., Cleveland, O.
J. R. MacCOLL, President Lorraine Mfg. Co., Pawtucket, R. I.
CYRUS H. McCORMICK, President International Harvester Co., Chicago, Ill.
EMERSON McMILLIN, President American Light and Traction Co., New York City.
CHARLES A. MOORE, Manning, Maxwell & Moore, New York City.
JOHN OMWAKE, President United States Playing Card Co., Cincinnati, O.
L. A. OSBORNE, Vice-President Westinghouse Electric and Mfg. Co., East Pittsburg.
LEWIS W. PARKER, President Victor Mfg. Co., Greers, S. C.
THOMAS F. PARKER, President Monaghan Mills, Greenville, S. C.
C. STUART PATTERSON, President The Western Saving Fund Society of Philadelphia, Philadelphia, Pa.
THOMAS G. PLANT, President Thomas G. Plant Co., Boston, Mass.
ALBERT L. POPE., Pope Manufacturing Co., Hartford, Conn.
H. K. PORTER, President H. K. Porter Co., Pittsburg, Pa.
F. F. PRENTISS, President Cleveland Twist Drill Co., Cleveland, O.
F. W. ROEBLING, JR., John A. Roebling's Sons' Co., Trenton, N. J.
W. L. SAUNDERS, President Ingersoll-Rand Co., New York City.
THOMAS H. SAVERY, President Pusey & Jones Co., Wilmington, Del.
H. A. SHERWIN, President Sherwin-Williams Co., Cleveland, O.
WILLIAM ELIOT SMITH, President Illinois Glass Co., Alton, Ill.
ELLISON A. SMYTH, President Pelzer Mfg. Co., Pelzer, S. C.
THEODORE P. SHONTS, President Interborough Rapid Transit Co., New York City.
NATHAN STRAUS, R. H. Macy & Co., New York City.
WILLIAM H. TAYLOR, President The St. Clair Coal Co., Scranton, Pa.
D. A. TOMPKINS, President The D. A. Tompkins Co., Charlotte, N. C.
H. B. WALKER, President Old Dominion Steamship Co., New York.
GEORGE F. WILLETT, President Geo. F. Willett Co., Boston, Mass.
J. H. WILLIAMS, Vice-President J. H. Williams & Co., Brooklyn, N. Y.
RUFUS K. WOOD, Maryland Steel Co., Sparrows Point, Md.
EDWARD WORCESTER, Vice-President National Tube Co., Pittsburg, Pa.

GENERAL MEMBERSHIP.

ADAMS, EDGAR E., The Cleveland Hardware Co., Cleveland, O.
ALLEN, W. C., The Yale & Towne Mfg. Co., Stamford, Conn.
AMORY, JOHN J., President Gas Engine & Power Co. and Charles L. Seabury Co., Morris Heights, New York City.
ANDERSON, D. M., St. Regis Paper Co., Watertown, N. Y.
APPERSON, R. D., President Lynchburg Traction & Light Co., Lynchburg, Va.

TOWNE, F. B., Treasurer National Blank Book Co., Holyoke, Mass.
TREANOR, P. C. J., Woodward & Lothrop, Washington, D. C.
TUFTS, LEONARD, American Soda Fountain Co., Boston, Mass.
VOPICKA, CHARLES J., Atlas Brewing Co., Chicago, Ill.
VREELAND, HON. EDWARD B., U. S. Repersentative, Vice-President Salamanca Trust Co., Salamanca, N. Y.
WALKER, A. W., President Walker & Pratt Mfg. Co., Boston, Mass.
WALLACE, F. A., President R. Wallace & Sons Mfg. Co., Wallingford, Conn.
WALLIN, V. A., Treasurer Wallin Leather Co., Grand Rapids, Mich.
WARREN, WM. C., S. L. Allen & Co., Philadelphia, Pa.
WELLS, F. O., President Wells Bros. Co., Greenfield, Mass.
WESTERVELT, J. I., President Brandon Mills, Greenville, S. C.
WESTON, EDWARD F., Secretary Weston Electrical Instrument Co., Waverley Park, Newark, N. J.
WHITING, J. H., President Whiting Foundry Equipment Co., Harvey, Ill.
WHITTAKER, BENJAMIN, Treasurer J. H. Williams & Co., Brooklyn, N. Y.
WILKINSON, MELVILLE L., President The William Hengerer Co., Buffalo, N. Y.
WILLCOX, HON. WM. R., Chairman Public Service Commission, New York City.
WILLIAMS, ROGER H., Treasurer The Eaton, Cole & Burnham Co., New York City.

Interior View Lunch House, General Electric Company, Schenectady, N. Y. (The Welfare Department Was Called Into Consultation in Planning These Arrangements.

WILLIAMSON, WILLIAM H., James N. & W. H. Williamson, Raleigh, N. C.
WITHINGTON, P. H., President Withington & Cooley Mfg. Co., Jackson, Mich.
WOOD, E. N., The Denver Dry Goods Co., Denver, Col.
WOODBURY, C. J. H., American Telephone & Telegraph Co., Boston, Mass.
WOODS, FRANK F., Treasurer S. A. Woods Machine Co., Boston, Mass.
YOUNG, WILBER H., President Austin Electric Railway Co., Austin, Tex.

The National Civic Federation Review

Vol. III. NEW YORK, FEBRUARY, 1908. No. 3

A RECORD OF LARGE UNDERTAKINGS

THE EIGHTH ANNUAL MEETING OF THE NATIONAL CIVIC FEDERATION TERMINATES A YEAR OF ACTIVE EFFORT—A SUMMARY OF ACHIEVEMENT.

PROBLEMS of vital interest to the public welfare, the savings of the people and the prevention of strikes and lockouts, authoritatively discussed by the highest authorities in this country, and a brilliant banquet of nearly eight hundred guests, enlivened by speakers of national reputation, combined to render the eighth annual meeting of the National Civic Federation, held December 16-17, 1907, even more successful than its predecessors. The characteristic note of the activities of the National Civic Federation, the furtherance of mutual interests of capital and labor, revealed itself in all the meetings. As in previous gatherings, a successful effort was made through a careful choice of topics to maintain an open and free discussion from a broad and catholic standpoint, giving equal opportunities for the presentation of the views of all sides.

The discussions which followed the presentation of formal subjects were extremely animated and pointed, betokening a lively interest in the matters before the meeting. Other incidents of general interest were the passage of a resolution on the subject of elastic currency and the election of the Hon. Seth Low as president of the National Civic Federation, in succession to Mr. August Belmont.

"The Protection of the People's Savings," the topic for the first day's discussion, presented two highly important aspects of the banking problem. The morning session was devoted to an argument in favor of such reform of our currency system as should insure the safety of deposits by preventing abnormal and unusual demands upon banks in times of emergency and stress. Among the speakers who

CURRENCY SESSION OF THE FEDERATION'S ANNUAL MEETING.

1. Andrew Carnegie. 2. Grange Sard. 3. L. E. Holden. 4. Horace White. 5. Victor Morawetz.
6. John Mitchell. 7. Theodore Marburg. 8. Isaac N. Seligman. 9. James Speyer.

contributed to the discussion of this subject were: Messrs. James Speyer, Andrew Carnegie, Victor Morawetz, Theodore Marburg, David G. Evans, Horace White and Alfred O. Crozier. The afternoon session was devoted to a presentation of the safeguards which are, or may be, thrown about savings deposits with the view to encouraging thrift and preventing the hoarding of the money of the nation. This involved a discussion of Postal Savings Banks, Mutual Savings Banks and Building and Loan Associations and other agencies designed to gather into a commercial force the small savings of the many and make them available in industry and in commerce. Postmaster General Meyer, Mr. Andrew Mills, Mr. Myron T. Herrick, Mr. James H. Hamilton and Mr. Edwin F. Howell addressed the meeting on several phases of this question.

The second day's sessions were devoted to the subject of "Compulsory Arbitration." The Canadian Industrial Disputes Investigation Act was presented by Mr. S. L. Landers and Mr. G. M. Murray, while the experiences of New Zealand were portrayed by Mr. Hugh H. Lusk. The compulsory features of both laws were sharply criticised by Mr. Samuel Gompers. Mr. Otto M. Eidlitz, Mr. Daniel Keefe, Mr. John Lundrigan, Mr. Rezin Orr and Mr. August Belmont discussed various aspects of voluntary as opposed to compulsory arbitration.

The crowning glory of the meeting was the banquet at the Hotel Astor, attended by nearly eight hundred guests, who enjoyed the presentation of a number of topics of present day social and economic interest in the words of forceful and competent authorities. Gen. F. D. Grant spoke on the "Army Canteen," Mr. John Mitchell on the "Mutual Relations of Capital and Labor," Mr. George W. Perkins on the "Profit Sharing Plan of the United States Steel Corporation," and President Charles W. Eliot upon the "Canadian Labor Legislation, and the Need of Additional Power in the National Government to Cope with Modern Problems." Mr. Samuel Gompers closed the evening's discussion with a forceful statement of the position of labor in the present industrial situation and the purposes, aspirations and achievements of the labor unions.

Too much credit cannot be given to the Committee on Arrangements for the success of the banquet. The committee was as follows:

Marcus M. Marks, Chairman, President National Association of Clothiers.
V. Everit Macy, Treasurer, Capitalist.
Elihu Root, Jr., Attorney-at-Law.
Charles F. Delaney, Granite Cutters' Union.
Dr. John Bancroft Devins, Editor "The New York Observer."
Timothy Healy, President International Brotherhood of Stationery Firemen.
Marcellus H. Dodge, Treasurer M. H. Dodge & Co.
Melville E. Ingalls, Jr., Attorney-at-Law.
Edward Gould, President Teamsters' Joint Council.
Charles A. Moore, Jr., Manning, Maxwell & Moore.
Lawrence F. Abbott, President The Outlook Company.
William H. Taylor, President the St. Clair Coal Company.
Louis P. Schram, United Association of Brewers.
C. U. Carpenter, President Herring-Hall-Marvin Safe Company.
Henry C. Hunter, Secretary Metal Trades Association.
William Fyfe, Amalgamated Carpenters' Union.
Hamilton Holt, Editor of the "Independent."
August Belmont, Jr., August Belmont & Co.
Samuel B. Donnelly, Secretary Building Trades Employers' Association.
Robert E. Simon, Henry Morgenthau & Company.
Edward A. Moffett, Bricklayers and Masons' Union.
T. C. Martin, Editor "Electrical World and Engineer."
Henry C. Watson, Editor Dun's "Review."

The unanimity of opinion which was expressed with regard to the need for an elastic currency led Mr. Isaac N. Seligman to introduce a resolution presenting, in general terms, the approval of the National Civic Federation for the plan of an elastic currency and urging that Congress take some action in the matter. The resolution was referred to a sub-committee consisting of Messrs. Horace White, chairman; N. J. Bachelder, Samuel Gompers, Isaac N. Seligman and Franklin MacVeagh. The introduction of the resolution led to a vigorous protest, lest the Federation by such resolution should commit itself to the scheme of elastic currency issued by the banks. The belief was expressed that the issue of money was strictly a function of government and should not be delegated to banking corporations. When, therefore, the Committee on Currency, through its chairman, Mr. Horace White, presented a memorial and resolution favoring in express words the establishment of an elastic currency through bank issues, based upon assets, the report was not received with unanimous approval. At a later stage of the conference, the report was withdrawn and the original resolution introduced by Mr. Seligman placed before the conference for action. An effort to secure the addition of a proviso to the effect "that the power to expand and contract the volume of currency should be exclusively exercised by the Federal Government and not by banks, clearing houses or private parties," was unsuccessful after it had been pointed out that the purpose of the resolution was simply to endorse the principle of elasticity, but neither to approve nor disapprove of any specific plan to attain that result. The conference thereupon adopted the following resolution:

"WHEREAS, the present financial crisis and the consequent distress has emphatically demonstrated the necessity of some remedial action by Congress as to our currency system;

BE IT RESOLVED, That the National Civic Federation without committing itself specifically to any of the many plans of currency reform, content itself with the declaration that Congress should, after careful consideration, pass as speedily as possible, consistent with security and safety, some measure which will impart to our currency system greater elasticity, so urgently demanded throughout the country."

At an early hour of the session the announcement was made of the appointment of a Nominating Committee, consisting of the following members:

For the Public—V. Everit Macy, New York; Dr. Albert Shaw, New York; Archbishop John Ireland, Minnesota; John M. Stahl, Illinois.

For Employers—Henry Phipps, New York; Franklin MacVeagh, Illinois; Samuel Mather, Ohio; Marcus M. Marks, New York.

For Wage Earners—John Mitchell, Indiana; Daniel J. Keefe, Michigan; James O'Connell, District of Columbia; P. H. Morrissey, Ohio.

The chairman of the committee, before presenting the report, read a letter addressed to Mr. Easley by Mr. August Belmont, expressing his wish to retire from the presidency of the Federation. The letter is as follows:

44 East 34th Street, New York.
December 16, 1907.

R. M. EASLEY, ESQ., Chairman Executive Council,
National Civic Federation.

My Dear Sir:—I am asking with this letter that you request the Committee on Nominations that my name be not considered for the office of president of the Federation, because it will be impossible for me to serve another term.

No work that I have ever been associated with has been nearer to my heart and ideals, but the executive duties of my business compel me to ask relief from an office I prized above all others, but which I cannot fill to do justice to its important requirements.

In retiring, I wish to thank my associates for their loyal support and the unbroken friendly relations that have existed between us during my four years of service. And, as to you, Mr. Easley, I owe a special debt of gratitude for your unremitting labor in promoting the interests of our organization.

I will be none the less interested in the work serving in the ranks, and pledge my loyalty to its future. I remain, yours very truly,

(Signed) AUGUST BELMONT.

The committee then presented as its report the names of the following gentlemen as the officers of the Federation for the ensuing year:

Seth Low, President.
Samuel Gompers, Vice-president.
Nahum J. Bachelder, Vice-president.
Ellison A. Smyth, Vice-president.
Benjamin I. Wheeler, Vice-president.
Isaac N. Seligman, Treasurer.
Victor Morawetz, Chairman finance committee.
John Mitchell, Chairman trade agreement committee.
Charles A. Moore, Chairman welfare department.
Seth Low, ex-officio Chairman conciliation committee.
Franklin MacVeagh, Chairman immigration department.
Ralph M. Easley, Chairman executive council.
William H. Taft, Chairman public employees welfare committee.
Nicholas Murray Butler, Chairman industrial economics department.
Melville E. Ingalls, Chairman public ownership commission.
D. L. Cease, Secretary.

They were unanimously elected.

Mr. Seth Low, on taking the chair, said that he appreciated very highly the honor conferred upon him, that the election carried with it a very unique compliment as a mark of confidence of the several elements represented in the Federation. He said: "I think we must all approach this labor question, as it is called, the question of adjusting the diverse interests involved in it with some modesty. I used to say at Columbia to the professors, that when they ceased to learn they should certainly cease to teach. It is equally true that all of us who have to deal with this question realize, the more we know, how little we know, and that we must be willing to learn. That is the spirit with which I shall take up the work that you have asked me to assume. Progress has been made in the solution of the problems which have arisen. We have reason to felicitate ourselves as we reflect upon how much progress has been made. The number of employers to-day who are willing to consider jointly with their men and with the organizations that represent their men, the terms upon which the details of their business are to be conducted so far as they influence the employment of wage earners, is very much greater than it used to be, and the number, I think, it greater every year. It is the business of this organization to do all that it can to stimulate that movement.

"We believe in the trade agreement; we believe in arbitration; we believe that there may be a time when a strike is justified; we believe that there may be a time when a lockout is justified; we believe in approaching every definite problem with the best wisdom that we have, and we believe in the wisdom, above all others, in trying to bring together in mutual consideration the diverse interests that have to be harmonized. It is a very great pleasure to me in accepting this nomination to express my high appreciation of the work that has been done by my two predecessors in this office, the late Senator Hanna and Mr. Belmont. I appreciate that each in his own way has set a standard that it will be very hard to live up to. I can only assure Mr. Belmont, in taking the chair which he has resigned, that I shall do the very best I can, and would like to ask for myself a full measure of that co-operation which we have all tried to extend to him."

The motion was then made and carried that the chair appoint a committee of three to draft a suitable set of resolutions to be presented to the retiring president, Mr. August Belmont. Mr. D. L. Cease, the newly elected secretary of the Federation, returned his thanks and spoke briefly of the service which had been rendered to the Brotherhood of Railway Trainmen through the Civic Federation. The chair announced the appointment of Messrs. Keefe, Crozier and Seligman, as the committee to draft and present the resolutions to Mr. Belmont. Call was then made for Mr. Gompers, who made a characteristic speech, and paid a high tribute to the energy and activity of Mr. Easley. He said:

I do not believe that ever was there a gathering brought about such as was assembled last evening, so many people representing so many diverse interests and walks in life, listening to the discussion of great problems. It bodes good for us. I believe in the good, red blood of manhood, that, as we progress, we see more clearly not only our rights, but our corresponding duties. Every time that the people understand better the rights to which they are entitled and have the manhood to stand for them—we may get a little bruised, but there comes from it a better and more enlightened manhood—a better citizenship.

AN ELASTIC CURRENCY

LESSONS OF THE RECENT PANIC—FLEXIBILITY IN CURRENCY WILL MITIGATE FINANCIAL DISTURBANCE—HOW IT CAN BE OBTAINED.

THE general topic for consideration in the opening session was that of Currency Reform. In the absence of President Belmont, First Vice-President Samuel Gompers called the meeting to order. He read a communication from Mr. Belmont and introduced Mr. James Speyer as the chairman for the day.

AUGUST BELMONT regretted that out of town engagements prevented his attending the morning session, and wrote that in a general way he endorsed the recommendations made by Mr. Hepburn last year for a flexible currency. "But," he continues, "whatever method may be adopted to supply the elastic element in our currency system, there

EXECUTIVE COUNCIL OF THE NATIONAL CIVIC FEDERATION.

will remain, if not corrected, a disturbing element to the stability of the money market by reason of the present legal restrictions and limitations placed upon the authority vested in the United States Treasury for placing this money on deposit in the banks. Why should not the Government deposit all its funds not absolutely needed in its Treasury without collateral and protected by the same security that surrounds the ordinary depositor in the national bank?

"Were the Treasury empowered to deposit all its funds in the national banks in its discretion, but regulated by way of precautionary restrictions, according to the capital and surplus of the institutions selected, and at a rate of interest to be prescribed by law, of, say, 2 per cent., such accumulated interest to be set aside in a permanent fund to cover any possible losses as might occur through insolvent depositories, the possible losses would be protected more than twenty-four times over. The losses to depositors in the national bank have not been more than one-twelfth of 1 per cent. annually.

"The Government has an added security as a depositor, by reason of the fact that through its properly constituted officers it has absolute supervision over any of the banks that it chooses to select as depositories. How inconsistent, therefore, is the recent appeal of our Chief Executive, of our public men and bodies in general, that the people should have confidence in the banks and leave their money in their custody, while at that very moment the Government was exacting for its deposits the very cream of the securities our national banks were able to produce as collateral.

JAMES SPEYER on taking the chair at the morning session called attention to the widespread interest in the questions of banking and currency, which had been awakened by the recent financial panic. Continuing, he said:

"An old friend of this Federation said to me the other day, 'No two panics are alike!' This is certainly true, but traced to its ultimate cause this panic, like any other panic, is due to disturbed confidence. To maintain the normal credit necessary for all business and industrial prosperity confidence must not be disturbed by too much governmental activity or interference. The people must have confidence in those at the head of large corporations occupying responsible positions of trust. They must not be disturbed by legislative or other attacks on corporations in whose securities they have invested their savings.

"People must have confidence in each other, and, what is more important, they must have confidence in themselves and their own judgment. When confidence is impaired every one makes an effort to strengthen reserves and resources, to put his money where he thinks it would not depreciate, and where he can put his hand on it. At such a time, when confidence is disturbed, a good and elastic currency will minimize the danger and restore things quickly to a normal basis, while an insufficient and unelastic currency system aggravates the shock. It is then that a great majority of people suddenly awaken to the realization of what they have been told by experts over and over again, that compared with other nations they are laboring under very great disadvantage, that our currency system is not what it should be. Public opinion is now generally aroused and should insist upon Congressional action. The right kind of circulating medium is just as important to the farmer and the workman as it is to the mine owner, the merchant and the banker. The wishes and needs of all classes must be fully considered to arrive at a correct solution.

"It is only a few years ago that the American people settled definitely the most important question in connection with the currency, namely—that the standard of value should be gold, and, personally, I have no doubt, with common sense and with a spirit of fairness and with a desire to subordinate personal preference and prejudice to the common good, we will ere long resolve this question of a proper and elastic circulating medium based on the gold standard; but time is money, and the longer we wait the more it is going to cost all of us. In competing in the markets of the world not only must every producer have the best implements and the best tools, but commerce itself needs the best tools, that is to say, the best form of currency adapted to our needs. Not until we get such a system will the people of the United States take the place amongst the nations of the world to which the wealth of the country, their energy and industry justly entitle them.

ANDREW CARNEGIE stated that our currency system having had a great shock innumerable doctors and quacks were rushing to its relief, some of them with remedies that reminded him of the quack who sold pills warranted to cure earthquakes.

"Let us dismiss from our minds," he said, "the idea that there is any cure possible for financial troubles and panics. They have their root in human nature and are as certain as the tides or the storms or the change from Summer to Winter. They are just as essential for the regulation, clearance and purification of business as are climatic changes for the general health of human life. Prosperity is bound to stretch the lines beyond the breaking point, and dull times are needed to restore them. Let us, therefore, dismiss all panaceas for panics such as we have just experienced, and which was due several years ago, though delayed by an unequaled succession of good crops and strong demands for our products abroad.

"The point that demands attention is that our banking system is unlike that of other countries. Japan tried it, but had the good sense to abandon it, as we shall do some day. The complete change we need is the substitution of gold for our reserves, and currency based upon assets, instead of upon government debt, the false foundation upon which we have built.

"The currency question will never down until it is founded upon correct principles. If there be anything established it is that it should be based upon the assets, viz., trade bills which expand and contract as business does, the reserves being in gold. But this does not seem to be the proper time to urge so great a change as this implies. Congress is in a mood to listen to those who understand banking and currency and to legislate somewhat in accordance with their views. Our first effort should be to get legislation turned from the wrong to the right path by introducing to some extent asset currency. As the people see the advantages of this system we may hope to enlarge its use and gradually to abandon bond security.

"By that means we can substitute gold in our reserves for government evidences of debt and obtain the most profitable form of banking, as proven by the experience of other countries, especially of Scotland. That little country had 1,065 banks in 1902, bringing banking facilities to every village in the land and extending to its small customers these facilities on as favorable terms as to the millionaire in the metropolis. If our farmers and small traders generally knew how much they would be benefited by the Scotch system, we should encounter little delay in Washington.

"Other countries have elasticity of issue of bank notes. We have none. Our system is rigid. This may be illustrated by one elevator which has only the hard rock floor below it, which in its fall is smashed and the passengers injured or killed, and another which, striking a safety air cushion, allows the weight to drop slowly down and avoid serious consequences.

"If our banks had an expanding and a contracting elastic cushion below them, such as banks in any other lands, they would avoid the violent and disastrous shock to which they are now suddenly subjected in the periods of financial distress. In other words, our banks would have it in their power to issue a certain percentage of emergency currency—the soft, pliable cushion, which would break the blow and, as a rule, prevent the loss of confidence that precipitates panic.

"Please note that after the cushion has once served its purpose and been crushed, it must again be filled and put in place exactly as before, prepared to receive and soften the next pressure that falls upon it. So with emergency bank notes. Take one illustration: Every time the crops have to be moved between two and three millions of additional currency are required for this special purpose. Our banks have no power of expansion, and yet, here at hand is an automatic device which would adjust itself without the slightest strain to the task. More than this, our neighbor Canada has proportionately the same demand and is using this device successfully, while our go-ahead country lags behind. European nations all have it.

"Mr. Fowler has shown that our present discreditable banking system involves a loss of at least one hundred and fifty millions of dollars per year from the unusual requirement that currency be secured by Government 2 per cent. bonds costing par. The purchase of these bonds withdraws money from actual banking facilities. Other nations secure their note issues without lessening the banks' power to meet business demands. They make currency notes the first lien upon all other assets, and as banks cannot issue such notes to an amount exceeding their capital, loss by note holders is unknown. Our Government could exact a fund from banks ample to secure the currency, as the two bills now before the country suggest, upon emergency notes. It is estimated that less than one-half of 1 per cent. would be ample, so small is the risk. Our backwardness in this department may be due to prevailing prejudices inherited from the past. They should be overcome. The Civic Federation, representing as it does both labor and capital, is especially fitted to perform a great service here. It is not creditable to our country, foremost in many departments of human activity as it is, that such an old-fashioned, rickety piece of antiquated machinery as our present currency system should be exhibited to the world.

VICTOR MORAWETZ, Chairman Executive Board of the Atchison, Topeka & Santa Fe Railway Company, spoke of the need in a progressive country like ours for a very considerable expansion of bank credits to meet the requirements of business and enterprise.

Recent experience has shown that while the minimum reserves required under the National Banking Act are sufficient in ordinary times they are not sufficient at all times. Bank credits can be kept within the limit of safety and be adjusted to meet the necessities of exceptional conditions only by vesting in some competent authority charged with the supervision of the entire credit situation a power to force a contraction of credit or to allow an expansion when necessary. In England this control is exercised by the Bank of England, by increasing or lowering the rate of interest which it charges on loans and discounts, thereby increasing or reducing the reserves of the bank against its deposit liabilities. In France and Germany the control of the credit situation is exercised by large central banks, through the issue of bank notes, which, however, maintain very large reserves, the Bank of France sometimes keeping a reserve of 75 per cent. and the Imperial Bank of Germany a reserve of 50 per cent.

There is probably no country in the world where the volume of currency in circulation and the demand for bank loans and credits fluctuates more widely than in the United States. The great expanse of country, the annual requirements of the harvest season, the prevailing business activity and enterprise, the rapid and unequal increase of population and business in different sections contribute to this result. There is no country in the world where intelligent control over bank credits and bank reserves is more needed than in the United States, and there is none where it is more conspicuously absent. Each of our six thousand national banks, besides State banks and trust companies, acts in its individual interests independently of the others, with a tendency to expand credits at all times to the limit permitted by law. The establishment of a large central bank, clothed with the necessary duties and powers to supervise and control the credit situation, would not be practical or desirable in the United States.

The beneficial results of a large central bank would be obtained by an association of the national banks in the nature of a large clearing house association, for the purpose of enabling each member of the association to issue notes for the joint credit of the associated banks, depositing a proper cash reserve for the redemption of the notes and securities for the difference between the amount of the issue and the reserve deposited. The minimum reserve should be kept at at least 25 per cent. of the notes, but the managing board should have power from time to time to increase this percentage. The Government should have control over the notes issued by authorizing the Secretary of the Treasury to increase the percentage of the reserves to be kept by the banks. The Government, through the Secretary of the Treasury or the managing board of the joint issue department, representing the judgment of the bankers throughout the country, could at any time force the contraction of outstanding notes and of bank credits generally by requiring an increase of the note redemption fund. To regulate from time to time the percentage of reserve would be the great function of the board of managers. By so doing the board could, to some extent, regulate and equalize the prevailing rate of interest and hinder the export of gold when this is threatened by temporary redundancy of bank reserves.

The plan provides intelligent control over the credit situation through a board of leading bankers under Government supervision and control. It provides a really elastic system of notes with proper reserves. It would avoid the political danger inherent in any plan under which the Government is to lend its credit to the bank. Having regard to the uncertainty of politics and the financial heresies which have prevailed and still prevail in various sections of the country, any expansion of the present system of issuing bond notes upon the credit of the Government would set a very dangerous precedent and probably result in many future schemes for the inflation of the currency.

THEODORE MARBURG, of Baltimore, dealt with the question, "Do we want an asset currency?" The present crisis is largely a question of credit. Industry on its present scale cannot proceed without the aid of credit: Men would want bread while waiting for the products of their labor to be finished and exchanged. However intangible, credit is based upon two very substantial things, capital and money. It is capital that is loaned, but the bank is the agent and money is the language, and to a great extent the the instrument of the loan. The element of flexibility in our currency would have modified undoubtedly the autumn crisis each year, but there is no assurance that even such a salutary expedient would have

entirely prevented the crisis. Any device which would have provided a large permanent increase in the currency, other than that based on the money metal, would probably have launched us in the midst of the wildest speculation.

In the consideration of the currency question we must protect the money basis. Gold is at present the money stuff of practically the civilized world and no prominent commercial country can afford to adopt any other than gold as its money basis. Our national bank note, based upon government bonds, is credit currency, and so long as the national bank currency is not too large a proportion of our whole circulation we run no serious risk in continuing the system. United States notes, likewise credit currency, are more dangerous because they offer a temptation to the national legislature to provide funds in an emergency by inflation pure and simple.

A rich country can have its share of gold, and will have just as much gold as its system calls for and no more. The bank note currency passes as money, takes the place of money, and releases so much gold from service. Unless it be taxed to a point where it is unprofitable to keep it in circulation, in ordinary times asset currency is among the devices which must be characterized as dangerous.

Is the experience of other countries conclusive? Canada is cited as an instance, but apart from the fact that the amount of Canadian money as compared with ours is so insignificant, and its trade so small that its experience would be of little value, it may be noted that the supply of gold and silver in the United States was three and three-quarter times as great as the uncovered paper, while in Canada it was less than the paper. If we consult European experience we find the stock of gold and silver in Germany four and three-quarters times as great as the uncovered paper, and in France and the United Kingdom each five times as great as the uncovered paper. To all of this the advocates of an asset currency in the United States may reply, "What do we want with so much gold anyway; asset currency is cheaper?" Our answer must be that in a country with such a spirit of enterprise, not to say tendency of speculation, as the United States none but the best money is good enough. An abundant supply of gold is in itself an element of national strength. We want safety and uniformity, not only in ordinary times but in extraordinary times, in times of stress and trial. Asset currency would undoubtedly introduce a much needed element of elasticity into our system, but is it the only way or the best way to attain this object? Most of the plans before the country fail to tax the proposed issues heavily enough to cause them to be withdrawn in ordinary times. Making no adequate provision for contraction, they threaten a permanent addition to the currency and a loss in our gold holdings.

DAVID G. EVANS, of New York, presented briefly the plan of securing the deposits in national banks by having the Government act as a trustee of fund formed by the national banks to guarantee such deposits. He proposed that the national banks be taxed about one-twentieth of 1 per cent. of the average deposits to form a fund to be placed in the hands of the United States Treasury Department. under the supervision of the Comptroller of the Currency, which fund should be used to reimburse the national bank depositors in case of the failure of a national bank.

Its underlying idea is that most of the people in the country believe that at present the Government is behind the national banks. When they fail, and the people find that the Government is not behind them, there is disappointment and distrust of the entire system. People familiar with human nature know that when a dark cloud begins to hover over our financial system the people will seek to take their money out of the bank, but if they know that the Government is really behind the banks—our great national Government, with absolutely no politics in this matter—they would not want their money This is human nature. You tell a man he can have it and he doesn't want it.

HORACE WHITE, replying to the arguments of Mr. Evans, stated that, apart from the large deposits in State banks, trust companies, savings banks and in private banks, there were recently in the national banks deposits to the amount of $4,200,000,000. Therefore, the proposition amounts to this, that the United States Government shall assume a demand liability of $4,200,000,000. All the banks in the world could not meet such a demand. It is said that if the Government was behind the banks the people wauld not want their money. Now, in 1893, that is just exactly what they did. Beginning in August, 1893, they continued it for nearly four years. Just as fast as the Government could negotiate a loan they would take their money away, and they continued the run until the Government had paid out $183,000,000 of gold over the counter.

Moreover, such a guarantee on deposits would be a premium on recklessness in banking, for it would relieve depositors from the need of discrimination in the choice of banks in which to make their deposits. The banker could take more risks if his depositors were protected. The morale of banking would be lowered and bad banking methods introduced into our system.

ALFRED O. CROZIER, of Wilmington, Del., stated that the discussion appeared to him rather one-sided. "I consider," he said, "the scheme for an elastic currency a plausible delusion. The plan seemed to overlook the Constitution of the United States, which vests in Congress, the responsible government for the people, the right to provide money for the people. All who have spoken to-day believe that this power should be conferred upon the associated banking interests of the United States. Now, if we farm out the responsibility for our money to a syndicate of bankers and let them handle it, is not it possible that they may use it for the purpose of moving the prices of registered securities up and down like a pump handle? A leading officer in a Wall Street trust company told me the other day that we needed elasticity of our money when the crops had to be moved. My reply was, 'Then provide enough money for the people's maximum requirements.' That is the duty of the Government under the Constitution, but it is not the duty of the Government under the Constitution to provide that as soon as that demand for the maximum amount of money is over there shall exist some power to contract the supply of money solely for the purpose of keeping competition out that would lower the interest rate. The scheme of elasticity is nothing more or less than a scheme to keep up interest rates against the producers of this country."

SARAH S. PLATT DECKER gave a spirited defense of the action of the women of the country during the late financial crisis. During the trouble serious criticism was passed upon the action of women depositors.

The property held by women at present is far beyond any former holdings, and their obligations are the same as men. But the attitude of business men toward the former is wholly different. "If a woman owes her grocer a hundred dollars, even though she may have paid every bill promptly for ten years, he will begin proceedings to collect if there is any financial trouble; while her brother will be allowed to continue in indebtedness for an indefinite period. No care or thought is taken by business men to uphold the women's credit.

"With all this distrust of women in business, it is the rarest instance that a woman or a woman's organization fails or defaults. Thousands and thousands of dollars pass daily through the hands of treasurers of women's organizations with absolute safety and accuracy. All over the land are found women's clubs, solvent, prosperous, managed upon the most conscientious business principles.

"Unfortunately, the lack in the present system of any protection against speculation and improper loaning of banks and trust company funds, and the lamentable fact that old-fashioned moral fiber and business honesty are either in hiding or have disappeared, have combined to render the women of the country suspicious and distrustful."

PROTECTION FOR THE PEOPLE'S SAVINGS

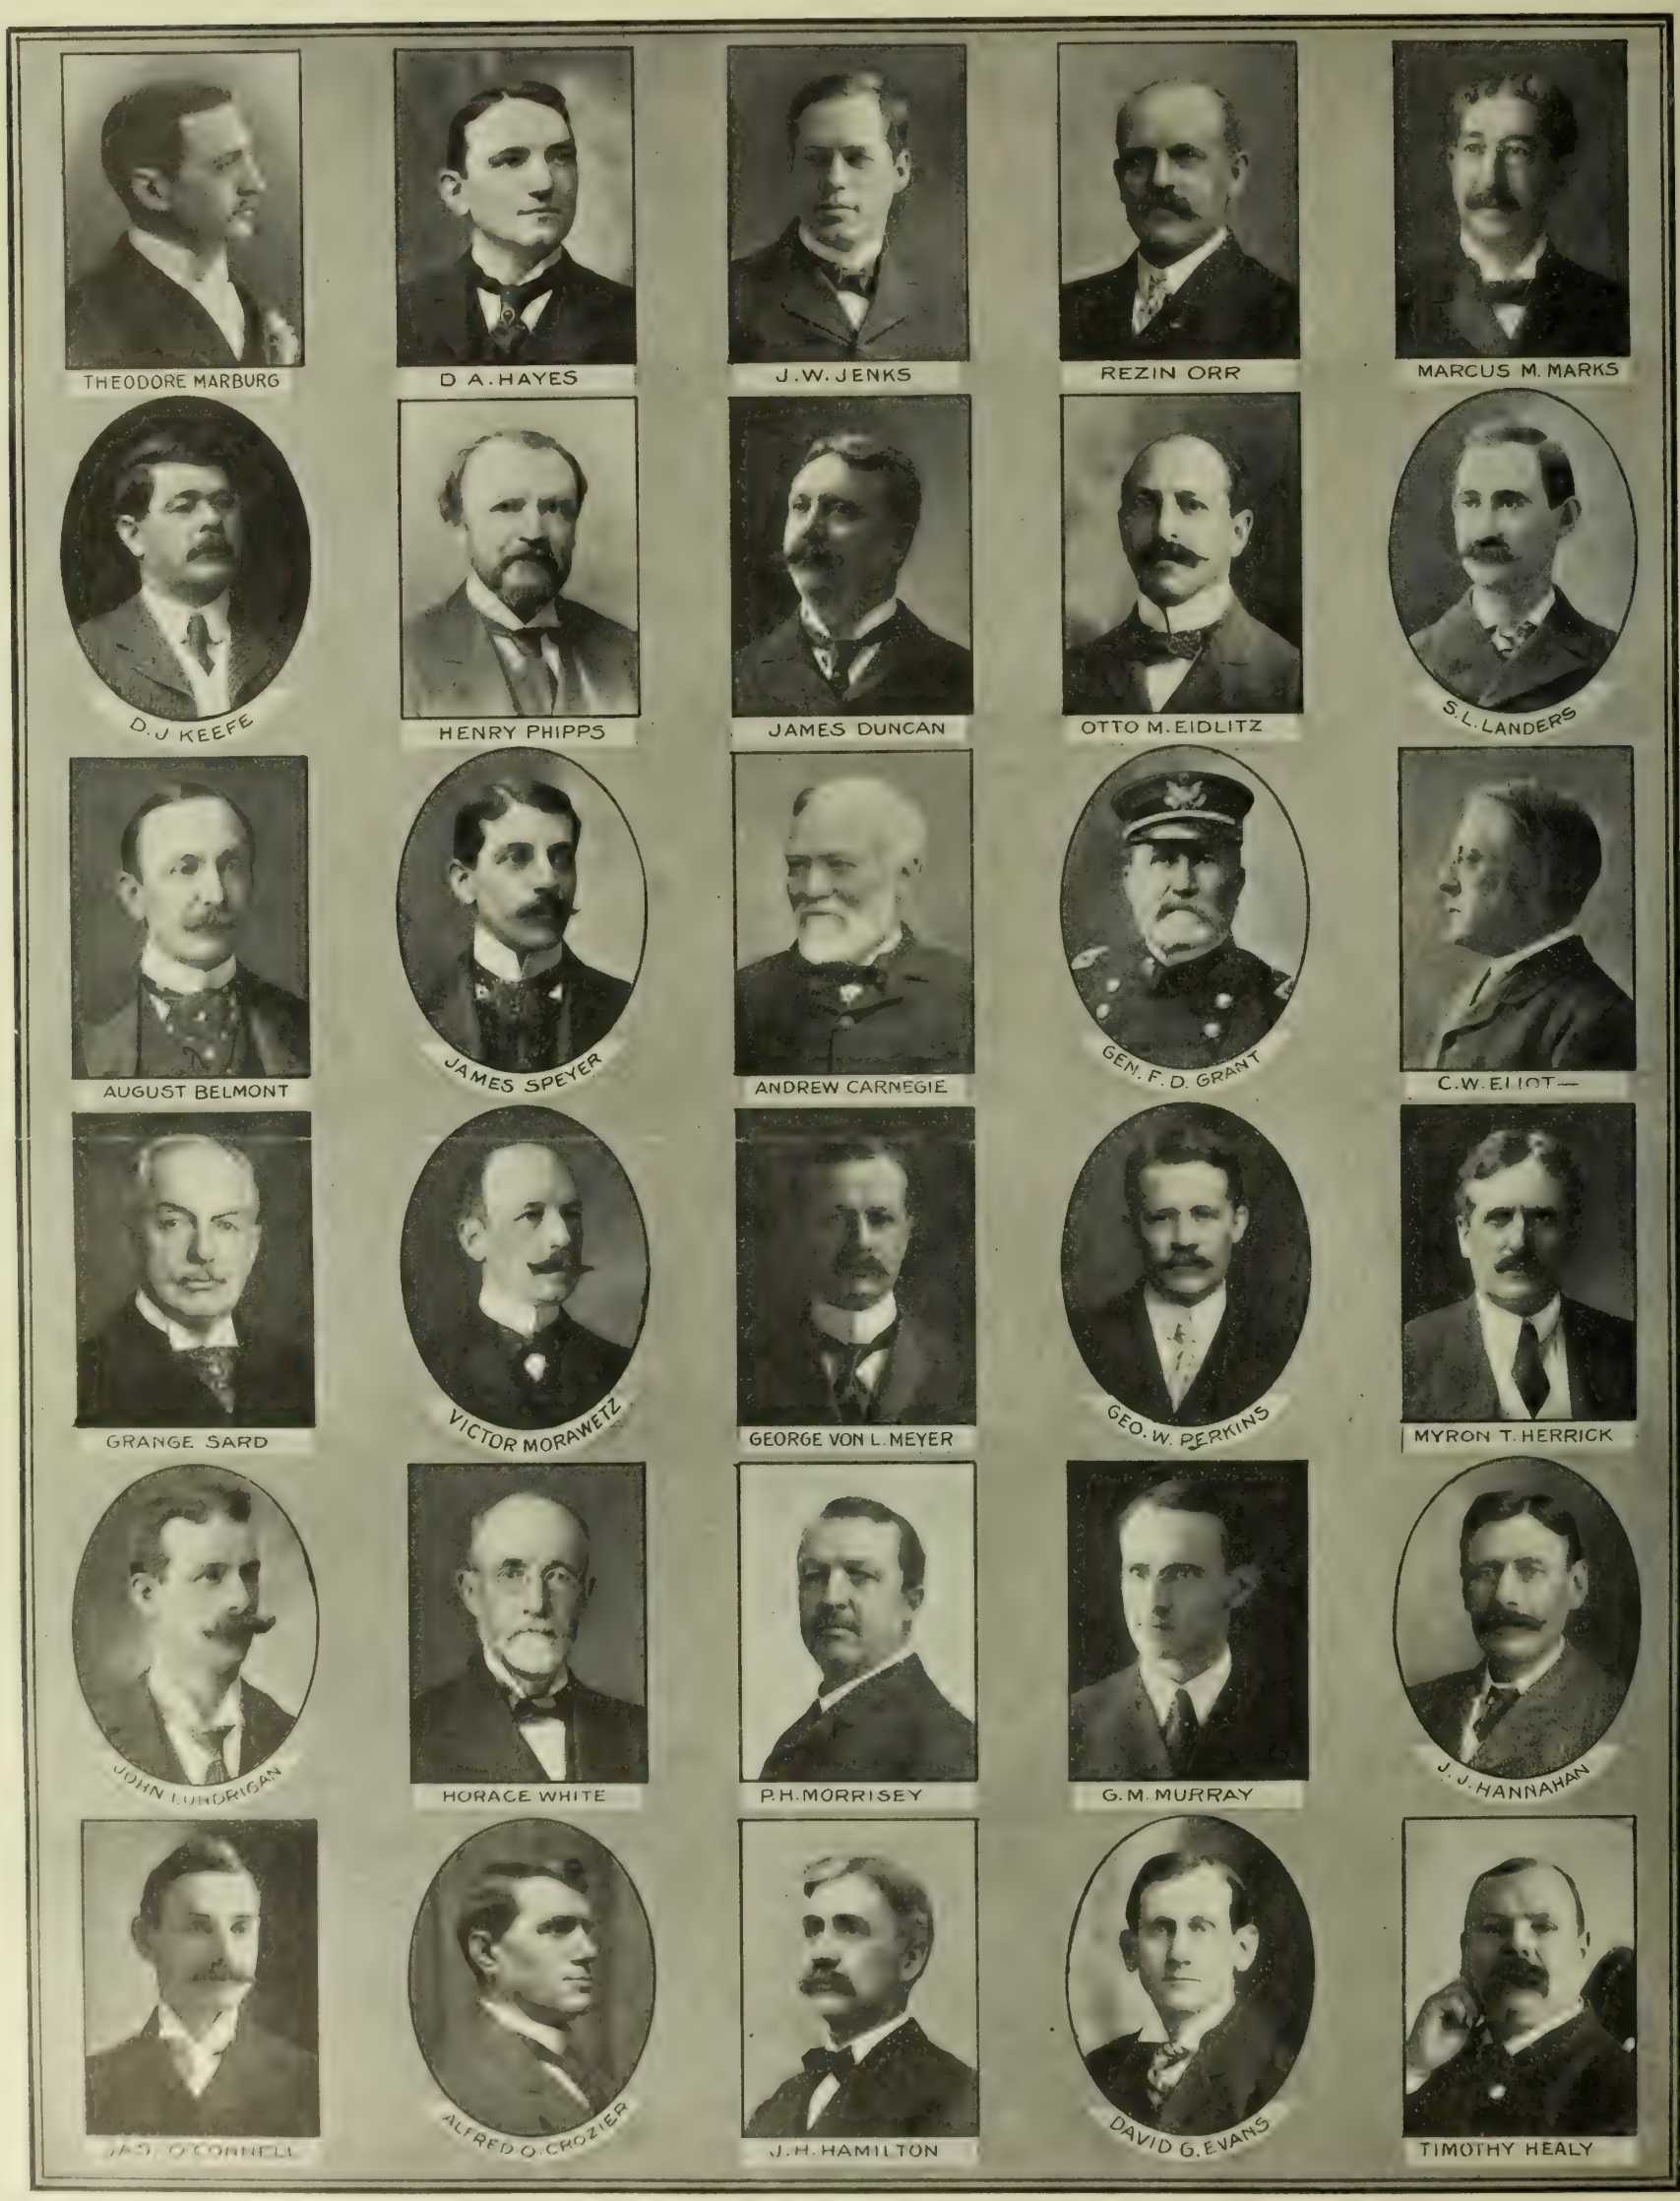
POSTAL SAVINGS BANKS, SAVINGS INSTITUTIONS, BUILDING LOAN ASSOCIATIONS — A RECORD AND A PROMISE.

THE second session of the meeting on the afternoon of December 16, Mr. James Speyer, chairman, was devoted to the subject of "Savings Deposits." Besides the formal addresses reproduced here in abstract, the meeting was characterized by a lively interchange of questions and answers.

POSTMASTER-GENERAL MEYER, in speaking of his plans for the extension of the postal service, called attention to the fact that the postal deficit was steadily decreasing. From being 43 per cent. of the expenditures fifty years ago, it had dropped to 6 per cent. a year ago, and in the last fiscal year, ended June 30, 1907, to 3½ per cent.

The recommendation of the postal savings bank is to encourage economy and thrift among our people and to afford a place of deposit free from any possibility of doubt or suspicion, for vast sums of money which might otherwise be hoarded, but are kept out of circulation through ignorance or lack of confidence. We are annually sending out of the country vast sums of money, which last year amounted to $72,000,000 to European countries alone. Foreigners came over here with preconceived and prejudiced ideas against our institutions. They have confidence only in the Government. They use the Government for their shipments of money abroad because we have a fixed rate of exchange, but what they send abroad represents only a part of their savings, for some of it is retained here. Throughout the recent disturbance people have been coming to the post office and asking the postmaster to take care of their money. When this was refused they have in many cases bought money orders payable to themselves, good for a year. In two States I find the amount of expired money orders over a hundred thousand dollars in each case. This money will not be lost, but it will cause the individual considerable trouble to get it back. The banks of the country are not paying sufficient attention to the encouragement of savings. Ten or eleven States contain 92 per cent. of all savings bank deposits. Furthermore, hundreds of thousands of people live where they have no access to banking institutions of any kind, while the postoffice is at their door.

I have suggested to the Congress that the rate of interest that we pay to depositors be about 2 per cent., and that the limit that any individual or association could deposit shall be $500. The system proposed is a very simple one. The rate of interest is low, that there may be no competition with banking institutions. It will withdraw no money from savings banks or trust companies. The money will come from other sources. The Postoffice Department will seek to get it back instantly into the channels of trade by depositing it in the national banks in the locality of the postal savings bank where the money has been deposited.



You will readily see that we cannot deposit it in any other institution but the national bank, for it is important that the depository should be under the jurisdiction of the Government. We have safeguards through the examinations of the Comptroller of the Currency, and by reason of that fact the Government is a preferred creditor.

If the postal savings bank had existed in the late financial flurry, when small depositors grew frightened and drew their money from the banks and were looking for a safe place to put it, they would have deposited this money in the postal savings banks. Being then instantly deposited in a strong national bank you can see at once that the currency stringency would not have occurred to the same extent that it has occurred.

At the conclusion of Mr. Meyer's address a running fire of questions was kept up which elicited important information in regard to the details of the proposed system. The Postmaster General, in reply to a question, stated that he did not believe the money deposited should be secured by bonds. If the banks were asked to provide collateral security they would be less willing to pay interest upon these deposits.

Mr. Carnegie stated that the postal banks of Great Britain allowed an interest of 2½ per cent., and he would be sorry to see less offered by this country. Mr. Meyer's reply was that the Government to-day borrows money at 2 per cent., and he did not see why the Government should agree to pay more than it could borrow at; that the primary object of the institution was to encourage economy and thrift and not to see how much money could be given in return for deposits. What is wanted is absolute security. If a transaction can be rounded up by which the money boards itself, the Government is put to no expense. The money returns to the channels of trade in such a way that it is not taxed upon the rest of the people. The point is that we should not tax one class to give to another.

The practice of other governments of investing these deposits in government bonds being urged, Mr. Meyer again stated that as the Government bonds, under the present law, were the basis of currency to do anything which might be difficult for the banks to get the Government bonds would result in currency restriction. One reason, he explained, for drawing the bill in so simple a form was to avoid the question of investment. Previous plans have provided that the money remain in the Treasury, but such an addition to Treasury holdings would be a temptation to reckless legislation. One of the many

PARTICIPANTS IN THE EIGHTH ANNUAL MEETING.

troubles to-day is that too much money is locked up in our Treasury.

A member stated that in New Zealand money could be deposited in one postoffice and withdrawn in another, and asked whether the same provision was contemplated in the United States. The answer was that for the present this was not anticipated, since it would too greatly complicate the system, but the same result can be obtained by withdrawing the money and taking a money order on another point.

The advantage of the system lies in the universality of the postoffice, and it would be comparatively simple to make adjustments which would permit deposits to be made also through the rural free delivery agents.

ANDREW MILLS, president of the Dry Dock Savings Institution, and a member of the committee appointed by the Governor to recommend improvements in the banking laws, gave an interesting account of the operations of savings banks under the laws of the State of New York.

The first institution in this State was established in the year 1819, under the name of the Bank for Savings of the City of New York. Its first prospectus said it was intended to furnish a secure place of deposit for savings of mechanics, manufacturers, mantua makers, cartmen, seamen and laborers; in short, for all who wished to lay up a fund for savings for the benefit of the family or for old age. The institution started nearly a century ago, and is in existence to-day, one of the largest and strongest of them all. Its success encouraged others to follow and to-day we have one hundred and thirty-five in active operation in the State. Prior to 1875 special charters were issued, but in that year a savings bank law was passed which made all charters conform to one standard and brought about new improvements. A savings bank under this law is a philanthropic corporation without capital stock, which pays no dividends except to its depositors, under the management of a board of not less than thirteen trustees, who can have no financial interest in the institution under their charge. The trustee is prohibited from either directly or indirectly borrowing the funds of the institution, or from receiving any fee for his services as trustee. Salaries are paid only to the necessary officers, who devote their entire time to the affairs of the institution.

The maximum amount allowed any depositor is $3,000, exclusive of interest, and if by accumulation his account exceeds $3,000, there can be no interest paid on the excess. The institutions are intended for small depositors only, and this rule discourages those who seek to use them as investments. There is an erroneous impression that the savings banks are used by the rich. The Dry Dock Savings Institution has 70,000 depositors, with an aggregate deposit of about $34,000,000, or an average of about $468 to the account. A recent examination showed that out of the 70,000 accounts, over 824 had reached the maximum of $3,000, and most of them by a gradual accumulation of what is legitimate savings bank business.

To safeguard investments the trustees are allowed to set apart a small portion of the income each year to form a guarantee fund to provide for any possible loss through deterioration in value of the securities, or otherwise. The fund is limited by law to 15 per cent. of the deposits.

On January 1, 1907, the savings banks of New York showed deposits of $1,362,000,000. Thus the savings bank depositors of the State of New York have enough money in their savings banks to pay the entire debt of the nation and have $84,000,000 left. Of this sum $688,000,000 are invested in first mortgages on real estate. The reserves of the bank were first used to aid depositors to become householders, but many of the mortgages are made to business men supplying the means to erect storehouses, office buildings, apartment houses and tenements, and some loans, and more than would be thought have been made in some of the exclusive residential districts of the city. It sounds strange to say that the tenement house dwellers on the East Side have loaned the millionaire money and taken the house as security, but such is the actual fact.

A large part of the resources—over forty millions—are invested in the bonds of States, cities, counties, villages and school districts. Not long ago statistics were gathered which showed that outside of what is now the Borough of Manhattan, 80 per cent. of the municipal debt of the State of New York was owned by savings banks. Another portion of the resources are invested in the underlying mortgage bonds of a limited number of railroads, an investment which is carefully safeguarded by law. The total cost of administering the care and investment of this vast accumulation in the year 1906 was $4,600,000, or 3-10 of 1 per cent. The savings bank is of the greatest importance to the State, every savings bank book is a policy of insurance against anarchy and social disorder. It is of importance to the individual, it promotes thrift, industry and economy, and helps to make him what every citizen of our Republic should be, an independent man. In these days when everything corporate is the target of indiscriminate criticism and when every officer of a corporaton is, in the minds of many, an object for suspicion, I would have it remembered that there are to-day thousands of men good and honest, conservative men who are giving their time and strength to the care of the interests of the savings banks depositors and that their only possible reward is the consciousness that they are doing something to help their fellow men.

MYRON T. HERRICK, of the Cleveland Society for Savings, said: The Postmaster-General desires to establish postal savings banks to encourage habits of economy and thrift and to afford a safe place for deposit of sums of money which might otherwise be hoarded and kept out of circulation through ignorance or lack of confidence. But are the people suspicious of banks as now constituted, and are they without confidence in the integrity of those who control the banking power of this country? Its banking power is estimated at $16,000,000,000, that of the rest of the world $20,000,000,000. This banking power is made up of the capital, surplus, undivided profits, deposits and circulation of national and State banks of every character. The predominating item in the list is deposits. Is it possible to infer from such a showing that there exists a serious lack of faith in existing financial institutions? Conclusions drawn from savings bank deposits alone are equally impressive. Such deposits in the United States are reported in 1906 as $3,480,000,000, and those of the rest of the world $8,245,000,000. In other words, with a population of about one-twentieth of the world, our savings banks hold considerably more than one-third of all the world's savings, belonging to the thrifty and economical. Does this indicate a lack of confidence? The average savings deposit in this country is $433, more than one-half larger than any other country. Savings deposits per capita in the United States are $41, and are exceeded by those of six nations only. Canada and Great Britain, whose postal savings banks are frequently cited to show the advantages of such institutions, have per capita savings deposits of but $11 and $23 respectively. It is true that a large proportion of the savings deposits of this country is held by the banks of the older and more densely populated Eastern States. This is but a natural condition since the people of the West have use for their funds in the purchase of farms, improvements of all sorts, and in the building of homes. When the time comes that they also have surplus wealth, savings institutions will be established to care for it and the money will continue in its natural channels.

Is there anything in the recent history of banking in this country to warrant the assumption that the existing institutions are not the proper depositories of the people's savings?

The record of mutual savings banks in this country—probably the ideal form of savings banks—for stability and for unselfish devotion to the interests of the depositor, is probably unparalleled in any country of the world. The record of the other class of financial institutions that receive savings deposits, the trust company, while not quite so plain, is still admirable. It is a comparatively new type which has not yet quite found its proper sphere, but serves a real need. It is only a question of a short time before it will rank equally with the older types of financial institutions in conservatism and stability.

It is now proper that we make a hasty survey of the Government's experience in banking. The part which it took in the management of the two United States banks was not altogether to its credit, and yet these two banks were infinitely superior to the Sub-Treasury system that followed, which has ever been a drag to the industrial and financial progress of the country. The Government's management of the currency, properly a banking function, has been equally to its discredit. The issue of greenbacks, the coinage of silver under the Bland law, and the issue of Treasury notes authorized by the Sherman act, are but a few of the unfortunate measures that none but a country of marvelous resources could have withstood. For the people have now finally awakened to the fact that they have borne the burden of the banking operations of the Government, and that their welfare would have been much better served had the Government kept out of the banking business. Are we not, therefore, under the circumstances, justified in concluding that the interest of the nation will be better subserved by leaving the savings of the people where they are?

The Postmaster-General refers to the immigrants who, he says, distrust the integrity of our banks. The class of foreigners who become panic-stricken at the slightest provocation do not possess implicit faith in the beneficent designs of our Government as to either their persons or possessions. About the time they have learned to put their faith in our Government they will also have become convinced that our savings banks are, after all, to be trusted.

Postal savings banks have not been an unqualified success in other countries. A recent issue of the London "Statist" severely criticises Government savings banks, intimating, among other things, that the deposits have not been so invested as to give the depositors a decent return for their self-denial and thrift. Where postal savings have been used to bolster up the credit of the State, the gain of the State has proven the loss of the depositors, and has caused a continuous rise in Government stocks and a corresponding decrease in interest. With all these facts before us, the enormous aggregate of savings in this country, the adequacy and conservatism of savings banks as now organized, the uncertain success of the Government whenever it has undertaken banking functions, to my mind but one conclusion can be reached, that absolutely no need exists for postal savings banks here and that the system would be productive of much more harm than good. Let us settle the currency question first.

One of the basic principles of our form of government is that it shall touch the citizen at as few points as possible, consistent with the preservation of order and individual rights. In recent years there has been a noticeable movement in the other direction, but it cannot be too strongly emphasized that any addition to the power of the Government to interfere with the daily life of its citizens violates our traditions and contracts the field open to individual initiative. Do not let us forget that it was the people who made this government, and not the government the people. Democracy is faith in man, and in man's wisdom and ability to work out his own destiny, and that faith must be preserved, if this country is not to repeat the history of the republics of antiquity, and perish from the face of the earth.

JAMES H. HAMILTON, of the Social Settlement, spoke of the Post Office Savings Bank as an educational institution. He believed that if the Government were to establish such a system that it should be with full recognition of its educational purpose, and not as a commercial undertaking. We recognize the necessity for universal common school education, the great desirability of free public libraries, but the need for appropriate culture on the economic side has not been fully recognized. It is the province of the savings bank, whatever its form, to inculcate and encourage self-denial. If united to industry and ordinary intelligence, it will lead to proprietorship. It teaches the lessons to those who most need them; its students are its depositors, its graduates those whose savings have found investment in stock, public or private, or in real estate securities, or in the ownership of land. Like any other school, it should seek to graduate as many of its pupils as possible, and this should determine its policy. Having in mind the development of a strong economic type in all sections of the country, the post office system has evident advantages over all other plans. The trustee system in America works superbly in spots, but great sections of our country are unfamiliar with the institution. Taking our country as a whole, we may be about as far advanced in savings bank culture as Russia in her common school facilities.

EDWIN F. HOWELL, former president of the New York State League of Building and Loan Associations, presented for the consideration of the meeting a digest of the business of the Building Loan Associations.

There are upwards of 5,500 of these companies in the United States, with a total membership of 1,800,000 persons, and total assets of $700,000. The States of New Jersey, Pennsylvania, Ohio, Illinois, Massachusetts, Indiana, California, Missouri and New York lead in the number of these institutions. They are mutual banks whose funds are invested in one line of securities; namely, mortgages taken upon the property of their own home-seeking members. They have their own place to fill and do not conflict with other financial institutions. Their membership is drawn from the great middle class, and embraces the weekly or monthly wage earner and mechanics, tradesmen and clerks. There is no limit to the size of an association. Its depositors are its members and elect annually their officers and directors. Like other financial institutions, the clientele is divided into a depositor or creditor class, and a borrower or debtor class. Every borrower, however, must also be a depositor and member of the company.

Every home-seeking member who borrows, gives his bond, secured by a first mortgage upon the home he has built or purchased. These loans are repaid in instalments of both interest and principal, such instalments being generally so adjusted that the cost does not exceed the rental value of the mortgaged property. Payments are made weekly or monthly, so that the burden will fall upon the member in the same manner as the rent of a similar building would. To secure the necessary funds to supply demands there must be depositors who are not home owners, and, as the average loan is from $1,500 in the country, to $4,000 in the larger cities, and as the average deposit is about $400, an association is composed of from four to ten depositors to every borrower. The

rate of interest on mortgages prevailing in the Eastern States is from 5 to 7 per cent. per annum, and the rate of dividends or earnings to the investing depositor from 4½ to 6 per cent. The principal features, therefore, of a Building Loan Association are the encouragement of home building, the providing of a safe, equitable and certain method of acquiring homes, the payment of indebtedness thereon by weekly or monthly instalments, which take the place of rent, a voice for all in the management of the company, almost absolute safety in the investment of the funds of depositors, and the encouragement of thrift on their part by the regular saving of small stipulated sums. In the savings bank, loans are incidental to its chief idea of hoarding, while in our institutions, the central idea is the creation of homes for our membership and our saving department is incidental thereto. Its funds are as well safeguarded in a properly conducted Building Loan Association as they are in any other financial institution of the country. Its object is commendable and its theory is sound. While the love of home owning exists in the human breast the sphere of its labors and influence will never grow less.

IS COMPULSORY ARBITRATION PRACTICABLE?

WORKINGS OF THE NEW ZEALAND LAW—THE CANADIAN INDUSTRIAL DISPUTES INVESTIGATION ACT—DEFECTS OF COMPULSORY SYSTEMS

THE sessions of Tuesday, December 17, were devoted to the question of compulsory arbitration of industrial difficulties. The morning session was presided over by Mr. Isaac N. Seligman; the afternoon session by Rev. Thomas R. Slicer, who later ceded the chair to President August Belmont. The second session being a continuation of the debates of the morning, the abstract of proceedings is here presented as a whole.

HUGH H. LUSK, of New Zealand, spoke of the compulsory arbitration law of that country. In form the law is not compulsory upon all men, but only upon those who become amenable to it by registering their associations under the law. Since associations, both of workers and of employers, are generally registered, it is and has been for twelve years now past absolutely compulsory arbitration. About six years ago the law was extended to the Commonwealth of Australia, where it is now in force. In New Zealand compulsory arbitration has hitherto been a great success. It has had the effect of preventing all strikes and all lockouts for twelve years in that country until the other day. The history of its extension to Australia has been the greatest tribute that could be made to its success in New Zealand. It has not been in all respects as great a success in Australia as in New Zealand. New Zealand has a million white inhabitants, Australia nearly five million; therefore, by the extension of the law from New Zealand to Australia you have got, as it were, a stepping stone from which you can easily see how far it would be likely to be a success in a country as much greater and as much more populous than Australia as is this country.

The law of New Zealand, and now of Australia, compels all associated workers who are registered under the act to submit to the law if they have causes of difference with their employers.

In the first place, they have to go to a member of the Board of Conciliation, one of which exists in any considerable district, and the Conciliation Board failing in its object they can remove the cause into the Court of Arbitration, which passes final judgment.

For twelve years the law operated without serious breakdown in New Zealand. It has been carried on for five years without a serious breakdown in Australia. Now, what is wrong with the Act and its operations? At first the workers were perfectly satisfied with the court because, as a general rule, it was with them. Later on, the court as a rule has been against them. They have been inclined to the belief that the constitution of the court is unfavorable, the court being constituted of two representatives of labor and two representatives of capital, together with one Judge of the Supreme Court, sitting as president or chairman. They have come to the conclusion that it is the fifth man who really gives the decision. The difficulty in such a case as this is that if the representative man who gives his decision has not the confidence of both parties the court fails in its object. It is believed that the decisions are, in general, those of a man belonging to the capitalist class—since laborers do not often find their way to the Supreme Court bench in any country. This seems to be the bottom of the difficulty both in New Zealand and in Australia.

I do not think you could enact a law either as a Federal law or as a State law, to-day, such as the law in New Zealand and enforce it. The people are not ready for it.

The Canadian plan seems to me to be a step, although perhaps rather a timid step in the right direction. The idea there was that they should bring about such a revelation of the facts in each case as would enable the public to understand them and the public to pronounce upon them. The weakness of the act is this, that the public never gets to the length of understanding them until the evil has happened.

In New Zealand the idea was there should be no strike, there should be no lockouts, there should be no interruption of business, there should be no dislocation of society, there should be no suffering of the workers, there should be no loss to the employers until every step has been taken and everything has been done to make known to the public what is really the right in the cause and compel the people to comply with what is just and right according to the findings of unprejudiced persons. The difficulty is to find persons so free from prejudice that their decision meets universal approval. We need a standard of righteousness which not only the court but every one can understand. This can only be achieved when employers understand that the worker is a partner of theirs; that every worker brings his capital when he brings his skill, and that his capital is entitled to recognition in the profits of the business. If you will lay down in your law that the first charge in every business shall be the necessary wages that would be sufficient to keep people in decency, and, on the other hand, the lowest scale of interest which money commands in the country for the capitalists' share, all other profits could be divided on a scale set forth in the law between employers and employes. There would be something upon which a court could act, which would not be a matter of opinion, and after the first returns had been divided, as provided by law, what you have got to do is to say, "How are the profits to go?" They are not all to go into the pocket of the employer, but to be divided fairly between the man who has the capital and the man who has the skill and the labor. I think it can be done. It has been done on a small scale in many individual cases. What you want to do now, so far as I can see, is to advance step by step.

In answer to the question in regard to the recent slaughtermen's strike in Australia, Mr. Lusk said that the strike of the slaughtermen had taken place in New Zealand about a year ago. The Court of Arbitration had decided that the wages should be so much per 100 for killing sheep and lambs, exported in such large quantities from New Zealand. Among the slaughtermen were a number who had come over from Australia, who are supposed to have been responsible for much of the dissatisfaction with the decision of the court. They claimed the court was prejudiced, that the court had not given them as much as it should have done. At one place about one hundred men went on a strike; the employers applied to the Court of Arbitration, which summoned the men to appear before it. The court fined each man $25 for disobedience to the order of the court, and told them that they could not work in their trade in that district, except on the terms set down by the court. As the men had no funds with which to pay the fines, the court was at a standstill. The matter was transferred to the Supreme Court and the men were told that they could go to jail for three months or pay the fine imposed. It ended by the unions paying the fine.

Mr. Gompers asked whether it were not true that on the reference of a matter between the boot and shoe manufacturers and their workers to the court the manufacturers were dissatisfied with the result of the award and went out of business. Such, indeed, was the case.

SAMUEL GOMPERS stated that Mr. Lusk did not appear to be quite so sure of the success and triumph of that magnificent proposition of compulsory arbitration as he was nine years ago. During the last nine years I have tried to keep posted as to what was going on in Australia in the matter of arbitration. There can be no doubt of the magnificent industrial development of these countries, but may we not take a retrospective view of the past twelve years' development of our history. Perhaps it is necessary to do so, since so many would have us believe that the great development that has come in New Zealand and in Australia is due to the great tranquility which has obtained in industry.

What is the object of our activities? No one who has gone through strikes can have anything but a wholesome desire to avoid them. But strikes accomplish oftentimes what could not be otherwise attained. Talk about the Court of Arbitration bringing about a change in the condition of mine workers as was accomplished by their strike; you could not do it in half a century! I would not have employers do as they please; I would not want workmen to do as they please; but I believe that by the organization of industry and by the organization of labor we are gathering forces conscious of their power, which intelligently and wisely wielded, bring forth a spirit of conciliation that no court of arbitration ever yet was able to impose. There is in the United States more genuine conciliation between organized employers and organized workmen than exists in any other part of the world. Now, in reference to our Civic Federation, its unwritten history is its most important work. It has helped to bring men together. The anthracite coal strike is an illustration. Its adjustment was brought about not by law but by the strength of the miners' organization aided by the Civic Federation.

No matter what may be done in another country, whether it be in New Zealand or in other parts of the Australian federation, in the United States we will protect ourselves against any such law that will either practically or actually confiscate property, and, on the other hand, impose slavery on persons as a penalty for refusing to work, or for asserting that the conditions of employment are onerous and unfair. The workers of this country are not only workers, they are citizens. They believe that among their rights is the right to dispose of one's own body; that there is no ownership in man except by himself; that he has the right of free locomotion to go where he pleases, to work or not to work, to sell his labor or not to sell his labor, and you cannot differentiate a man from his labor.

The organized workmen of the United States want to be helpful in creating a higher degree of intelligence among those who are their fellows. We have our public schools for the children, but what institution is educating the emigrants that come here to the number now of a million and a quarter a year, who but the labor organizations of the United States? We are doing a service to this country of which there has been little or no conception. We are going to do our work. Our men want fair treatment, they want a living wage, and if I know anything about the signs of the times, they are going to get it. They are going to insist upon the exercise of their rights to own themselves as men and as workmen, and as citizens they are going to be helpful to their fellow citizens in the country and in the social uplift.

OTTO M. EIDLITZ, president of the New York Building Trades Employers' Association, said compulsory arbitration for the settlement of labor disputes has, up to date, received no very enthusiastic support from any one prominent in the ranks of the employers or the employed. It signalizes the intrusion of the outsider in family affairs, with a possibility of non-consent by those vitally interested in the question at issue. It is a debatable question whether any compulsory method of settlement inaugurated by those outside of an industry could secure the much-desired end of industrial peace with honor.

Perhaps the nearest approach to compulsory arbitration in this country is the present arbitration agreement between the Building Trades Employers' Association of the City of New York and the unions of the Building Trades. It has been characterized as compulsory, for the reason that the Employers' Association compelled the acceptance of the arbitration agreement by a number of unions through the medium of a lockout. Since two years later a convention was held modifying the agreement, the plan may now be properly called voluntary and mutual. During the year ending November 30, 1906, 433 complaints were filed with the secretary of the general arbitration board. Many were adjusted by the secretary, but as many as 247 cases came before the executive committee, and in four cases special arbitration boards were necessary.

Now, the building industry is only one of the many extensive industries in the city, and though perhaps the most complicated in its divisions and sub-divisions, employing the greatest variety of mechanics, all other industries are proportionately complicated. I believe that the capital invested in our New York building industry, the volume of business transacted

and the number of mechanics employed greatly exceeds the entire business investment and working population of the country of New Zealand, and hence the method employed in that country would be no criterion for the enormous business interests involved in our own country, especially when you have to reckon with the spirit of independence which permeates the individuals on either side.

Under present conditions in our country, while each industry is solving the labor problem in its own way, either conclusively or tentatively, I feel that voluntary arbitration of labor disputes, based upon the joint trade agreement, both sides depositing a cash forfeit as a guarantee of good faith, is the extreme limit to which we can go with safety to industry and the liberty of the individual.

D. J. KEEFE, president of the International Longshoremen Marine and Transit Workers' Association, said: The question of arbitration in its various phases has been before the public for some time and discussed from every conceivable standpoint.

As one who served for a number of years on a State Board of Arbitration and had the privilege of sitting in judgment in a large number of disputes where a great many workmen were involved, I find that arbitration of any description is not satisfactory, and compulsory arbitration, if it means anything, means coercion, and neither the American workman nor employer can be coerced into doing anything they believe they should not do.

My experience in industrial disputes has convinced me, beyond a reasonable doubt, that there is but one way to bring about satisfactory and lasting results between the employer and workers, viz., the trade agreement, where both sides meet, all things being equal, and discuss fully the wages, the hours and the conditions under which the work is to be performed, both parties understanding in advance that they are assuming an obligation that must be respected and adhered to by all the interests they represent.

I hold that an agreement once made should not be deviated from under any circumstances. If either party to a contract feels as though the other fellow got the best of the bargain, the only thing left for them to do is to abide by and fulfil all their obligations until a future conference is had, and then repair or correct their mistakes. Under the trade agreement when a dispute arises relative to the meaning or intent of the contract, or any part thereof, such difference or dispute is a subject for arbitration by the representatives of both parties to the agreement, but pending the finding of such arbitration, under no circumstances should the men discontinue work, nor should the employer discriminate against any member of the union.

G. M. MURRAY, secretary of the Canadian Manufacturing Association, spoke upon the Industrial Disputes Investigation Acts. Premising that he was not authorized to speak for his Association, he believed that so far as he had been able to gather, the verdict of employers was favorable to the act. The consensus of opinion, even where everything did not go the way the employer wanted it, seemed to be that the act on the whole is a very good thing.

If the act is observed it defers hasty action upon both sides, since it provides that pending investigation of the matter under dispute there shall be a continuance of operations under existing conditions. Speaking from the employer's point of view, therefore, it makes it impossible for a grievance committee to wait upon you in the morning with a long list of demands which you must accede to at once on the pain of having your entire force called out within twenty-four hours.

It is stated that in Western Canada nearly all the coal miners are members of the union, but that not more than ten per cent of them attend the union meetings, which would indicate that the union is largely dominated by a few members. If we can believe half of what we hear, these are men of extreme and radical views, and the unions are all too frequently precipitated into strikes against the better judgment of the more sober-minded of their members. The new act makes it a matter of considerable difficulty for agitators within the union to obtain a snap decision to go on strike.

Employers are equally debarred from aiming sudden blows at labor unions, since notice of any intention to alter the rate of wages or the hours of work must be posted thirty days in advance.

The second point I wish to make is that in no sense of the word is the Canadian Act an arbitration act; it is purely and simply a conciliation act. Where it has failed—and in one or two instances the word "failure" was written across the act—it seemed to be because the board of investigation clothed itself with too much formality, conducting its investigations as if it were a court of law, with evidence under oath and stenographic report of proceedings. Now, such a course may be all right where the disputants are not required to meet again, but where they must continue relations as employer and employe it does not promote good feeling. With the highest respect for the Canadian judiciary and for the high prelates of the Church, it may be remarked that the most signal failures of the act have been where such personages presided over the board of investigation.

Quite a different procedure was adopted by Prof. Shortt, of Queens University, Kingston, who has presided over no less than four investigations with remarkable success. Proceedings have been had in an ordinary business office, the parties seated around a long table; there has been no suggestion of a court. The board seats itself at one end, with the men appointed to represent the workmen on one side and the representatives of employers on the other side of the table. The proceedings are most informal and lawyers are debarred from them. The side which has called for the investigation is called upon first to state its case, which is answered by the other side, and then the whole matter is treated in a conversational discussion. There are no reporters present. All information given to the press is given by the president of the board. In this way irrelevant matter is excluded, angry retorts and indiscreet remarks do not find their way to the public.

The act has its weaknesses. While its penalties are enforceable against employers it is practically impossible to enforce the act against employes. The employer who declares a lockout may be promptly arrested and fined, but if his workingmen, to a number of a thousand, go out on strike in violation of the act, it is absurd to suppose that they could all be arrested and brought before a magistrate. Moreover, it would be the veriest folly for an employer who is anxious to get his men back to work to have them arrested. The Department of Labor has attempted to smooth this difficulty over by saying that the men did not understand the act. This excuse carried little weight with those who have an intelligent acquaintance with the circumstances. In every case in which the act has been violated the Government has condoned the offence by saying that the men did not understand the terms of the act. But in the only case where an employer has been guilty under the act, that of Mr. Hill, of the Hill Crest Mining Company of Alberta, he was promptly haled before the magistrate and fined $100 a day during the duration of the lockout. Notwithstanding the weaknesses to which I refer, I think the employers, even those who have seen their men violate the act, would be sorry to have it repealed. While the penalties may never be imposed they stand as a wholesome preventive against rash conduct, and so long as it exercises this deterrent effect the employer will regard the measure with favor.

JOHN LUNDRIGAN, of the New York State Board of Mediation and Arbitration, spoke of the necessity of co-operation among such public agencies as State boards or bureaus established for the prevention or settlement of industrial disputes. To this end he believed it advisable that a national or international association be formed of the State officials and others interested in the subject, which might present and discuss ideas, and the information developed and encountered by practical experience, eventually leading up to uniformity in State legislation, making the same more effective and avoiding clashes of jurisdiction.

The great majority of our citizens who occupy the relation of employer and employe are either not informed on this subject, or, what is infinitely worse, are misinformed. I firmly believe that if we can demonstrate it to be the mission and policy of public agencies not to interfere in matters which are the subjects of amicable discussion or negotiation between employer and employe until plainly demonstrated that there will be an interruption of the industry, and that if such interruption does occur, especially in the case of any public service or public utility, there will be a full and complete investigation which will define responsibility and recommend a solution, public opinion will do the rest.

In my opinion most State departments dealing with this subject are limited far short of their possibilities, in other words, not sufficiently equipped in either help or resources to carry out the principle of public investigation, which, if it is to be effective, should not be spasmodic. I believe, however, that public opinion is crystallizing on this subject to such an extent that legislative bodies will treat such departments with more liberality in the future.

At the same time I am of the opinion that, owing to the immense volume of public utilities and public service industries which are positively interstate in character, the Federal Government should continue to exercise the statutory powers or authority now vested in the chairman of the Interstate Commerce Commission and the Commissioner of Labor, which might well be enlarged to the extent of permitting or requiring the Federal authorities to take the initiative, and, if necessary, providing a separate department or bureau charged with its execution, but limiting its powers absolutely to investigation and recommendation.

REZIN ORR, treasurer of the Amalgamated Association of Street Railway Employes, stated that there was probably no industry in the country which, in the event of controversy between the employer and employe, concerned so much the general public as the street railway industry. Those who advocate compulsory arbitration could refer to no other industry in stronger terms than to this, but I do not believe in compulsory arbitration. I do not believe in forcing individuals to do things. I feel the best results can be obtained, not only in the street railway controversies that arise, but in all others, through the instrumentality of this body that is in session here this afternoon. If we establish a system of compulsory arbitration we would be stepping in and interfering with the duties of this body. Much has already been done by it, and should it to-day go on record as being in favor of compulsory arbitration it would be shirking a duty devolving upon it.

We should settle our own controversies. The two parties directly interested—the people who own the property and the men who operate the cars—should sit down together and talk the matters over to arrive at an understanding. If you take the question out of our hands and place it in the hands of others they are likely to forget some of the most vital and important parts to both parties concerned. Finally, a decision is rendered by such a board of arbitration with results that one or the other of the two parties, and possibly both, will not be satisfied with the decision. So my advice on the street railway industry especially is that the Civic Federation should reach out much further than it has already done. There are a large number of employers who are not yet affiliated with the Civic Federation, who do not understand its mission. Instead of going to the legislature and asking for laws to be enacted, let us get right down and do the work ourselves that it has already been demonstrated can be done by this body.

AUGUST BELMONT: It is needless for me to recall the fact that I publicly expressed myself as favoring a trade agreement, and so I do in principle, and in practice, in connection with trade in general, but I have come to the conclusion that it is not the only and safe remedy for difficulties that arise in connection with public utilities.

In this city the elevated railway and the subway were being managed under the operation of trade agreements with employes. There were two unions, and a disagreement between them precipitated a conflict with the management.

The result was the breaking up of the union, and when I was asked some time afterward by one of its heads whether I was definitely opposed to the employment of the union men on the road I said that it was impossible for a utilities corporation to run the risk of a trade agreement, inasmuch as the law could not enforce one. Further, the number of men employed in a great city like this outnumbers so much their associates in other parts of the country that the national organization cannot control them. Now, I have thought if a law could be so drawn, in conformity with the regulations of the national organization, giving a certain amount of time, that there would be an opportunity for conciliation and precipitate action would be avoided. I believe that the law should treat every man entering the service of a transportation line as having, by that fact, entered into a contract to serve the community, and that he must, as an individual, give a reasonable notice of his intentions to leave the service. Of course, you cannot compel a man to remain in the service of a corporation, but the law can say that when you enter the service of a corporation by so doing you make a contract with the community, and must serve them at least a reasonable time before you stop, and you must give them reasonable notice of your intention, let us say, two weeks. But at the present time any man can put down his vehicle, either trolley car or train, before it has reached its destination—he can leave—and that is the end of his obligation. The community, therefore, runs the risk of a breach of a trade agreement without any remedy at all for its protection. The safeguards suggested would be valuable to the national organizations, and I cannot see for myself why they should not be very glad to promote and bring about a regulation of that kind. It would help them enforce their authority, for at the present time they have no remedy except the expulsion of the local unions. That, as you recall, was done, but the result was no better than if it had not been done. The moral effect, of course, was to satisfy the community that the local organizations here had not lived up to their agreements, but the people ran just as much risk of having their transportation lines stop and traffic suspended.

MR. CROZIER: Mr. Belmont, can I ask you one question.

MR. BELMONT: Yes.

MR. CROZIER: If a company employee enters the employment of a public service corporation at a modest wage and thereby incurs an obligation as a servant of the public should not the corporation which receives the franchise from the public free to

use the public streets, free, a franchise which is not property but a mere license, should not they also have an obligation to the public and be prevented from capitalizing that franchise for $100,000,000, and then charging the public higher rates to earn dividends on that capitalization?

MR. BELMONT: Well, that is rather an awkward question—I suppose I must answer that? But then you have stated your question a little incorrectly, I am afraid, and I might, therefore, say it is not, for that reason, answerable, but I will try and answer you. In the first place, you said that these franchises were granted to operate public service in the streets "free." That is not the fact. You will find that the taxation, if you will look into the matter, is very onerous. The franchise tax itself is very heavy, and the real estate and property belonging to these corporations are taxed also.

In the case of the subway, where a contract was made with the city to operate its own property, the city exacted different terms altogether in lieu of taxation, but in the case of the surface lines and the elevated railway the taxation is heavy, and they are not operating free, as you stated, by any means. Now on general principles, it is important for a corporation to have the means required for its development, and those means can only be obtained from investors, and the corporations are obliged—notwithstanding the regulations that are now being exercised over capitalization—they are and will be obliged to seek the investor with the kind of security that he is willing to take; and in most of these large amalgamations that have been effected between stockholders it has been necessary in the past to offer them, in order to induce them to come together, something in the way of future opportunity to earn on their newly created investment. If the investment turns our unprofitably, of course, it may tend to some criticism if you choose to pass on this; but if they do not lose, and frequently they do not, the amalgamation will result in an ability of the corporation to largely increase its usefulness. In the present instance, the great difficulty with the transportation in New York is going to be that the money cannot be obtained to keep it up to its requirements; that the very hostility which is being shown to-day, while this may be justified, nevertheless is so crippling that when the corporations are asked to give additional facilities it may—I won't say it will—but it may be impossible. And I wish to say in this connection that the alternative suggested is that the city take up the question of ownership and operation. In fact, I judge a great deal of this hostility has been based on the assumption that the alternative would be that the city would undertake what the corporation either would not, or could not do. Unfortunately, the city is going to be unable for a long time to do anything of the kind, because the very threat on the part of a certain portion of the press and community that the city should undertake local transportation and should acquire the means for it has had the effect of frightening the investors in the city's own securities. So that neither one nor the other is in a position to do anything.

The plan is based on the fallacious idea that there is such a thing as public money outside of that which is raised by taxation. Money raised through taxation and rentals is the only real public money that is in the treasury, but the moment you go outside of that remember that both the municipality and the Government itself, either State or National or otherwise, have got to go to exactly the same source for their money, which is then only borrowed money—the investor; and there is no such thing as a standing supply of Government funds. It is a fallacy which here locally we ought very soon to explode that there is such a thing as public money other than that which is derived from taxation. Every dollar of any other funds comes from the investor. The proceeds of every Government bond, every municipal bond, come from exactly the same source that the proceeds of your railroad bond comes from, exactly, excepting that the terms offered by the Government may be more attractive and the chances of getting the money may be better; but if the day comes, like to-day, that the investor cannot do anything, then not even the municipality or Government can get what they need. As a result of attacks upon corporations the investor has been guarding himself and keeping his purse strings tight for the past three years, so that the corporations have been obliged because they could not reach the investor, to, in a great many cases, make what are called short time notes. Those were temporary provisions waiting for this investor that I am speaking about to ultimately take their securities off the hands of the corporations. Now, that is the condition of to-day.

I do not mean to say that that is the sole condition operating unfavorably to-day; it is apart from the currency disturbances, but aggravates them. That is one of the features, and after the currency difficulty has passed you still will have that lack of confidence which does not come from mismanagement of corporations, but from an unreasoning hostility to them, and from a fallacy as to what Government can do in case private corporations are either unwilling or unable to do, and you will find that if the investor, as a result of the general attitude of the public and the Government toward his investment remains frightened—if such attacks keep him in his present state—neither the one nor the other will be able to contribute to the improvement that we all need both in our general railroad transportation and in our municipal transportation.

I did not intend to say so much.

THE EIGHTH ANNUAL DINNER OF THE NATIONAL CIVIC FEDERATION

DISTINGUISHED SPEAKERS DISCUSS PERTINENT SUBJECTS OF PRESENT DAY INTEREST

THE eighth annual dinner of The National Civic Federation, held in the Hotel Astor, December 16, 1907, was a notable and remarkable gathering. Nearly eight hundred guests assembled in the banqueting hall of the Hotel. When the cigars were lighted Mr. August Belmont briefly presented as the toastmaster Mr. Melville E. Ingalls.

Mr. Ingalls said that while it was not his purpose to make a speech, but rather to see that others did so, he was proud of the gathering. "Our officials should feel proud that so many men and women from the busy walks of life have come here to-night to consider what can be done and to talk over the various matters that may be presented. The question is, what can be done to better the relations of capital and labor to each other and to the world? The duty of the Civic Federation is not to decide things, but to attempt to get the facts and lay them before the public that the public may decide as it pleases."

GENERAL FREDERICK D. GRANT, commanding the Department of the East, devoted his remarks to the question of the canteen in military posts. Alluding to the fact that he was himself a total abstainer, he had, after noting the effects resulting from the withdrawal of the canteen from military reservations, come to the conclusion that the sale of liquor under restrictions and complete control is a lesser evil than its sale in the low saloons and vile dens of vice which have surrounded army posts since the canteen was abolished. The canteen in the army was the soldiers' club, their resort for social intercourse and innocent amusements. Beer was sold under rigid restrictions. All profits made by sales in the canteen were returned to the soldiers in the form of additions to their rations, to the supply of their reading and writing materials, and secured them a fund from which to draw their amusements and entertainments in general. They were managed by company officers and were conducted in the interests of the soldiers. On the abolition of the canteen soldiers sought their social amusements and diversions in the vile dens and groggeries outside of military reservations.

"When asked to speak here to-night, I happened to have before me for review, proceedings of fourteen court martial cases and noted of these fourteen cases, involving a total of twelve years' imprisonment, three were trials under charges of drunkenness on guard, and nine upon close analysis proved to be cases of offence committed because of drunkenness that would probably not have occurred except for the existence of the anti-canteen law.

"Referring to the annual reports of the Judge Advocate General of the United States Army for the years 1896 and 1907, two years in which the conditions of the service were quite similar, we find that trials for general court martial had increased from 62.6 per thousand men in 1896, to 65.4 per thousand men in 1907. Trials by inferior courts increased from 571 per thousand men in 1896 to 768 per thousand men in 1907. Like results appear in the Department of the East.

"Because of these verified facts I am convinced that the abolition by law of the canteen in the army is a serious disadvantage to the soldiers, and notwithstanding my own inherent disapproval of the sale of any alcoholic drinks in army posts, I believe it is far better to choose the lesser of two evils and grant to the soldiers the freedom of having their clubs, with the privilege of enjoying moderately light drinks under the strict control of those interested in their welfare, rather than have them constantly subjected to the temptations now alluring them in the vile dens and saloons which have clustered as near as possible to the soldiers' barracks. Although a total abstainer, I am an advocate of the canteen in the army until the time comes when the civil authorities abolish those dens near military reservations kept by vicious persons who now tempt the soldiers of our army to their destruction."

JOHN MITCHELL: I conceive it to be the highest obligation and duty upon every man and woman who has at heart the welfare of our country and the welfare of our people to do what they can to preserve among all classes of people a degree of peace and plenty that will make for the good of all. So far as I have been able to control the affairs of my organization, it has been in the direction of peace—of peace with honor. I should be most happy indeed if the time were here when strikes and lockouts and boycotts and blacklists, with their attendant evils and hardships, would be no more. I am not so sure that that time will come within our lives, but is it not better that we reason together and try and see if reason cannot take the place of force? I don't know whether the people of New York, or the people of our country, know how near they came two years ago to becoming involved in greater hardships than they endured in the great anthracite coal strike, but let me say to you now, that had not ten men met together in this city and talked to each other as reasonable men should talk, the great coal strike which occasioned you so much suffering in 1892 would have been repeated. I am proud to say that I found the anthracite coal operators much different when I got to know them than I did when they were talking to me through the newspapers, and I believe that they have a different opinion of those I represent and of myself than they had five or six years ago.

Out of these meetings much good may come. It is especially important now, when our country seems to be entering upon depression and disturbance in our industries, that we try to avoid the experience we had in 1893, and in all periods of depression which preceded it. We who represent labor—and we who represent capital—have it in our power to do more than the men in Congress to return our country to that prosperity it enjoyed for so many years. Financial, and especially industrial, panics cannot be cured by legislation. They cannot be cured at all, but their evils may be materially minimized and their duration lessened if the men who work and the men who employ will do what is right by each other. Experience in the past has not demonstrated that the way to cure an industrial evil is to reduce wages. At a meeting of the Civic Federation four or five years ago, when there was some depression in industry, Senator Hanna, then president of the Civic Federation, suggested to the men of labor who were there that probably the time had come when it would be necessary for the men to give up some of the increased wages which they had secured during the several years before. I suggested that I thought the thing to do was to stand "pat," but the Senator advised that that was not the way to do. It eventually became necessary for the coal miners of America to give up 6 per cent. of their wages. The result was that we demoralized the entire coal industry, and not only made our miners suffer, but destroyed a lot of coal operators. The people who bought from them did not fail to remind them that they had reduced wages, nor did they fail to take from the operators more than the latter had taken from the miners.

I am not so sure that I shall be as active in the labor movement in the future as I have been in the past, but I hope that I shall be permitted to participate in this Civic Federation movement which has done so much to bring influential men and women together. I trust that each person shall feel that upon him rests a share of the responsibility. Let each of us do our part and see if we cannot extricate the country from our present predicament.

GEORGE W. PERKINS, speaking of the profit-sharing plan of the United States Steel Corporation, said the problem that faced the new corporation was this: Would men on salaries and wages carry on this vast organization directed only by other men on salaries, with no proprietorship above them save the vast and scattered body of security holders. The thousands of men employed by the corporation are divided into two classes, those who work with their brains and those who work with their brains and their hands. While the responsibility of the first class of men is, of course, very great, the opportunity of the second class may be of almost equal importance because in the practical everyday working of the thousands of little and big machines and the general handling of material the man who is actually doing the work can, with surprising frequency, suggest this fact or the other improvement which reduces cost, improves quality and increases output. The difficult problem was how to arrive at some method of compensating the officers of the subsidiary companies for the successful management

and at the same time compensate the actual workers in the plant.

After much discussion and the examination of many profit-sharing plants, the board of directors, in December, 1902, authorized the announcement of the plan which has come to be known as "The Steel Corporations Profit-Sharing Plan." It is composed of two parts, one of which affects the managers, superintendents and others in positions of responsibility and control. After the company has earned its fixed charges, a dividend in a sum sufficient for maintenance and repairs, a certain sum varying from 1 to 2½ per cent., according to the profits, is set aside. Half of it goes to the participants in cash, the other half in stock, though a part of the latter is not delivered until after five years of continuous service.

The other part of the plan permits the acquisition of stock in the company by all of its employes. The amount which can be purchased may not exceed a fixed per cent. of the salary paid. Stock was allotted at little less than market price and arrangements made for the gradual payment of the stock by deductions from salaries. A reduction from the payments to be made was allowed in the shape of Five Dollars per share for each year in the service of the company up to a period of five years. Title to the stock subscribed for vested in the employe, who thereby gained the difference between the 5 per cent. interest charged him on his deferred payments and the 7 per cent. dividend paid him on the par of the stock.

In January, 1903, when the plan was first announced, 27,000 employes subscribed for 49,000 shares of stock. Almost immediately depression of business came upon us and something over 12,000 subscriptions dropped out during the year, nevertheless, 10,000 of the original subscribers have remained. When the five year period expires next month, they will find that through the difference of interest and dividends with Five Dollars per share credited to their account and sums credited from those who have dropped out, their stock has cost them almost nothing, and is to-day selling for $86.25 per share and paying regular dividends on par of 7 per cent. per annum.

The offer made in 1903 has been repeated in January of each succeeding year with considerable participation on the part of the men.

By the close of this year, when the entire plan will have been in force five years, over $10,000,000 will have been actually distributed through the organization under the various provisions of the plan. It has gone to a very large number of men and has been one of the factors which has helped to form an organization which for loyalty and efficiency is perhaps unequaled in the industrial world to-day.

In these results is there not a form of co-operation of the highest, best and most ideal sort—that makes real partners of employer and employe and yet preserves the right of private property—retaining the capitalist's incentive to enterprise while giving the worker a new inspiration for effort—humanizing a vast organization—promoting good will and industrial peace?

DR. ELIOT, president of Harvard University, said that in the National Civic Federation he represented neither capital nor labor, but that great public which invariably pays all the cost of industrial warfare, whether it breaks out openly or is privately compromised; that he had, therefore, the strongest interest in contributing, if possible, to industrial peace. The best legislation that has ever been adopted to promote industrial peace is the Canadian Act of March 22, 1907, called the "Industrial Disputes Investigation Act." Under it no strike is lawful and no lockout is lawful until there has been a public investigation of the causes of the strike and of the lockout. There is no arbitration in it, only investigation, conciliation and publicity, but the primary merit is this, that no strike is legal and no lockout is legal until the public investigation has been held by an impartial authority.

In Canada specified powers belong to the provinces, all others belong to the National Government. It is absolutely the reverse with us, but it is an immense object lesson for the community that these two free countries continue to experiment independently on the conduct of free institutions. But Canada has an enormous advantage. Nearly all of the questions which are now important for the prosperity of our country are new. Not one of them arose at all until more than fifty years after the adoption of the Constitution. How is it possible that that instrument, so wise, so wonderful in its day, should provide the means of dealing with questions never imagined for a moment when the Constitution was made. The Federal Government of our country greatly needs new powers. It is trying to get them by a stretching process and some experiments in this direction have turned out pertty well considering the extremely limited nature of the powers which can be twisted out of the Constitution in this manner. When a corporation has power to carry on business over the whole of these United States—to live and work in many States—can State authorities control it?

The real definition of a good labor union is that it is a commercial association. Now, these commercial associations work over the whole country. Is it to be expected that any power but that of the central Government can control a commercial association of that sort? All the great commercial associations, whatever you call them—trusts, companies or labor unions—are really in search of the same thing, a monopoly. They very seldom get a complete monopoly, but they often approach it. Now, if there is anything in this country that free men in all countries have abhorred and resisted, it is monopoly; and it does not make much difference what sort of a monopoly it is. Now, these great monopolies, broad as the continent, cannot be controlled by any but a central government, and, therefore, I say that Canada has already won a great advantage over the United States, because all these new questions go to their central government.

It is not alone in industrial disputes that we discover the same difficulty. How can the great evil of divorce be dealt with in our land except by the force of the National Government? How can the great evil of child labor be dealt with in this land through the efforts of the State? Take the great source of many of our social and industrial evils, the misuse of corporation and association powers; how can they be dealt with except by the force of the central government? I say, therefore, that we should look forward to an increase of national power in all of these directions. The suggestion goes against our cherished fetish of local government, local interest or local representation. We desperately need, ladies and gentlemen, a revision of our conception of local interest. The interests called local have entirely changed their nature and scope within the last fifty years, and so, I say, we need to revise our idea of local government, and above all, we need to give up our fear of the extension of national power.

The National Government rules to-day a territory really much smaller than New England was sixty years ago. Not only is the territory smaller for administrative purposes, but we can talk all over it on the instant; we can bring news from every part of it on the instant and we can ride across it in five days, whereas, it used to take three weeks for a student to arrive at Harvard College from central New York; as I have heard a student of that day tell, he made the journey in the year 1826, it took him three weeks, and he rode all the way, with all his goods in two saddle bags. So, I say, the National Government rules to-day a much more manageable area than sixty years ago, with infinitely better means of communication. Why, after all from the point of view of a National Government, this continent has become a very manageable place and local interests, what are they? They are continental interests.

In introducing the last speaker of the evening, Mr. Samuel Gompers, Mr. Ingalls called attention to his unique record, in that he had for twenty-six years been elected the chief of his organization and the last time without any opposition.

AS OTHERS SEE US

COMMENT ON ANNUAL DINNER AND WORK OF THE FEDERATION

M. ALEXANDRE ULAR.

ALEXANDRE ULAR, foreign editor of "Le Petit Journal," of Paris, and correspondent of other important journals of the Continent, was a guest of the National Civic Federation at its annual banquet.

"To see capital and labor at a great banquet peacefully discussing social questions was most amazing to me," said M. Ular, "because of my knowledge that discussions in France between the two classes are always unfriendly.

"Above all, I was amazed to see well-known labor leaders on good terms with great capitalists. I could hardly credit the spectacle of John Mitchell, who is considered by his French friends just as revolutionary as our labor leaders, sitting between Mr. Charles A. Moore, a manufacturer, and Mr. Percy A. Rockefeller, the capitalist, and later between Miss Morgan and Mrs. Harriman.

"If a French labor leader were to do this French workingmen would at once believe that he was playing them false, and he would lose influence with them. Here, on the contrary, it seems that laborers want their leaders to maintain friendly relations with capital. It astonishes me to see that the labor men considered their interests identical with those of capital. A toast like the one to which John Mitchell responded would be impossible in France, or at least its sentiments would be regarded as an indication that the speaker was playing into the hands of the capitalists. Mr. Mitchell said that he had always worked for peace between capital and labor, that he was proud of it, and that the prosperity of the working classes was intimately connected with the maintenance of peace between the two classes. Now, the French labor men don't want peace, but strife. They will accept peace only when capital is utterly subdued.

"To a French observer it was indeed a remarkable thing to see Samuel Gompers sitting beside Andrew Carnegie and James Speyer, two of your best know capitalists. You would never be able to bring French labor and capital together for a discussion of labor problems."

Speaking with a representative of the Civic Federation, M. Ular said that what impressed him most was the apparent difference in the mental attitude of the labor leaders of the United States and the workingmen of France. Here, he said, they are practical men, seeking, first and foremost, the improvement of their own economic condition, whereas, in France they are idealists, with the aspiration to reform society, not so much for their own immediate benefit as for the sake of the principles which they believe to be involved. It is needless to say that the principles are those of Socialism. The whole labor movement is permeated with them. For this reason a friendly gathering of employers and workingmen would be impossible in France or in Continental Europe generally.

"LE FIGARO," OF PARIS, December 29, 1907.

PHILIPPE MILLET, of the University of Paris, who is visiting the United States for an extended study of the subject of trade agreements between employers and labor unions, was an interested participant in the annual banquet. His impressions were recorded in a letter to the Figaro, from which the following is taken:—

The eighth floor of the Hotel Astor presented the other night a very animated aspect. The extraordinary thing, even for New York, was the combination of this assembly. Close to men in evening dress and white ties and society ladies in decollete as for the opera, there were many workingmen in their ordinary business suits. At the same tables, elbow to elbow, were Andrew Carnegie, John D. Rockefeller, Jr., Wall street bankers like Isaac N. Seligman, George W. Perkins, August Belmont, together with presidents of miners', railway employes' and building trades unions. I sat myself between the president of Harvard University, Dr. Eliot, and General Grant, who is the son of the celebrated general. At a little distance from my place I saw, comfortably seated between two bankers, Samuel Gompers, the president of the American Federation of Labor, which is—I scarcely dare write it; you won't believe me—the great labor organization of America.

To understand this astonishing combination and the peculiar interest which it offered this evening it is necessary to know the National Civic Federation, of which this was the annual dinner.

It is a private association founded about nine years ago to study problems of national interest and mainly to strengthen social peace by bringing together the employers and the employes. Such initiative is frequent in America. Instead of permitting the State to care for the general happiness, private citizens prefer to take this care into their own hands. It happens very often that they found societies in order to supervise the public powers and prevent the latter from undertaking to promote the general happiness. The National Civic Federation is an association of this kind, one of the largest and most powerful, as it seems, at the present time. The Federation sends to Congress respectfully formulated resolutions, which are very much like those of our General Council, but one feels that the Federation does not expect its salvation from a good legislator and does not believe that the social contest, with its strikes and lockouts, will magically end on the day when an honest Representative will have presented in Congress an excellent law of compulsory arbitration.

MELVILLE E. INGALLS, Chairman Public Ownership Commission.
RALPH M. EASLEY, Chairman Executive Council.
D. L. CEASE, Secretary.

EXECUTIVE COMMITTEE

On the Part of the Public:

GROVER CLEVELAND, Ex-President of the United States, Princeton, N. J.
ANDREW CARNEGIE, Capitalist, New York.
CORNELIUS N. BLISS, Ex-Secretary of the Interior, New York City.
NAHUM J. BACHELDER, Master of the National Grange, Concord, N. H.
BENJAMIN I. WHEELER, President University of California, Berkeley, Cal.
CHARLES W. ELIOT, President Harvard University, Cambridge, Mass.
NICHOLAS MURRAY BUTLER, President Columbia University, New York City.
SETH LOW, Publicist, New York City.
ARCHBISHOP JOHN IRELAND, of the Roman Catholic Church, St. Paul, Minn.
BISHOP HENRY C. POTTER, of the Protestant Episcopal Church, New York City.
CHARLES J. BONAPARTE, Attorney-General of United States, Washington, D. C.
DAVID R. FRANCIS, Ex-Secretary of the Interior, St. Louis, Mo.
ISAAC N. SELIGMAN, of J. & W. Seligman & Co., New York City.
JAMES SPEYER, of Speyer & Co., New York.
V. EVERIT MACY, Capitalist, New York.
JOHN M. STAHL, President Farmers' National Congress.

On the Part of Employers:

HENRY PHIPPS, Director United States Steel Corporation, New York City.
AUGUST BELMONT, President August Belmont & Co., New York City.
W. A. CLARK, President United Verde Copper Company, Butte, Mont.
CLARENCE H. MACKAY, President Postal Telegraph-Cable Co., New York City.
LUCIUS TUTTLE, President Boston & Maine Railroad, Boston, Mass.
FREDERICK D. UNDERWOOD, President Erie Railroad Company, New York City.
M. H. TAYLOR, President Pittsburg Coal Company, Pittsburg, Pa.
MELVILLE E. INGALLS, Chairman C. C. C. & St. L. Ry. Co., Cincinnati, Ohio.
SAMUEL MATHER, of Pickands, Mather & Co., Cleveland, Ohio.
CHARLES A. MOORE, Manning, Maxwell & Moore, New York City.
FRANKLIN MacVEAGH, of Franklin MacVeagh & Co., Chicago, Ill.
ELLISON A. SMYTH, President South Carolina Cotton Manufacturers' Association, Pelzer, S. C.
CHARLES H. TAYLOR, Jr., Ex-President American Newspaper Publishers' Association, Boston, Mass.
DAN R. HANNA, of M. A. Hanna & Co., Cleveland.
MARCUS M. MARKS, President National Association of Clothiers, New York City.
OTTO M. EIDLITZ, Chairman Board of Governors, Building Trades Employers' Association, New York City.

On the Part of Wage Earners:

SAMUEL GOMPERS, President American Federation of Labor, Washington, D. C.
JOHN MITCHELL, President United Mine Workers of America, Indianapolis, Ind.
WARREN S. STONE, Grand Chief International Brotherhood of Locomotive Engineers, Cleveland, Ohio.
A. B. GARRETSON, Grand Chief Conductor Order of Railway Conductors, Cedar Rapids, Iowa.
JAMES DUNCAN, General Secretary Granite Cutters' International Association of America, Quincy, Mass.
DANIEL J. KEEFE, President International Longshoremen, Marine and Transportworkers' Association, Detroit, Mich.
P. H. MORRISSEY, Grand Master, Brotherhood Railroad Trainmen, Cleveland, Ohio.
WILLIAM D. MAHON, President Amalgamated Association of Street Railway Employes of America, Detroit, Mich.
TIMOTHY HEALY, President International Brotherhood of Stationary Firemen, New York City.
WILLIAM J. BOWEN, President Bricklayers' and Masons' International Union, Indianapolis, Ind.
J. J. HANNAHAN, Grand Master Brotherhood of Locomotive Firemen, Peoria, Ill.
JAMES O'CONNELL, President International Association of Machinists, Washington, D. C.
JOHN F. TOBIN, General President Boot and Shoe Workers' Union, Boston, Mass.
JOSEPH F. VALENTINE, President Iron Moulders' Union of North America, Cincinnati, Ohio.
JAMES M. LYNCH, President International Typographical Union, Indianapolis, Ind.
DENIS A. HAYES, President Glass Bottle Blowers' Association of United States and Canada, Philadelphia, Pa.
WILLIAM HUBER, President United Brotherhood of Carpenters and Joiners of America, Indianapolis, Ind.

The Year's Work. During the past year the work of the National Civic Federation has been more extensive, and has appealed to even broader interests than ever before. It culminated fittingly in the annual dinner at the Hotel Astor, one of the most notable social gatherings of the year. Members and officers of the organization may well be content with so emphatic an expression of the public approval. Everywhere were heard words of commendation for the spirit which marked the occasion. The unique character of the gathering, where so many interests met upon common ground, is reflected in the friendly comment of two visiting French economists and others, which is reproduced elsewhere in this issue of the *Review*.

The consciousness that the National Civic Federation was a living agency for the common weal found further expression in the discussion at the annual meeting of the protection of the people's savings, in its varied aspects of currency reform and the protection of deposits. What in ordinary times is considered a somewhat dry and technical subject became magnetic with life and interest, and the meeting passed a resolution urging upon Congress to provide an elastic currency system. In the discussion of compulsory arbitration the exposition of Australian legislation and of the recent Canadian Industrial Disputes Investigation Act was attentively followed, but the principles of the former awakened no favorable criticism, and there was some disposition to question the compulsory features of the latter.

The report of the Chairman of the Executive Council tells of varied and important activities.

The Conciliation Department has secured many conferences which have averted threatened local disturbances. Proposals are being considered which will strengthen this work through local representatives in every important city of the United States.

Interest in welfare work has been greatly stimulated by numerous addresses of members of the Welfare Department. It has been called upon to aid by furnishing plans for or experts to install conveniences for the health and comfort of employes in large manufacturing establishments.

A specially noteworthy feature was the formation of a Public Employes' Welfare Committee, with the underlying idea that the government—whether Federal, State or municipal—should be a model employer. Important local reforms have already been accomplished. Its principal undertaking was an exhaustive investigation of all the conditions surounding employment on the Canal Zone, which showed much to be applauded, and likewise the need of improvements for creature comforts, in the regulations applying to labor conditions and opportunities for recreation and for the education of the children of the employes.

The report of the Public Ownership Commission has attracted wide attention, and its conclusions are regarded as an authoritative statement of the considerations for and against the municipal operation of public utilities, and its copious and scientific publication will have a permanent place in the literature of this subject.

The National Conference on Trusts and Combinations, which gathered in October in Chicago at the call of the National Civic Federation, was a highly representative body well adapted to reflect the well-considered, sober-minded opinion of the people, and thus to be a sure guide to our legislative bodies. The resolutions of the conference, shortly to be submitted to Congress, point out the way to secure a practical and judicious basis for future legislative enactments.

In the early part of the year Mr. W. H. Mallock, the noted English individualist, visited the United States on the invitation of the Federation, and lectured upon Socialism at some of the leading universities. These lectures, since published in book form, contain a thorough exposition of the Socialist faith and a skilful answer to its claims.

An important educational feature of the work of the Civic Federation is found in its meetings, which bring all classes together for the discussion of the common welfare. Meetings held in New York at the residence of Mr. Andrew Carnegie to discuss industrial peace and one in Chicago at the residence of Mrs. Potter Palmer for a general presentation of the work of the Federation were especially notable.

Every year sees our work broaden. While new activities are being constantly undertaken, they are marked by the same spirit to promote as far as in us lies the common welfare. Continued public support and interest encourages us to believe that there are still larger opportunities for usefulness in store for the Federation in the future.

EIGHTH ANNUAL DINNER.

Continued from page 11.

SAMUEL GOMPERS: It falls to my lot frequently and yet it is always an unpleasant duty, if perchance I must, to sound a discordant note. I should like at some time to inquire a little further into the profit-sharing proposition. I should like to inquire, had I the time, what are the relative wages of the men employed in the iron and steel industry ten years and more ago, before the profit-sharing system was put into vogue, and what are the wages to-day.

It suggests a little less comfort, but it appears to me a very pertinent question. I doubt that any one listens with deeper interest and concern, but whether it be here at your banquet board or in the hall of discussion, while I am contributing as best I can to the great uplifting of all my fellow men and women, my chiefest concern is for the men and women who labor, and I trust that I may never fail to say a word particularly for them. Gentlemen have come to me and whispered in private conversation, in gentle hints and in knowing innuendoes that after all the workingman of the country must come down in his wages. But let me say the soil of our country is not less valuable than it was yesterday, men's minds have not become dull, men are not less industrious, men are no less willing to work than yesterday, and wherefore is the natural necessity of attacking the wages, the American standard of life, of the working people of our country? You cannot reduce wages without reducing the consuming power of the people, and every time you reduce their consuming power you make your situation worse. Whoever is to blame for the present financial system, the fault is not that of the working people of our country. They have made up their minds that they are not going to be the chief sufferers by reason of an artificially made panic or by the blunders of those who have the affairs of finance and industry under their direction.

If there is one thing upon which I have some pride, not vanity, it is that I think I know something about the labor question and something about the labor movement and something about the history of organization among working people, the history of their struggles through the ages, the history of modern industry, the history of workers in the past century, the history of workers within the past third of a century, with which I have been closely associated; but it has been left for this evening for me to learn that a union of labor is a commercial organization. A trust is a combination of men or persons to control the product of labor; how can there be a trust in a thing that is not produced and will not be produced until it is given to the world? In the very nature of things the organizations of labor cannot be, and are not, trusts and cannot be measured by the same standards.

Nor am I one that have lent my voice to the denunciation or attacks upon the combinations of industry and trust. To me, as a workman, or as a union man, a trust is an employer of labor, and it is either good or bad or indifferent as it accords a fair and square deal to the working people.

With my fellows, I have believed, and still believe, that the organizations of industry in the case of corporations and trusts are in the very nature and order of industrial development. And now a word as to the people. I ask you, my friends, to consider for a moment who are the people. Nothing mythical, I suppose. They are human beings—men, women and children. They are all employers or employed. There is no onerous condition which can be imposed on the working people of any one trade or calling but what it will have its baneful effect upon all who are employed. You cannot improve the condition of any trade or calling, or of the working people of any trade or calling without giving an impetus or tendency to the outward life of all the working people. The strike of the coal miners did more not only to uplift the miners and their families, but it did more than all else could accomplish in half a century of preachments without the strike. Do not for a moment imagine that I am an advocate of strikes. I regard them as a necessary evil, and I do not believe that necessary evils are blessings.

Respecting child labor, I agree that insufficient progress has been made in that line of work, but I think that it is not amiss to suggest the fact that it was the commercial organizations of labor that started and carried on the work to secure even what we now have upon the statute books of our several States that have taken the children out of the factories and workshops and given them the opportunity to be in the schools and kindergartens.

The report of the Chairman of the Executive Council follows:

NATIONAL CIVIC FEDERATION IN 1907

EXTRACTS FROM THE REPORT OF THE CHAIRMAN OF THE EXECUTIVE COUNCIL

THE questions, "Where did the Civic Federation start?" "What was it for?" and "Has it not deviated far from its original purpose?" arise) frequently that a brief account of its origin may ɔt be inappropriate in this report.

The Federation was organized in 1900, in Chicago, fter a succession of national conferences had been eld upon such subjects as Primary Election Reform, oreign Policy and Trusts and Combinations. It consted of an advisory council of five hundred members nd an Executive Committee. On the Executive Comittee were several of the members of the present ational Executive Committee, including Franklin lacVeagh, Archbishop Ireland, Samuel Gompers, ohn Mitchell, D. J. Keefe, John W. Stahl and Benjaiin Ide Wheeler. The prospectus, published at the me, stated the purpose of the organization to be as ollows:

" * * * To organize the best brains of the naon in an educational movement toward the solution f some of the great problems related to social and inustrial progress; to provide for study and discussion f questions of national import; to aid thus in the rystallization of the most enlightened public opinion; nd, when desirable, to promote legislation in accordnce therewith."

Fifteen national subjects were named, and it was xpected that from time to time the formation of ommittees would result having as their special provnce the consideration of the subjects suggested.

By vote, it was decided to take up for discussion, hrough national conferences, the three subjects of inustrial arbitration, taxation and municipal ownerhip. The first conference, that on industrial arbitraion, was held at Chicago, in December, 1900, and reulted in the organization of the Industrial Departnent, with A. C. Bartlett, of Chicago, chairman. In he following June a national conference on taxation vas held in Buffalo, resulting in the formation of the)epartment on Taxation, with Edwin R. A. Seligman s chairman. It was the intention to hold the confernce on Municipal Ownership in New York the folowing December, but in the meantime a number of arge strikes, especially the Steel Strike, the National Iachinists' strike and a threatened Anthracite Coal trike absorbed so much of the energy and attention f the active members of the Federation at that time hat the Public Ownership Conference was postponed or the time being.

Through the work done by the committee in conection with the coal and steel strikes, Senator Hanna ecame interested in the organization, and in Decemer of that year was made President of the organzation. His selection for that office, together with he appointment of other men of national reputaion on the committee, attracted the attention of the ountry to the organization. For two years following hat department was the only one prominent before he public, and its work in the prevention of strikes nd lockouts was naturally regarded as the only purose of the organization. The conferences held durng this period were naturally confined to the subject f conciliation and collateral phases of the work. As ational labor disturbances then became less frequent fter two years of this special work the organization vas able to resume its original programme, holding tself, however, in readiness to concentrate its eneries on the industrial work at any time the need ight arise.

It was at this time that the national conference on mmigration was called, and the Department of Immiration organized. After that a national commission n Municipal Ownership was formed, and by that ime the public began to take interest in the broader spects of the organization. Later came the establshment of the Industrial Economies Department, vhich has taken up some of the most important probems of the day, including Socialism and Trusts and ombinations. The holding of a national conference n Political Reform resulted in the organization of a epartment especially devoted to these subjects.

While the subjects to be taken up by the organizaion are determined by the Executive Committee, he fact is here emphasized that in devoting itself to ther matters than questions relating to strikes and ockouts, the organization has not deviated from, but as returned to, its original lines.

Referring to the activities of the past year, the hairman speaks of the educational value of the neetings held under the auspices of the Federation. The several departments have held important meetngs, which are duly noted later. The gathering in New York at the residence of Mr. Andrew Carnegie, vhen 500 persons listened to a discussion of industrial arbitration, and one in Chicago at the residence f Mrs. Potter Palmer, attended by 700 persons, when a general presentation of the work of the National Civic Federation was made, deserve especial mention. In all these reunions, leaders of the world of capital and the world of labor have met on friendly terms for the discussion of their mutual interests.

IMMIGRATION DEPARTMENT.

Largely through the work of the Immigration Department, Congress was induced to appoint a Commission on Immigration, which commission has, with unlimited funds at its disposal, undertaken a large part of the work that had been planned by the Federation department. In fact, two members of our department are on the commission and have utilized all the material gathered by the Federation's experts, relating to both white and Oriental immigration. As some of the important evils, however, in the immigration problem are connected with the Port of New York, a committee, with Mr. Marcus M. Marks as chairman, secured valuable legislation at Albany last Winter to protect immigrants from frauds imposed upon them by bankers and ticket sellers. The department, representing all public interests affected by the immigration question, holds itself in readiness to take up any special problems which may remain after the national commission shall have completed its labors.

CONCILIATION DEPARTMENT.

The work of the Conciliation Department during the past year consisted largely of securing conferences at the request of one side or the other in threatened local disturbances. The only national strike of the year was that of the telegraphers, and in that every conceivable organization and influence was brought to bear, and all completely failed to effect any settlement. The same thing was true in the case of the local strike of the longshoremen in this city. It is an organization not affiliated with any other labor organization, and its leaders refused to discuss the matter with any outsiders. In some twenty-six instances conferences were secured by members of the Conciliation Committee that resulted in settlements, the last one being settled on the last day of the annual meeting at the Park Avenue Hotel while the meeting was in progress. This was the case of the New York cab drivers and the team owners' association. In this case the chairman of the New York Conciliation Committee induced seven men from each side of the controversy to meet him at the Park Avenue Hotel, and effected a settlement. In the case of the threatened street railway strike in Philadelphia President Low at the New York end, and Vice-President Gompers at the Washington end set machinery at work in Philadelphia that resulted in a settlement. This case, as well as many of the other cases for the year, brought out very conspicuously the fact that in most cases effective work can only be done through members of our organization who reside in the city where the trouble occurs. It was made perfectly clear in Philadelphia that outside intervention would not be accepted.

If the Committee on Organization, which will be recommended later, is appointed, it should secure membership for the Civic Federation in every important city in the United States. The lack of such members is one of our weak points now, as many of these local troubles arise where we have no one to call upon.

Every member of the Civic Federation, in whatever department, is always glad to respond to any request from the Conciliation Committee.

The importance of studying the questions that produce industrial disturbances was impressed upon the committee in several of the cases, especially the one in the case of the Erie Railroad machinists' strike. It is a straight-out fight on the question of piece-work. The management insists on piece-work and the machinists insist on day work. A committee of business men from points along the line of the Erie Railroad appealed to the Civic Federation to bring about a conference, and one was secured with President Underwood, but the men who have been suffering for several months for lack of work feel that the principle at stake is so great that they cannot afford, under any circumstances, to accept any proposition that even faces in the direction of that method of work. The apprentice question, restriction of output, shorter work-day, union or non-union shop and numerous other questions that underlie the majority of strikes should be taken up by the Conciliation or some other department and earnestly discussed.

The New England Civic Federation has during the past year rendered service in connection with threatened or actual trade disputes in the following industries and crafts: Shoe manufacture, electrical contracting, street railway service, boiler making, paper and pulp manufacture, truck teamsters, excavating, cotton manufacture, machinists, hotel porters, musicians, freight handlers, bookbinders, apparel workers, comb and novelty workers.

The threatened troubles between the big railway systems centering in Chicago and the engineers, firemen and conductors led to the discovery that the Erdman act, which has been on the statutes for some years, could render great service. The engineers settled their troubles with the railway managers without any outside help, but in the case of the firemen and conductors no settlement could be reached, so the railways appealed, under the Erdman act, to the chairman of the Interstate Commerce Commission and the Commissioner of Labor to act as conciliators. They were entirely successful, and prevented what threatened to be the greatest strike in years. The fact that the Interstate Commerce Commission decides, practically, what the railroads may charge for service makes it a logical thing that that commission should pass on the question of wages.

At our annual meeting the head of the New York State Bureau of Arbitration suggested that the Conciliation Committee of the National Civic Federation invite a conference of the various State boards on arbitration, bringing them into relation with its work. Eight or ten States have very good boards, and they have power to compel the attendance of witnesses and production books, etc., which, of course, our committee has not. I think, during the coming year, we ought to adopt the suggestion made.

WELFARE DEPARTMENT.

Among the efforts of the Welfare Department has been the formation of a committee to promote welfare work for Federal, State and municipal employes, with one hundred members throughout the United States, from the Atlantic to the Pacific Coast. Investigations of conditions surrounding Federal employes in the navy yard and in factory and office buildings in Washington, D. C., the post offices in New York and Chicago, the Brooklyn Navy Yard and of the employes on the Isthmus of Panama have been conducted and reported upon with convincing illustrations.

The importance of the work of that committee is shown by the fact that the conditions that were found surrounding the employes in the hospitals in New York City were such as would not be tolerated by a private employer. Commissioner Hebberd, who welcomed suggestions, has already made important improvements, and promises additional reforms as rapidly as funds can be secured by appropriation.

Mr. Marcus M. Marks, chairman of the Committee on Welfare Work for New York City's Employes, took up with Commissioner Bingham the conditions of the policemen with reference especially, to the inhuman working hours and the sanitary arrangements and dormitories in the station houses. Prompt action was taken in the matter of reducing the hours of work and some new station houses are being constructed; but the conditions are very bad, some places being unfit to be used for the stabling of horses, and yet our policemen are allowed to sleep in them.

The result of the investigation at Panama has been to secure many improvements for the benefit of the employes, as is evidenced by letters from and the personal testimony of employes and other visitors from Panama to the headquarters of the Federation, although some of the improvements which are most urgently needed, such as wholesome food, rational recreation, boat service and equitable labor regulations, have not yet received adequate attention.

Assistance Rendered Employes in Private Enterprises.—The department has been called upon to send literature and plans showing what other employers have provided in the way of pension funds, insurance covering accident, death or sick benefits; upon the entire scope of welfare work and specifically with reference to sanitary arrangements, seats for women, drinking water, rest rooms, ventilation, wash rooms, lighting systems, lunch rooms, safeguards for machinery, hospitals, recreation, housing, vestibules for street cars and industrial training.

The following companies have received such aid, either by correspondence or through personal service:

American Woolen Company, Lawrence, Mass.
United Shoe Machinery Company, Boston, Mass.
Colorado Fuel & Iron Company, Colorado.
B. F. Sturtevant Company, Boston, Mass.
United States Playing Card Company, Cincinnati, Ohio.
International Harvester Company, Chicago, Ill.
General Electric Company, Schenectady, N. Y.

Studebaker Brothers, South Bend, Ind.
Westinghouse Machine Company, East Pittsburg, Pa
Butler Brothers, St. Louis, Mo., and Chicago, Ill.
New York City Railway Company, New York.
Champlain Silk Mills, Whitehall, N. Y.
Reliance Automobile Company, Providence, R. I.
O. M. Edwards Company, Syracuse, N. Y.
Herrlinger Cordage & Paper Company, Cincinnati.
Philadelphia Watch Case Co., Riverside, N. J.
Meriden Britannica Company, Meriden, Conn.
Weston Electrical Instrument Co., Newark, N. J.
James Doren's Sons.
Curtis Publishing Company, Philadelphia, Pa.
Paiste & Company, Philadelphia, Pa.
National Railroad Company of Mexico, City of Mexico, Mexico.
Providence Engineering Company, Providence, R. I.
Talbot Mills, North Billerica, Mass.
Ballard & Ballard, Louisville, Ky.
Young Men's Christian Association; various places.
Oneida Community, Oneida, N. Y.
Ludlow Manufacturing Associates, Ludlow, Mass.
Cleveland Hardware Company, Cleveland, Ohio.
Solvay Process Company, Syracuse, N. Y.
The seventeen manufacturers in Greenfield, Mass.
Hood Rubber Company, New York.
Sherwin Williams Company, Cleveland, Ohio.
Deere & Company, Moline, Ill.
Malden Electric Company, Boston, Mass.
Regal Shoe Company, Boston, Mass.
S. D. Warren & Company, Cumberland Mills, Me.
Smith Premier Typewriter Company, Syracuse, N. Y.
Benton, Hall & Company, Cleveland, Ohio.
Commonwealth Steel Company, St. Louis, Mo.
Armour & Company, Chicago, Ill.
F. W. Bird & Son, East Walpole, Mass.
C. M. Clark, president East St. Louis & Suburban Railway Company, Philadelphia, Pa.
J. B. & J. M. Cornell, New York.
William Hengerer Company, Buffalo, N. Y.
Morrison, Mackintosh & Company, Grinnell, Ia.
Pepperell Manufacturing Company Biddeford, Me.
The Western Saving Fund Society, Philadelphia Pa.
F. C. Huyck & Sons, Albany, N. Y.
L. Abt & Sons, Chicago.
Dexter Yarn Company, Pawtucket, R. I.
Western Corporation.
Stanley G. Flagg & Company, Philadelphia, Pa.
Crews, Beggs & Company, Pueblo, Col.
Farley, Harvey & Company, Boston, Mass.
A glass company in a Central State. (Name withheld because work not completed.)

A few illustrations will serve to show how this work is performed:

American Woolen Company, Lawrence, Mass. The services performed for this company present an interesting illustration of accomplishment through expert advice. Mr. W. M. Wood, the president, having attended a meeting of the woolen manufacturers, at which our stereopticon slides were shown, sent that company's welfare worker to New York to place himself entirely in the hands of the Welfare Department for the purpose of having certain improvements made. An expert was sent, who planned a lunch room for the women and men, trained the manager, selected the equipment, purchased same, and took up other details, which have resulted so successfully that the following letter was received recently from Mr. William E. Hall, treasurer of the Shaw Stocking Company:

"The writer called at your office some months ago and made some inquiry of you relative to welfare work being done by some large manufacturing concerns of the country. I now beg to advise that we are constructing a large building in connection with our factory for the purpose of furnishing meals to our operatives, who are largely girls, and also rooms for those who desire to make their home in the building. Realizing that we are rapidly approaching a point where we desire expert suggestions for laying out our kitchen, dining room, etc., I would be interested in receiving from you, at your earliest convenience information showing what the cost would be to us were we to enter into arrangements with you to have a representative of experience come here, at an early date, and gives us the necessary instruction. The main feature at the present time is the methods of furnishing dinners to about 300 persons during the noon hour from 12 to 1 o'clock.

"The writer understands that one of your lady representatives was given carte blanche at the Wood Worsted Mills, at Lawrence, Mass., in arranging their dining rooms.

"Assuring you that we shall be much interested in hearing from you relative to this important matter, we are"

An expert was sent at once, who has developed the plans, the following letter having been received since:

"I am in receipt of your favor of the 28th inst., with bill enclosed, covering expenses and services of Mrs. Thaon. I assure you that we are more than pleased to enclose herewith our check covering this bill, and beg to advise that we are much pleased with the services rendered by Mrs. Thaon."

A Glass Company in a Central State. At the request of the daughters of the president of that company, the secretary visited the factory, making an inspection and recommendations for improvements. An expert was furnished, who spent three months installing conveniences for the women employes, and plans are under consideration for other beneficial arrangements.

This is an interesting example of the result of the policy of the Welfare Department, which is to do no coercive work. It so happens that the president of the company, who has since become a member of the Executive Committee of the Welfare Department, met the secretary at the time of her visit with the statement that "he had no use for women reformers and would not allow her to enter his factory if it were not for (pointing to his daughter) that girl!" His antagonism is the result of a report made by a Socialist, who included the sentence that at this particular plant "little boys were found carrying red-hot bottles in their naked hands," together with other like occurrences. He attended our meeting at the residence of Mrs. Potter Palmer, in Chicago, and saw upon the screen not only views of ventilating devices such as he had thoughtfully installed for workers in superheated places, but also views of conveniences which have been introduced in various trades, and thus learned that similar facilities for the comfort of the workers might be introduced into the glass industry, since practical employers elsewhere had proven their usefulness. This should have a far-reaching effect, because other employers in that trade are likely to follow his example.

United Shoe Machinery Company, Boston. Mr. George W. Brown, one of our members, secured an expert from us, who completely reorganized the old lunch room and aided in planning a new one for eight hundred employes. It is now in operation. It will be described, with illustrations, in another issue of the *Review*.

Colorado Fuel & Iron Company, Colorado. Thinking that the unusually efficient head of the Sociological Department of that company might be interested, the secretary sent to him the plan of the changing house for miners, which was successfully installed by one of our members, Mr. W. G. Mather, of the Cleveland Cliffs Iron Company, for the purpose of enabling the men to bathe and put on dry, clean garments at the close of the day's work. The result was that during the year the Colorado Fuel & Iron Company constructed such excellent washhouses for its miners and they have been pictured in its annual report.

The B. F. Sturtevant Company, Boston. The publication by this company of plans for the construction of a new mill afforded an opportunity to offer suggestions for modern sanitary arrangements, with the result that the president of the company wrote thanking us for the illustrated pamphlets and stating, "I assure you it will be my purpose to bear the suggestions of your department in mind in the construction of the mill."

One successful piece of work was culminated in March, through the efforts of the Rev. Dr. Thomas R. Slicer, chairman of our New York Welfare Committee, who induced the Interborough Rapid Transit Company to put vestibules on the surface cars in New York.

Lectures have been delivered by members of the Welfare Department at the following places:
Albany, N. Y.—Municipal Men's Club.
Boston, Mass.—Women's Educational and Industrial League.
Newburg, N. Y.—Civitas Club.
Ithaca, N. Y.—College of Agriculture, Cornell University.
Washington, D. C.—Before members of Congress.
Minneapolis, Minn.—National Conference of Charities and Correction.
Grinnell, Ia.—Iowa Manufacturers' Association.
Chicago, Ill.—At residence of Mrs. Potter Palmer.
Brooklyn, N. Y.—The Turn Verein.
Philadelphia, Pa.—Pennsylvania Institute of the Young Men's Christian Association.
Muncie, Ind.—At residence of Mrs. F. C. Ball.
St. Louis, Mo.—Women's Clubs.
Passaic, N. J.—Women's Clubs.
Long Island City, N. Y.—Women's Clubs.
New York City—The Colony Club.
New York City—The Stationary Firemen's Union.
New York City—Speyer School.
New York City—Teachers' College.
New York City—Unitarian Club.
Cambridge, Mass.—School of Inspection at Harvard Medical School.

INDUSTRIAL ECONOMICS DEPARTMENT.

Under the auspices of the Industrial Economics Department Mr. W. H. Mallock, the noted English individualist, visited the United States and delivered a series of lectures on Socialism. The lectures were given at several universities—Columbia, Harvard, Johns Hopkins, Pennsylvania and Chicago. Their keen analysis of the socialistic faith and refutation of its pretensions attracted much attention and the lectures were reproduced extensively in the general newspaper press and in the labor papers. They were published in pamphlet form by the National Civic Federation and have received considerable circulation.

The main achievement of the Industrial Economics Department was the organization of the National Conference on Trusts and Combinations, held in Chicago October 22-25, 1907. It was one of the most successful efforts of the Federation. A large and thoroughly representative assembly, composed of delegates appointed by the Governors of States and a large number of organizations, to the number of nearly 500 persons gathered for the discussion of this most important problem. Without a dissenting voice, the conference passed a series of resolutions calling for an official investigation of the whole subject of trusts by a non-partisan national commission, and indicating some of the lines which such investigation might properly cover. Arrangements have been made for the presentation of these resolutions on March 7, 1908, to the President and to the two Houses of Congress by a large and representative committee.

PUBLIC OWNERSHIP COMMISSION.

During the Summer the Public Ownership Commission made a highly valuable report upon the operation of public utilities by municipal governments and private corporations. The high standing of its members, the representation among them of various shades of opinion, the ample technical and other expert assistance at the disposition of the committee and the personal inspection by its members of many public utility plants had led to the hope that its labors would bear fruit in important and authoritative conclusions. Nor was this hope disappointed. The general conclusions of the committee appended to the report have been most favorably received by the press and by students of this problem as the findings upon the evidence of a highly intelligent jury. These findings gain additional force from the remarkable unanimity with which they are approved by the committee. Out of twenty-one members of the committee only one withheld his consent to the report.

The printed report contains the general conclusions of the committee reports on special topics made by various sub-committees and a detailed account of the various plants visited in the United States and Great Britain. It is published in three large volumes of upward of 2,500 pages.

The conclusions follow:

It is difficult to give positive answers of universal application to the questions arising as to the success or failure of municipal ownership as compared with private ownership. The local conditions affecting particular plants are, in many cases, so peculiar as to make a satisfactory comparison impossible, and it is very difficult to estimate the allowance that should be made for these local conditions. For instance, in making deductions from the financial conditions of Wheeling, as affected by its gas plant, as compared with those of Atlanta and Norfolk with their private plants, allowance must be made for the presence of natural gas in Wheeling. Again, in comparing the public water works of Syracuse with the private water works of Indianapolis from the point of view of the success or failure of municipal operation, geographical conditions must be taken into consideration. The situation at Syracuse is extremely favorable to the establishment of an efficient plant with comparatively little effort on the part of its management. At Indianapolis the conditions are unfavorable. In Syracuse the water flows to the city by gravity; in Indianapolis it must be pumped. So we might go through the various cities here and abroad that have been visited and show that the results were affected favorably or unfavorably by special conditions applicable to each city.

Further, the difficulty of reaching satisfactory results by the comparative method is not confined to special or local conditions. It is true, as well, of much broader questions. Thus any attempt to compare municipal with private electric light plants in the United States would be fruitless if allowance were not made, for the fact that in most cases such municipal plants are confined to street lighting and may not do commercial business. Allowance must be made also for the fact that many municipal plants have had a struggle to exist in the face of unsympathetic public opinion. Again, in England consideration must be given to the fact that the municipal electric light and street railway plants have permanent rights, while the rights of the private companies operating these particular utilities are limited as to the length of their existence, many street railway franchises expiring twenty-one years after they were granted.

Finally, not only must it be borne in mind that the social and political conditions which characterize the

two countries find expression in their private and public systems, but we must consider the difference in the nature of the two peoples which causes them to adopt different ideas and views to the expediency of certain things. In other words, a measure of success in the municipal management of public utilities in England should not be regarded as necessarily indicating that the municipal management of the same utilities in this country would be followed by a like measure of success. Conditions are quite different in the two countries, as will be seen from an examination of the various reports that follow.*

There are some general principles which we wish to present as practically the unanimous sentiment of our committee.

First, we wish to emphasize the fact that the public utilities studied are so constituted that it is impossible for them to be regulated by competition. Therefore, they must be controlled and regulated by the government; or they must be left to do as they please; or they must be operated by the public. There is no other course. None of us is in favor of leaving them to their own will, and the question is whether it is better to regulate than to operate.

There are no particular reasons why the financial results from private or public operation should be different if the conditions are the same. In each case it is a question of the proper man in charge of the business and of local conditions.

We are of the opinion that a public utility which concerns the health of the citizens should not be left to individuals, where the temptation of profit might produce disastrous results, and therefore it is our judgment that undertakings in which the sanitary motive largely enters should be operated by the public.

We have come to the conclusion that municipal ownership of public utilities should not be extended to revenue-producing industries which do not involve the public health, the public safety, public transportation, or the permanent occupation of public streets or grounds, and that municipal operation should not be undertaken solely for profit.

We are also of the opinion that all future grants to private companies for the construction and operation of public utilities should be terminable after a certain fixed period, and that meanwhile cities should have the right to purchase the property for operation, lease or sale, paying its fair value.

To carry out these recommendations effectively and to protect the rights of the people, we recommend that the various States should give to their municipalities the authority, upon popular vote under reasonable regulations, to build and operate public utilities, or to build and lease the same, or to take over works already constructed. In no other way can the people be put upon a fair trading basis and obtain from the individual companies such rights as they ought to have. We believe that this provision will tend to make it to the enlightened self interest of the public utility companies to furnish adequate service upon fair terms, and to this extent will tend to render it unnecessary for the public to take over the existing utilities or to acquire new ones.

Furthermore, we recommend that provision be made for a competent public authority, with power to require for all public utilities a uniform system of records and accounts, giving all financial data and all information concerning the quality of service and the cost thereof, which data shall be published and distributed to the public like other official reports; and also that no stock or bonds for public utilities shall be issued without the approval of some competent public authority.

We also recommend the consideration of "the sliding scale," which has proved successful in some cases in England with reference to gas and has been adopted in Boston. By this plan the authorized capitalization is settled by official investigation, and a standard rate of dividend is fixed, which may be increased only when the price of gas has been reduced. The subway contracts and their operation in Boston and New York are also entitled to full consideration.

In case the management of public utilities is left with private companies, the public should retain in all cases an interest in the growth and profits of the future, either by a share of the profits or a reduction of the charges, the latter being preferable, as it inures to the benefit of those who use the utilities while a share of the profits benefits the taxpayers.

Our investigations teach us that no municipal operation is likely to be highly successful that does not provide for:

First—An executive manager with full responsibility, holding his position during good behavior.

Second—Exclusion of political influence and personal favoritism from the management of the undertaking.

Third—Separation of the finances of the undertaking from those of the rest of the city.

Fourth—Exemption from the debt limit of the necessary bond issues for revenue-producing utilities, which shall be a first charge upon the property and revenues of such undertaking.

We wish to bring to your consideration the danger here in the United States of turning over these public utilities to the present government of some of our cities. Some, we know, are well governed and the situation on the whole seems to be improving, but they are not up to the government of British cities. We found in England and Scotland a high type of municipal government, which is the result of many years of struggle and improvement. Business men seem to take a pride in serving as city councillors or aldermen, and the government of such cities as Glasgow, Manchester, Birmingham and others includes many of the best citizens of the city. These conditions are distinctly favorable to municipal operation.

In the United States, as is well known, there are many cities not in such a favorable condition. It is charged that the political activity of public service corporations has in many instances been responsible for the unwillingness or inability of American cities to secure a higher type of public service. This charge we believe to be true. However, there seems to be an idea with many people that the mere taking by the city of all its public utilities for municipal operation will at once result in ideal municipal government through the very necessity of putting honest and competent citizens in charge. While an increase in the number and importance of municipal functions may have a tendency to induce men of a higher type to become public officials, we do not believe that this of itself will accomplish municipal reform. We are unable to recommend municipal ownership as a political panacea.

In many cases in the United States the people have heedlessly given away their rights and reserved no sufficient power of control or regulation, and we believe that corruption of public servants has sprung, in large measure, from this condition of things. With the regulations that we have advised, with the publication of accounts and records and systematic control, the danger of the corruption of public officials is very much reduced.

To sum up, certain of the more important of our conclusions are:

Public utilities, whether in public or in private hands, are best conducted under a system of legalized and regulated monopoly.

Public utilities in which the sanitary motive largely enters should be operated by the public.

The success of municipal operation of public utilities depends upon the existence in the city of a high capacity for municipal government.

Franchise grants to private corporations should be terminable after a fixed period, and meanwhile subject to purchaes at a fair value.

Municipalities should have power to enter the field of municipal ownership upon popular vote under reasonable regulation.

Private companies operating public utilities should be subject to public regulation and examination under a system of uniform records and accounts and of full publicity.

The general expediency of either private or public ownership is a question that must be determined by each municipality in the light of local conditions. What may be possible in one locality may not be in another. In some cities the companies may so serve the public as to create no dissatisfaction and nothing might be gained by experimenting with municipal ownership. Again, the government of one city may be good and capable of taking charge of these public utilities, while in another it may be the reverse. In either case the people, must remember that it requires a large class of able men as city officials to look after these matters. They must also remember that municipal ownership will create a large class of employes who may have more or less political influence.

*See "The Facts of Municipal Ownership," Part II.

AS OTHERS SEE US.

Continued from page 11.

At the moment a dangerous subject was in the air—the financial crisis. One could not avoid speaking of it, still the most opposed interests were represented in this assembly. There were rich people, who could be considered as having caused the panic, and poor people who suffered by it. How was it possible that the short coat and the evening dress wouldn't quarrel that night? Of course, some very pointed remarks were made. On the side of the evening dress, President Eliot, in spite of his age, showed the greatest audacity. With very quiet disdain of popularity, he maintained that the labor unions, as well as the trades, should be subjected to the control of the Federal Government. A very bold opinion, but the reply of Mr. Gompers was still keener. The external appearance of this famous leader is surely a very pacific one. He always wears a cap, which is very much the same as that of an usher of the College de France; his gray hair is always sweeping the collar of his coat, his nose is armed with golden spectacles, and he looks when on the platform like a good-natured scholar who is going to make a report to the Academy. You wouldn't think at that moment he was the powerful leader of one and a half millions of workingmen, something like the Roosevelt of the American unions. As soon as he speaks, however, he is not the same man. A kind of continual anger seems to possess him, every one of his gestures is a menace, and all his words have a kind of tragical effect. His speech was in an aggressive tone. One felt that behind this little man the working masses were standing, the masses which have not yet expressed their opinion in the general disturbance, but which are going to speak.

MR. TIMOTHY HEALY.

ADDRESSING Local Union No. 56, International Brotherhood of Stationary Firemen, New York, December 21, 1907, Mr. Healy said:

Last Monday night one of the most remarkable gatherings was held in this city. I refer to the dinner of the National Civic Federation, held at the Hotel Astor. It was the largest gathering that the Civic Federation ever had, nearly 800 people being present. There were at the dinner, among others, Miss Morgan, Mrs. Harriman, Mr. Andrew Carnegie, Mr. John D. Rockefeller, Jr., President Eliot, Mr. Samuel Gompers and Mr. John Mitchell. A meeting of labor and capital! Representatives of all walks of life, some of our biggest millionaires and captains of industry, as well as leaders of labor and men representing the "general public," were there gathered together. I want to tell you, my friends, that in no other country could there be such a gathering. It is a great country where capital and labor can sit down and discuss their grievances; and the National Civic Federation is the organization that makes such a thing possible. This organization is only in its infancy. I predict that in ten years from now every one, even the most radical, will be interested in its work.

I want to say that our grievances and the great majority of our strikes and lockouts have occurred because the employer and the employe were too far apart, and if they can be brought nearer together we shall not have the great labor wars that we have had in the past, and both capital and labor will be a great deal better off.

There is a gentleman in England, a great philanthropist, named Mosely.

Mr. Mosely tried to start a branch of the National Civic Federation in England, but it was a failure.

It would not go there. The upper classes in England would not come down to mingle with the representatives of labor. I will just read you an interview with a French editor in last Tuesday's "American," which was published in nearly all the daily papers, who said among other things: "It was indeed a remarkable thing, to my mind, that Samuel Gompers should sit beside Andrew Carnegie and James Speyer, two of your best-known capitalists."

Now, that is the difference between England and America. We are ahead of them in that, and I think that we are the winners. We all know that this is a great country. Boys, let us try to make it greater! We can do it by having more confidence in ourselves and more confidence in those who are higher up.

It will never do to fight all the time, so let us have peace for the great good and the great results that will be obtained in this Republic for our children and our children's children who will come after us.

LESLIE'S WEEKLY.

IN its issue of January 3, 1908, Leslie's Weekly describes the dinner of the National Civic Federation as "one of the most remarkable public dinners of 1907," and, commenting on the Civic Federation, says:—

"The election of Seth Low to the presidency of the National Civic Federation augurs well for the continued usefulness of that organization, which has already done so much to bring the representatives of capital, labor and the general public to a better understanding. Mr. Low is a fine type of the business man, who divests himself of the cares of commerce to give his services unreservedly to the public, as Mr. Low has done in educational affairs, in politics, and is now doing in the cause of industrial peace—thereby performing a service second in importance to none that he has rendered in the past. At the annual dinner of the Federation, given in New York recently, the principles of the organization were illustrated and emphasized by the presence at the same board of such men as President Eliot, of Harvard, and John Mitchell, Samuel Gompers and August Belmont, while members of the Morgan, Harriman and Rockefeller families were elbow to elbow with the wives and daughters of wage-earners. Such social meetings have been made fairly familiar to the American public through the established usage of the Federation, but they seem nothing less than epoch-making to foreign observers, of whom several were present at the dinner in question, and so they are. Well-deserved compliments upon the success of this year's meeting were tendered by the Federation to Ralph M. Easley, the Chairman of the Executive Council, who has for years directed the activities of the organization with consummate tact and efficiency."

TRUSTS AND COMBINATIONS

PROCEEDINGS OF THE NATIONAL CONFERENCE

RESOLUTIONS ADOPTED—DELEGATES APPOINTED

THE National Conference on Trusts and Combinations, held at Chicago October 22-25, 1907, brought together a large and representative body of men for the discussion of one of the most important questions before the American people at the present time. By resolution of the conference, the National Civic Federation was charged with the duty of preparing the proceedings for publication, and a volume of nearly five hundred pages, giving a verbatim report of the entire proceedings, is just off the press. The profound interest aroused by the announcement that the conference would take place is well demonstrated by the large number of delegates appointed by the Governors of the States and by the presidents of commercial, financial, economic, agricultural and labor organizations and other bodies concerned with our national welfare.

The conference was called to order by Dr. Nicholas Murray Butler, chairman of the Industrial Economics Department of the National Civic Federation, who, in his opening address, stated in general terms the problems which were before the conference for discussion. The conference elected the following officers:

Chairman,
NICHOLAS MURRAY BUTLER.....New York

Vice-Chairmen,
SAMUEL GOMPERS.....New York
NAHUM J. BACHELDER.....New Hampshire
DAVID R. FORGAN.....Illinois
C. P. WALBRIDGE.....Missouri
D. A. TOMPKINS.....North Carolina
GEORGE LANGFORD.....Oregon
BROOKS ADAMS.....Massachusetts

Permanent Secretary,
JAMES B. REYNOLDS.....New York

Assistant Secretaries,
HENRY WALLACE.....Des Moines, Iowa
DELL KEIZER.....Topeka, Kansas
HAL H. SMITH.....Detroit, Michigan

The proceedings of the conference were in a high degree interesting and varied. Addresses or papers were presented as follows:

"Present Principles Enunciated by the New Organization of Attorneys-General," Wade H. Ellis, Attorney-General of Ohio.

"State and Federal Jurisdiction Over Interstate Commerce," William P. Borland, Attorney-at-Law, Kansas City, Mo.

"Does the Power to Regulate Rates in Transportation of Commerce Rest with Congress or the States?" A. T. Ankeny, Attorney-at-Law, Minneapolis, Minn.

"Conflict Between Federal and State Courts," David P. Marum, Attorney-at-Law, Woodward, Oklahoma.

"Shall Federal Jurisdiction Be Extended in the Solution of the Trust Problem?" John W. Tomlinson, Attorney-at-Law, Birmingham, Ala.

"Remedies for Monopolies and Their Results," William Dudley Foulke, Attorney-at-Law, Richmond, Ind.

"Governmental Regulation," Theodore Marburg, Baltimore, Md.

"Uniform Federal and State Control Over Interstate Matters," Charles F. Ziebold, President West End Business Men's Association, St. Louis, Mo.

"National Control of Railways," Seth Low, Publicist, New York.

"Powers of the State and Nation Over Corporations and Trusts," Bartlett Tripp, Attorney-at-Law, ex-Minister to Austria, Yankton, S. D.

"The Farmers' Interest in Trust Regulation," Nahum J. Bachelder, Master of the National Grange, Concord, N. H.

"The Trust Situation," Jeremiah W. Jenks, Professor in Cornell University, Ithaca, N. Y.

"The Trust Problem," Isaac N. Seligman, Banker, New York.

"Destruction or Regulation," Edgar A. Bancroft, Attorney at Law, Chicago, Ill.

"Overcapitalization," Irving Fisher, Professor in Yale University, New Haven, Conn.

"Trust Philosophy Boiled Down," Frank Parsons, Professor in Boston University, Boston, Mass.

"Corporations as Such," John S. Crosby, Attorney-at-Law, New York.

"The Enforcement of the Sherman Anti-Trust Law," Frank B. Kellogg, Special United States Assistant Attorney-General, St. Paul, Minn.

"Anti-Trust Laws," Peter S. Grosscup, Judge United States Circuit Court, Chicago, Ill.

"Corporate Reforms," Eugene E. Prussing, Attorney-at-Law, Chicago, Ill.

"Labor Unions and Trusts," Samuel Gompers, President American Federation of Labor, Washington, D. C.

"The Sherman Anti-Trust Law," Charles G. Dawes, President Central Trust Company, Chicago, Ill.

"The Evils of Competition," Grange Sard, Manufacturer, Albany, N. Y.

"Regulation of Transportation Rates," Robert Mather, Vice-President Chicago, Rock Island and Pacific Railroad, New York.

"Governmental Regulation of Competitive and Monopolistic Corporations," Allen Ripley Foote, Columbus, Ohio.

"Administrative Regulation of Corporations," Herbert Knox Smith, Commissioner of Corporations, Washington, D. C.

"The Railways and the People," D. A. Tompkins, Manufacturer, Charlotte, N. C.

"Reasonable Agreements Beneficial to Commerce," William Jay Schieffelin, Merchant, New York.

"Newspapers, Their Relation to the Paper Trust and to the Labor Trust," Herman Ridder, Proprietor of the New Yorker Staats-Zeitung, New York.

"Federal Incorporation," Henry W. Palmer, Member of Congress, Wilkes-Barre, Pa.

"The American Society of Equity and Its Need in Our Country," J. A. Everitt, President American Society of Equity.

"What Next," F. W. Taussig, Professor in Harvard University, Cambridge, Mass.

"The Trust Question from Labor's Standpoint," Thomas Carl Spelling, Attorney-at-Law, New York.

"The English Incorporation Act," Hennen Jennings, Washington, D. C.

"The Relation of Industrial Combinations to Export Trade," James H. Gore, Professor in the George Washington University, Washington, D. C.

"The Adjustment of Labor Problems and the Policy of Incorporating Unions," D. C. Seitz, New York.

"Is the Tariff the Mother of the Trusts?" Byron W. Holt, American Free Trade League, New York.

Other participants in the trust discussion who spoke more briefly were: George H. Barbour, Michigan; Warren S. Stone, Ohio; Avery C. Moore, Idaho; Wilbur F. Wakeman and Franklin Pierce, of New York; Charles J. Traxler, Karl Mathie and A. T. Stebbins, of Minnesota; James Bingham and Robert Taylor, of Indiana; J. W. Kinnear and Mahlon N. Kline, of Pennsylvania; Charles W. Needham, District of Columbia; Albert Hibbert, Massachusetts; Thomas V. Wooten, J. Newton Ninde, Henry Othmer, J. E. Defebaugh and S. Westerfield, of Illinois.

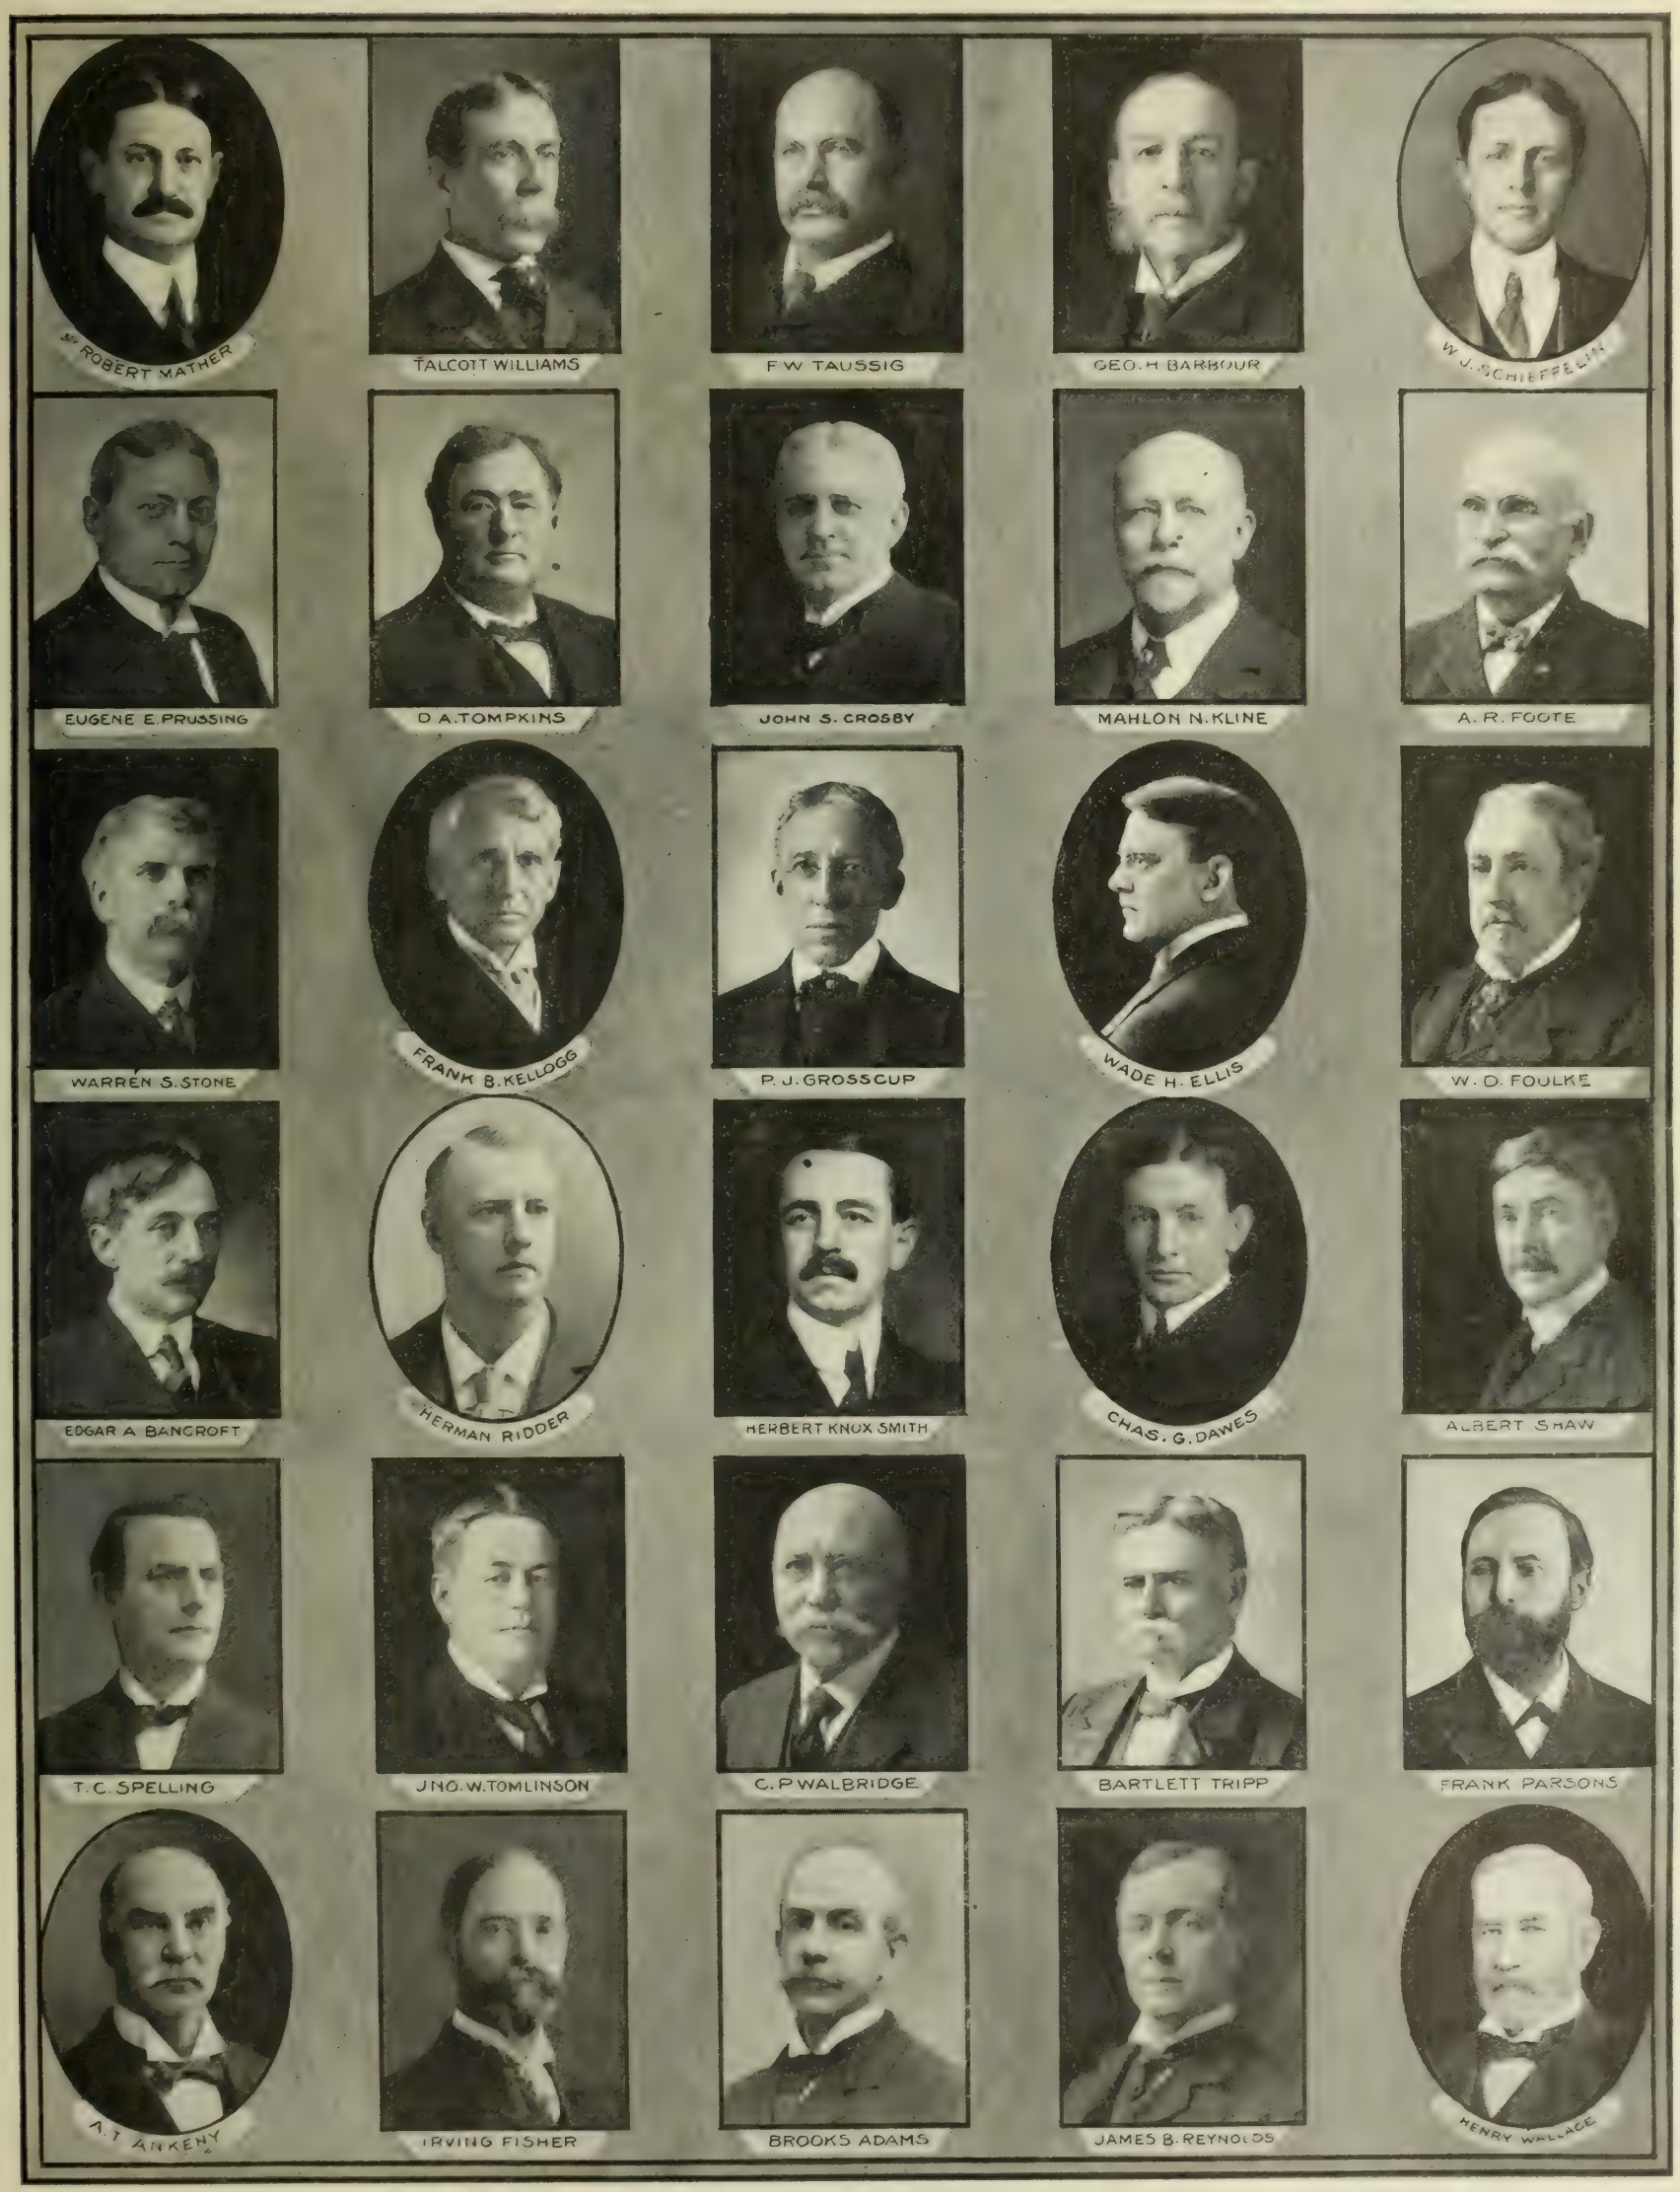
As a conference upon the same subject was held in the year 1899 in the same city, under the auspices of the Civic Federation of Chicago, a comparison of the two gatherings is natural. Two marked points of distinction can be observed. First, the larger scope; and, second, the greater unanimity of the latter conference, as compared with the earlier one. It may perhaps be due in part to the growth of the Civic Federation from a local to a national organization that the conference of 1907, called under the auspices of the national body, was so much larger and more representative than that of 1899, and it may be due in part to the growth of public opinion and the spread of information upon the various aspects of the trust question.

Whatever the cause, the results were highly gratifying. A significant evidence of this greater interest is found in the larger number of delegations appointed in 1907 than in 1899. The records show the following:

Delegations.	1899	1907
Appointed by Governors	33	42
Appointed by national and State organizations	22	33
Appointed by labor organizations	7	14
Appointed by local commercial bodies	33	58
Totals	95	147

Furthermore, the attendance of 492 delegates in 1907 might be contrasted with that of 238 delegates at the earlier conference.

To name individually the States whose Governors appointed delegates to this convention would partake of a lesson in geography. Suffice it to say, that official representatives were present from all sections of the country, from Massachusetts to Colorado, and from Washington to Florida. Equally noteworthy was the large representation of organizations which represented interests affected to a greater or less extent by the trust question in its various aspects. The list printed herewith reveals the presence of organizations devoted to the furtherance of such interests as those of jurisprudence, agriculture, banking, manufacturing, labor, commerce in general and wholesale and retail trade.



The conference of 1907 differed further from the earlier body in the adoption of definite and important resolutions. Those who examine the proceedings of the earlier gathering cannot but be struck by the fact that the keynote of its proceedings is the wide diversity of opinion in regard to the economic attributes of trusts and combinations, as well as the legislative measures which should be adopted to cope with them. The Committee on Resolutions of that conference made a prolonged and earnest effort to agree upon definite recommendations, but failed utterly to do so. It may be that at that time the subject of trusts was too new and too vaguely understood for men to be of one mind regarding it.

The situation which confronted the recent conference was materially different. Public education on the subject of trusts has been proceeding at a very rapid rate of late years. Through the investigations of the Industrial Commission, the reports of the Bureau of Corporations of the new Department of Commerce and Labor and the records of several important judicial inquiries, the public now has access to accurate information concerning some of the more important trusts and combinations, where formerly it was obliged to form its opinion upon the unsubstantiated and partial evidence set forth by the critics, and occasionally the defenders, of those organizations. There can be no doubt that public opinion on the subject is beginning to crystallize.

The important service rendered by the trust conference, which was recently held in Chicago was to offer an opportunity for the various interests to give expression to the views which have been slowly maturing in the course of the last few years, and to seek a common ground, if one could be found, on which all these interests might unite. That among so many speakers widely divergent views should be expressed is not to be wondered at. Yet one feature, so characteristic of recent discussions of this matter, namely, the wholesale denunciation of trusts, was conspicuously absent. The recognition of the services to our industrial development rendered by various forms of combinations was general. It varied widely according to the personality of the speaker, between a hearty commendation and a somewhat grudging admission. This attitude, however, willingly or unwillingly expressed, eliminated from the proceedings of the conference the battle which has heretofore been waged between those who would destroy the trusts, root and branch, and those who believe that regulation is not only practicable, but a sound public policy.

So far, though, as it may be possible to gauge the consensus of opinion of such a body, it may be said that the conference was distinctly in favor of the regulation of trusts and combinations, though the details of such regulation presented in the minds of the several speakers a wide variety of form. This difference of opinion as to the proper remedies is, in a measure, reflected in the resolutions adopted by the conference.

The forthcoming volume of the proceedings will be not only a contribution to economic literature, but also to the literature of politics in the larger sense of dealing with some of the fundamental concepts of our national life and government. Were the remarks of the several speakers welded into one, they would appear as a plea for a larger intervention of the national government in the business and commercial life of our people. Not that the strictly business and commercial interests are desirous of government interference, but recognizing under existing conditions the inevitability of government intervention, the desire that such intervention should proceed from the nation rather than the State, was very marked. An increase of the activities of the Federal Government in dealing with questions of industrial life was accepted practically as a matter of course by a large majority of the speakers. Among the legal members of the conference, who gave ut-

OFFICERS AND SPEAKERS, NATIONAL CONFERENCE ON TRUSTS AND COMBINATIONS.

terance to some very acute analysis of the Federal Constitution, there was some diversity of opinion as to whether the increased power needed by the nation to meet the national questions now arising could be obtained by a reasonable interpretation of the clauses of the Constitution, or whether the more cumbersome form of constitutional amendment must be adopted. Here, again, it may perhaps be estimated that the weight of opinion was with those who believed that the nation already has in the Constitution adequate power to meet the situations so far as they can now be foreseen, arising from the prodigious development of trusts and combinations of all kinds in our country.

The general attitude of the conference being thus understood, the resolutions adopted by it assume a great significance. Considering the care devoted to their preparation and the unanimity with which they were adopted, there can be no doubt that they fairly represent the general trend of opinion.

One of the first acts of the conference was to provide for the appointment of a Committee on Resolutions to consist of fifteen members at large appointed by the chair and representatives of each State chosen by the respective State delegations. All persons attending the conference, by whomsoever appointed, were considered part of the State delegation for the purpose of making these selections. The committee thus constituted was thoroughly representative. Dr. Albert Shaw was chosen chairman of the committee and Prof. John H. Gray, of the University of Minnesota, acted as secretary. The members of the committee were:

MEMBERS AT LARGE.

SETH LOW, Publicist.....New York
SAMUEL GOMPERS, President American Federation of Labor.....Washington, D. C.
C. H. SMITH, President Illinois Manufacturers' Association .....Chicago, Ill.
JAMES M. LYNCH, President International Typographical Union.....Indianapolis, Ind.
AARON JONES, National Grange...South Bend, Ind.
GEORGE W. PERKINS, President International Cigar Makers' Union.....Chicago, Ill.
FRANKLIN MacVEAGH, Wholesale Grocer, Chicago, Ill.
A. T. ANKENY, Attorney-at-Law..Minneapolis, Minn.
JAMES O'CONNELL, President International Association of Machinists.....Washington, D. C.
JOHN F. CROCKER, President Chamber of Commerce .....Boston, Mass.
FRANK DUFFY, General Secretary United Brotherhood of Carpenters and Joiners of America, Indianapolis, Ind.
WILLIAM JAY SCHIEFFELIN, National Association of Wholesale Druggists.....New York
DANIEL J. KEEFE, President International Longshoremen, Marine and Transporters' Association, Detroit, Mich.
PROF. J. LAURENCE LAUGHLIN, University of Chicago.....Chicago, Ill.
A. T. STEBBINS, National Retail Hardware Association .....Rochester, Minn.

MEMBERS SELECTED BY STATE DELEGATIONS.

JOHN W. TOMLINSON.....Alabama
G. W. HULL.....Arizona
CHARLES S. THOMAS.....Colorado
IRVING FISHER.....Connecticut
J. HOWARD GORE.....District of Columbia
J. W. ARCHIBALD.....Florida
AVERY C. MOORE.....Idaho
JOHN V. FARWELL, JR.....Illinois
JOHN H. HOLLIDAY.....Indiana
F. L. MAYTAG.....Iowa
JAMES W. ORR.....Kansas
GEORGE L. SEHON.....Kentucky
THEODORE MARBURG.....Maryland
DR. FRED WILLIAM HAMILTON....Massachusetts
GEORGE H. BARBOUR.....Michigan
JOHN W. WILLIS.....Minnesota
ROBERT H. WHITELAW.....Missouri
WALTER L. LOCKE.....Nebraska
NAHUM J. BACHELDER.....New Hampshire
HOWARD H. WOOD.....New Jersey
J. H. BEARRUP.....New Mexico
DR. ALBERT SHAW.....New York
D. A. TOMPKINS.....North Carolina
ALLEN R. FOOTE.....Ohio
DAVID P. MARUM.....Oklahoma
GEORGE LANGFORD.....Oregon
TALCOTT WILLIAMS.....Pennsylvania
J. A. PICKLER.....South Dakota
JAMES S. MEAD.....Tennessee
F. G. HOWLAND.....Vermont
WYNDHAM R. MEREDITH.....Virginia
JAMES C. LAWRENCE.....Washington
JAMES M. PAYNE.....West Virginia
WILLIAM GEORGE BRUCE.....Wisconsin
NELLIS CORTHELL.....Wyoming

The resolutions presented on the floor of the convention as well as those handed to the secretary, were referred by the committee above named to a smaller committee of nine persons. After a prolonged discussion the sub-committee, upon the basis of the several resolutions before it, drafted a proposition which was submitted to the whole committee, and after considerable discussion and amendment in detail, was adopted by that committee. Upon presentation of its report to the conference at its concluding session there was considerable debate, less in the nature of criticism than for the purpose of bringing out the exact purport of the resolutions. The difficulties suggested being satisfactorily explained, the conference, without a dissenting voice, adopted the following resolutions:

After twenty years of federal legislation as interpreted by the courts, directed against the evils of trusts and combinations, and against railroad rebates, beginning with the interstate commerce act of 1887 and the anti-trust act of 1890, a general and just conviction exists that the experience gained in enforcing these federal acts and others succeeding them demonstrates the necessity of legislation which shall render more secure the benefits already gained and better meet the changed conditions which have arisen during a long period of active progress, both in the enforcement of statute law and in the removal of grave abuses in the management of railroads and corporations. These changes now demanded are:

First—Immediate legislation is required, following the recommendation of President Roosevelt and the Interstate Commerce Commission, permitting agreements between railroad corporations on reasonable freight and passenger rates, subject in all respects to the approval, supervision, and action of the Interstate Commerce Commission.

Second—The enforcement of the Sherman act and the proceedings under it during the administrations of Presidents Harrison, Cleveland, McKinley and Roosevelt have accomplished great national results in awakening the moral sense of the American people and in asserting the supremacy and majesty of the law, thus effectually refuting the impression that great wealth and large corporations were too powerful for the impartial execution of law. This great advance has rendered more secure all property rights, resting, as they must, under a popular government, on universal respect for and obedience to law. But now that this work is accomplished, it has revealed the necessity for legislation which shall maintain all that the Sherman act was intended to secure and safeguard interests it was never expected to affect.

As the next step in executing the determination of the American people to secure in all industrial and commercial relations justice and equality of opportunity for all, with full sympathy and loyal support for every effort to enforce the laws in the past, we urge upon Congress without delay to pass legislation providing for a non-partisan commission, in which the interests of capital, of labor and of the general public shall be represented. This commission, like a similar commission, which proved most successful in Germany in 1870, shall consider the entire subject of business and industrial combinations and report such proposals as to the formation, capitalization, management, and regulation of corporations (so far as the same may be subject to federal jurisdiction) as shall preserve individual initiative, competition, and the free exercise of a free contract in all business and industrial relations. Any proposed legislation should also include modification of the prohibition now existing upon combinations on the following subjects:

1. National and local organizations of labor and their trade agreements with employers relating to wages, hours of labor, and conditions of employment.

2. Associations made up of farmers, intended to secure a stable and equitable market for the products of the soil, free from fluctuations due to speculation.

3. Business and industrial agreements or combinations whose objects are in the public interest as distinguished from objects determined to be contrary to the public interest.

4. Such commission should make a thorough inquiry into the advisability of inaugurating a system of federal license or incorporation as a condition for the entrance of certain classes of corporations upon interstate commerce and also into the relation to the public interest of the purchase by one corporation of the franchises or corporate stock of another.

On no one of these subjects must what has been gained be sacrified until something better appears for enactment. On each, this conference recognizes differences between good men. On all, it asks a national non-partisan commission to be appointed next Winter to consider the question and report at the second session of the approaching Congress for such action as the national legislature, in the light of this full investigation, may enact.

Third—The examination, inspection and supervision of great producing and manufacturing corporations, already begun by the Department of Commerce and Labor and accepted by these corporations, should be enlarged by legislation requiring, through the appropriate bureaus of the Department of Commerce and Labor, complete publicity in the capitalization, accounts, operations, transportation charges paid, and selling prices of all such producing and manufacturing corporations whose operations are large enough to have a monopolistic influence. This should be determined and decided by some rule and classification to be devised by the commission already proposed.

Fourth—The conflicts between State and Federal authority raised in many States over railroad rates being now under adjudication and under way to a final and ultimate decision by the Federal Supreme Court, this conference deems the expression of an opinion on these issues unfitting, and confidently leaves this great issue to a tribunal which for 118 years has successfully preserved the balance between an indissoluble union and indestructible States, defining the supreme and national powers of the one and protecting the sovereign and individual powers of the other.

ORGANIZATIONS WHICH APPOINTED DELEGATES TO THE NATIONAL CONFERENCE ON TRUSTS AND COMBINATIONS

Affiliated presidents and secretaries of commercial and trade organizations.
American Bankers' Association.
American Bar Association.

Board of Trade of Wilmington, Del.
Board of Trade of Worcester, Mass.

PRESS COMMENT ON THE TRUST CONFERENCE

THE PRESS THROUGHOUT THE COUNTRY UNITES IN APPROVAL OF THE PURPOSE AND THE RESULTS OF THE CONFERENCE

FEW of the undertakings of the Federation have attracted so much attention as the National Conference on Trusts and Combinations. The newspaper press throughout the country gave its proceedings wide publicity in their news columns and much sympathetic and approving comment in their editorial columns. From the hundreds of editorials dealing with the matter, a few are here selected as illustrations of the discriminating approval generally expressed:

COMMON SENSE AS TO TRUSTS.

New York Times.

It is fairly to be assumed that the President, before preparing his next message to Congress, will give careful consideration to the recommendations of the Civic Federation at the close of the important conference held last week in Chicago. In that meeting were represented a larger number of interests and classes, we believe, than have ever been brought together for like purposes. The discussion was informing. Many of the addresses were exceedingly able and nearly all of them were in excellent spirit, and this is true especially of some men who have hitherto been prone to excess in denunciation of the trusts. This spirit of moderation and of practical searching for common ground on which to proceed is reflected in the resolutions. These not only call for a commission, but outline the work it would be expected to do, and the general methods by which it should be done.

If the President should come to the same ground, and if he is prepared to submit the whole matter to a fair, nonpartisan, competent commission for study, it would be a good thing, on which the country might be congratulated.

REPEAL THE SHERMAN LAW.

New York Globe.

That progress is being made toward educating the public into a true perception of the true character of the Sherman anti-trust law was shown yesterday at the convention of the National Civic Federation at Chicago. The delegates, many of them economists of national repute, were practically unanimous that the anti-trust law should be repealed—that it is based on a wholly false principle and that attempts to enforce it are necessarily productive of profound business disturbance.

The year 1890 seems destined to be remembered as the birth year of two Diabolic Twins—the Sherman silver purchase law and the Sherman anti-trust law, each a panic breeder. We throttled one of them in 1894, but not soon enough to prevent doubt concerning the integrity of the money base, bringing on a depression. The other is still on the statute books, and for fifteen years practically escaped perception of its true character because unenforced. But its inherent viciousness is now pretty well displayed. As combination is an economic necessity—as our prosperity is dependent on combination—the sound opinion of the country should demand of the approaching Congress the repeal of the Sherman anti-trust law as it did the repeal of the Sherman silver law in 1894.

COMMENDABLE CONCLUSIONS.

Chicago Tribune.

The resolutions adopted by the conference will commend themselves to thinking men. A competent commission should be created by Congress for the consideration of all the great problems which have resulted from the enormous industrial development of the country and from the merger of great railroad and other corporate interests. And it is equally important that there should be legislation along the lines recommended by the President, permitting reasonable agreements between railroads subject to the approval of the government.

TRUST BUSTING HOPELESS.

Buffalo Commercial.

The late meeting of the National Civic Federation in Chicago was made highly significant by the frank opinion expressed by some of the ablest men present that prohibiting, penalizing, dissolution and "trust busting" are hopeless as a means of dealing with the trust problem. This view was advanced by F. W. Taussig, Professor of Economics in Harvard University, an authority of high repute, and was substantially reiterated by others, including Herbert Knox Smith, head of the Bureau of Corporations. What is more, it was formally approved by the conference, which recommended that Congress "without delay" pass legislation providing for a non-partisan commission—such as was organized in Germany in 1880—to consider the entire subject of a general law that will preserve the individual initiative, competition and the free contracts of all industrial relations.

Professor Taussig declares that it is senseless to resist an irresistible economic tendency like that in modern times toward combinations and trusts. Facts must be faced. The proofs of the case are indicated by the railroad situation. In one essential respect our policy toward the railways for the last twenty years has been wrong, he asserts. We have simply caused combination to take new forms, to conceal itself and to become more difficult of supervision. We have not prevented it; we have simply driven it into hiding. We should let railroads combine and co-operate, but they should be made to do it in the open. The principles which are applicable to railway combinations are applicable to the trusts also. The mere act of combination should not be subject to legal penalty. Secret combination should be hounded down.

TO INVESTIGATE TRUSTS.

Chicago Evening Post.

The resolutions which brought the trust conference of the National Civic Federation to a close yesterday admirably express what now may be called the conservative opinion of progressive public men. They do not recommend or, on the other hand, attack the more radical remedies advanced, and in this avoidance provide what may very well be a safe ground of compromise.

The recommendations are of a necessity somewhat indefinite, but not more so than may be welcomed at this time, since there is obvious need of a broad and thorough study of the results of recent legislation in regulation of industrial and commercial activity. The suggestion of a government commission of inquiry was inevitable, and is unobjectionable and even highly desirable if properly constituted and conducted. In this respect, however, the greatest care is necessary. The history of our tariff commissions has not been happy. Partisanship and selfish interest have run riot in them or over them. The just and reasonable conclusions of the best of them have been pointedly ignored by legislators lacking either in public spirit or courage.

FEDERAL CONTROL OF TRUSTS.

Boston Advertiser.

At the conference of the National Civic Federation representatives in Chicago, it is noteworthy that about all the speakers, although discussing the trust question from different points of view, reach practically the same conclusion, which is exactly that at which President Roosevelt arrived in his Provincetown speech—that instead of the Sherman anti-trust law, the country needs more modern legislation, which, while allowing trusts to exist, shall bring them under the supervision of the Federal law. Experience has shown that the tendency of business organizations to-day is to reach closer relations with one another. The law may forbid this, but the same thing is accomplished under cover of law in some roundabout fashion. The President came to the conclusion, therefore, that it was better to recognize the tendencies of the times in a straightforward way, making sure that the public interest should be thoroughly protected.

USEFUL DISCUSSION.

San Francisco Record.

Probably the most notable discussion of recent years in its bearing upon American business and industrial conditions was inaugurated at Chicago yesterday under the auspices of the National Civic Federation.

Discussion of national problems—and this one is most pleasing—has been productive of much good in the past, and there is little doubt that a solution of this one will be found. It is a good sign that the men most interested in the problems that are confronting this nation to-day meet and discuss those problems with a view to finding a remedy that will do equity as between the people and capital. No thinking man can maintain that the present system of trusts and combinations is detrimental to the people at large, by reason of the concentration in the hands of a few of many of the necessaries of life. Nor can any one reasonably maintain that such combinations should not be regulated. Just how that regulation should be done is a matter of wide divergence of opinion that this conference is expected to—and probably will—reconcile.

THE TRUSTS HARD HIT.

Omaha News.

The National Civic Federation's conference on the trusts is over. There were more than 400 delegates present from forty-three states and territories.

Well, what did they DO, these 400 talkers about the trusts?

They asked for NATIONAL LEGISLATION and they asked LOUDLY!

So they asked Congress for a NATIONAL NON-PARTISAN COMMISSION, to represent equally the interest of CAPITAL, LABOR and the general PUBLIC.

They suggested legislation which would interfere LESS with combinations like those among local and national labor organizations and their agreements with their employers as to hours and conditions, associations of farmers designed to secure staple and equitable markets, and business associations or combinations whose object would further the public interest.

They suggested that the work of examining, inspecting and supervising the great producing and manufacturing corporations, already begun by the Department of Commerce and Labor, be ENLARGED so as to give complete PUBLICITY as to CAPITALIZATION, ACCOUNTS, OPERATIONS, TRANSPORTATION CHARGES and SELLING PRICES, and they recommend that conflicts between state and federal authority as to railroad control be turned over to the Federal Supreme Court for adjudication.

Now we shall see how much attention Congress pays tc these recommendations.

But don't you think this is a PRETTY SENSIBLE PROGRAM?

BETTER LIGHT ON THE TRUST PROBLEM.

St. Paul Pioneer Press.

The general trend of the proceedings of the recent conference on trusts of the National Civic Federation was toward a broader development of federal regulation. On the one hand, the general opinion leaned toward the extension of governmental control over commerce and on the other hand toward a modification of the requirements of the Sherman anti-trust and the provisions of the interstate commerce laws in respect to pooling. The discussion was significant, in that it was participated in by many of the closest students of the general trust and railroad problem, men who are not influenced by personal or class interests, but who weigh with care and with impartiality both the evil and the good of trusts and combinations and of the laws that regulate them. The desire was not to make the laws more lenient, but to make them more effective by bringing them into harmony with economic forces and with equity. In short, the expressions at the conference reflected very accurately the best thought of the country, which is bound sooner or later to be embodied in national legislation.

TO FORBID OR REGULATE.

Indianapolis News.

The real issue before the country in relation to trusts, as it is presented by the utterances of the speakers at yesterday's session of the National Civic Federation is to forbid or to regulate. Mr. Herbert Knox Smith, Commissioner of Corporations, argued that it was most inconsistent to regulate or to propose to regulate something which you had forbidden. Of course, he is right. If we are going to regulate trusts and supervise their operation it is manifestly absurd to keep in force a law which makes trusts illegal and those connected with them criminals. Governments do not undertake to regulate crime—they simply forbid and punish it.

CONTROL OF CORPORATIONS.

San Antonio (Tex.) Express.

Reviewing the proceedings of the National Civic Federation in Chicago, the Indianapolis News concludes that the old and fierce opposition to trusts, because they are trusts, is swiftly disappearing and that even the bitterest enemies of monopoly are beginning to differentiate between good and bad trusts.

All the speakers at the conference opposed annihilation or destruction in lieu of regulation, and none more strongly than Mr. Gompers of the American Federation of Labor, and the general idea seemed to be that regulation should be by the national government rather than by the state governments.

So it is found that there is a friendlier sentiment being manifested toward great corporations that serve a useful purpose, and at the same time a growing desire on the part of these corporations for federal instead of state regulation, because it would be easier to conform to the mandates of a central commission than to satisfy a number of state commissions that are at variance of views with each other.

LABOR AND THE TRUSTS.

Spokane (Wash.) Spokesman-Review.

If Samuel Gompers, president of the American Federation of Labor, correctly represents the views of organized labor in his public utterances, William Jennings Bryan can hope for little support from that source in his advocacy of the annihilation of all the trusts. At the recent convention of the National Civic Federation no man spoke more strongly in deprecation of any destructive war on trusts than Mr. Gompers, who held that violent denunciation is more harmful than helpful.

Constructive and associated effort, Mr. Gompers declared, must check and correct the abuses which have grown so rapidly in this era of concentrated methods of production and distribution. "We can not, if we would," he said, "turn back to the primitive conditions of industry which marked the early part of the last century. It is idle chatter to talk of annihilating trusts. The trust is, economically speaking, the logical and inevitable accompaniment and development of our modern commercial and industrial system."

A FRUITFUL CONFERENCE.

Muncie (Ind.) Star.

It is generally admitted that the first American trust conference, which met in 1899, rendered the country a great service in emphasizing the duty and need of publicity as regards all affairs of public utility companies and great corporations. The second trust conference, which has just finished its labors in Chicago, has taken several steps forward, profiting by the abundant experience of the last several years and reflecting the decided progress of opinion on the great subject.

A REASONABLE DEMAND.

Grand Rapids (Mich.) Herald.

The demand made at the Chicago Trust Conference, so called, by representatives of numerous nation-wide associations of industries for such amendments to the Sherman law as shall legalize the formation of "legitimate combinations for defense and not offense," thus protecting such associations from harassment, is not unreasonable and should, and probably will, receive attention from Congress in the near future.

NEW ENGLAND CIVIC FEDERATION

THIRD ANNUAL MEETING—EDUCATORS, EMPLOYERS AND LABOR LEADERS DISCUSS THE PROBLEMS OF INDUSTRIAL EDUCATION

THE third annual meeting of the Civic Federation of New England, held January 9, 1908, was devoted to the subject of industrial education. The deep interest felt in this subject is testified to by the large attendance, representing all classes and varied interests.

About three hundred and fifty members and guests accepted the invitation to be present, and, including those in the balconies coming in response to the general public invitation, there were fully five hundred persons present. The meeting began with an informal reception. The Hon. Curtis Guild, Governor of Massachusetts; Hon. George A. Hibbard, Mayor of Boston; the members of the Massachusetts Commission on Industrial Education, and other representatives of the State and local government were in attendance.

In calling the meeting to order Mr. Lucius Tuttle, President of the Civic Federation of New England, congratulated the organization upon its gain in membership, representing an increase of more than 25 per cent., since the last annual gathering, and gave a brief account of the aims and purposes of the organization, in which he said:

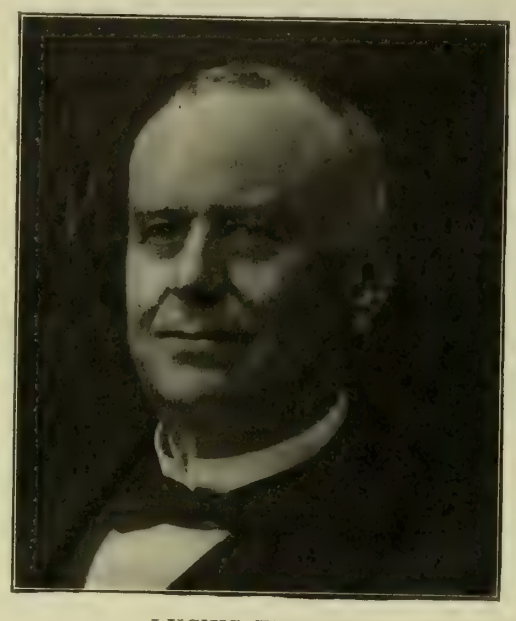
"The Civic Federation is a round table at which there is neither head nor foot, and at which all who take part in its deliberations do so upon the plane of absolute equality. It pursues no plans that have in them anything in the nature of demand, dictation, or even arbitration. Its work is wholly educational and conciliatory.

"As is well known, this work of the Federation is unobtrusively, but none the less effectively, carried on; and while it is no part of its policy to publish the details of the different cases in which its assistance is solicited, nor to boast of its successes, enough may be gleaned to give full and satisfactory assurance that results have already been accomplished in the preservation of industrial harmony and peace of paramount social and commercial value.

"One breach of the laws of industrial peace, with its attendant lockout or strike, attracts the attention of whole communities, while hundreds of cases in which prospective and even imminent danger of industrial rupture is adjusted and removed, through the quiet and unassuming efforts of this and kindred organizations in the country, seldom or never become matters of public knowledge.

"I am sure, beyond any question of doubt, that the results of the past three years' efforts of the Civic Federation of New England have been in the highest degree worth while; and that we are justified in entering upon another year of its work with renewed courage and a stanch faith in the efficacy of the methods."

After reading letters from members and guests who were unable to attend the meeting the report of the Nominating Committee was received.



The general officers were unanimously re-elected as follows:

Lucius Tuttle, president; Frank H. McCarthy and Louis D. Brandeis, vice presidents; John Mason Little, treasurer; Henry Abrahams, recording secretary, and Hayes Robbins, secretary.

The following were chosen to constitute the executive committee on the part of the public: W. Murray Crane, Henry L. Higginson, Bishop William Lawrence, Dr. William J. Tucker, president of Dartmouth College; Louis D. Brandeis, John Mason Little, William A. Gaston, William F. Henney, Hartford; Rev. Thomas I. Gasson, S. J.; Frederick P. Fish, W. H. P. Faunce, Charles S. Hamlin, Alvah W. Sulloway, Hayes Robbins. On the part of employers: Lucius Tuttle, W. L. Douglas, Amory A. Lawrence, Charles H. Taylor, Jr., Wallace L. Pierce, J. L. Richards, T. E. Byrnes, C. L. Edgar, J. H. Hustis, P. F. Sullivan, Garret Schenck, Arthur T. Lyman, W. C. Winslow and James Logan. On the part of wage-earners: Frank H. McCarthy, John Golden, Henry Abrahams, Frank K. Foster, P. F. McCarthy, Dennis D. Driscoll, Samuel Ross, Francis J. Clarke, Thomas F. Kearney, Edmond F. Ward, John J. Connolly, P. F. Sheehan, Norman E. McPhail and William H. Frazier.

The chairman announced the subject of "Industrial Education" as the topic for the evening's discussion, and as the speakers, Prof. Paul Hanus, Mr. J. F. Deems, Mr. James O'Connell and Rev. Thomas I. Gasson.

PROF. PAUL HANUS, of Harvard University, chairman of the Massachusetts Commission on Industrial Education, outlined the history of the commission and its work, and said:

LUCIUS TUTTLE.

"One of the most important principles on which our Democratic institutions are based is, briefly stated, equal opportunities for all through education and equal rights before the law.

"We insist that in this country every youth shall have an opportunity to make the most of himself and lift himself to any social level to which he may aspire, and to which his character, capacity and industry may enable him to attain. Yet the school system which has been devised to guarantee this right now fails to reach the great majority of our population.

"Our present provision for public education is inadequate. Its dominant aim is general culture, but it makes no provision for training in some specific usefulness, in some skilled vocation for those who must leave school at the age of 14 or 15, and, therefore, they must face at an early age the momentous question as to what they should do to insure early self-support and progressive well-being as they grow older.

"The majority of pupils leave school at the age of 14. They naturally take advantage of the first opportunity to work for wages that presents itself, and that opportunity usually leaves them stranded at the age of 18 or 19 among the hosts of the unskilled.

"A generation or more ago it was possible for a youth who was obliged to leave school at 14 or 15 to enter one of the skilled vocations as an apprentice and to learn the whole of a trade in the course of a few years. This is no longer possible. The specialized condition of modern industry makes it impossible for the youth to learn the whole of any trade, even when the inclination exists to teach him a trade.

"The progressive development of all high-grade industries requires skilled workmen possessing industrial intelligence and a comprehensive insight and intelligent interest in their several trades as well as their skill, though the present conditions of production are unfavorable to the training of such workmen in the shop or factory, and sometimes render such training impossible.

"Such men, whether workers, foremen or superintendents, are now developed in this country, in general, by chance—and they are then self-made men, possessing the merits, but also the conspicuous shortcomings of their training.

"Meanwhile, boys and girls, young men and young women, are not only not directed toward the trades in our existing schools, but are often actually directed away from them by the bookish education of these schools and their purely academic traditions. Manual training is not industrial training, and should not be confused with it. It may make a pupil generally 'handy,' and hence may serve as preparation for industrial training, but it goes no farther. Industrial training, on the other hand, means vocational training in trades and agriculture. It aims to develop industrial intelligence and skill in particular vocations and does not properly begin until the pupil is at least 14 years old. It does not make a journeyman, but gives each worker at a skilled vocation a training that entitles him to earn a living wage at 18 or 19, and a promise of increasing efficiency as time goes on.

"Boys are not wanted in the industries until they are 16 years of age. The result is, an army of young men from 14 to 16, most of whom are either at work in various kinds of juvenile occupations, in which they learn no trade and are subject to little, if any, beneficial general education. The majority of these children would be in school if that school promised preparation for some life pursuit.

"These years in the life of the child are, however, invaluable for industrial education, but there has been no agency whereby such education is provided, except to a limited extent by philanthropic organizations and correspondence schools. Hence the need of industrial schools to meet this new educational need. Such schools should receive pupils of 14 or 15 years of age desiring to learn a trade. They would, therefore, be parallel to the existing public schools, but must be entirely independent of them. There must be independent schools because their leading motive is vocational training and not general culture. Such schools should offer a course of study covering four years—the first two devoted to general shop instruction, with related drawing, mechanics, natural sciences, the history of industry and commerce, shop and business English, while the last two years should be shop instruction for particular trades and for each trade such drawing, mechanics and other sciences as may be appropriate. It is not likely that such schools can achieve marked success at once, or that they can be founded or carried on without some mistakes. An encouraging beginning has been made. All progress involves some risks. The Commission on Industrial Education desires to make no mistakes, but it also intends to make progress, and to that end it invites the co-operation of all who have the welfare of the wage-earner, the employer, the agriculturist and of the entire commonwealth at heart."

J. F. DEEMS, general superintendent of motive power of the New York Central lines, said: "The only way to get industrial education is by doing the thing itself. The schools cannot replace the constant association of employer and employed. The old system of apprenticeship turned out good workmen thirty-five years ago. The dawn of the present industrial era brought about entirely new conditions. The increased business activity has proved an education in itself. Educators have learned that industrial or commercial training may be as effective as a classical course in turning out broadgauged men. Thus far college course and shop training have only partly adapted themselves to our new conditions.

"It is doubtless true that there are some trades in which the manual training may be largely had in schools. The atmosphere of the trades school, at its best, is not that of the actual shop. There are many trades, however, that, from their very nature, must be learned in a regular shop, and for these trades we must look to apprenticeship, perhaps not the old-fashioned kind, but one suited to our present needs and conditions.

"The problem of securing skilled workmen in machine shops has received much attention from the railroads of the country, and out of this discussion has grown the system of apprenticeship and training which I have been permitted to introduce in the New York Central shops. It went into effect March 1, 1906, its object being to provide a recruiting system which will eventually produce from the ranks a large number of skilled workmen, a number of foremen, as well as draughtsmen, master mechanics and superintendents of motive power. The plan is a purely business proposition. The course of training has been outlined with the intent to educate the boy *in* the trade, and not *out* of it. The general plan is to provide for shop instruction of the apprentice in the trade and for his instruction in a technical way in subjects allied to his trade, during working hours and while receiving pay. The shop instructor teaches the trade in a regular shop and on regular work.

"All of the shop work done by the apprentice is part of the regular shop output. The shop instructor is present to see that each machine is run at its best efficiency, even when handled by a green apprentice. The apprentices are still responsible to the foreman as formerly, and he alone is responsible for shop discipline, but has been relieved from the necessity of instructing the apprentices. Boys are taken on for a probationary period of six months, at the end of which time, if it is discovered that they are not suited to the business, they are discharged.

"The plan is now in operation at the ten larger shops of the system, and already includes over five hundred apprentices. A uniform set of regulations

has already been adopted, showing the division or class of work in the shop and the time allotted to each class. These regulations have been made sufficiently flexible to suit various conditions in the different shops, and to insure proper progress of the apprentices. Uniform certificates or diplomas are issued at the completion of the course. Such a system as is here described has its own educational needs, which must be worked out from practical experience, because your work must be brought into living relation with the shop work. The ingenuity of the instructor is taxed to present subjects in an attractive way, so that their vital connection with the whole work may be thoroughly understood. Practical and not theoretical instruction is an essential. The immediate and direct results of the apprentice system have been an increased output (notwithstanding the four hours per week spent in class rooms), less spoiled work, better ability to read drawings and make sketches, better grade of apprentices, and increased interest in work. Local officials have everywhere noted the benefits of apprentice training and are uniformly enthusiastic and interested. One of the immediate results of the opening of the apprentice schools was the request from the foremen and mechanics for educational classes of a similar nature, which resulted in the organization of self-supporting evening classes in several of the shops.

"What can the public school do for the mechanical trades? This is a very large question. It can never teach trades. It can, however, possibly lay a better foundation than at present by simplifying courses, by work in applied arithmetic and mechanical drawing, some presentation of the laws of mechanics. A curriculum might be arranged which would tend to hold in school a boy with a mechanical turn of mind. This, however, is only in the way of preparation. After all has been said, there still remains the fact that the United States must look mainly to apprenticeship for its industrial salvation."

JAMES O'CONNELL, president of the International Association of Machinists, said:

"After the schools have done all that is possible in the preliminary way for the boy the real work begins to properly qualify and equip the coming citizen with all that is necessary to enable him to earn a living and shoulder the social responsibilities that come with mature manhood.

"Books can only help him in part; thoroughness and skill can only be gained by practice. Industrial schools and kindred establishments making claims of ability to instruct the rising generation in all the details necessary to equip fully a practical machinist so that he can hold his own and command the average pay of a journeyman in less time and with less practice than it is done in the machine shop are claiming more than can be accomplished.

"Because of this lack of thoroughness and the attempt to teach by rote, so to speak, the industrial school cannot perform what it promises, and the more the matter is investigated the more conclusive will be the evidence to confirm this view.

"On one occasion I witnessed this remarkable spectacle: About twenty-five young men were being marched from a school to a factory where men had been on strike for several weeks. The young men were headed by a detachment of the State militia, and in the rear of the parade was a squad of city policemen. These young men were marched from the school to the shop in the morning, and from the shop to the school in the evening. The strike was finally adjusted and the boys then remained at their school.

"The industrial school in these cases worked a great injury upon the men on strike, though not nearly as bad as the injury it did to the lads induced to take the strikers' place. To them the injury is well-nigh irreparable. It leaves a stain on their characters that years cannot efface, a stain that will cling to them as long as they attempt to earn a living in the vocation they have chosen, and upon which, in the estimation of their shopmates, they have brought disgrace. No one outside the ranks of labor can appreciate or understand the bitterness of feeling that has been generated among workingmen through the shortsighted selfishness which has taken advantage of boyish enthusiasm and used it to strike-breaking ends. The industrial schools in these cases were used for the vilest purposes, and there can be no excuse or extenuation for those who are responsible or at whose instance it was permitted.

"The workshop is the only place where an education can be gained that is practical and thorough, calculated to fill all the requirements that go to make up a full fledged mechanic. The industrial school merely supplies a veneer of education, which can never compete with the solid practicability of the education acquired in the factory. Its well-rounded thoroughness comes from observation, from intuition, from absorption and all-around hard work that comes with every day application. It can never be acquired elsewhere, or gained in any other way than in the hard school of factory experience. The factory workshop can be depended upon for practical results in the matter of supplying fully equipped mechanics, which can never be expected from the industrial school as long as it is dependent upon itself alone.

"Summing up the whole question of industrial education as it is supposed to apply to the young men, I am firmly convinced that unless every precaution is taken concerning such schools to the end that young men will not be induced or led to believe that after serving a few months, or a year, if you will, in an industrial or trades school, by securing certificates, they are permitted, or even warranted, in going into the industrial field seeking employment as mechanics against the best interests of those who have served a reasonable or legal apprenticeship. To avoid this danger and with views of securing the highest skill, and to perpetuate the supremacy of the American mechanic, I believe that the proper and best methods to be adopted are for employers to establish schools in connection with their factories and workshops for the purpose of giving young men employed by them an opportunity for a few hours' schooling each day, in addition to the practical experience they are securing while serving their time as apprentices. To my mind this idea is best being carried out by the New York Central Lines, as represented by Mr. Deems.

REV. THOMAS I. GASSON, S. J., president of Boston College, said:

"I cannot and never will admit that there is too much education, but will say that there can be misdirected education. There are lines upon which there should be more education, as is shown by the statements of speakers here to-night, who say that when an important position is vacant there is no one to fill it, and when there is an unimportant one, there are battalions to fill it. Take the boy after he has graduated from the grammar school. He will say that he wants to get clean work. He means by that that he doesn't want manual labor. The average boy has the wrong idea. He has a debased idea. Manual work, as we call it, constitutes the backbone of American citizenship.

"When the average boy says he doesn't want to wear overalls and soil his hands with oil he means that he is afraid that he will not be thought a gentleman. He should remember that all labor is clean, and no matter if he has the whitest hands and the finest broadcloth, if there is grime in his heart and his conscience is soiled, then his work is not clean. I believe there is nothing more ennobling than the labor in which the hands are soiled. There is no crown so white as that worn by the laborer.

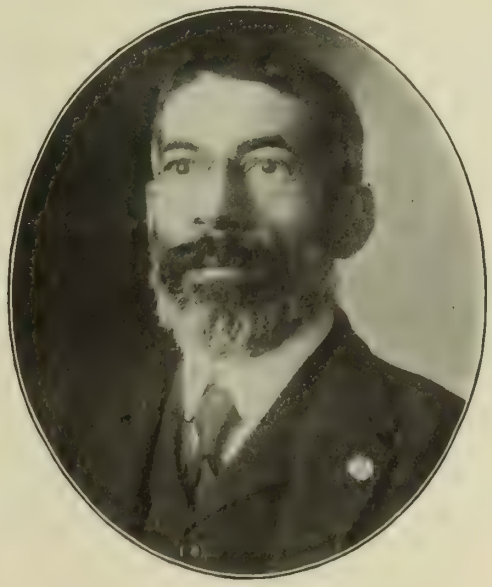
"Education should bring out what is in the lad, and make the possibility an actuality. Education depends upon circumstances. There may be abuses in the industrial or trade schools, but does that prove that they are entirely wrong? What we should do is to root out these abuses and combine our efforts in lifting up the country to purity of ideals in industrial progress and the promotion of industrial civilization."

PRESIDENT TUTTLE said in closing the meeting:

"I am going to take the liberty of saying one thing from my own knowledge in connection with the industrial school problem as it is being worked out in this commonwealth. There is no attempt on the part of those who have the matter in charge to provide any short-cut to a mechanical education. It is the clear and well understood purpose that there must be thoroughness in the education in so far as they are able to give it in the school, and there is intended to be a survival of the fittest in the course of that education. There is nothing different in this from what we have practised for years in our technical schools. To-day the great technical schools are turning out men who are not absolutely finished engineers or specialists, but who, in their three or four years in that technical school have absorbed the fundamentals of the knowledge so that they begin to be wage-earners from the beginning, and they have learned in those schools what they would otherwise have to learn in three or four years' practice in the field.

"In our commercial schools, in our industrial schools and manual training schools, the chief purpose in mind is to save the boy's time, and time is everything. This is a country of producers, and the producer makes the bone and muscle of the country, and if we can do anything within reason to see that the boy who is coming to be the producer while he is getting general education is taught some of the industrial and mechanical fundamentals, so that he can apply them when he goes to work, we have saved the boy's time and we have done God's service."

EVILS OF HOLDING CORPORATIONS.



Chicago News.

In the opening of the National Civic Federation conference on trusts and combinations, President Nicholas Murray Butler of Columbia University called attention to the fact that the danger in corporations is not due to the large size to which some of them attain. The small corporation, he pointed out, might have such relations to the government as would make it a greater menace than a concern representing larger capital.

President Butler's words on this subject served well to prepare the way for the address which followed. It was by Wade Ellis, Attorney-General of Ohio, and it dealt with the subject of holding corporations. Under the common law, Mr. Ellis pointed out, one corporation has no right to hold the stock of another. This right exists, if at all, by express statutory authority. Some of the states have conferred this authority on corporations; others have not. But the stocks of corporaions in states that have not conferred this authority, nevertheless are purchased and held by corporations organized in states like New Jersey which authorize the purchase by one corporation of the stock of another. In this way, the Standard Oil Company of New Jersey, as a holding company, has obtained control of a multitude of corporations in other states.

WOMEN'S CLUBS IN PANAMA

CLUBS ORGANIZED THROUGHOUT THE ISTHMUS—THE CANAL ZONE FEDERATION FOUNDED

ONE of the practical results of the work of the Public Employees' Welfare Committee of the National Civic Federation, in investigating conditions in Panama, has been the establishment of a flourishing chain of women's clubs, and their union into a Canal Zone Federation under the presidency of Mrs. George W. Goethals. In her report upon conditions in Panama, Miss Gertrude Beeks called attention to the monotony of life and the isolation of the people in social interests which has been so characteristic of the more or less improvised communities which have sprung up along the line of the canal. Among them there was the lack of common interests such as we always find in older communities, and Miss Beeks pointed out how this might be promoted by establishing women's clubs as central points in which common interest might be focussed.

The suggestion met with the hearty approval of Secretary Taft, and at his request Miss Helen Varick Boswell, of the Welfare Department of the National Civic Federation, visited the Isthmus to organize such clubs. Miss Boswell spent part of the month of October in Panama, and her suggestion met with so appreciative a response that in all of the large centres clubs were established. The Canal Record, which is published weekly under the authority and supervision of the Isthmian Canal Commission, gives in its various issues an interesting account of the inception and progress of this movement. Its underlying purpose is well expressed in a description of a preliminary meeting of the women at Culebra, as follows:

"At the meeting Miss Boswell gave an informal talk, in which she stated clearly her reason for coming down. It was her wish to meet the American women on the Zone and to confer with them, to learn their wishes regarding the organization of clubs. It seemed to her that clubs could be formed in the larger centres, Ancon, Culebra, Gorgona, Empire and Colon, with branches, or separate organizations in the neighboring settlements, each club to be under its own title, all to be affiliated under the title of the Canal Zone Women's League, or other suitable appellation. The club should be for social and educational purposes, to promote social feeling among the women, to enable them, as an organization, to take a part in municipal matters, governing the schools, and matters where a woman's wisdom may be considered to go far, and for the purpose of study, Spanish classes could be formed, a good teacher engaged, and members admitted to the class at club rates. She spoke of the real good that women are doing here, of the influence of the sight of domestic life and happy homes on the young men. While the life of every woman here is a busy one, there is time to be kind. We hear a lot about the 'fatherhood of God,' the 'brotherhood of man.' Let us prove that there is a 'sisterhood of women,' said Miss Boswell. The influence of their development of the social spirit is scarcely to be overestimated. All the women present signified their intention of joining a women's club should one be organized."

The interest which is reflected in this paragraph was shown at the several points along the line where the movement was inaugurated. So successful were the efforts of those interested in the project that by October 12 eight clubs had been organized, seven of which were represented in a meeting held at Ancon for the purpose of establishing a federation. At a subsequent date another club was organized, making in all nine clubs in active operation on the Isthmus.

At the meeting above referred to the Canal Zone Federation of Women's Clubs was formally organized. Mrs. George W. Goethals was elected president, other officers were chosen and a constitution adopted. One feature of the constitution which will undoubtedly prove of interest is the provision for quarterly meetings of the executive officers to be held at different points within the Canal Zone, thus bringing the several clubs into closer relations with each other. Since Miss Boswell's visit the clubs have become important centres of social life and activity in the Isthmus. Every issue of the Canal Record brings an account of their doings. A summary statement from the Canal Record of November 13 indicates the general activities to which the clubs are devoted.

"Each week brings fresh interests in the Women's Clubs in the Zone. New names are constantly being presented, and the scope of work enlarged, suggestions being eagerly seized and acted upon in accordance with the special needs of each individual organization.

"During the past week a number of talks have been given in several clubs on the work of other organizations in the chain, and it was observed that each club took up the points especially adapted to its own community and several new measures of usefulness were adopted.

"The interest displayed in the study of Spanish was universal, and in several of the organizations this promises to be the most useful and prominent feature of club life. In all the communities the club influence is making itself felt in social life, in the increased spirit of contentment and broadening of the lives of the women. In this respect the efforts and work necessarily expended for maintaining the organization are well repaid. One of the most gratifying features of the movement is the interest that the men are taking in it. Not only the unmarried men who greatly appreciate the increased opportunities for social intercourse, but the married men as well, give every encouragement to their wives to take an active part in the work.

"There is a general feeling of satisfaction in the action taken by the Cristobal Woman's Club in the recent resolution quoted in last week's issue of the Canal Record, that the women should unite in fostering favorable instead of adverse criticism of conditions in the Zone and on the Isthmus of Panama. Several of the clubs have already taken action on this and expressed their intention to support the Cristobal Club in this movement.

"A great need is felt for intercourse among clubs which could be brought about in the way of invitations extended from one organization to another for social occasions. This would accomplish, not only the object for which the clubs were organized, i. e., to unite the women in social and educational influence, philanthropic work and musical and literary study, but would afford opportunity for the exchange of ideas, and the study of the methods and work of the other organizations. The general meeting of the Zone Federation of Women's Clubs, which takes place quarterly, different towns being appointed for each meeting, will be beneficial in this respect, but it is greatly desired that the exchange of courtesies among the organizations will be arranged as frequently as is convenient with club work. It is generally understood that business shall be transacted in closed meetings, and that invitations shall be extended for social occasions."

As the foregoing selection indicates, these various activities promise a bright future for these organizations and an important place in the community life. Such activities are as diverse as the varied interests of those who make up the clubs.

In some localities particular attention has already been given to questions affecting the schools. The civil administration is in hearty accord with the interest of the women in promoting the efficiency of the school work.

Where hospitals are located the care of the sick has been a matter of interest to the club members. Nurses from the hospitals have presented papers before the clubs on nursing in the homes and kindred topics, and the clubs themselves have organized committees for the purpose of visiting hospitals and doing what they can to cheer the sick and alleviate their suffering.

Literary entertainments and talks on various maters of general and current interest are also reported.

At other points the "Home Department" of the clubs has developed considerable activity and much attention has been given to the subject of horticulture. Efforts to improve the surroundings of the homes by gardens and experiments with flowers and shrubs which may be suited to the soil are being made.

That the clubs have found so much to do is in itself evidence of their need, and at the same time a guarantee of their usefulness in promoting the interests and welfare of those resident upon the Isthmus.

CANAL ZONE FEDERATION'S FIRST MEETING.

1. Mrs. Lorin C. Collins, First Vice-President and Acting President of the Canal Zone Federation, President Cristobal Club. 2. Mrs. W. C. Gorgas, President Ancon Women Club. 3. Mrs. F. R. Roberts, President Pedro Miguel Women's Club. 4. Mrs. N. F. Morrison, President Gorgona Women's Club. 5. Mrs. J. C. Barnett, President Paraiso Women's Club. 6. Mrs. F. M. Miracle, President Empire Women's Club. 7. Mrs. J. L. Elliott, Vice President Gatun Women's Club. 8. Mrs. Charles J. Jewett, Ancon. 9. Miss J. M. Beattie, Corozal. 10. Mrs. J. F. McTyer, Empire. 11. Mrs. F. H. Powell, Cristobal. 12. Mrs. E. S. Waid, Paraiso. 13. Mrs. John Burke, Cristobal. 14. Mrs. M. C. Rendell, Cristobal. 15. Mrs. Ralph R. Wolf, Gorgona. 16. Miss Eunice Browning, Empire. 17. Mrs. Edna Fraser, Pedro Miguel. 18. Mrs. S. R. Calvit, Gorgona. 19. Miss Helen V. Boswell.

The National Civic Federation Review

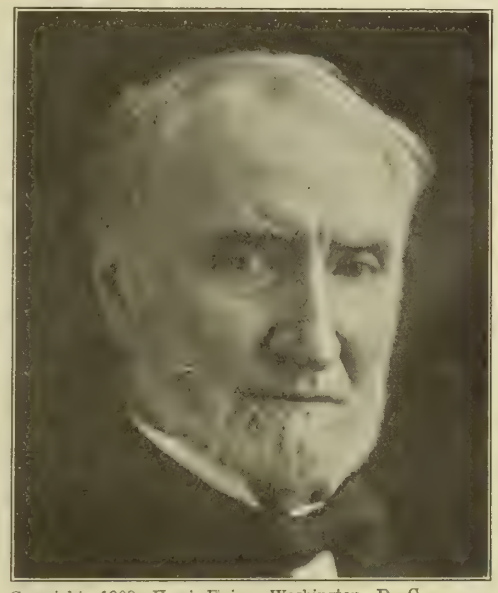
Vol. III. NEW YORK, MAY, 1908. No. 4

SHALL THE ANTI-TRUST ACT BE AMENDED?

EFFORT TO AMEND THE SHERMAN ACT—HEARINGS BEFORE THE HOUSE COMMITTEE ON THE JUDICIARY ON THE CIVIC FEDERATION'S BILL—THE MEASURE EXPLAINED AND DEFENDED.

THE bill prepared under the auspices of the National Civic Federation to amend the Sherman Anti-Trust Act, has been considered at length by the House and Senate Committees on the Judiciary. It has been the subject of an exhaustive examination by those bodies. A condensed statement of the hearings before the House Committee on April 4th and April 6th is here given.*

April 4th, Morning Session.



The sub-committee, consisting of Representatives Littlefield, Chairman, Malby and Henry, met on Saturday, April 4, 1908, for the purpose of according a hearing on the bill to amend the Sherman Anti-Trust law. Various members of the Committee on the Judiciary who were not members of the sub-committee were present during the hearing, and some of them took an active part in the proceedings.

On behalf of the bill Mr. Seth Low led the delegation from the National Civic Federation, which included Mr. Samuel Gompers, Mr. W. J. Schieffelin, E. H. Gary, Albert Shaw, Isaac N. Seligman, Charles A. Moore, John S. Huyler, V. E. Macey, William G. Breed, of New York; John Mitchell, Indianapolis; D. J. Keefe, Detroit; Samuel Mather, Cleveland; Henry L. Higginson, Boston; Franklin MacVeagh, Chicago; Frank A. Faxon, Kansas City; Mahlon N. Kline, Philadelphia; A. B. Garretson, Grand Rapids; Theodore Marburg, Baltimore; Prof. J. W. Jenks, Ithaca, and J. W. Kinnear, Pittsburg.

The opposition to the bill was represented by Mr. Daniel Davenport in behalf of the American Anti-Boycott Association; Mr. Monahan, representing the National Founders' Association; Mr. Henry R. Towne and Mr. Nathan Bijur, of the Merchants' Association of New York, and Mr. Emery, who stated that he appeared in behalf of some 135 associations in opposition to the bill.

Before entering upon the hearings, the Chairman read telegrams opposing the measure.

*Subsequent hearings, when the opponents of the bill testified, will be reported in the next issue of the *Review*.

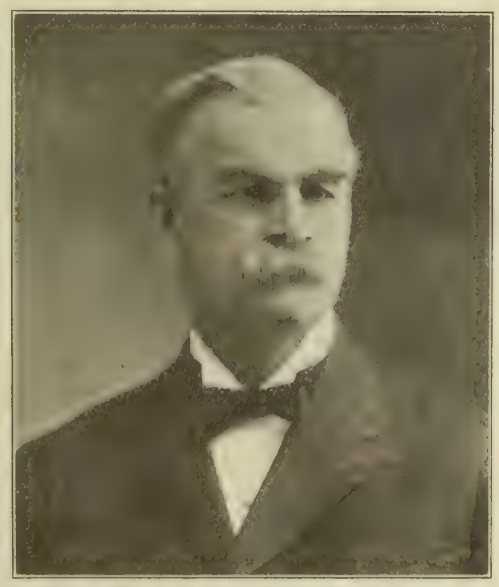
HON. JOSEPH G. CANNON.

MR. SETH LOW stated that the Trust Conference in Chicago had adopted resolutions and had authorized a sub-committee to present the same to Congress. In making arrangement for the presentation of the resolutions, the committee met Mr. Jenkins, Chairman of the Judiciary Committee, and Mr. Hepburn, Chairman of the Interstate Commerce Committee. At this conference the suggestion was made that a bill or bills be prepared. The bill now proposed grew out of that suggestion. It is not presented on behalf of the Trust Conference, but on behalf of the National Civic Federation, which called the conference. A careful study was given to the subject and consultations were held with the different interests so far as it was practicable ot secure them within the time available for the preparation of the measure.



Mr. Low then read the following statement:

MR. CHAIRMAN and Gentlemen of the Committee:

The problem with which the bill introduced by Colonel Hepburn, and prepared under the auspices of the National Civic Federation, seeks to deal, is not an easy one, but it may be stated very plainly. As a result of a long series of decisions by the Supreme Court of the United States it is at last made clear to everybody doing interstate commerce by the methods of combination which are characteristic of these times that much or such business is done contrary to law. Common carriers, business corporations and business men, labor organizations and labor men have all had it brought home to them, one after another, that under the terms of the Sherman Anti-Trust law a large part of the business done in the United States at the present time is being done contrary to law. Co-operative associa-

tions and other associations of farmers are subject to the same statute.

Common carriers should be permitted to combine and to make traffic agreements in proper cases and under suitable governmental supervision; for combination and traffic agreements often mean more effective service to the public. What is wanted is effective public supervision and not an absolute prohibition of the very thing that may secure the best public service. It is singular that a people who have constituted the greatest republic in history by the combination of many States should, even for a moment, deny to its own commercial agencies the opportunity of giving better service by proceeding along the same lines. Regulation, not prohibition, should be our watchword in all such matters. There is scarcely a line of commercial business, if there be even one, in which combinations in restraint of trade are not sometimes desirable in these days in the public interest, no less than in the interest of trade; for modern business is very complex, and its problems are often trade problems, as distinguished from individual problems. Organized labor is built up upon the recognized right to combine, to strike, and to make trade agreements. A law that raises doubt as to these rights for which labor has successfully contended in other countries, when it was a hanging offense to do so, strikes a blow not only at organized labor, but at the whole structure of modern democratic society. The trade agreement, which determines for a fixed period by mutual agreement of employer and of employee the rate of wages to be paid and the conditions of employment, offers the most hopeful metnod which has yet been discovered to promote and to make permanent industrial peace under modern industrial conditions, and to classify such agreements as though they were contracts in restraint of trade would be a public calamity. The attempt of cotton growers, wheat growers, and other producers of farm products, to protect themselves by combination against the combinations that deal in their products is just as certainly unlawful under the Sherman act as the business combinations of which they complain; but even a law of the United States, powerful as this country is, cannot set aside the universal law that leads men in these days to combine, and which leads men to do so precisely in proportion as they are intelligent and free.

As a further aggravation of the situation, the anti-trust law is a penal one. Yet no one is able to be sure as to certain agreements whether they are unlawful or not. Any one making an agreement of such a sort affecting interstate commerce and who does business under it does it at his own risk; and long after the agreement has been made he may find out that he has rendered himself liable to imprisonment as well as to a heavy fine. I respectfully submit that this is a situation which is literally intolerable. It inevitably leads to a wide disregard of the statute upon the theory that "necessity knows no law"; because business to be done at the present time must be done by modern methods and these often involve some restraint of trade. The preservation of our forests, for example, by agreement between the owners as to the amount of timber to be cut year by year is probably impossible under such a law, because such an agreement involves a restraint in trade. Beyond this the statute itself constantly acts in restraint of trade, for the reason that only what is necessary is likely to be undertaken in the face of the penalties which the statute provides. A better method for sapping enterprise could scarcely be devised.

How does it happen that a country like ours, renowned the world over for its freedom of initiative, finds itself in such a condition? If one goes far enough back in history one reaches a time when even so simple a form of combination as a partnership was held to be illegal under the common law. In the interval, especially in this country, we have broken away so far from the original restraints of the common law concerning combinations as to encounter a new set of evils, chargeable, as many think, to the too great absence of restraint. Combinations in this country have been formed upon so vast a scale, and have so efficiently dominated one line of business after another, as to awaken a genuine fear in the minds of multitudes that the end of individual opportunity is in sight. Acting under such an impulse of apprehension, the Sherman Anti-Trust law was passed in 1890. There is little evidence that the popular fear which placed this law upon the statute books has disappeared. The Sherman Anti-Trust law, as interpreted by the Supreme Court, reimposed, as it were, all the ancient restraints of the common law concerning combinations, and as to agreements in restraint of trade imposed even greater restraints, for the common law permitted such agreements as were reasonable, and this law has placed us, in fact, in the intolerable position already described. If, then, we cannot endure the ancient restraints of the common law as to combinations nor the large freedom from restraint as to agreements in restraint of trade, which

SETH LOW.

gave rise to the new evils that proved so alarming to the people, what shall we do?

There are evidently several possible courses. (1.) The Sherman Anti-Trust act might be repealed. Every man must judge for himself whether this is possible. To us of the National Civic Federation it seems at the present time out of the question. Popular opinion would not tolerate it. (2.) The Sherman Anti-Trust act might be amended, so that only contracts in unreasonable restraint of trade would be forbidden. This undoubtedly would remove the restraints complained of; but what does it offer to quiet the fears which placed the Sherman Anti-Trust act upon the statute book and which keep it there? By many, such an amendment would be considered the equivalent of the repeal of the Sherman Anti-Trust law. It must be admitted, if such an amendment were made, that it would be difficult to frame a law that would even bring about reasonable publicity. Such an amendment is evidently not in line with the President's recent recommendation. For all of these reasons such an amendment does not seem to us to offer the promise of immediate relief. (3.) It is possible to propose the national incorporation of all organizations doing interstate business. Whether that plan may be adopted or not, in the future, no one can say. It will not be disputed that, to-day, to use one of Gladstone's phrases, "It is hardly above the horizon." (4.) The suggestion that every one doing interstate business should be obliged to take out a national license is another way that has been suggested of dealing with the problem. The National Civic Federation believes that this method, also, is one as to which public opinion is not yet clear. A bill framed upon such lines would doubtless lead to an interesting constitutional discussion as to the precise limits of State and Federal control of commerce, and that would postpone the very relief that is so imperatively needed without delay. It has been said of the bill under discussion that it is in effect a license bill; but the very essence of the license system is that no one can do business who does not take out a license. This bill, on the contrary, is optional, and affects only those who voluntarily place themselves under it. I submit that this is a conservative method of testing how a bill upon new lines is likely to work. If it becomes a law, it is almost certain to lead to a large measure of publicity; and that, in the opinion of many, is likely to be the cure for most of the evils that have brought about too great legal restraint. If so, it will surely lead in the end to greater freedom from such restraint. The advantages of publicity are two-sided. Men whose corporate activities, within proper limits, are to be made matter of public record, are likely to be careful not to do anything that they are not willing that the public should know. On the other hand, much of the criticism of corporations on the part of the people at large is due to the fact that they do not understand corporate methods or corporate procedure. There is much reason to believe that publicity will make the criticism of corporate undertakings more intelligent, and therefore, in the main, more friendly. Rightly or wrongly, people believe that publicity means fair dealing with the public; and they are equally ready to believe, whether justly or unjustly, that secrecy means unfair dealing with the public.

The National Civic Federation fully understands that there may be honest difference of opinion as to the general scheme of the bill under discussion; but while the bill may not escape criticism, we believe it capable of vindication. The reasons why other alternative methods of escape from our present intolerable situation are not available, either now or in the near future, have already been pointed out. Let me now try to make clear the salient features of the Hepburn bill, which is offered as a practicable method of dealing with a situation which is confessedly exceedingly difficult.

(1.) The benefits and immunities offered by the bill are conditioned upon registration; for common carriers, with the Interstate Commerce Commission; for all others, with the Bureau of Corporations; and registration is optional. Therefore the bill affects only those who choose to register.

(2.) Registration can be denied to no one who gives the information called for by the bill; and no one can be deprived of registry arbitrarily; nor for cause without appeal to the courts.

(3.) All corporations and associations affected by the bill are divided into two classes; (a) those for profit and having capital stock; and (b) those not for profit and not having capital stock. The first class must give such information as may be called for by general regulations, to be prepared by the President, as to their organization, their finances, their contracts, and their corporate proceedings. The second class must file their constitutions and by-laws, the address of their head office, and the names and addresses of their officers and standing committees; but this distinction is not arbitrary. Corporations for profit appeal to investors for their money. Corporations not for profit do not. At no other point in the bill is any distinction made between the two classes of corporations or associations. The clause relating to strikes and trade agreements is not an exception to this statement. That clause simply makes clear that certain correlative rights of employes and of employers are not affected by the Sherman Anti-Trust law. The necessity for such a clause I shall speak of later.

What, then, are the benefits to be derived from registration under this bill?

(1.) For the public, reasonable publicity, such as some corporations already give voluntarily.

(2.) For existing combinations and contracts in restraint of trade, the assurance that they will not be attacked by the government, except upon the ground that they are in unreasonable restraint of trade; and as to everything done prior to the passage of the act a statute of limitations of one year is fixed. I ask you to notice, therefore, that this bill does establish the rule of reasonableness as to restraint in trade, so far as the past is concerned. This is fair because many such agreements were made before the Supreme Court had given its wide and sweeping interpretation to the Anti-Trust act; and it is wise, because it will lift a great load of anxiety off men of all sorts who would not willingly do anything contrary to the laws of the country. I doubt if there be any one thing that will do so much to revive business courage and enterprise at a time when both are so much needed.

(3.) For combinations to be formed hereafter, the bill provides that if not disapproved within thirty days (the President in his message suggests sixty days—the precise period is not important) these combinations cannot thereafter be attacked except on the ground of unreasonableness.

(4.) Contracts or agreements in restraint of trade to be made hereafter need not be filed any more than they are now; but if they are filed, the same rule applies; that is to say, if not disapproved within a limited period they can only be attacked on the ground that they are in unreasonable restraint of trade.

I apprehend that this proposed grant to an administrative board or department of the power to disapprove combinations or contracts hereafter to be made is the critical feature of this bill. The first question that will be asked is: Why not adopt the same policy toward future combinations and contracts as toward existing ones, and provide that none shall be attacked except for being in unreasonable restraint of trade? The answer is that such a provision would compel us to go into the future with no other protection than the protection which has proved insufficient, in the past, to avert the very evils which have aroused the strong popular feeling that has placed the Sherman Anti-Trust law upon the statute books and which keeps it there. With such a provision as to future contracts, it is doubtful whether this bill would even bring about publicity; and even if it were to do so, until it is proven by experience that publicity alone is a sufficient protection, it cannot certainly be said that no other safeguard is desirable.

The next question that will be asked is, why should not the government's failure to disapprove be final? The answer is that what is reasonable to-day may become, by the changes that time brings, unreasonable, say five or ten years from to-day. The government should not be prevented from questioning anything that is in unreasonable restraint of trade; but it may properly be compelled, as it is compelled under this bill, to assume the burden of proving the unreasonableness of which it complains.

The third question that may be asked is, what redress have those whose combinations or agreements

are disapproved by these administrative officials? It must be frankly said, none. I know of no way to secure a review in the courts of an administrative decision of this character. On the other hand, it must be pointed out that disapproval has no other effect than to leave such combinations and contracts under the Sherman Anti-Trust law as it now stands; that is to say, in the position in which all combinations and contracts in restraint of trade now are. Is it worth while to keep all the business activities in the United States under the harrow because a few combinations or contracts may still be left there, with the possibility at least that they ought to be left there? I think our bill as submitted should be amended at this point, so as to call for a written statement of reasons in every case of disapproval. This would tend to prevent arbitrary action, and it would often enable persons aggrieved by disapproval to modify their agreements so as to secure the withdrawal of the disapproval. Again, it seems worth while to run this risk of executive disapproval for the sake of the gains that accrue if it is escaped. Those wishing to make combinations and contracts in restraint of interstate trade, will learn in this way much more quickly than they can through the courts whether it is safe to make them; and combinations and contracts that successfully run this gauntlet will command a quality of public confidence, including the confidence of investors, not to be had so easily in any other manner. Like all other administrative power, the power to disapprove is capable of being abused, but I ask you to notice the actual safeguards against abuse. First, the administrative officers cannot interfere by inaction. The government must take the responsibility of positively disapproving; and if it is also obliged to give reasons, those reasons will be passed upon in judgment by the whole country. Second, the Interstate Commerce Commission is a body of seven men, trained in exercising such functions. The action of the Commissioner of Corporations must be approved by the Secretary of Commerce and Labor. The Secretary is a member of the President's Cabinet. It is not too much to say, therefore, that the positive, aggressive disapproval of a proposed combination or contract in restraint of trade would form a part of the public policy of the administration, for which it would be held responsible by the country. Inaction can be maintained without sufficient knowledge on which to base criticism; but positive action by a Cabinet officer must be in the open, and must be capable of vindication.

The clause relating to certain phases of trade disputes has been inserted in the bill with the purpose of quieting the fears of organized labor, lest even strikes and labor unions and trade agreements may be declared illegal under the Sherman Anti-Trust act, as in restraint of trade. This fear is not wholly imaginary. Lawyers say, I know, that the Supreme Court in its recent decision has only condemned the boycott; and that, therefore, no such clause as this is necessary; but the members of trade unions scattered all over the country are not lawyers, neither have they lawyers at their elbows, and they are, in great numbers, subject to this fear. Neither are lawyers always right in such opinions; for I remember that many lawyers were confident that the Sherman Anti-Trust act did not apply either to common carriers or to labor unions. But the Supreme Court has ruled that the law applies to both. This clause, therefore, is not only just; but it is in the highest degree important, in order to set at rest the minds of literally hundreds of thousands of men, that their recognized right to strike, to combine, and to make trade agreements with their employers is not open to question. The correlative right of employers to discharge, to combine, and to make trade agreements with their employes must evidently be equally conserved. The precise clause is as follows: "Nothing in said act approved July 2, 1890, or in this act is intended, nor shall any provision thereof hereafter be enforced so as to interfere with or to restrict any right of employes to strike for any cause, or to combine, or to contract with each other or with employers, for the purpose of peaceably obtaining from employers satisfactory terms for their labor, or satisfactory conditions of employment, or so as to interfere with or to restrict any right of employers for any cause to discharge all or any of their employes, or to combine, or to contract with each other or with employes for the purpose of peaceably obtaining labor on satisfactory terms." This clause, you will perceive, merely limits the purpose and effect of the Anti-Trust law, and does not assume to render lawful any action that prior to the passage of the Anti-Trust act would have been unlawful. Laborers had no right prior to the passage of the Anti-Trust act to combine or to contract for the purpose of effecting a boycott or of injuring others, and the proposed amendment confers no such right. The only effect of the amendment is to provide that the Anti-Trust act shall not have the effect of preventing employes from exercising their right to strike, that is to say, refusing to work, for any cause; or the right to combine or to contract with each other and with employers for the purpose of peaceably obtaining from employers satisfactory terms, etc. The correlative rights of employers to discharge their employes, and to combine and to contract with each other and with their employes are equally recognized. A boycott or a blacklist or a combination or contract for the purpose of injuring others would continue to be as unlawful as at common law, and would continue to be in violation of the Anti-Trust act if in restraint of interstate commerce.

Supplemental statement of Seth Low, president of The National Civic Federation, made before the Judiciary Committee of the House of Representatives, April 6, 1908:

In reflecting upon the criticisms made upon this bill it seems to me that the scheme of the bill has not been perfectly apprehended. At the present time it is an executive duty, exercised by the Attorney-General, to determine whom to attack under the Sherman law. No one can find out whom the prosecuting department may choose to attack, nor when. Our bill does not change the legal status, under the Sherman law, of any combination or contract in restraint of trade, but it does provide a method by which business men can quickly find out, if they want to, from another executive department, that of Commerce and Labor, whether the Executive is going to attack or not, and while the Executive may change its mind, if time should show that a mistake had been made it can then attack only by accepting the burden of proving that the thing complained of is in unreasonable restraint of trade. Evidently this is not an extension of executive power, but a limitation upon it; and it involves no hardship upon any one, for every one is left free to determine whether or not to apply for such a ruling. It is practically an offer made in return for publicity to define at once the attitude of the prosecuting department toward a particular combination or contract in restraint of trade. This is in the interest of uniformity in the policy of the Government under the Sherman law and is distinctly unfriendly to a policy of selection and persecution which is always possible under the law as it stands.

At the conclusion of the reading Mr. Low was questioned as to the attitude of the bill with reference to boycotts. He replied that it was not the intention of the bill to favor or authorize an interstate boycott or blacklist.

The Supreme Court in the Loewe case condemned the boycott, but it founded its condemnation on three elements: On a strike at the factory; on trade agreements by which seventy out of eighty-two hat factories had been coerced, and then on the boycott of the merchandise all over the United States. The line that we draw in the Civic Federation, so far as I am able to speak for it, is exactly this: We think the Sherman Anti-Trust law should be maintained with reference to boycotts and also with reference to blacklists; but we also believe that it is wise and necessary to make it perfectly clear that the Sherman Anti-Trust law in the future is not to have any bearing on the fact of combinations into unions, nor on the fact of striking, nor on the fact of trade agreements.

The Chairman asked whether he desired to authorize a strike for an unlawful cause, to which Mr. Low replied that it is not the purpose of the measure to define the rights which are now enjoyed. It simply states that nothing in the Sherman Anti-Trust act shall interfere with rights which may now exist.

The Chairman asked whether if, as stated, a large part of the business now being done in this country is being done contrary to law and if anybody has been embarrassed by that condition?

Mr. Low: The Department of Justice has certainly prosecuted some people, but I believe that if the Attorney-General were to attempt to prosecute all who are doing business in restraint of trade it would be like what Burke said was impossible—to indict a whole nation.

We have a law that forbids everything in restraint of trade, reasonable or unreasonable, and it is my opinion, and I think that of a great many, that that is doing injury to the country as long as it remains unmodified. On the other hand, the fear that put that statute on the books still exists, and the question is whether any way out can be found unless it provides some sort of an agency to protect society from the evil results of future combinations and future contracts in restraint of trade, such as have aroused the fear that put that statute on the books. We perfectly well understand that the suggestion that an administrative department should have anything to say about such things is a novel one; but, as regards general business, we have come very closely up to the same point we had reached when the Interstate Commerce Commission was established. I do not myself consider it important whether the decision is given by the Commissioner of Corporations or whether there is a commission created, or whether the whole thing is turned over to the Interstate Commerce Commission. My point is that I do not see any path of progress except along a line that puts up some sort of machinery that can protect the people in advance, instead of trying to right wrongs after they are committed. Whether this is the best plan or not, we have not so much assurance as to assert.

The vital feature of the bill is the question of being upon the registry. Those who are on the registry get the benefits and immunities of the bill. Nobody can be denied registry, and therefore nobody can be denied the benefits and immunities of the bill. If the proposition is made to remove anyone from the registry, and the person feels aggrieved, he can only be removed for the causes stated in the bill itself; but if the person feels aggrieved by that proposition, he has an appeal to the Supreme Court of the District of Columbia.

As a result of a somewhat long colloquy between Mr. Davenport and Mr. Low, it appeared that the status of the individual as respects the right to claim damages was not in any way altered by the bill, even though the Government may not prosecute in case the conditions set forth in the bill were complied with.

MR. WILLIAM J. SCHIEFFELIN made a statement in regard to conditions in the drug trade, especially with relation to proprietary goods, or patent medicines. He showed that agreements as to prices had always been prevalent in the drug trade and that this was particularly true in regard to patent medicines, which constitute a large portion of the drug business. These proprietary articles, put up in uniform packages, are sold widely throughout the country. Price cutting among the wholesalers led to agreements with the manufacturers to make fixed

WILLIAM JAY SCHIEFFELIN.

prices. Later, the retailers found that they were subject to the competition of the great department stores, which oftentimes sold these articles at prices less than cost in order to attract the public to the stores and sell them other goods at a profit. The retail druggists formed a national association, with a membership of over 20,000 persons. Probably one-half of the druggists in the United States are members of the association. The retailers made arrangements with the wholesalers by which goods should be sold only to those dealers who charged the regular rates. The effect of this arrangement was to steady prices but not to enhance them.

In certain places the retailers endeavored to draw the line more sharply and to prevent the wholesalers from selling, not only proprietary articles, but sponges, drugs, chemicals and everything to those who cut prices. This was not accomplished in New York, but was in Philadelphia. The Sherman Act was appealed to and out of that unfortunate concession in Philadelphia the whole drug trade has been enjoined from making any three-party agreement—any agreement, that is, between the manufacturer on the one hand, the distributor (the jobber) in the middle, and the retailer on the other hand.

In answer to a question, Mr. Schieffelin stated that in his judgment the Philadelphia scheme was absolutely improper. The complaint of the drug trade is that the terms of the injunction are so sweeping. We would have been perfectly satisfied if any sort of an agreement involving a boycott, involving a blacklist and refusing anything, was enjoined, but the United States Court has enjoined us from making any kind of an agreement and from using any kind of persuasion.

The Chairman of the committee asked a variety of questions from the standpoint of the department stores, leading up to whether legislation was wanted to prevent the department stores from selling to its customers and consumers at prices less than retailers sell for.

This Mr. Schieffelin admitted was the purpose. He believed that the majority should have the right to compel business to be done in the way in which they wanted it done.

It has been said that you cannot indict a whole nation, but here the United States Court has enjoined an entire trade, five or six hundred wholesalers and forty-two hundred retailers. By the terms of the injunction it did not cover members of the association only. It applied to any one who signed these three-party contracts and thus includes practically all the retailers throughout the country.

Mr. Schieffelin: In view of the fact set forth, we desire to propose an amendment. Page 9 of the bill reads in part as follows:

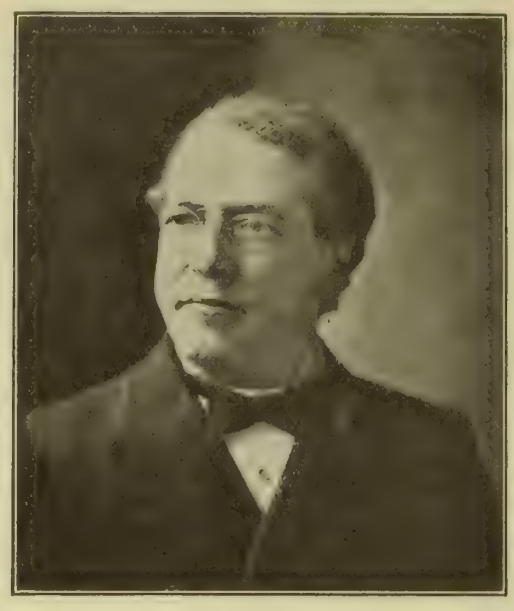
"Anything herein contained to the contrary notwithstanding, all actions and proceedings now or heretofore pending under or by virtue of any provision of the said act, approved July 2, 1890, may be prosecuted and may be defended to final effect; and all judgments and decrees heretofore or hereafter made in such actions or proceedings may be enforced in the same manner as though this act had not been passed."

We ask that there be added to the bill the following: "But no such judgment or decree shall be held to prevent any person whatsoever from taking advantage of the benefits and immunities of this act in reference to any contracts or combinations hereafter made."

After some further questions, which brought out that Mr. Schieffelin, speaking individually, was in favor of the bill as a whole and which repeated further details in regard to the injunction suit already referred to, the committee took a recess.

April 4th, Afternoon Session.

On assembling in the afternoon, after preliminary discussion as to the time for continuing the hearing, the committee heard first MR. SAMUEL GOMPERS, who spoke as follows:



MR. CHAIRMAN and Gentlemen of the Committee: You of course understand that in whatever representative capacity I appear before you it is that as representing the workmen who are organized and who undertake the effort to advance as well as protect the interests of all workmen. I say this now because, before entering into the presentation of the thoughts that I have upon the subject under consideration, I want just to make this remark in passing, and that is that, in so far as the bill presented is concerned, I have had little or nothing to do in the preparation of these features dealing with corporations and associations conducted for profit and owning stock, and also with the common-carrier clauses. Nor am I willing to say that in so far as the construction of the bill is concerned I know enough of it to give the bill per se whatever endorsement that I can——

The Chairman: That is, its legal construction?

Mr. Gompers: Its legal construction; yes, sir. The purposes of the bill in so far as they deal with the associations and organizations and corporations and common carriers have my endorsement, and the fullest possible endorsement that I can give. Such purposes as, for instance, that business men may have full and free opportunity for the growth and the development of their business, and that they may conduct their business upon the assumption that it is fair and reasonable until it is proven and demonstrated that it is otherwise.

Modern business cannot be conducted upon the old notions. Development in industry does not admit of it. Development in transportation does not admit of it. The development and transmission of information does not admit of it. And therefore what may seem to some an anomaly that representatives of large corporations and business interests are here, accompanied by the representatives of workmen, advocating a line of policy to be shaped into law, yet the fact is that labor, or organized labor if you please, has realized for a long time, and realizes now—perhaps clearer now than ever before—the necessity for the fullest and the freest hand in the operation of business and industry and the performance of labor, and that in so far as interference by the Government is concerned, it should be of the least possible character.

Addressing myself particularly to the interests that I in part represent, I may say that, despite the assurances of a number of men, both Senators and [illegible] of Representatives, when this [illegible] anti-trust law was in its tentative and [illegible] stage, I was apprehended that lurking within those bills was the feature that covered the organizations of labor, and it was under that apprehension that with others I urged upon Congress the adoption of amendments to the then bill in order that it might be specifically stated in the bill that

SAMUEL GOMPERS.

the organizations or associations of labor, instituted to regulate wages, hours of labor and conditions of employment, and with the organizations of farmers and horticulturists, dealing in their own products, shall be excluded from the operation of the law. This is not the language of the amendments which we suggested at the time, but they are substantially the provisions.

Mr. Alexander: Have you got that language with you?

Mr. Gompers: Yes, sir.

Mr. Alexander: Will you put it into the record?

Mr. Gompers: I can read it if you care to have it now.

Mr. Alexander: Yes; read it, and it will go into the record.

The Chairman: You will find it in Mr. Hughes's speech the other day if you do not happen to have it there handy.

Mr. Gompers: I have it in my editorial in the American Federationist. This is the amendment which Senator Sherman made as a proviso to the bill in the Senate, while in the Committee of the Whole, it being an amendment that was drafted and fathered by Senator George, of Mississippi:

AMENDMENT.

"Provided, That this Act shall not be construed to apply to any arrangements, agreements or combinations between laborers made with a view of lessening the number of hours of labor or the increasing of their wages, nor to any arrangements, agreements or combinations among persons engaged in horticulture or agriculture made with a view of enhancing the price of agricultural or horticultural products."

The Senate, in Committee of the Whole, amended it by inserting the words "their own," so that, in so far as it applied to agriculturists' and horticulturists' organizations, that the arrangements, agreements, and so forth, that were made "with a view of enhancing the prices of their own agricultural or horticultural products." In that shape it passed the Senate. Then the entire bill was re-referred to the Judiciary Committee of the Senate, and the committee brought in a reconstructed bill, in which this provision was omitted.

I say again that the assurances were given that in the form that the bill was brought before the Senate by the Judiciary Committee, and as it passed that body, that it was not applicable to the organizations of labor nor the agricultural nor horticultural organizations.

Substantially as it passed the Senate the bill became a law. I want to just repeat the statement that, notwithstanding the assurances that others and myself received, and contending along that line, yet I always was apprehensive that at some time the courts might so decide, that the organizations of labor and of the farmers do come under the anti-trust law. I think Mr. Littlefield will remember that in 1901, I believe, when the Judiciary Committee of the House had an amendment to the Sherman anti-trust law under consideration, the representatives of labor urged the adoption of an amendment which directly and affirmatively excluded the labor organizations from the operations of the then pending bill and of the existing law.

The Sherman anti-trust law either in fact or, as now construed by the Supreme Court in its decision in the case commonly known as the hatters' case, makes it perfectly clear that under the construction the labor organizations come under its provisions.

The Chairman: I have a copy of the opinion here if you would like the opinion itself.

Mr. Gompers: I have it. I am aware that the members of the Judiciary Committee are fully cognizant of the decision of the Court, and I do not want unnecessarily to take time to read the law; but the decision of the Court brings conspicuously to notice Sections one, two and seven of the Sherman anti-trust law; and for a clear presentation—or the best presentation which I can make—I find it necessary to read the three sections of the law which the Court quotes in its opinion:

"Section 1. Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is hereby declared to be illegal. Every person who shall make any such contract or engage in any such combination or conspiracy shall be deemed guilty of a misdemeanor and, on conviction thereof, shall be punished by fine not exceeding five thousand dollars, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the Court.

"Sec. 2. Every person who shall monopolize, or attempt to monopolize, or combine or conspire with any other person or persons to monopolize any part of trade or commerce among the several States, or with foreign nations, shall be deemed guilty of a misdemeanor and, on conviction thereof, shall be punished by fine not exceeding five thousand dollars, or by imprisonment not exceeding one year, or by both said punishments in the discretion of the Court.

"Sec. 7. Any person who shall be injured in his business or property by any other person or corporation by reason of anything forbidden or declared to be unlawful by this act may sue therefor in any Circuit Court of the United States in the district in which the defendant resides or is found, without respect to the amount in controversy, and shall recover threefold the damages by him sustained and the costs of suit, including a reasonable attorney's fee."

Let me revert back for a moment to Section 1, and call attention to the fact that the law as construed by the Court, and as constructed, makes this fact clear: "Every contract, combination in the form of trust or otherwise"—and I want to emphasize that word "otherwise," that it need not be a trust, it need not be injurious; but the mere fact that a contract has been made in the form of a combination or in the form of a trust or otherwise. In other words, it makes no difference whatever what the combination may do, whatever contract they may enter into, that shall in any way restrain trade, even though it be to the advantage not only of those who participate in the contract, but be a public benefit, it is still under the law, as construed by the Court, an illegal combination and punishable by the various methods named in the law.

Let me read Section 2, omitting some words, so as to bring out the thought I have, and that I desire to present to the committee:

"Every person who shall monopolize, or attempt to monopolize * * * any part of trade or commerce among the several States, or with foreign nations, shall be deemed guilty of a misdemeanor and, on conviction," punished as already stated.

In other words, an individual who undertakes to enlarge his business comes under the operation of this law. It is a curb upon individual initiative and development. The Court in its decision takes the very evidence of the successful co-operation of employers with employes to maintain industrial peace as the evidence that these combinations or agreements are in restraint of trade. Indeed, Mr. Low this morning, in his address to the committee, called attention to the fact that the Court quoted approvingly that, out of eighty-two manufacturers of hats in the United States, seventy were in agreement with the Union of Hatmakers, as the evidence of the success of the conspiracy between employers and these organizations, the conspiracy of the men in the organizations, the men of labor in their organizations.

May I say here in passing that I am not endeavoring, nor is it my purpose to indulge in such criticism of the Supreme Court or its decision that would directly or indirectly cast any reflection upon either the Justices of the Court individually or collectively. That is not my purpose, nor is it in my mind.

The Chairman: As I understand it, you complain of the statutes and not of the decision?

Mr. Gompers: I complain of the statutes.

The Chairman: You do not criticize the Court; your criticisms are directed to legislation?

Mr. Gompers: To existing law as interpreted by the Court, for until that decision it was an open or debatable question as to whether the labor organizations did come under the operations of the law.

Now, Mr. Chairman, let me say, in a word, that this so-called Sherman anti-trust law is not an anti-trust law, as its very title assumes it to be. It is an anti-combination law. It is a law against associated effort; it is a law something like the law which obtained about 2,000 years ago in Rome that made every form of association or organization which was not approved by the Emperor unlawful and pun-

ishable with all sorts of penalties. Under it I might, without expressing my own opinion, for a moment adopt as my own a statement made by an organization of labor having this self-same subject under consideration:

"Against the dangerous powers of the nobles, wise men of Europe, during the middle ages, nursed the free cities and the guilds. Against the free cities, grown too powerful, they raised the power of the whole people.

"It would seem reasonable that against the power of massed capital such power as may be found in organization of men, as men, might well be used to advantage. With the land monopolized and the instruments of production and transportation grown so expensive that they can be owned and controlled only by the very rich as individuals or by combinations of capitalists, the owners of such instruments will be masters, not only industrially but politically—nay, over life and death—unless the individual freedom of man, as man, is so protected that he may combine with others in his own interest and for the protection of individual liberty and of democratic institutions.

"As conditions now stand, the worker is without tools and, usually, without land. His inherent necessities compel him to seek employment in order that he may live. Capitalists in possession of the land and the tools of production need the workers to make the former profitable. Surely, the inherent necessity of the worker may be trusted to induce him to labor on conditions that will enable him to live and reproduce his species. There is no need, and no wisdom, in converting the law into a lasso with which the worker may be caught, led to the employer and made to labor against his will.

"Judge Caldwell, in his dissenting opinion in the Oxley Stove Co. vs. Coopers' Union, truly says"——

The Chairman: Have you the number of the report of that case, so that we can make the reference?

Mr. Gompers: I have not.

The Chairman: It was in the Federal Reporter, I suppose?

Mr. Gompers (reading): "The only weapon of defense the laborers can appeal to is the strike or the boycott, or both. * * * If these weapons are withheld from them, then, indeed, are they left naked to their enemies. One class of men cannot rely for protection and the maintenance of their rights upon the justice and benevolence of another class who would reap profit from their oppression. They must be in a position to compel respect, and make it to be the interest of their adversary to grant their reasonable and just demands. Laborers can only do this by making common cause—by organization and collective action."

It is not necessary to put in the whole paper. What I just read was from a report made by a committee of the San Francisco Labor Council to that body, and, after a discussion of two evenings, it was adopted unanimously.

Under the law as it now stands construed by the Court, it is apprehended there is nothing which a labor organization can do in furtherance of the interests of labor, nothing which it can do in protection of the rights or interests of its numbers, but what is either enjoinable or punishable both by fine and imprisonment. We contend that equity, power and jurisdiction, discretionary government by the judiciary for well defined purposes and within specific limitations, granted to the courts by the Constitution, has been so extended that it is invading the field of government by law and endangering individual liberty. As government by equity, personal government, advances, republican government, government by law recedes.

I need not say at this late stage of appearing before committees, both this honorable committee and others of Congress, that we favor the enactment of laws which shall restrict the jurisdiction of courts of equity to property and property rights, and shall so define property and property rights that neither directly nor indirectly shall there be held to be any property or property rights in labor, or the labor power of any person or persons.

Mr. Chairman, we have fallen, all of us have fallen, into the misuse of a word in our language that has led to untold confusion. We speak of the working man or the working woman not in those terms, but as labor, labor. And under the confusion into which we have been led by reason of the use of that term—labor as applied to man and woman—comes much of the difficulties with which we have to contend. We all have seen in the press of the past week or two editorials in which the burden finds its expression that there must be equality of treatment of labor and capital. No less than a distinguished member of the present Congress introduced a bill in which there is no provision mentioned in so far as concerns the workman or the workwoman or the organizations of either—neither mentioned nor referred to; and he, too, with his great intellect, and I believe not unkind feeling, says that such a bill would be equal in its provisions to capital as well as to labor.

Now, what is capital? I shall not attempt to give a scientific definition of the term, but simply that which we all understand. It will be good enough for all the purposes of my statement. Capital is the product of human effort, used for the purpose of producing more wealth. It may be inanimate things, and is largely so.

What is labor? Is it an inanimate thing? Taking it in its accepted sense, is labor an inanimate thing? Labor is the effort of the human breathing man and woman. You can take capital and transport it to the other end of the world. You cannot do that with labor. You cannot differentiate the labor of the man or the woman from their breathing, respiring body and heart and brain. It is an abuse of the use of ordinary terms in our language. It is an abuse of the very essence of essential principles to place in the same category capital and labor, labor and capital.

You can make regulations for capital, and the owner of the capital may leave. You may not deprive him of even his own personal liberty, though you make all the regulations you may so far as concerns capital, but you cannot make one regulation in so far as labor is concerned, in the ordinary acceptance of that term, without it affecting the laborer—his heart, his body, his brain and his future.

It is because of this misconception that is so prevalent that we find learned screeds in editorial columns and speeches upon the floor of Congress, and elsewhere, dealing with the subject, with the terminology of which they are entirely deficient. It is because of this that we find editorials headed, "Labor and Privilege," because we want to have the human rights accorded to us, and to which we are entitled, rights which the workman had before the State—the ownership of himself. With the abolition of human slavery in the dim, distant past, man became owner of himself, and with the ownership of himself and in himself he possessed the inherent ownership of his labor power, and to do with that just as he pleased—to sell it or to withhold it, as best served his purpose and his interests. There may be combinations in the profit of labor, and these may be properly dealt with by the State in order that the rights of the people may be protected and their interests furthered.

I want to say here again that I believe it is the part of unwisdom to attempt to unwarrantably interfere by law in the conduct of business in the interest and for the people of our country and of our time. But there must be a different concept of these two factors in human society—the one not capital, but the owner of capital, and dealing by law with capital, the product of labor; and the other dealing with the human, the man who labors.

I see that there are manifestations of opposition to the passage of this legislation. May I say, Mr. Chairman, that I received a copy of a circular in which this bill or this legislation is denounced as the most dangerous and diabolically ingenious measure yet proposed to Congress?

Mr. Alexander: Who says that, Mr. Gompers?

Mr. Gompers: Mr. James A. Emory, counsel for the National Council for Industrial Defense.

Mr. Emory: Guilty, if your honor please.

The Chairman: He is here.

Mr. Gompers: That is not the only thing, either. This was placed in my hands—I cannot remember how I got it; I know I did not take it. There is only one other species of circulars that are sent through—I do not know whether it is this National Council for Industrial Defense, because this is a new title, or a new organization; I do not know which—but sent out by the same gentlemen, Mr. Emory and his colleague, Mr. Davenport, and some other gentlemen whom it is not necessary to advertise. This circular from which I quoted denounces this bill and this species of legislation. One would imagine that if these gentlemen represented employers of labor who have an intelligent conception of modern industrial conditions and modern commercial conditions, that they would gladly co-operate with the best spirits in all walks of life to try to obtain relief from an intolerable condition. But no. There are some men like that sort of piscatorial creature who swings around in the water and besmirches the entire pool. There is nothing that the labor organizations can aid in securing in the form of remedial legislation to remedy any existing evil but what will meet with the undying antagonism of these gentlemen of the legal profession whose names I have mentioned, and perhaps those whom they represent.

Mr. Emory: Amen.

Mr. Gompers: I want to advertise Mr. Emory just once more by mentioning his name. He has the facility or the adaptability of always butting in when I am talking. I do not know for what purpose; but it is a good confession to make and to have on the record. I want to repeat, that there is not any legislation which the organizations of workmen can advocate to remedy an evil which is not met with their undying opposition, and to that he says "Amen."

Mr. Emory: Pardon me——

Mr. Gompers: Pardon, not now. You may need it worse some time. I cannot give it to you now.

There are some who entertain the hope that the organizations of labor will become disbanded, that their funds will be confiscated or mulcted in damages; that the earnings, the savings of some of the men, little as they may be, will be taken by decrees of the courts, and that the organizations of labor will be swept off from the face of the earth. I do not know what hopes some men entertain in that regard, but I say this, not only advisedly but from a careful study of the past history of the development of the working people of the world and their various forms of organization, and the battles that they have had to make, the obstacles which they have had to overcome—that they were outlawed, that they were criminal, that the men were punished not only by imprisonment, not only by being branded with red hot irons and stamped forever in servitude, but hanged to the gibbet, because they were banded together for the purpose of protecting themselves against the avarice and the tyranny of their employers.

Despite all the laws that outlawed them, despite all the decrees that condemned them, despite all the sentences that sent them to the jail and the branding iron and to the gallows, the organizations of labor still lived, and they will live, they will live. They have done so much to advance the interests of the working men and women and the children of the workers, they have brought so much sunshine into the homes where gloom before prevailed, that you could not drive the spirit and the feeling and the knowledge for and of labor organizations out of the hearts and minds of the working people.

Suppose it were possible that you could drive out of our lives the organizations that have protected us, our wives and our little ones, and done so much for us; suppose you would succeed by an injunction from Judge Gould in prohibiting us from declaring that the Bucks Stove and Range Company products are unfair, supposing you succeed in enjoining us and make that injunction permanent. Supposing you take our funds away by damage suits; supposing you do send us to prison because we believe that we have a right to protect that which we own, namely our power to labor; supposing you do all these things—what then? You may drive us into secret organizations, perhaps not us, but those who will follow. You may drive the men and women of labor into organizations oath-bound and secret; you may drive them into the dark.

There are two things that the American workmen have learned. One of them is some of the declarations of independence. They have been fed upon that. They are not yet satiated with it. They are more in love with it than I think most people are. The next is their organizations of labor. They love our country. They revere our institutions upon which our Republic is founded, and they know that within that Republic are their organizations of labor, their voluntary associations with their fellows that have done so much, and they are going to organize and remain organized—if not in the way that you permit it by law, they will still organize and remain organized, and neither ukase nor injunctions are going to drive the organizations of labor out of this country.

But supposing you force them to do in secret the perfectly legitimate human activities that they have always performed in the open. I need not say to you gentlemen, learned as you are, that men in the open, where they can express their views thoroughly, where they can promulgate to the world their thoughts, their hopes, are always more careful, intelligent and circumspect than they are or would be in considering the same questions in secret, oath-bound; and where they are simply free from the criticism of the general public.

Now, what? Industry has developed, is developing still further and will still continue to further develop. In so far as modern industry is concerned it is largely impersonal. It is a matter of profit, it is a matter of dividends. The human interest in industry, so far as the relations between employer and employes are concerned, is almost absent. Such human interest as the effort which gentlemen of the character and type of Mr. Low, and others, who are trying—and we are helping in our way—to bring about a better recognition of the interdependence of man upon man, whether he be employer or employe—to bring about better relations between them. But in the impersonal character of industry to-day what hope has the workingman to protect his rights and his interests, his wages, to obtain reasonable hours of labor if he, in modern industry, must act as an individual?

I am afraid to give my mind the range of the possibilities of such a condition of affairs—the industries of the country developing and concentrating and the associations of labor gone, and each man acting as an individual and trying to work out his own means of protecting his rights or his interests, without the ability to effectively protect and promote

(Continued on page 19.)

AMERICAN TEACHERS TO VISIT EUROPE

NATIONAL CIVIC FEDERATION PLANS FOR STUDY OF SCHOOL SYSTEMS—A CORDIAL WELCOME PREPARED IN ENGLAND—IMPORTANT COMMITTEES NAMED.

THE National Civic Federation has perfected its plans and made its announcements for a trip to Europe in the fall and winter of 1908-09 for the inspection of schools and teaching which is offered to 500 teachers in the public schools of the United States.

This undertaking, which has been received with great interest by the educators of the country, is a sequel to the visit of 500 English teachers to the United States in 1905-06. Mr. Alfred Mosely, of London, who has done so much to promote a better understanding and a friendly feeling between the two countries by the organization of the Mosely Industrial and Educational Commissions, was the soul of that enterprise. He arranged for the selection and transportation of the teachers, and, aided by committees on this side of the water, provided for the access of the teachers to the schools which they desired to visit, and for their entertainment in the homes of the American teachers, at a very modest cost to those who took part in the visit.

Mr. Mosely is associated with the National Civic Federation in the present enterprise. He has generously undertaken to make all the arrangements for the reception and comfort of our teachers when they reach England next winter, and will secure the co-operation of the various schools which are to be visited. His large influence and his experience in enterprises of this nature insures the successful issue of the undertaking.

On the part of the National Civic Federation the initiative has been taken by Dr. Nicholas Murray Butler, chairman of the Industrial Economics Department. Through his efforts important concessions in the matter of ocean transportation have been made by the International Mercantile Marine Company. Mr. J. Bruce Ismay, president of the company, is deeply interested in the project. He appreciated the great advantages which accrued to the English teachers from their visit to this country, and, desiring to promote relations which would knit closer the bonds of sympathy and friendship between the two countries, has generously accorded to our teachers the same privileges as were granted three years ago to those of England.

In carrying out the work of planning and arranging for this visit, the National Civic Federation enjoys the co-operation of the leading educators in the United States. The advisory committee, which has been constituted, is thoroughly representative of the varied educational interests participating in the enterprise. Under the chairmanship of Dr. Butler the committee consists of the following:

Elmer Ellsworth Brown, Commissioner of Education, Washington, D. C.

Edwin G. Cooley, President National Education Association, Chicago, Ill.

Frank B. Cooper, President Department of Superintendence, National Education Association, Seattle, Wash.

Edwin B. Craighead, President Tulane University, New Orleans, La.

James M. Greenwood, Superintendent of Schools, Kansas City, Mo.

John R. Kirk, President State Normal School, Kirksville, Mo.

John W. Olsen, Superintendent of Public Instruction, St. Paul, Minn.

Henry S. Pritchett, President Carnegie Foundation, New York City.

Homer H. Seerley, President State Normal School, Cedar Falls, Iowa.

W. H. Smiley, Principal Denver High School, Denver, Colo.

Joseph Swain, President National Council of Education, Swarthmore, Pa.

Henry Clay White, President Georgia State College of Agriculture and the Mechanic Arts, Athens, Ga.

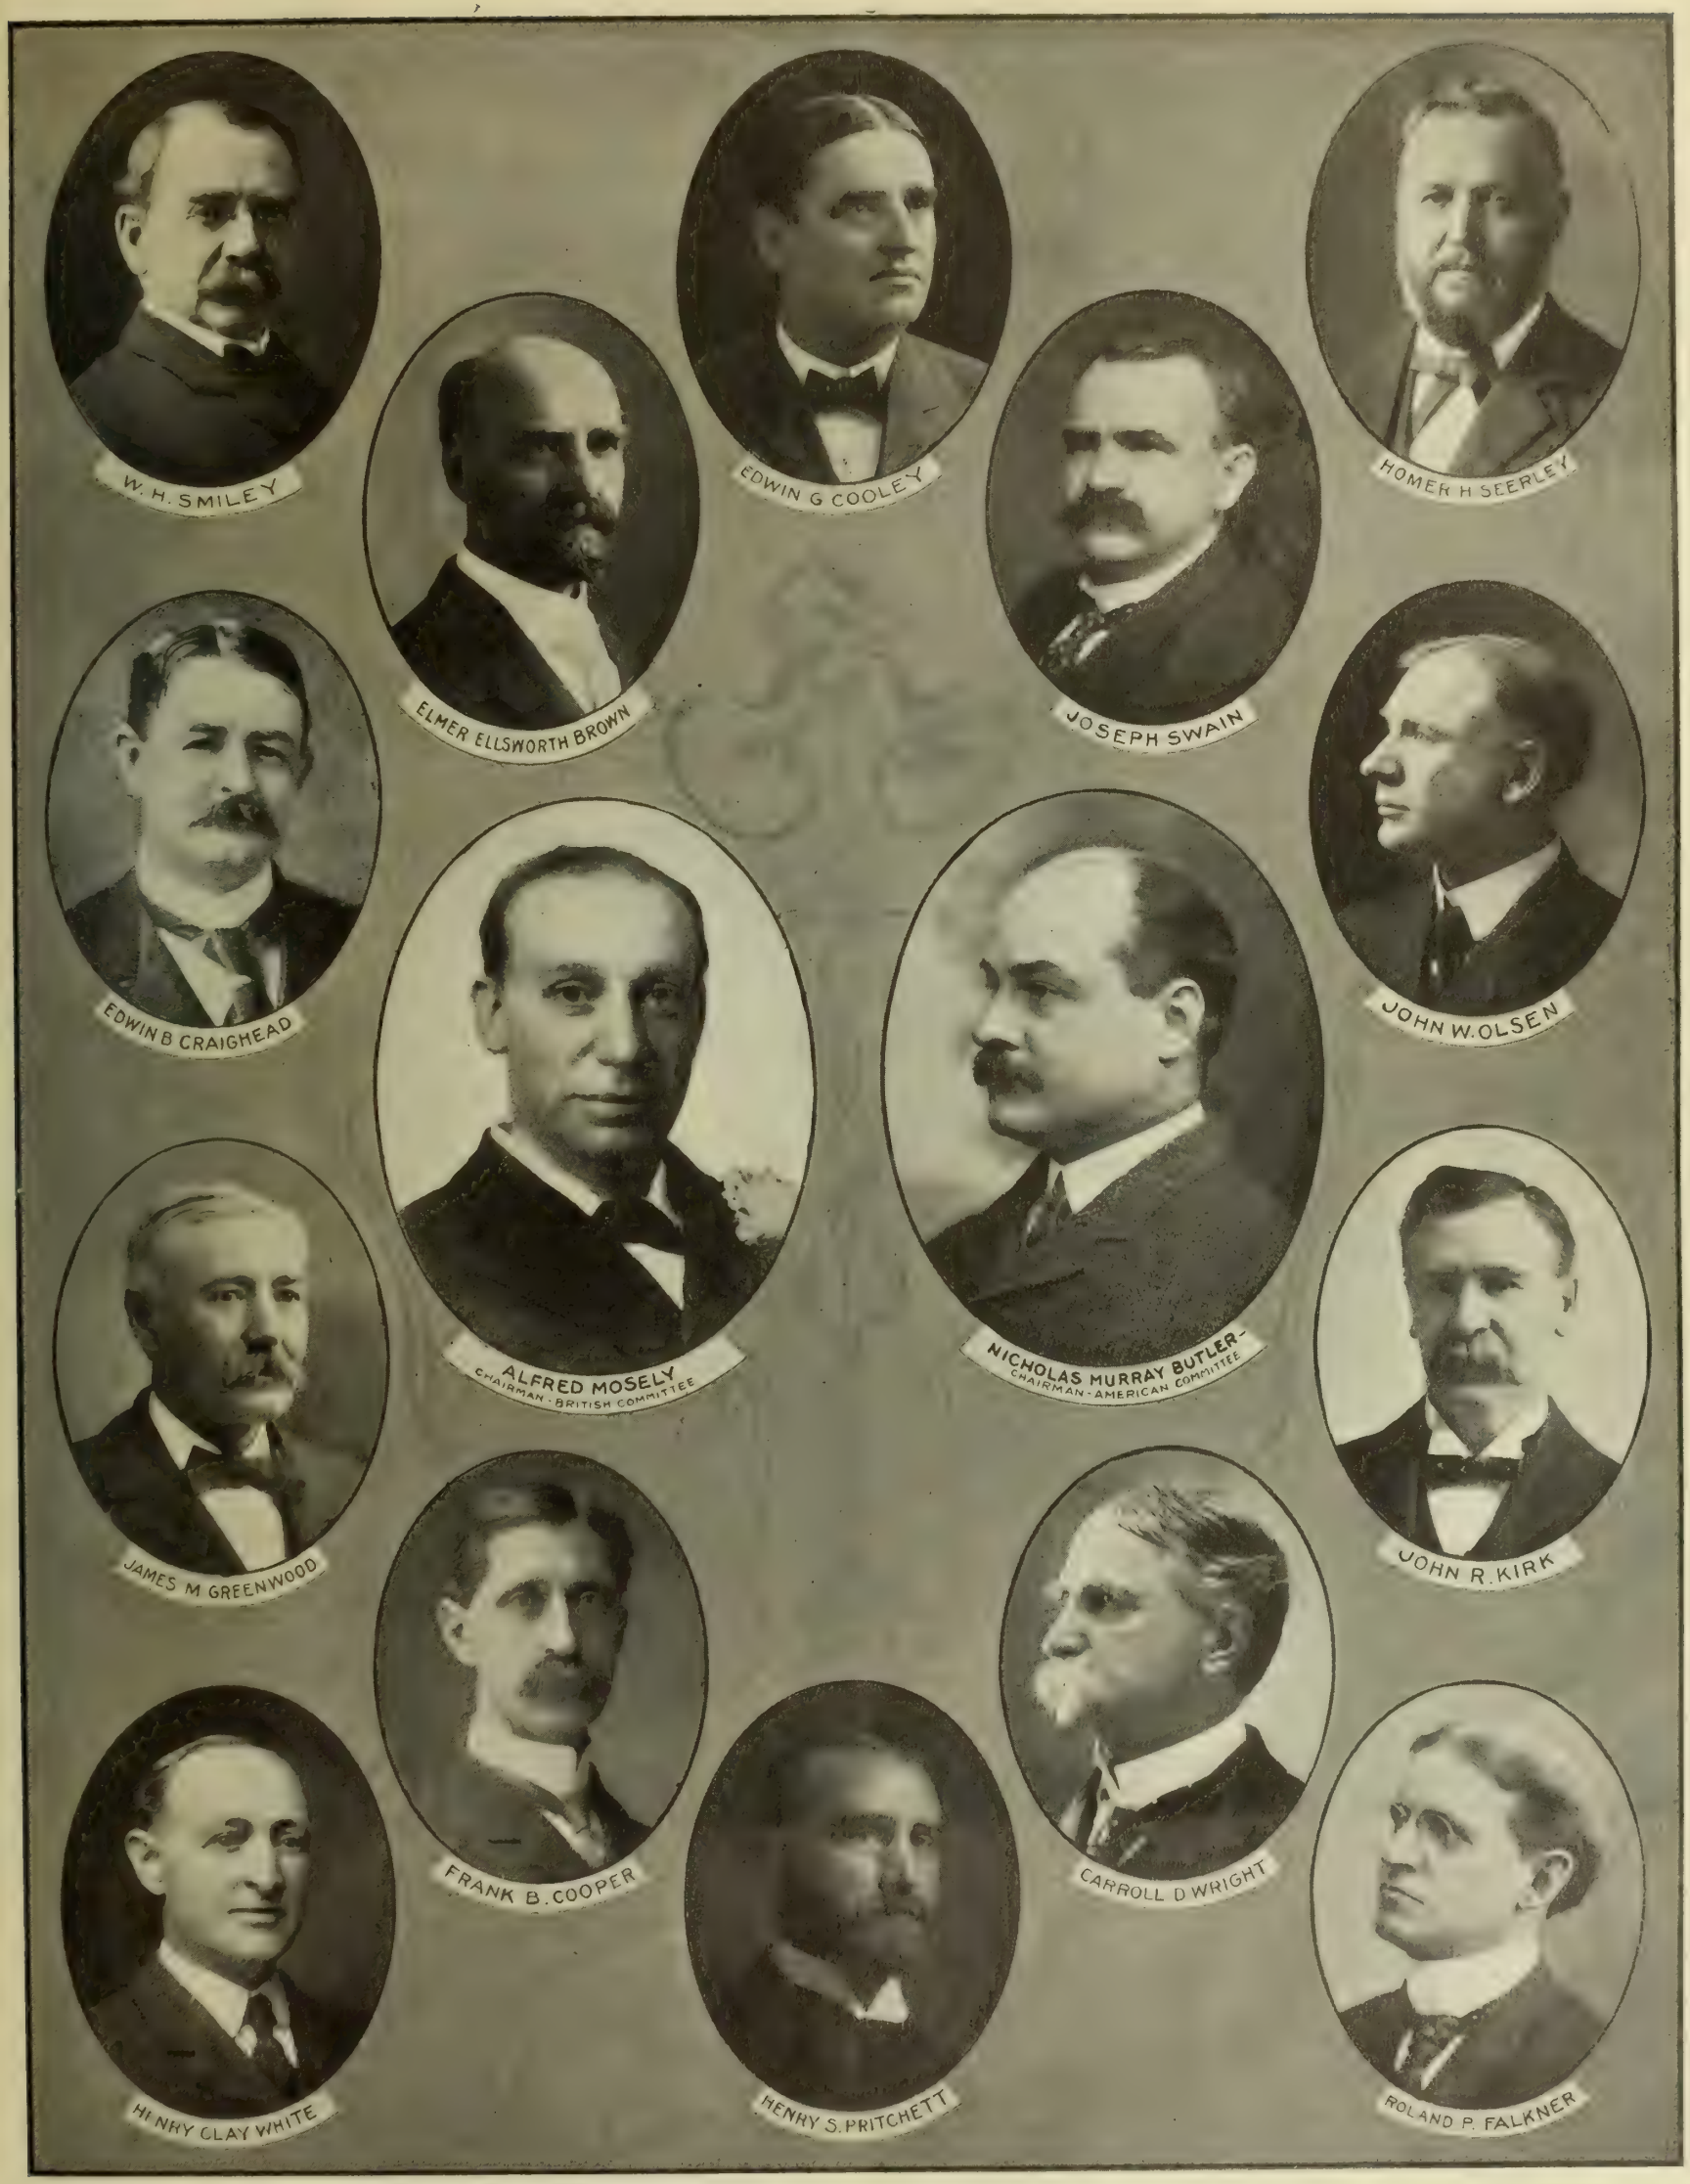
Carroll D. Wright, President Association for Promoting Industrial Education, Worcester, Mass.

The executive secretary is Roland P. Falkner, 281 Fourth avenue.

The conditions of the visit are such as to secure for all who take part in it an ample opportunity to see the work of the schools abroad. They will go on the lines of the International Mercantile Marine Company, leaving the ports of New York, Philadelphia, Boston and Portland during the months of September to December, 1908, in small groups not exceeding ten on any one vessel. The visit will, it is contemplated, last from four to six weeks on the other side. A limited number with a speaking knowledge of the French or German language may visit the continent, landing at Antwerp.

These opportunities are offered to the teachers in the public elementary and secondary schools of the United States. Such varied interests as elementary instruction in all its branches, with special work in music, drawing, manual training and domestic science, as well as work of secondary grade, such as general high school studies, manual training, commercial studies, industrial and trade education, and the training of teachers for elementary and secondary schools will be represented in the visit. Plans will be made to meet the needs of these, and perhaps other interests which may be represented. The places and schools to be visited will be carefully selected to meet the special needs of the visitors.

The project of the visit of the American teachers to Great Britain has awakened a widespread interest and support throughout the country. Mr. Mosely has associated with himself as a general reception committee a large number of influential persons throughout the United Kingdom, representing the various organizations and institutions and social groups which are associated there with the cause of education, and, indeed, with all the forces of social welfare. The co-operation of the leading men of England, as represented by this committee, insures that the visiting teachers will receive a cordial welcome wherever they go, and that whatever can be done for their comfort and for the success of the enterprise will be done. The general committee consists of the following:



The Lord Archbishop of Canterbury.
The Lord Mayor of London.
Rt. Hon. Joseph Chamberlain.
Rt. Hon. R. McKenna, President of the Board of Education in the British Cabinet.
Rt. Hon. A. J. Balfour, late Prime Minister.
Lord Reay, late President of the Board of Education.
Professor T. H. Warren, Vice-Chancellor of Oxford.
The Duke of Sutherland, K. G.
Professor M. E. Sadler, late of the Board of Education.
Sir H. Mortimer Durand.
Professor Osler, of Oxford.
Hon. Whitelaw Reid, the American Ambassador.
The Rt. Hon. Lord Desborough.
The Lord Bishop of Ripon.
Sir Thomas Barclay, LL. B.
Sir Alfred Bateman, K. C. M. G.
Sir John Cockburn, K. C. M. G.
Sir Charles Follett, C. B., etc.
Sir Norman Lockyer, K. C. B., etc.
Sir William White, K. C. B., etc.
The Rev. H. B. Gray.
Professor E. B. Poulton, Oxford.
Principal E. H. Griffiths, of Cardiff University.
Principal H. R. Reichel, of Bangor University.
Lord Ridley, D. L.
Sir Vincent Gaillard, D. L.
Sir Henry Roscoe, D. C. L.
Sir Cecil Clementi Smith, G. C. M. G.
Canon Lyttleton of Eton.
Principal Sir J. Rhys, of Jesus College, Oxford.
Sir Thomas Vezey Strong.
Sir S. B. Boulton, A. Inst. C. E., F. R. G. S.
Sir Edwin A. Cornwall.
Sir William Mather, M. Inst. C. E.
Sir W. J. Collins, M. P.
H. Llewellyn Smith, Esq., C. B.
The Rt. Hon. Charles Booth, P. C., etc.
Sir Alfred L. Jones, K. C. M. G.
Canon H. Scott Holland, M. A.
Dr. W. H. Gaskell, of Cambridge.
The Rt. Hon. J. Austin Chamberlain, P. C., M. P.
The Lord Bishop of Manchester.
The Rt. Hon. Lord Strathcona and Mount Royal, G. C. M. G., etc.
The Rt. Hon. Lord Willoughby de Eresby, M. P.
The Rt. Hon. Sir Herbert E. Maxwell, Bart, P. C., F. R. S., etc.
The Rt. Hon. Lord Viscount Duncannon.
Evelyn Cecil, Esq., M. P.
A. Bonar Law, Esq., M. P.
Col. Sir C. M. Royds, C. B.
The Rt. Hon. The Earl of Malmesbury.
Sir R. L. Morant, C. B., Permanent Under Secretary Board of Education.
Sir Frederick D. Dixon-Hartland, Bart, F. S. A., F. R. G. S., M. P.
Sir Thomas Wrightson, Bart.
The Rt. Hon. Gerald Wm. Balfour, P. C.
The Rt. Hon. H. O. Arnold-Forster, P. C., etc., M. P.
Sir M. Mitchell-Thomson, Bart.
The Hon. Robert P. Porter.
The Hon. T. A. Brassey, M. A., F. R. G. S.
Sir Wm. Reynell Anson, Bart, D. CL., etc., M. P.
George R. Parkin, Esq., C. M. G., LL. D.
The Lord Mayors of : Bradford, Birmingham, Cardiff, Liverpool, Leeds, Manchester, Newcastle-on-Tyne, Sheffield. The Mayors of: Bootle, Brighton, Bolton, Bath, Bangor, Cambridge, Dover, Exeter, Halifax, Leicester, Norwich, Nottingham, Plymouth, Rochdale, Scarborough, Swindon.
Dr. Sir James Crichton-Browne, LL. D., F. R. S.
Professor H. E. Armstrong.
Professor W. E. Ayrton.
A. W. Black, Esq., M. P.
Sir J. W. Benn, M. P.
Dr. J. Rose Bradford.
R. Blair, Esq.
H. Coward, Esq.
G. M. Chamberlin, Esq.
Walter Emden, Esq.
The Rev. Professor T. A. Finlay.
W. C. Fletcher, Esq., M. A.
Dr. T. Gregory Foster.
R. S. Fraser, Esq.
Dr. William Garnett.
H. T. Gerrans, Esq.
Sir W. J. Goulding, Bart.
Edward A. Goulding, Esq., M. P.
J. R. Heape, Esq., J. P.
Professor P. J. Hartog.
Rev. Canon A. W. Jephson, M. A.
Rev. Frank Johnson.
Arthur G. Lupton, Esq.
Professor R. Meldola.
Sir Philip Magnus.
Professor Magnus Maclean.
Dr. T. J. Macnamara, M. P.
T. H. Openshaw, Esq., C. M. G.
The Rev. T. L. Papillon, M. A.
H. R. Rathbone, Esq.
Professor W. Ripper, M. I. C. E.
Charles Rowley, Esq., M. A.
E. A. Ridsdale, Esq., M. P.
A. Rendall, Esq., M. P.
A. E. Spender, Esq.
A. J. Shepheard, Esq.
Mrs. Sadler.
John Whitburn, Esq.

In caring for the comfort of the teachers, Mr. Mosely will be assisted by a special committee headed by Mr. R. Blair, of the London County Council, composed of members of the Mosely Educational Commission of 1903. There has also been formed in each city or town to be visited by the teachers a local committee, generally under the chairmanship of a prominent member of the Board of Education. These local committees have been formed in large part with the assistance of the English teachers who visited the United States some years ago, and will be animated by the desire to reciprocate, as far as possible, the courtesies shown to the English teachers when they visited the United States. These committees have agreed to act as adviser to the American teachers, to introduce them in the schools to be visited, to procure in advance accommodations in boarding houses or hotels, as they may request, to meet the teachers (if desired) on arrival, and to minister to their comfort in every way.

At each of the ports of arrival (Plymouth, Southampton, Liverpool and Dover) the teachers will be met by a member of the reception committee, with whom they can arrange immediately for their accommodations at that port. With these committees they can consult in regard to the schools to be visited and plan out a definite schedule for the trip. The committees will have available specimen routes of travel to meet the needs of the different classes of teachers who may participate in the visit. When the schedule has been determined upon, teachers should then communicate with the chairman of the local committee at the several points to be visited, in order that these committees can arrange in advance such accommodations in boarding houses or hotels, as may be desired. While awaiting information from the committees in the several points to be visited, the schools at the port of arrival can be visited as well as schools in adjoining towns, which are easily accessible. Those persons arriving at Liverpool might very well make that city their headquarters for a week or more, in the meantime visiting schools in Manchester and other nearby cities.

Arrangements have already been made by Mr. Mosely for visiting a large number of schools. The authorities at these schools will throw open their

(Concluded on page 18.)

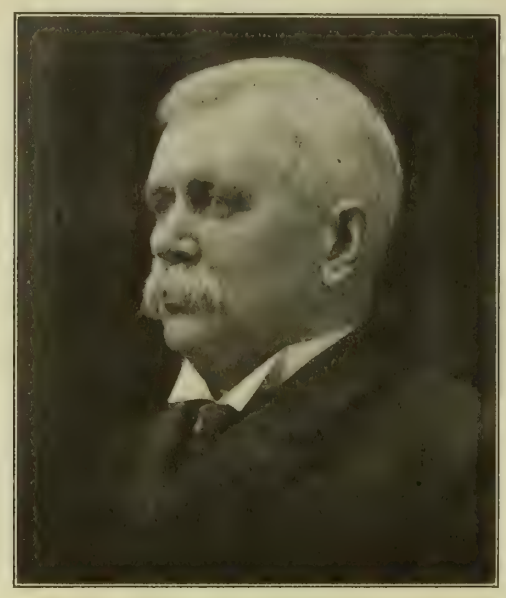
COMMITTEE ON THE TEACHERS' VISIT TO EUROPE.

FOR SHOP AND FARM

SHALL OUR PUBLIC SCHOOLS TRAIN WORKMEN AND FARMERS?

VOCATIONAL TRAINING ADVOCATED BY HIGH AUTHORITIES IN STATE AND NATION.

THE strenuous demand of the present day for industrial training is being voiced in many quarters. The educational press is full of it. It is attracting the attention of prominent educators. It filled a large place in the programme of the recent meeting at Washington in February of the Department of Superintendence of the National Education Association. The Assistant Secretary of Agriculture, the Hon. Willet M. Hays, made a stirring address upon the subject at one of the large evening meetings of the association. An afternoon session was devoted to the same subject. At another evening session Dr. Andrew S. Draper, Commissioner of Education of the State of New York, touched upon the question in his address on "Desirable Variety and Uniformity in Education." The report of Dr. Draper for 1907 is devoted mainly to this subject. This report and the address of Mr. Hays constitute two of the most important recent declarations in regard to the training of our people for work which have been made, and they are here summarized for the readers of the "Review."



INDUSTRIAL EDUCATION.

HON. ANDREW S. DRAPER.

IN his annual report for 1907, Dr. Andrew S. Draper, Commissioner of Education of the State of New York, in a chapter entitled "Our Children, Our Schools and Our Industries," makes an earnest plea for industrial education. He believes that the schools should hold all of the pupils until they have received a training fitting them for some definite employment. This need is more and more recognized among us from an increased knowledge of what other peoples, harder pressed and more painstaking than we, have done to meet modern conditions. Justice, as well as the progress and strength of the nation, make it necessary to give to the wage earner himself, and to the common industries, such equivalent as we can for what the present schools are doing for the wealthier classes and for the professional and managing vocations. In the early days of our country a knowledge of the "three Rs" was ample for most people. There was one main occupation, that of farming, and the children learned it from their parents. In towns an apprentice system provided for the instruction of the future workmen. Schools went no further than the elementary schools. High schools are a later growth. Universities, supported by public money, are of still more recent origin. The tendency in American education is to lean toward the professional occupations.

Nothing in the common schools leads to a trade. The manual training high schools are too elaborate, too expensive, and lead to nothing other than one of the industrial professions; often they do not even prepare for training any one of these. They are more like schools than shops, whereas they should be more like shops than schools. They are managed by men who are more teachers than workmen, when they should be in the hands of those who are at least as much workmen as teachers. Our system of schools does not train workmen. The unskilled labor in American cities is trained very little in the American schools. American children are taught that they must hold themselves above unskilled labor. The fact that our unskilled labor does not come out of our own schools, joined by the fact that the skilled labor which we have is so largely trained, not only in the schools, but in a very haphazard way in the shop, is disturbing the equilibrium of our factories, impeding our industrial productivity and raising much criticism of the unbalanced curriculum of the schools. The lines in all the schools above the elementary schools are set hard and fast for professional employments and for managing positions in industrial employments. In the high schools, the colleges, professional schools that are independent, as well as those related to the universities; in business and commercial schools, or independent schools of every kind in universities, and even in technical schools of every grade, the whole scheme is to turn out professional men and managers and captains of something or other rather than skilled workmen. From the top to the bottom of the school system the eye is on the school above, and the school above leads to a professional or a managing employment rather than a trade vocation.

Not much beyond the natural growth of existing institutions seems now to be necessary to the professional life of the country. This cannot be said as to the factors which contribute to the industrial life of the nation. In the interest of the common people and of the country the kinds of schools must

HON. ANDREW S. DRAPER.

be multiplied, the educational schemes be broadened, attendance upon schools must be longer and more universal, and the work of the lower schools must have much more bearing upon the labor of the masses. It is commonly assumed that practically all the children who generally go to the high schools finish the elementary schools. But this is not the fact. It is startling to find that certainly not more than two-fifths and probably not more than one-third of the children who enter our elementary schools have finished them, and that not one-half of them get beyond the fifth or sixth grade.

With the development of schools on the literary, scientific and professional sides the indenturing system has practically disappeared. Few boys are now apprenticed to a trade. The increase of machinery has led the older workmen who work with their hands to resist the training of boys for that work in order to avoid more competition. It is even true that there are many less apprentices in the trades than the rules of the labor organizations approve. This leads to a shortage of skilled workmen, and to the complaint of manufacturers that they cannot get competent workmen, and of others that the schools do not fit children for any ordinary duties in stores and offices. The reason why so many leave the elementary schools before finishing the course is not so much because parents need their labor, or because the law says that they may, as because there is too much wandering around in tall grass, too much time wasted in merely incidental matters. It is because the work of the schools is behind the ages of the children. It is because the work which we set to be done by the woman teacher in the fifth grade, and the way we expect her to do it, can no longer be tolerated by a boy passing into his fifteenth year. The hard fact is that we ought to get children well started earlier, and push them along more rapidly than we do, and there is no doubt that we ought to do the work of the elementary grades in at least one year less than we take for it. In any event, we should make it a point of getting children to the end of the elementary schools by the time they finish their fourteenth year. It is monstrous that two-thirds of the children of the State do not go through the elementary. Good citizenship and thrift and morals of the country are dependent upon the mass being trained to skilled work. The successful workman is a happier man and a more reliable citizen, a much larger factor in giving strength and balance to his country, than the unsuccessful or only half successful professional man.

There is nothing which now appeals to the popular fancy in America so much as "industrial training." The newspapers are full of it. Every public audience responds to it quickly. The authorities of charitable and penal institutions are trying to install it. The school boards are all in favor of it, but hardly know how to accomplish it. They do something about it because they dare not do nothing. They do not do much because the pedagogical mind is not very clear about policies and plans, because the professional and capitalistic classes are too often uninformed, uninterested or selfish about it, and because the labor organizations are skeptical about its ultimate effect upon the scale of wages. The confusion and uncertainty are widespread.

We have gone wrong in starting our movements in industrial training at the top rather than the bottom. Other nations have intrenched it at the bottom of their educational system and let the top meet its own needs. The top is more able than the bottom to get what it needs. Whatever the motive or the logic, Germany is educationally more democratic than the United States.

In recent years some special vocations, like stenography and typewriting, and other things relating to office work, have found their way into the public secondary schools. Three or four public vocational schools, of secondary grade, supported by a municipality, or partly by the municipality and partly by the State, like the Washington Irving High School of New York City, the Textile School of Lowell, Mass., and the Central High School of Commerce of Philadelphia, and some of the evening high school of Buffalo and New York City have been established. But their very names prove how far they are from the training of the masses in workmanship.

Private business schools have been more profitable and successful. Some of the great manufacturing or construction companies, like the Westinghouse Electric Company and the Baldwin Locomotive Works, have set up schools of their own, but the enumeration of these agencies shows the general lack of preparation for vocational employments in the United States, and the disconnected, very often unsubstantial, and ordinarily self-interested and sporadic movements to overcome the difficulty, rather than any general plan for meeting a very wide and very imperative demand.

The American public has really done nothing about training the children of the wage earners in industrial vocations. We permitted the very name "industrial school" to become used almost exclusively by institutions of a penal or disciplinary character. The manual training schools are not vocational schools. A number of very excellent trade schools established by benevolent citizens have awakened little enthusiasm, since Americans do not take keenly to institutions which in whole or in part rest upon charity. The American schools which come as near as any to the trade schools of Europe are those which have been established by a few of the great manufacturing works to train workmen for their shops. This movement under private corporations exemplifies the dearth of industrial training in the country. They are unacceptable to labor organizations because the latter think that such schools are created and operated in the particular interest of the employer, and not in the general interest of the employe; and more particularly because such schools provide ways for defeating the aims and methods of organized labor. From the viewpoint of general educational policy, the labor organizations have the better of the contention. We must find a scheme which will involve public proprietorship and be managed in the interest of all the people, or, at least, all with common interests in any trade, before it would be an effective American institution.

The American Federation of Labor, at the recent meeting in November, refused to commit itself to an attitude of antagonism to technical and trade schools, and directed its executive council to examine "established and proposed industrial school systems so that it may be in a position to inform the American Federation of Labor what, in the council's opinion, would be the wisest course for organized labor to pursue in connection therewith."

There can in the end be but one outcome, and I have entire confidence that the wisdom of the labor organizations will lead them to an attitude which is at once sane, patriotic, and promotive of the best good to the children of the masses.

The foregoing consideration which have been very briefly stated from Dr. Draper's able argument, lead him to suggest and recommend a definite programme, which is as follows:

1. Insist upon more complete and always up-to-date vital statistics. Know of the existence of every child, and when he is of school age have him accounted for.

2. Require attendance at seven years of age, instead of eight, and let it continue, in elementary school or trade schools, to seventeen, but excuse from attendance before eight, at the parents' request, on the ground of immaturity, and also excuse from attendance whenever the work in the elementary school and trades school is completed, or after fifteen if the child is regularly at work.

3. Establish schools for teaching trade vocations, the work to begin at the end of the elementary school course, and continue for three years.

4. Let the trades schools be open both in the day time and evening.

5. Establish continuation schools, to be open mainly in the evenings, where the work shall be of a general character, suited to the needs of youth who are employed through the day and are not doing the work in the trades schools. In other words, make our evening schools more general and better. Let the work in the continuation schools go perhaps half way or more through the high school course but with less formalism about it.

6. Shorten the time in the elementary schools to seven years. Take out what it is not vital for a child to know in order to learn or to do other things for himself. Assume that he will learn and do things on his own account if he has the power. Strive to give him power, and expect that through it he will get knowledge. Stop reasoning that mere information will give him power. Stop the dress parade and pretense about teaching, which consume time unnecessarily. Push the child along and aim to have him finish the elementary school in his fourteenth year. When he is fifteen send him to the trades school whether he has finished the elementary school or not.

7. Assume that if the child does not go to the high school, his school work may end with his seventeenth, and not in his fourteenth year.

8. Put into the elementary schools, from the very beginning, some phase of industrial work. Up to the last year or two let it be work that can be done in the schoolroom, at the desks, under the ordinary teachers, and will occupy two or three hours a week.

9. As the child comes to the end of the elementary schools, expect him to elect whether he will go to the high school, to a trades school, or to work.

10. Wherever he goes, expect that the schools will keep track of him until he is at least seventeen. If he goes to the trades school, expect him to get into the possession of the fundamental knowledge and something of the skill of a trade by his seventeenth or eighteenth year. If he goes to work in a store or factory, expect him to come to the continuation school till his seventeenth year is completed. Have him and his parents understand that he is responsible to the schools until he is perhaps eighteen years old.

11. Set up trades schools in spacious, but not necessarily ornate, buildings. Start the particular kind of trades schools that the business of the town and the interests of the trades call for. Let it be understood that wherever there are a sufficient number of children to learn a particular trade there will be a school to teach it to them. Let the trades school partake more of the character of the shop than of the school. Hold to books, somewhat, particularly books which the pupils will be glad to read by themselves, carry mathematics a little farther, lay emphasis upon work with a pencil; let the main part of the work be with the hands; and let the atmosphere of the place be free and comfortable, so that young people will like it. Let the teaching be done by real artisans, who are intellectually balanced and can teach, rather than by teachers who can use tools only indifferently. Above all, have teachers who are not afraid of youth, and so are not under the necessity of brow-beating and badgering them a great deal, but rather who command respect because of what they are, and can lead the way to the pleasure of really doing things.

12. Keep the trades schools open afternoons and evenings. Have their pupils attend from four or five hours to as many hours a week as the pupil can give. Let the training be individual and let the progress of the pupil depend upon himself and upon the time he can give; but allow him to engage in other work for pay if he must.

13. Modify the child labor laws so they will articulate with the plan, and enforce them. Require employers to regulate their affairs so that employes may attend continuation schools or a trades school at least four or five hours per week.

14. Let the trades schools be supported by the town, but give them sufficient State aid to encourage their organization and dispose them to conform to the needs of the situation.

15. Meet any demand on behalf of girls as well as on behalf of boys.

16. Make it quite possible for one in a trades school to go to a manual training high school, and vice versa, but be careful to avoid the inference that one is to prepare for another. Let it be understood that each stands upon its own footing and leads to very different ends.

AGRICULTURAL INDUSTRIES AND HOME ECONOMICS IN OUR PUBLIC SCHOOLS.

HON. WILLET M. HAYS.

OUR country has come to recognize that changed economic conditions, an increase in technical knowledge, and newly devised forms of school work have made it necessary and practicable to broaden our educational machinery so as to give a large place to the industrial vocations. Existing schools must enrich their courses of study along these new lines, so vitally connected with the thought and work of the people, and the newer types of schools especially fitted to the industrial life of the people must be developed so as to meet the new conditions in the largest and best way.

Generally speaking, one-third of our men folks are in agriculture, and one-third in the non-agricultural productive industries; while two-thirds of our women are in the vocation of home-making. Two-thirds of all our people enter these several vocations and nearly all receive their only schooling in our public schools. All will agree that our schools should be fitted in some measure to prepare them for it.

For those who cannot secure in their home schools vocational training along the lines they especially desire, special vocational schools are necessary. For the non-agricultural industries these may best be in the large centres of population, often in the

HON. WILLET M. HAYS.

atmosphere of the vocation for which preparation is sought. Here resident pupils can attend, each choosing that school which best meets his needs. For the agricultural industries these vocational schools should be on the land, preferably near a town or city. Those experienced in agricultural secondary schools designed mainly for young men and young women who are to remain on the farm, or are to change from city to country life, are unanimous in the belief, so far as I know, that these schools will not succeed so well as annexes to city schools as when separate and on large farms. As the school of art, theology, literature or science needs an environment, an atmosphere of its own, made possible by a strong special group of teachers and students in a large institution, or in a separate institution, so the school of an industry needs to be distinctive as a separate school or as a strong unit in a large school. Weak industrial departments in schools mainly devoted to non-industrial subjects have not generally succeeded. No doubt as the industrial subjects are better developed pedagogically, and as the industries are better organized as to the amount and regularity of employment the industrial subjects will oftener succeed, whatever the school environment. But it will always be true that the schools highly developed for special work in agriculture, in the mechanic industries, arts and trades, and in home economics, will establish the highest standards in education in these respective lines. The trend seems strongly to the development of large secondary mechanic arts schools and large secondary agricultural schools as parts of our public school system, and to include home economics in both. There are none, however, so narrow as to limit instruction in these lines to these large special schools. The industrial studies are finding more and more room in the academic city public secondary schools; and especially in the secondary schools of villages, towns and cities not large enough to support separate technical schools. Even short trades courses are finding favor in the public schools of some smaller towns where there is need for expert tradesmen in specific industries. And even the primary schools of our centres of population are giving more and more attention to mechanical and home-making vocational work.

The Davis bill now before Congress (H. R. 534) proposes to give national aid to vocational training It equitably distributes money raised by general taxation and gives its share to every district in the land.

Briefly stated, the terms of the Davis bill provide that Congress shall appropriate annually to each State ten cents per capita for industrial education. Of this sum each city with more than 2,000 inhabitants shall receive its per capita share, the only limitation being that this money shall be used for studies in mechanic arts and home economics in schools of secondary grade. To the population outside of cities the ten cents per capita shall be used for studies in agriculture and home economics in secondary agricultural schools. Both in the city secondary industrial schools and in the agricultural high schools thus established the State or locality must provide the lands, buildings, and also current funds to provide all the necessary general studies to round out strong courses of study.

The bill further provides that Congress shall appropriate one-fourth the sum received by each agricultural high school for a branch agricultural experiment station and requires the State to appropriate an equal sum. This branch station fund will aid the practical teachers to fully understand the soils, crops, live stock, and the plan of farm management suited to the respective districts. It will provide means with which to co-operate both with the State experiment station and with the United States Department of Agriculture in such work as breeding, testing and distributing new varieties of field, orchard and garden crops; in the improvement of the breeds of animals; and in working out systems of farm organization, field management, soil fertilization and crop production.

Following such noteworthy examples as the Minnesota, Wisconsin and Nebraska agricultural high schools and branch experiment station organizations, 300 of these institutions would accommodate 100,000 farm boys and girls, many of whom are not seeking an avenue off the farm. Probably 20,000 would graduate annually, the majority returning to take leading places in their farm communities, a large proportion entering upon teaching as in the consolidated farm schools, in town schools, in normal schools, and in the district rural school, and probably ten per cent. going to the agricultural college.

Following such splendid examples as the St. Louis, St. Paul, and Washington mechanic arts secondary schools, hundreds of these institutions will accommodate hundreds of thousands of city youth who wish to pursue courses in mechanic arts, industries and trades, and girls who wish to have technical training along home making lines. Tens of thousands will annually graduate ready to rapidly gain high efficiency in the expert trades or in the keeping of homes. Not a few will proceed to the engineering or other technical college and the graduates of these schools will eventually grow into the leadership of many of our manufacturing and transportation industries. But the great majority will take the well paid places requiring masterful artisans, places not too often taken from American youth by highly skilled foreigners. These schools, instead of being places to turn out cheap tradesmen, will supply men who, having joined scientific information, school shop experience and actual service in their chosen trades, will set new standards for our expert trades. They will tend to increase wages in these lines, and they will increase the output from labor. Under public management they will treat fairly both the man who has labor to sell and the man who is seeking to employ labor. Many of the women graduates will splendidly build up the home economics instruction in all schools where girls attend, from primary to collegiate, insuring that the housewives and mothers of our land be expert in their work. The improvements which will come through instruction in home economics in the agricultural high schools and in the mechanics arts high schools and by graduates of these institutions carried into all primary schools will pay all the cost to the Federal, State, and local governments as required under the provisions of this bill.

The Davis bill is open to defeat or to improvement and passage. Broadly speaking, it proposed to change our expenditure from, say, $4.00 per capita to $4.10 per capita; and to provide that this added 2½ per cent. of our school expenditure shall be placed under a plan where it can be used only for training in agriculture, in mechanical industries and in home making. We all know that this is the side of our educational machinery which has not kept pace with our needs. The main proposition should be handicapped by amendments.

This enlarged expenditure for teaching the children of our native and recently arrived Americans how to make better homes and to increase their production of commodities has the broadest possible national significance. We are in world competition with nations able and willing to make commodities at lower units of labor charge than we. We must either increase the efficiency of our labor units or be willing to sell them at lower wages. America has charge of the world's highest standards of wage and of living. Industrial education has a place beside a reasonable tariff in keeping America's dinner pail full.

KEEPING THE TRACK IN ORDER

ARDUOUS DUTIES OF MAINTENANCE OF WAY EMPLOYEES ON RAILROADS—SEVERE LABOR AND SCANTY REMUNERATION.

IN a recent investigation of labor conditions on the Southern Railway, undertaken by the Chairman of the Interstate Commerce Commission and the Commissioner of Labor, under the Erdman Act, Mr. A. B. Lowe, President of the International Brotherhood of Maintenance of Way Employes, presented a forcible brief on behalf of the men of his organization. The following extracts give a vivid account of the work of these men and the conditions under which they labor:

To begin with, then, I speak for the men whose duty it is to make possible the rapid transit of trains, passenger and freight, by close inspection of the tracks and bridges, seeing that everything is in good order and making daily repairs which fast and heavy traffic make constantly necessary.

To do this work most economically and efficiently a railway system divides its road into divisions, having its tracks under the supervision of an official usually termed a roadmaster, who probably has charge of 150 miles. The bridges in this or, perhaps a longer division, are under the care of an official called a supervisor, who has charge of the bridges and buildings. The name of the official in charge of either track or bridges and buildings may vary, but this is about the average system, the whole is usually under the charge of a civil engineer, called the engineer of maintenance of way.

The duty of keeping bridges, culverts and other passages in safe condition is entrusted to foremen and gangs of men living in cars and moving as the requirements of the work demand. Their importance in the railway service can be seen by just imagining for one moment any neglect in keeping either the foundations or upper structure of a bridge in safe condition, and the destruction of life and property which such neglect might cause. In addition to the arduous nature of their service and its responsibility it is to be remembered that many of their tools have to be supplied by the employes at their own cost.

A roadmaster's district is divided into sections of varying length, usually not less than six miles, each section being in charge of an employe called a section foreman and from one to six men. Their duty is to inspect daily or as much oftener as may be necessary their entire section, putting in ties, keeping the rails spiked to proper gauge to make the passage of trains safe, keeping the track in good alignment to make easy riding, keeping the surface of the rails level to prevent breaking of the rails by the pounding of the wheels caused by low joints, finding broken rails and renewing the same or worn out rails, keeping the curves properly elevated to prevent derailment of trains by spreading of track, tightening of bolts, keeping the right of way clear of weeds and rubbish, maintaining fences, gates and road crossings; in brief, doing the thousand and one things necessary to make rapid transit safely possible. Often the force to do this is not adequate for the purpose. In prosperous times the men cannot be obtained in many places who will work for the low wages the company offers, and in dull times, when men could be got, the necessity for a small pay roll seems to supersede all other considerations. All the work mentioned is of a laborious character, most of it is done in a stooping position and requires considerable muscular force, and the work has to be done regardless of the weather, and thus we are subject to all the vicissitudes of the intense heat of a Summer's sun reflected from the rails and ballast, and in Winter to all the rigors of Winter's stormiest days of snow and sleet and coldest, deepest frost.

Another point which deserves more than a passing notice is that the worse the weather, the more drenching the rain, the more necessary is it that we should turn out, often in the middle of the night, to make all speed with lanterns and torpedoes to some weak spot in an embankment, or a bridge force must turn out in just such weather to guard some pier that they fear may be undermined and leave a chasm into which a train might leap. To the credit of our craft it is seldom such a thing happens, but the occasions on which the red lanterns and the torpedoes have brought a train safely to a halt before the chasm where a bridge had gone down, an embankment been washed away, or a snow or mud slide had blocked the roadway are of frequent occurrence. As it is all in the line of our duty, not much is said of these things usually but they are well worthy of a place in the facts connected with this investigation. And as all the risks to trains mentioned are those of daily possibility, I need not say a proper regard for human life requires a class of men in the maintenance of way service of a character that will insure a faithful performance of the means of guarding against such accidents, and the employment of men whose fidelity to duty as well as their skill in its performance can be depended upon. For it must be remembered there is no taskmaster on hand to order these men out when the storms are worst. A roadmaster cannot be everywhere on a division 150 miles long, so it is left to each track or bridge man's sense of honor and his regard for the lives entrusted to his care to send him from the comforts of home out in the dark night's storm.

I need hardly remind you, gentlemen, that every life in the train, from the engineer in the cab to the porter in the rear Pullman, is in the hands of the employes of the M. of W. department. The most experienced engineer may be at the throttle, the most careful conductor in charge of the train, the most skillful despatcher send a correct train order to the most faithful of operators, but all the care and skill of all combined will not save a train from destruction if inefficient or unfaithful men have charge of the tracks and bridges. A careless inspection of the track that fails to detect the scarcely perceptible break in a rail, a little left to chance in the repairs to a bridge, or a lack of watchfulness of a current wearing away the foundations of a pier,

A. B. LOWE.

and, in spite of the utmost care of the most experienced engine and train men, disaster will surely follow.

These facts tell forcibly of the arduous character of the work, the danger to health connected with its performance, the great responsibility resting upon each employe, and the consequences which would assuredly follow even apparently slight neglect of any of our many duties. Believing that I have stated the case fairly, I think I am entitled to claim that men on whom such great responsibility rests should neither be selected from the lowest grade of society nor be the poorest paid employes in the railway service. Each year as heavier locomotives and cars are being introduced into the service, as each new schedule asks for a still faster train service than the last, the responsibility and hardship of the service increases, and as the responsibility and hardship increases certainly the pay should increase proportionately. And if a reduction of expenses ever makes a reduction in pay an actual necessity then the officials at the top, with salaries able to stand a cut, should be the ones selected for the knife, not men whose pay is barely above the point which supports existence. I have said nothing of the increase in pay which should keep pace with the increase in the cost of the necessaries of life, but you gentlemen know that when the cost of living increases if the rate of pay does not correspondingly increase then the wage is cut in the same proportion that the cost of living has increased. On the Southern Railway, although there has been no decrease in the cost of living, the laborers in the track department have had their wages cut ten cents per day, and some are working to-day for the same rate as was paid fifteen years ago. I commend this reduction of ten cents per day of these track laborers to your careful consideration and ask that the pay be restored to at least what it was before the cut was made.

Since March 1, 1907, and as the committee understood to continue for one year, the minimum for section foremen was forty-five dollars and fifty cents ($45.50) per month, the maximum fifty dollars, a few yard foremen getting from fifty-five to sixty dollars per month. Men in the bridge and building department to receive an increase of ten per cent. The minimum of laborers in the track department was ninety cents, the maximum $1.15 per day.

The committee contend this cut was in violation of the agreement between the management and the committee, effective March 1, 1907, while the management claim the laborers were not included in the schedule. There is certainly a misunderstanding between the parties, but I will only refer to it, as I understand the whole matter in controversy between the management and the committee representing the Maintenance of Way employes has been referred to you gentlemen, and I presume you will give a decision on our right to represent the laborers, who wish to be represented by us as well as on the question of rates. I would be loath to say the management deliberately broke a contract, as our experience has been that railway managers carry out generously both the letter and spirit of our agreements, and I trust the Southern will be no exception.

This reduction of 10 cents a day brings the minimum down to 80 cents and the maximum to $1.05 per day. I wish I could invent some other word than maximum; it seems such a large word for such an insignificant wage.

We have been hearing a good deal lately about "Frenzied Financiers." Let me call your attention to a class of whom the world has not heard much, but to whom the term may surely well apply. It is the wives of these men who at eighty cents per day of ten hours, having worked twenty-six days in the month, go home to the wife and hand her the envelope with their pay and tell her to provide shelter, food and clothing for the family out of a monthly wage of twenty dollars and eighty cents. If that does not produce "Frenzied Financiers" I can't imagine what would. And yet that is what the Southern management think is sufficient to supply a family with the needed home comforts and pay a man to sacrifice health or life itself if the exigencies of the service call for it, to protect the valuable property and the priceless lives committed to the care of the men in the track and bridge and building departments.

I presume, gentlemen, you understand that the foremen who take charge of sections are brought from laborers trained in the service. There is no other college to turn out graduates capable of performing the duties of a foreman except the hard school of the gauge and spike maul, the pick, shovel and tamping bar. With every passing year heavier, faster train service is demanding a better class of section foremen. Is there any real gain to a railway company in taking the heart out of their employes by paying wages which keeps them dissatisfied and discontented, and only retains them in the service until the first chance of leaving it offers? And as each road must provide its own foreman, what will the character of the future foreman be on the road where they have to be promoted from the men who would remain at track work at either 80 cents or $1.05 per day? In view of the disastrous killing and wounding of passengers and train employes shown by the accident bulletins sent out by the Interstate Commerce Commission, is it permissible, or even, from the viewpoint of dividends, economical, to procure the labor for the Maintenance of Way Department from the flotsam and jetsam, the culls and cast-offs, of the labor market? What else could you get for that price?

I have the utmost confidence, gentlemen, that you will recommend a wage rate for the foremen and men in the Maintenance of Way Department which will be based on our value to the company, the arduous nature of our work, its great responsibility in view of the value of human lives and limbs, and the immense value of the property entrusted to us. I am sure that in estimating a fair living rate for all the employes in the Maintenance of Way service whom I represent the cost of the necessaries of life will come into the calculation and the importance of the rate being such as will bring to the service married men, who will be permanent employes, and a rate sufficient to provide for the comfortable housing, clothing, feeding and educating of our wives and children in a style becoming American citizenship.

SOCIALIST SUNDAY SCHOOLS

THEIR EXTENT AND OBJECTS—MATERIALISM EXPOUNDED TO CHILDREN—SOME APT PUPILS.

THOSE Socialist Sunday schools teaching from the "red catechism" have been refused the further use of the public school rooms in London. But elsewhere throughout the world there seems to have been neither civil nor other effort made to check the education of children in "scientific materialism." In good British fashion the evicted Socialists are resisting the action of the London County Council. Upon civil grounds they stand by their "equal right" to the use of the school rooms with those other Sunday schools whose catechisms are founded upon the Bible. Pedagogically their rights are defended upon the alleged findings of science. They argue if there be such a thing as the soul in the religious sense, it is necessarily the result of a fortuitous concourse of events, in a word, blind force. Consequently the highest possible obligation from man is to man—there is nothing above humanism. As God is the product of imagination, brought into existence to sustain the reign of private property, it is silly to fear Him and idle to love Him. All the heaven worth striving for is made up of little work, more play and much wealth. This triple ascension may be gained by the collective ownership and operation of confiscated capital.

Great demonstrations in the parks of London are being held to compel the authorities to restore the Socialist Sunday schools the use of their erstwhile quarters.

In the United States these schools are not occupying public buildings free of rent, but they are well established and flourishing in all of our large cities.

Decidedly, the American children are shown to be the most apt. From exhibits in "The Worker" (July 20, 1907, the leading Socialist weekly in this country), the doctrine is clearly put forth in six "essays," which were written by the child members "without prompting." They are simplicity itself as to the origin, purpose and end of life.

The pen having already abolished the moral order, there can be no sins to deal with; and as the cause of crime—of killing and stealing—is merely lack of wealth, heaven shall come on earth "when Socialism comes; there will be plenty of food for all, and people will not have to run after food or kill or rob some other man in order to get it,' writes one of these six essayists, Abraham Edelsack.

The dogma of the "social organism" is treated by little Lena Rosenheck, age thirteen. She has been taught that the "science of Socialism" proves that the individual is not yet a responsible being. First, because he is practically non-conscious of the universal ego, and, second, even upon becoming "class conscious," he is powerless to act freely, being the slave of "capitalism." This, of course, applies with equal force to capitalist master and wage slave. When the working class shall have conquered the capitalist class—thus leaving but one class—then a moral code, a moral economy may be resolved in order—not before. So, also, then for the first time in the history of man will there be such a thing as free will.

"A society of men (writes little Lena), like the human body, is made up of different parts. Each part must do its work. A good example we have in the street cleaners of New York. Last week the street cleaners, instead of taking away the garbage every day, went on strike, and the garbage was piled on the streets for five or six days. It smelled very bad. It is believed that many children were taken sick from the terrible smell. The strikers did not win, but it is said they will get what they want." "Science" thus engages to make it plain that no man can do right, or be moral, until all are made to take their places in the "social industries." Domestic economy will die out, for the work of the home will be socialized, and "baby farming" must supplant the mother's care of her children.

The doctrine taught at the "red Sunday schools" is an extension from the premise that "religion is a fantastic degradation of human nature" (Marx). "Socialism must conquer the stupidity of the masses in so far as this stupidity reveals itself in religious observances (Liebknecht). That "we wish * * * in religion, atheism" (Bebel). Modern science having proved that "there is nothing left for Deity to do," clearly there is no reason left to fear God, to love God, or to worship God—"God is a myth."

Another little fellow, Abraham Jacobson, age eleven, deals with the weighty problem of the moral order, or, rather, with a fatalism which has formed civilization in place of the old superstition that there is an universal moral economy to which the individual may conform, or may refuse to conform. "It cannot be different," because "people cannot be kind, true or honest" so long as they work for wages. It is the "capitalist system" which causes capitalists to rob workmen, even if some employers don't want to. Whether we like it or not, the "present order" leads to the revolution, which will cause the workmen to rob their robbers of all the means of production, distribution, and exchange. This robbing will put forever an end to robbery. Because Socialism will be here, and everybody will own everything. And there will be nothing that nobody doesn't own.

These pupils are taught not only "why people are as they are" morally, but how the human body happened to be formed as it is. It was our habits while we were still only animals that made us over into men. Perhaps we shall be obliged to form some other habits that will make us into something other than men. But as yet Socialists are not sufficiently "race conscious" to pretend to give "cook shop receipts" for the conduct of the industries under their own regime, or to aid us in making ourselves over into what we shall be hereafter.

Like the rabbit and the wolf, every structure is made by habits forced upon it. "The rabbit has long ears and his eyes are at the side of his head, because the rabbit has to see what is going on around him."

"The wolf is fierce and his eyes are in front of his head, because he is always chasing the rabbit and trying to get him for food. It is the same way with the people—they are always running after food. * * * If they don't get it they are compelled to rob or kill some one to get food for their wives and children."

These Sunday school pupils have the Socialist dialectic set before them dogmatically. First, physical necessity shaped our necks—not so long as the giraffe's, nor as short as that of the hedgehog—by our prehistoric manner of getting our food supply. That material necessity alone is the master builder of our fate. We are neither good because we will to be and strive to be, nor are we bad because we yield to temptation and dwell in sin. But we are simply thus and so because our environment has made us to be thus and so.

Henry Feigenbaum, age thirteen, has a clear grasp on the doctrine of "class struggle," and also its mission and destiny. The "game of life" has been to "hold as their own social use property" and to keep the "stakes of the game through politics." When Socialists come into power they will "make rules for their own benefit. The working class being in the great majority, the rules they would make would really be for the benefit of all."

The last two of these "essays" tell "What Socialists Want." Jacob Schward is the author of one, and Stella Gillis, twelve years of age, the other. Americanism is ruled out of court, for "Socialists claim that a system like this has no right to exist. It must be changed to a new system of society, where people will not be divided with different interests, but it will be one class with one interest, and this interest will be the good and welfare of society." The revolution having arrived, "class consciousness shall have evolved into "race consciousness"—into the conscious experience of the "social organism," above which there is nothing.

Bible teaching and Christian standards are not alone out of date, but the "red" catechisms have left behind the principles of logic. The law of contrast—that process by which the identity of each person or thing has hitherto been known because of its difference to all persons or things—is, by their system of thought, not necessary. Of course, their proposed co-operative commonwealth will prove by experience whether it were easier to outgrow the moral code or the law of identity. Though the Ten Commandments have been already curtailed. For some of the "comrades" have, on Boston Common, "Resolved" that henceforth when a man is hungry it is moral to steal.

There is no monopoly in New York of Socialist Sunday school achievement. Chicago is also teaching the "science of Socialism" to its children. The philosophy that "things develop themselves according to some eternal idea" it will not tolerate. Just as from reaching far down into clover blossoms has developed the slightly longer proboscis of certain bees, thus allowing them to survive, "likewise society, as a large organism, has been formed entirely by the economic conditions in which men found themselves. Domestic life, government, literature, architecture and codes of ethics are all outgrowths of social surroundings."

So, also, in Boston the chief aim of the Socialist Sunday school "will be to bring up our children in the ethics of Socialist principles." Boston children are most fortunate, as among the instructors are "some of the heroic ministers who have been promoted from the pulpit to the broader and more strenuous field of international Socialism."

Although admiration for the literary achievement of the New York children spread from ocean to ocean, the Socialist press was keyed up a pitch or more higher in reporting the practical demonstration of those of Omaha. Patriotism was flung in the gutter to make room for the red flag of the world. The heroic act was led on by a "little girl of ten," and a "national reputation" has been made by these children, who tore down President Roosevelt's picture from the walls and hung in its place one of "Mother" Jones. Great exploit this! This incident, says the "Social-Democratic Herald," of Milwaukee, "speaks volumes for the manner in which these children have been taught the truths of Socialism."

In this free country the spirit of Socialism, even among the children, is intellectual and practical—"truly scientific." While in Melbourne it is somewhat sentimental, devotional. There, too, the doctrine is taught the little ones, but "an earlier step has been taken by the dedication of infants to the cause." Like as of old, Hannibal was sworn upon the altar of Baal always to be the enemy of Roam, so is a "Socialist baptism" given as a dedication to the cause, made a pledge of hatred to all that stands opposed to the oncoming revolution.

Throughout the world the children's literature is fast multiplying. Beginning with "The Young Socialist" there is now added "The Child's Socialist Reader," illustrated by no less an artist than Walter Crane. Tales, poems, pictures and song books are plentiful in supply. All the Socialist papers pay some attention to this branch, while "The Woman Socialist" especially furthers its interests.

Dozens of new schools have been founded during the past year, and while there are no statistics available for our own country, the Sunday school children of the "red internationals" abroad has reached the total of 59,225.

MARTHA MOORE AVERY.

EN ROUTE FOR PANAMA.
(Mr. Childs on the left, Mr. Balfe third from left.)

MESSRS. WILLIAM CHILDS, JR., and Harry Balfe, members of the Welfare Department of the National Civic Federation, sailed on the S.S. Allianca of the Panama Railroad Company, Tuesday, March 3, at noon, for the Canal Zone to make an investigation for the Government, as experts, on the food served to the men employed in constructing the Canal. This investigation is made under the executive order of President Roosevelt and Secretary Taft. Messrs. Balfe and Childs have been authorized to look thoroughly into the question of improving the food conditions, the inquiry extending into the methods of purchasing, the quality of the food materials, the management of the mess-halls, and the deterioration of supplies in transporting them from the United States to Panama and from the Port of Colon across the Isthmus to the various camps.

The equipment of these gentlemen is evidenced by the fact that they are respectively the President and Manager of the Childs chain of restaurants in New York and Philadelphia, patronized by one hundred thousand persons daily. Mr. Balfe also has charge of feeding the immigrants at Ellis Island.

OFFICERS

SETH LOW, President.
SAMUEL GOMPERS, Vice-President.
NAHUM J. BACHELDER, Vice-President.
ELLISON A. SMYTH, Vice-President.
BENJAMIN I. WHEELER, Vice-President.
ISAAC N. SELIGMAN, Treasurer.
JOHN MITCHELL, Chairman Trade Agreement Committee.
SETH LOW, Ex-Officio Chairman Conciliation Committee.
WM. H. TAFT, Chairman Public Employees' Welfare Committee.
NICHOLAS MURRAY BUTLER, Chairman Economics Department.
CHARLES A. MOORE, Chairman Welfare Department.
FRANKLIN MacVEAGH, Chairman Immigration Department.
MELVILLE E. INGALLS, Chairman Public Ownership Commission.
RALPH M. EASLEY, Chairman Executive Council.
D. L. CEASE, Secretary.

EXECUTIVE COMMITTEE

On the Part of the Public:

GROVER CLEVELAND, Ex-President of the United States, Princeton, N. J.
ANDREW CARNEGIE, Capitalist, New York.
CORNELIUS N. BLISS, Ex-Secretary of the Interior, New York City.
NAHUM J. BACHELDER, Master of the National Grange, Concord, N. H.
BENJAMIN I. WHEELER, President University of California, Berkeley, Cal.
CHARLES W. ELIOT, President Harvard University, Cambridge, Mass.
NICHOLAS MURRAY BUTLER, President Columbia University, New York City.
SETH LOW, Publicist, New York City.
ARCHBISHOP JOHN IRELAND, of the Roman Catholic Church, St. Paul, Minn.
BISHOP HENRY C. POTTER, of the Protestant Episcopal Church, New York City.
CHARLES J. BONAPARTE, Attorney-General of United States, Washington, D. C.
DAVID R. FRANCIS, Ex-Secretary of the Interior, St. Louis, Mo.
ISAAC N. SELIGMAN, of J. & W. Seligman & Co., New York City.
JAMES SPEYER, of Speyer & Co., New York.
V. EVERIT MACY, Capitalist, New York.
JOHN M. STAHL, President Farmers' National Congress, Chicago.

On the Part of Employers:

HENRY PHIPPS, Director United States Steel Corporation, New York City.
AUGUST BELMONT, President August Belmont & Co., New York City.
W. A. CLARK, President United Verde Copper Company, Butte, Mont.
CLARENCE H. MACKAY, President Postal Telegraph-Cable Co., New York City.
LUCIUS TUTTLE, President Boston & Maine Railroad, Boston, Mass.
FREDERICK D. UNDERWOOD, President Erie Railroad Company, New York City.
M. H. TAYLOR, President Pittsburg Coal Company, Pittsburg, Pa.
MELVILLE E. INGALLS, Chairman C., C., C. & St. L. Ry. Co., Cincinnati, Ohio.
SAMUEL MATHER, of Pickands, Mather & Co., Cleveland, Ohio.
CHARLES A. MOORE, Manning, Maxwell & Moore, New York City.
FRANKLIN MacVEAGH, of Franklin MacVeagh & Co., Chicago, Ill.
ELLISON A. SMYTH, President South Carolina Cotton Manufacturers' Association, Pelzer, S. C.
CHARLES H. TAYLOR, Jr., Ex-President American Newspaper Publishers' Association, Boston, Mass.
DAN R. HANNA, of M. A. Hanna & Co., Cleveland.
MARCUS M. MARKS, President National Association of Clothiers, New York City.
OTTO M. EIDLITZ, Former Chairman Board of Governors, Building Trades Employers' Association, New York City.

On the Part of Wage Earners:

SAMUEL GOMPERS, President American Federation of Labor, Washington, D. C.
JOHN MITCHELL, Former President United Mine Workers of America, Indianapolis, Ind.
WARREN S. STONE, Grand Chief International Brotherhood of Locomotive Engineers, Cleveland, Ohio.
A. B. GARRETSON, Grand Chief Conductor Order of Railway Conductors, Cedar Rapids, Iowa.
JAMES DUNCAN, General Secretary Granite Cutters' International Association of America, Quincy, Mass.
DANIEL J. KEEFE, President International Longshoremen, Marine and Transportworkers' Association, Detroit, Mich.
P. H. MORRISSEY, Grand Master, Brotherhood Railroad Trainmen, Cleveland, Ohio.
WILLIAM D. MAHON, President Amalgamated Association of Street Railway Employes of America, Detroit, Mich.
TIMOTHY HEALY, President International Brotherhood of Stationary Firemen, New York City.
WILLIAM J. BOWEN, President Bricklayers' and Masons' International Union, Indianapolis, Ind.
J. J. HANNAHAN, Grand Master Brotherhood of Locomotive Firemen, Peoria, Ill.
JAMES O'CONNELL, President International Association of Machinists, Washington, D. C.
JOHN F. TOBIN, General President Boot and Shoe Workers' Union, Boston, Mass.
JOSEPH F. VALENTINE, President Iron Moulders' Union of North America, Cincinnati, Ohio.
JAMES M. LYNCH, President International Typographical Union, Indianapolis, Ind.
DENIS A. HAYES, President Glass Bottle Blowers' Association of United States and Canada, Philadelphia, Pa.
WILLIAM HUTCHESON, President United Brotherhood of Carpenters and Joiners of America, Indianapolis, Ind.

The Washington Meeting. A conference of representative women has been called to meet in Washington, May 11 and 12, to organize the Woman's Department of the National Civic Federation. At the same time there will be a joint meeting of the Industrial Welfare Department and the Public Employes' Welfare Department. President Roosevelt has invited those attending these sessions to meet him in the East Room of the White House, and has consented to address them.

A reception has been arranged at the New Willard Hotel for the evening of the 11th, at which addresses will be made by Seth Low, Samuel Gompers, Nahum J. Bachelder, Sarah S. Platt Decker, Andrew Carnegie and John Mitchell. The next number of the *Review* will contain a full report of the proceedings of these meetings.

Amendment of the Anti-Trust Act. Out of the Conference on Trusts and Combinations held last October in Chicago has grown one of the most important activities in which The National Civic Federation has been engaged—namely, the effort to formulate such an amendment to the Sherman anti-trust law as would permit combinations in business not contrary to the public interest and which shall, at the same time, allay the fears arising from uncertainty as to the scope and application of the present law. It will be remembered that the Chicago conference adopted a series of resolutions declaratory of the existing unrest and of the need for a revision of the Sherman anti-trust act. It provided, moreover, that these resolutions should be presented to Congress and should be urged upon that body by a special committee.

On the presentation of these resolutions to Congress it was pointed out that the resolutions, however important, were not in a form which admitted of legislative discussion, and the suggestion was made by the chairmen of the Interstate Commerce Committees in both the Senate and the House of Representatives that it would be well to suggest definite legislation as a basis for discussion. Inasmuch as the conference at Chicago had not vested in its committee authority to do more than present the resolutions adopted by the conference, it was necessary if any further action were to be taken that it should be done in the name of and by authority of the National Civic Federation itself. Acting upon the suggestion made in Washington, representatives of the varied interests concerned, so far as they could be reached and time permitted, were invited to confer with officials of the National Civic Federation and take part in the drafting of a measure which would meet as nearly as possible the recognized need in legislation. Many conferences were held and the matter discussed at great length from all points of view. In these conferences a measure was finally drafted, in consultation with the Commissioner of Corporations, Mr. Herbert Knox Smith, which was introduced in the House of Representatives by the Hon. William P. Hepburn, chairman of the House Committee on Interstate Commerce. The same bill, slightly amended, was introduced in the Senate by Senator Warner. In both the Senate and the House the bill was referred to the Committee on the Judiciary.

Hearings have been held before both committees. An account is given in this issue of the Review of the first two days' hearing before the House Committee. This record brings into clear relief the constitutional and legal difficulties which are involved in any attempt by Congress to legislate upon the subject of interstate commerce. It shows that the powers of Congress in the regulation of interstate commerce have not yet had in all respects clear and unmistakable definition by judicial authorities. It would appear that whatever power Congress may have over interstate commerce is in large measure counterbalanced by the fact that the agencies of such commerce are not created by Congress but by the several States. The power of the State over the agency which it creates cannot be questioned. But we have the anomalous situation that the acts of these agents, in so far as they affect interstate commerce, are withdrawn by the Constitution from the jurisdiction of the State. It is equally clear that the acts of these agents affecting interstate commerce are subject to the regulation of Congress. But the authority of Congress to regulate the agencies that do interstate commerce appears to be denied by the Courts.

Probably nowhere else, as in the record of these hearings, can be found in so compact and definite a form a statement of these difficulties. To those who have considered the matter only in an abstract sense, the question here raised as to the power of Congress to secure from corporations information in regard to capital stock and other matters must be highly illuminating. The complex character of our dual control of commerce appears in strong relief. It is evident that remedial measures adequate to relieve the present situation will be hard to find.

This, however, we believe to be merely the superficial view of the case. Constructive legislation is proverbially difficult. It must be borne in mind that the measure under consideration represents the first real effort of a constructive character which has been made, since the passage of the Sherman Anti-Trust law, to deal more wisely with the trust problem. It will not be forgotten that the law itself was the culmination of several years of effort to secure legislation. It should not, therefore, be discouraging if this first effort made by the Civic Federation to amend the law should not be successful. Whatever may be the ultimate fate of this measure, it will have served a highly useful purpose in bringing out this discussion and in placing clearly before the people of the United States the conditions with which legislative measures upon these important topics have to reckon. Time is necessary for the perfecting of such legislation; but we are not among those who believe that the Government of the United States is helpless in the premises, perplexing as the question certainly is. Where the need exists—and the universal testimony is that it does exist—a way will be found.

The Woman's Committee. By the organization of the Woman's Committee the National Civic Federation has taken an important step in rounding out its organization. It is the expressed object of the Federation to organize into effective working groups the varied interests which are concerned in social welfare. It has had from the start the co-operation of prominent men and women in all walks of life. It has lent its aid to various movements in which women have been prominently identified, but has not heretofore made any especial appeal to the women of the country by providing an organization through which they could work in harmony with the general ideals of the Federation.

The need and the opportunity were most happily expressed by Mrs. J. Borden Harriman, president of the Colony Club, at the meeting for the organization of the committee, when she said:

"A decent, wholesome environment for the worker has come, in this progressive age, to be a part of the social and civic obligation of the modern employer.

"The frank recognition of this obligation on the part of employers generally, whether manager, directors or stockholders, not only restores a large measure of the old personal contact which was the best feature of the earlier industrial systems—unfortunately lost sight of too often in the tremendous growth of commercial enterprises—but it also goes far to remove the estrangement and want of sympathy out of which so much social prejudice, distrust and class feeling have grown. There is, perhaps, no better antidote for radical attacks upon present institutions than intelligent, genuine and wisely directed welfare work.

"This proposed Woman's Committee, therefore, furnishes to the women whose co-operation is invited an inspiring opportunity for practical humanitarian effort and, at the same time, for patriotic public service along the lines most needed under present day industrial conditions.

"There is a word for every age, and certainly the word for to-day is Brotherhood; and how better can we live up to the obligation and what this word implies than by trying through this committee to ameliorate the lot of those less fortunate than ourselves?"

The present Woman's Committee has been formed in recognition of the powerful influence which women are in a position to exert. It is, perhaps, true that many of the undesirable conditions of employment which prevail in modern industry are due to the fact that in large measure we are too busy to take note of them. The personal relations which once existed between the employer and his men have largely disappeared in the modern organization of industry. The experience of the Civic Federation has shown, in many instances, that it was only necessary to make employers cognizant of undesirable conditions to interest them in removing them. It seems peculiarly fitting, therefore, that the women of means and position with their greater leisure should be the medium of spreading a knowledge of such conditions. They have given many evidences of administrative and business ability. They are not lacking in sympathy, and thus bring to the study of actual conditions a most help-

ful and practical equipment. Their aims are thoroughly practical. They are eager to do what can be done for the improvement of social conditions and are not led away by sentimentalism.

There can be little doubt that the organization of this committee will be immensely helpful in promoting that practical understanding of industrial conditions from which the National Civic Federation seeks to evolve the spirit of self-respecting mutual helpfulness.

Teachers' Visit to Europe. The National Civic Federation has undertaken a work of large significance for the cause of education in this country in its plan to send 500 teachers abroad next Winter to visit the schools of England and of the Continent. One of the best means of improving our own work is to observe whether our neighbors are doing theirs differently or more efficiently.

The admirable opportunities which will be offered to these teachers to inspect foreign schools, to observe foreign methods, to become familiar with their forms of school organization, should make an essential contribution to the study of home problems.

The organization of this visit is parallel to that adopted by Mr. Alfred Mosely when the English teachers visited the United States in 1905-6. The selection of the teachers who make this visit will be made by the boards of education and other school authorities. In large part the school authorities will provide that the teachers participating in the visit shall have leave of absence from their home duties without loss of salary. The plan has been received with enthusiasm in the school world. The Department of Superintendence of The National Education Association at its meeting in Washington in February passed resolutions congratulating The National Civic Federation upon the plans made and declared: "The Department believes the cause of education will be helped and advanced by the comparative study of the school systems of foreign countries by competent observers." Many of the larger cities have already provided for sending teachers on this visit, and applications are being received by scores from all parts of the country from teachers engaged in every branch of school work. A considerable proportion of the applications are from principals and others engaged in directive and supervisory work who will be able to put into active practice the suggestions which they may receive from their visit.

The very complete arrangements which have been made for the reception of the teachers in England by Mr. Mosely are set forth in this issue of the *Review*. His consummate skill in the work of organization is the best guarantee that could be made for the success of the enterprise. In addition to the 500 teachers who will go from the United States under the auspices of the Civic Federation, Mr. Mosely expects to have an equal number from the Dominion of Canada.

It is no slight matter to arrange for the selection and comfort of so large a group of individuals, and the educational press has fully recognized the magnitude of the work undertaken by The National Civic Federation and Mr. Mosely and is duly appreciative of the advantages which it offers to the teachers of the United States.

Probably no more opportune time could be chosen for such a visit. Not in years has there been so general an interest in the school world in fundamental problems of methods and organization.

The growing demand in the general public for new forms of education, particularly on industrial lines, has profoundly stirred the educational world. It has led both the advocates of change and the upholders of the old order to a study and restatement of some of the fundamental principles of school organization and school methods. There has been a persistent appeal for a modification of the standard courses of study in order to make room for some form of industrial training. It has been pointed out that our schools were not reaching all of the children for whom they are designed. The illuminating discussion of vocational training by the Commissioner of Education of New York State and by the Assistant Secretary of Agriculture, which is given in the pages of this *Review*, shows how the new educational program may profoundly modify existing schools.

To these demands of the innovator the conservative replies that our elementary schools can not be abbreviated or modified without impairing their efficiency. But the movement has become so strong that the conservative is being placed upon the defensive. He is obliged to demonstrate that the schools are, in fact, efficient and is required to show that the studies pursued in them are essential and that the time allotted to them is indispensable.

The radicals are, therefore, studying school methods with a view to changing them; conservatives with a view to maintaining them. There is abroad, therefore, among the teaching profession a profound interest in methods of study and in methods of school organization. It is universally recognized that in such study comparative methods have the highest value. We may reasonably hope that the experience gained in visiting the schools of sister nations will prove of the utmost value in stimulating in this country educational discussion and school progress.

Justice to Union Labor. A man who feels keenly, thinks deeply and expresses himself vigorously awakens enthusiasm and arouses opposition. Such a man is Samuel Gompers. As representative of the forces of organized labor in this country his voice is heard in no uncertain tones. Beloved by his followers, to whom his sturdy advocacy of their cause endears him, he counts his adversaries by the scores and thousands. Because he feels keenly and is vigorous in expression he is always a radical to many; becaue he thinks deeply he does not satisfy the extreme or socialist element among the workers. He is either radical or conservative, according to the viewpoint of his critics, and his conservatism has been as roundly berated as his radicalism has been abused.

It is strange indeed that there is so little appreciation of the peculiar position of trades unionism in this country. Strange that, in face of the growth of socialistic opinions which are daily forcing themselves upon the public notice, trades unions should still stand in the public eye as the embodiment of radicalism. Strange that every utterance of its leaders should be given at once the most unfavorable construction.

If in seeking their own welfare trades unions appear to be selfish that should not be a reproach. It is not so long ago that an enlightened self-interest was held up as the cardinal motive of all economic activity, and if in these later days we have avoided seemingly harsh terms we surely have not changed the nature of the forces at work around us. The motive power of our industrial organization has not changed. It is behind all the forces that go to make up our complex society. We do not make it a reproach that banks and corporations and trusts and railways seek to influence legislation, to mould public opinion or to favor one political party or the other in the pursuit of their own ends. We expect it and accept it as a fact.

There is, however, a difference, not to be disregarded, between the selfishness of a corporation and that of a trade union, between the selfishness of capital and that of labor. As Mr. Gompers himself says: "We speak of the working man or the working woman not in those terms, but as labor. You cannot differentiate the labor of the man or the woman from their breathing, respiring body and heart and brain. It is an abuse of the very essence of essential principles to place in the same category capital and labor."

Capital is an abstraction, labor a living fact. The welfare of the great masses of humanity lies behind the latter term. And we cannot help but feel that such selfishness as may be exhibited in the effort to ameliorate the lot of the average man should not be judged by the same standard as that which impels the action of the employer.

It cannot, therefore, commend itself to our sense of justice that the daily press should pass over without comment or with sympathetic encouragement the protests of capital against existing conditions and should have nothing but sneers for the voice of labor when it is uplifted in its own behalf.

The attitude of the Federation of Labor toward the courts of the country has been roundly condemned; and yet their attitude is not different from that of any other litigant. The man who goes to law and loses his case abides by the decision of the court, but is not satisfied with it. If the lower court decides against him he is not expected to change his attitude or to abandon his contention until the matter reaches final adjudication. If the court of final resort decides against him he does not cease to be a good citizen if he indulges the hope that at some future time the court may change its decision, or if he seeks to obtain such a change in statute law as will favor his original contention.

When the American Federation of Labor protested against the injunction granted by the courts of the District of Columbia forbidding the further prosecution of the so-called boycott against the Buck's Stove and Range Company they were declared to be in mutiny against the established order of government. This in spite of the fact that the decision was by no means a final one.

The attitude of the press in the recent conflicts between the State and Federal courts over railway rate regulation has been in striking contrast. When the Federal Circuit Court of Minnesota enjoined the Attorney-General of the State and all county attorneys from any attempt to enforce the commodity rates established by Minnesota law pending the decision as to the validity of that law the Attorney-General boldly defied the injunction. He went before a State court and obtained a contrary order. He was haled before the United States Court, judged in contempt, and this action was finally upheld by the Supreme Court of the United States. Yet throughout this contest the Attorney-General was not accused of lawlessness, but his course was in the main commended as an effort to uphold what he believed to be the rights and prerogatives of the State. Can it be that the political rights and privileges which he was seeking to maintain were more sacred than the personal rights and liberties which labor believes to be involved in the boycott case?

Organized labor has been hard pressed by recent decisions of the Supreme Court of the United States. It is fearful lest the inhibitions placed upon its activities be still further extended. Under such circumstances resentment is not unnatural and criticism is human. The protest which has arisen because the American Federation of Labor quite naturally disagrees with the judgment of the court reads as if criticism of our supreme judicial body had never been heard before and as if the protest of labor had been couched in most unbecoming terms.

Before the Judiciary Committee of the House of Representatives Mr. Gompers said:

"I am not endeavoring, nor is it my purpose, to indulge in such criticism of the Supreme Court or its decisions that would directly or indirectly cast any reflection upon either the justices of the court individually or collectively." He stated further that his criticism was directed solely "to existing law as interpreted by the court."

Under these circumstances the American Federation of Labor is directing all its energies to securing such legislation as will relieve the labor unions from the restrictions placed upon them by existing law. In so doing it is following a course of conduct open to every American citizen. Other organized bodies follow a like practice without drawing upon themselves the condemnation of the press.

The newspaper publishers of the country are at the present time engaged in a contest with the paper manufacturers and are seeking a revision of the tariff which they believe will relieve them from the exactions of the Paper Trust. The bankers of the country have been loud in their protest against the currency bills before Congress. The president of the American Bankers' Association stated that the whole force of that organization would be arrayed against the Aldrich financial bill and would use its efforts to punish politically the party which should enact such legislation. Why is it that the efforts of such organizations cause no wave of excitement in the newspaper press? But when Mr. Gompers declares that if the measures urged by labor do not become laws at this session those responsible will have to answer in the Fall election these declarations are designated as threats and menaces. Are not the labor interests of the country equally entitled with other interests to take advantage of public discussion of legislative action and of political contention to obtain their ends?

Another illustration of misrepresentation which is characteristic is to be found in the oft-repeated declarations that Mr. Gompers in the hearing at Washington had threatened that if the demands of labor were not met he would organize a secret organization. Such a statement is cruelly unjust. What he said, as shown by the record, was:

"Supposing you take our funds away by damage suits; supposing you do send us to prison because we believe that we have a right to protect that which we own—namely, our power to labor; supposing you do these things—what then? You may drive us into secret organizations, perhaps not us, but those who will follow. You may drive the men and women of labor into organizations both bound and secret."

Even the casual reader of these lines will observe that it is a very different thing to say that an undesirable organization may arise than to threaten to form one.

Whatever be our personal inclinations in these matters, let us have a fair field and no favor. The struggle between the economic forces, always present, may shift its scene to the courts and to the halls of legislatures, but it is always carried on before the forum of public opinion. In that forum forms and proceedings may lack the ceremonial and dignity of the courts of law, but let us seek to infuse into that discussion as much as we can of the spirit of impartiality which should preside over judicial procedure.

WOMAN'S COMMITTEE OF THE NATIONAL CIVIC FEDERATION

ORGANIZATION OF AN IMPORTANT ADJUNCT—COMMITTEES APPOINTED —THE WORK IN PROGRESS.

The initial step toward enlisting the co-operation of women in the work of the Federation was taken when the following resolution was adopted at a meeting in New York at the residence of Miss Morgan, Friday, March 6, 1908, at 12 o'clock.

Resolved, That the Executive Council of the National Civil Federation be asked to appoint a committee to organize a Woman's Committee of the National Civic Federation.

Mrs. J. Borden Harriman, of New York, presided, and Mrs. Eva McDonald Valesh, of the American Federation of Labor, with headquarters at Washington, D. C., acted as secretary.

There were present:
Mrs. Samuel Mather, Cleveland, O.
Mrs. Joseph Medill McCormick, Chicago, Ill.
Mrs. Cornelius Stevenson, Philadelphia, Pa.
Mrs. Talcott Williams, Philadelphia, Pa.
Mrs. William H. Crocker, San Francisco, Cal.
Mrs. C. P. Orr, Birmingham, Ala.
Mrs. Thomas Sherwin, Boston, Mass.
Mrs. Eva McDonald Valesh, of the American Federation of Labor, Washington, D. C.
Mrs. Archibald Alexander, Hoboken, N. J.
Mrs. Julia K. West, New York.
Mrs. J. Borden Harriman, New York.
Miss Anne Morgan, New York.
Miss Gertrude Beeks, Secretary Welfare Department, and
Mr. Ralph M. Easley, Chairman Executive Council, the National Civic Federation.

Telegrams and letters expressing interest in the movement and willingness to become affiliated with it were received from:
Mrs. Cyrus H. McCormick, Chicago, Ill.
Mrs. J. K. Ottley, Atlanta, Ga.
Mrs. Sarah S. Platt Decker, Denver, Col.
Mrs. Charles Denison, Denver, Col.
Mrs. G. E. Emmons, Schenectady, N. Y.
Mrs. Frederick R. Hazard, Syracuse, N. Y.
Mrs. S. Thruston Ballard, Louisville, Ky.
Mrs. George C. Avery, Louisville, Ky.
Mrs. Marcus A. Hanna, Cleveland, O.
Mrs. A. F. McKissick, Greenwood, S. C.
Mrs. B. Frank Mebane, Spray, N. C.
Mrs. W. T. Harris, Danville, Va.
Miss Ellen D. Smith, St. Louis, Mo.
Miss Eunice Smith, St. Louis, Mo.
Mrs. Richard Wainwright, Washington, D. C.
Mrs. William Corcoran Eustis, Washington, D. C.
Miss Caro T. Field, Boston.
Miss Anna D. Slocum, Boston.

It was particularly gratifying to have for this movement the cordial support of Mrs. Marcus A. Hanna and her daughter, Mrs. Ruth Hanna McCormick, since it will be remembered that the first President of the National Civic Federation was the late Senator Hanna. In promising the heartiest co-operation Mrs. Hanna said she felt a very deep interest in every phase of the work of the Federation because of her husband's devotion to the cause. She stated: "When, in the last general conversation which the Senator had with our son in my presence, the desire of his friends to have him nominated for the Presidency of the United States was discussed, he made the following statement:

"'I would not accept the Presidency if it were offered to me on a silver plate. If I can only be permitted to have ten years more to live, I shall devote that time entirely to carrying out my plans for the National Civic Federation.'" Mrs. Hanna continued: "Its work was the nearest thing to his heart."

Mrs. McCormick said:

"To be able to do anything for my father's work is to me supreme. I call the National Civic Federation his work simply because he meant to give up the remainder of his life to it.

"I am grateful for this chance of fulfilling my highest ideals."

NEW YORK BRANCH FORMED.

On the same day, at 3 o'clock, the New York Woman's Committee was organized at the Colony Club. Mrs. J. Borden Harriman opened the meeting with the following address:

"We are here to-day to organize a Woman's Committee to co-operate with the Welfare Department of the National Civic Federation, because we feel that this organization comes nearer to our ideal than any other operating along these lines. The National Civic Federation, as you know, is an organization composed of prominent employers, labor leaders and representatives of agricultural, financial, economic, bankers', legal and farmers' organizations. The activities of the Federation are exercised through the Conciliation, Immigration, Political Reform, Economic and Welfare Departments.

All of us have an influence and some of us are the wives or sisters of employers of large numbers of factory operatives, or perhaps ourselves are owners and stockholders in companies. Should not the woman who spends the money which the employes help to provide take a special interest in their welfare, especially in that of the women wage earners?

Should we not frankly recognize our own ignorance of the conditions under which they live and work, and seek from those whose knowledge can be relied upon to guide us intelligently to a better understanding of the existing conditions and difficulties?

Neither emotional philanthropy nor ignorant indifference must influence us.

This we can do by taking the trouble to acquaint ourselves with things as they really are, by coming into contact with those whose weakness is a call upon our strength. We will learn to know from actual practical experience what should be done for the betterment of conditions among wage earners, and then we will not use coercive methods undertaking to secure improvements, but will try to find opportunities to offer friendly suggestions to those in power.

Of course, we can only do this by going slowly and after educating ourselves, and one way of doing the latter is to hear from leaders in their specific trades. Some of them will speak to us to-day, and I understand will be willing to tell us of the surroundings and conditions of the workers whom they represent.

This welfare work is not in fact simply a matter of charity. A decent, wholesome environment for the worker has come, in this progressive age, to be a part of the social and civic obligation of the modern employer.

The frank recognition of this obligation on the part of employers generally, whether manager, directors or stockholders, not only restores a large measure of the old personal contact which was the best feature of the earlier industrial systems—unfortunately lost sight of too often in the tremendous growth of commercial enterprises—but it also goes far to remove the estrangement and want of sympathy out of which so much social prejudice, distrust and class feeling have grown. There is perhaps no better antidote for radical attacks upon present institutions than intelligent, genuine and wisely directed welfare work.

This proposed Woman's Committee, therefore, furnishes to the women whose co-operation is invited an inspiring opportunity for practical humanitarian effort and, at the same time, for patriotic public service along the lines most needed under present day industrial conditions.

There is a word for every age, and certainly the word for to-day is Brotherhood; and how better can we live up to the obligation and what this word implies than by trying through this committee to ameliorate the lot of those less fortunate than ourselves?"

Mrs. Harriman presented by-laws for the action of the meeting. It was decided that:

"The object of this committee shall be to use its influence in securing needed improvements in the working and living conditions of women and men wage earners in the various industries and governmental institutions, and to co-operate, when practicable, in the general work of the Federation."

The following officers and chairmen of committees were elected:

Chairman, Mrs. Archibald Alexander.*

Vice-Chairman, Miss Anne Morgan.
Secretary, Miss C. V. R. Delafield.
Treasurer, Mrs. V. Everit Macy.
Chairman of the Committee on the Needs of Workers in Specific Industries, Mrs. J. Borden Harriman.
Chairman of Committee on Welfare Work for Government Employes, Mrs. Julia K. West.
Chairman of Membership Committee, Mrs. F. H. Cabot.
Chairman Press and Literature Committee, Miss Elisabeth Marbury.

On taking the chair Mrs. Alexander introduced as the first speaker of the afternoon Mrs. Eva McDonald Valesh, associate editor of "The Federationist," the official organ of the American Federation of Labor, whose address follows:

MRS. VALESH: Ladies and gentlemen: It gives me a great deal of pleasure to be present at a meeting which promises so much in the way of practical good as this movement that you have inaugurated to-day. I feel perhaps a little embarrassed, having to break the ice on the part of the wage workers, but I have for many years been studying, with somewhat selfish attention, perhaps, the various movements on the part of men and women more fortunately situated than the wage workers.

I know that the wealthy women of this country have generous and kindly hearts and brilliant intellects, and I know that for years they have wanted to do something for those who were less fortunate. But it required sometimes an experiment to find out what was the practical method of getting at it. It seems to me that in this movement you have inaugurated to-day you have got down to a practical method. If the wife of an employer or a woman who owns stock in factories takes interest enough to find out what are the conditions under which the men and women in that employment work, it then becomes a matter of almost personal pride with her, that if the conditions are not what they should be they shall be improved. And in many cases they are not what they should be—not altogether because the employers are too selfish or too mercenary to do what is right. We have to remember that there has been such a remarkable revolution in industry in the last half century that it is very difficult to keep up with all its effects, and balance it on all hands.

We have advanced from the handworking shop and handworker to the immense factories and establishments, where the worker is not long in personal touch with his employer. The employer, unless he is very much impressed with his responsibility, is apt to hold only an impersonal interest towards his employe. Then, in the new system of industry which has come up, in the rush of accumulating vast fortunes and vast profits, it was very easy to overlook the wage worker, and to forget that he who was contributing so much perhaps was not getting the share that he should. Now the wage workers have done what they can. In fact, it has been incumbent upon them to get what improvements they could by organization; by protests of various sorts. But as a wage worker, I can tell you that one of the most discouraging things about that sort of thing is, that neither the employers nor general public are willing to believe that what we say is true about the conditions of employment. They think we exaggerate it, because we feel ourselves to be a somewhat injured party.

Now that won't be true if the women whose husbands and fathers are interested in business come into this work. The women will go and see for them-

*That a wise choice was made in selecting Mrs. Archibald Alexander as chairman of the New York Woman's Committee of the National Civic Federation is demonstrated by the following:

Her father's family was among the first in this country to become identified with the industrial problems, as they then existed. Her grandfather, John Stevens, was the inventor of the first propeller steamboat and designed the first steamboat to go to sea, the voyage being from Hoboken and Philadelphia.

The ferry between Hoboken and New York belonged to the Stevens family for nearly one hundred years, and during that time there never was even a suspicion of a strike.

About 1850 Mrs. Alexander's father built houses for the men in his employ which were far ahead of the times, and her mother built, over twenty-five years ago, one of the first model tenement houses in this country.

At the time Mrs. Alexander and her brother sold the Hoboken Ferry a pension fund for the old employes was the first use made of the proceeds, many of them having worked for their family from thirty to sixty years. They have had for some time in their offices a complete system of profit sharing.

The Stevens family has given to Hoboken three parks, Stevens Institute of Technology, with its endowment; the recreation pier and the land on which now stands the Free Public Library and Manual Training School.

Mrs. Alexander has been for twenty-five years president of a working girls' club, and for many years appointed by the successive Governors of New Jersey as Trustee for Manual Education in Hoboken public schools. For four years she has been appointed by the County Judge Assistant Probation Officer, under her brother, Mr. Richard Stevens, and also is a member of the Executive Committee of the League for Women Workers. Mrs. Alexander has been appointed by several Governors of New Jersey manager of State Institutions. She was recently a representative of the Governor of New Jersey at the International Congress of Mothers held at Washington.

selves exactly what conditions are, and if they make up their minds that there needs to be some improvement, I think that the American women will have their usual success in persuading the American men to do what they want.

Now, I want to call your attention to the fact that welfare work is a good business proposition. Every worker is entitled to perform his or her work in a properly constructed, well ventilated and hygienic factory. The speed of production is such now that an average of eight hours is enough to ask people to work. Those hours are reasonable. Any employer who fails to house his employes properly, who rushes them too greatly, who is not careful, not conscientious about the conditions which surround them, is not getting the work from those people which he should. He is not getting the results. There was at one time somewhat of a feeling in this country that while we had so many wageworkers it didn't matter very much if you did work them out and throw them aside, I don't think that feeling obtains so generally now. I think that there is a very strong public opinion in favor of the more humane and kindly side of things, and in this movement started to-day, I see the strongest illustration of that feeling.

I know from some of the things that I have heard your members say that they propose to study actual economic conditions. Of course, it would not be of much use for you to go around and visit the various industries if you had not some means of finding out whether the conditions you saw were good or not. I believe that economics is a study which will appeal to you, and I think you will find it most interesting and fascinating.

I want to speak a word for the women workers, particularly. I am a bit of a conservative myself. I have been a wage worker from an early age, and at one time was very strongly in favor of many more radical movements among women, but I swung back to the conservative side of things. I think that a woman's place is in the home. A woman ought not to want any better place than that. This sending of girls and women into factories is really rather an abnormal phase of our civilization. But even though that is true, it is a phase that is here to stay for a long time. There is not any doubt that three-fourths of the girls in ordinary poor families—we will say mechanic's families and laborers' families, find it necessary to go out and work in order to earn their own clothing, and to help to support their families. I think that these girls would be appreciative of a kindly interest from those who are more fortunately situated.

Some have said to me that they thought perhaps the working girls would not be appreciative of what is known as welfare work. Personally, I am in favor of accepting the best conditions of work that an employer is willing to offer me. He cannot make my wages too high or surroundings too pleasant to suit me. The better he makes them, the better work I will do for him. I think that is the position of those who look at welfare work reasonably. But I do admit this, there are a great many wage workers who feel, perhaps, a certain sense of pride and independence; they don't wish to be patronized. Welfare work should not be patronage. As I said, it is a good business proposition for the employer. If a man gives employes a well-lighted, clean factory, serves a hot lunch at a reasonable price, and pays good wages, I think that is good for them and will bring him good returns.

If the wives, the daughters, the sisters of large employers would exercise the same tact and courtesy toward the wage workers that they do among ordinary social acquaintances, I think they will find a very kindly and appreciative response. I know that some of you are new in this work, but are very earnest and enthusiastic, and I ask you to keep your eyes open for the occasional talented girl among the workers. There is the occasional girl who has talent, perhaps genius, who has a really artistic soul. You know it is likely to be crushed out of her in the factory or shop. You can do much for the one who is worthy of something far better than a factory or shop. To put even one soul on the road of finding what life really should mean. What greater good could you do? Then, too, there are so many average bright girls, who, if treated in a friendly and frank sort of way, will respond, and go about among their fellow workers and help you to institute welfare work in the way in which it will be most effective.

To have the wife of an employer—I put it in that way as typical of your movement—the wife, sister or daughter of the employer going into her relative's factory or shop and seeing for herself what the conditions are, and if they are not just what they should be, persuading the head of the firm to see that proper reforms are instituted, and taking a really kindly family interest in the workers, is one of the dreams I long have cherished. I hope now to see it fulfilled.

We are a little too hard and commercial in all our manifestations of modern industry. Surely it is about time that the softer and more humane side of life should be touched upon. Then, too, there is this phase of it, the working girls of to-day will be the mothers of the coming generations. We are looking to their children to uphold our institutions in the spirit in which they were founded, and in the spirit in which we hope to see them carried on. If there is some criticism to-day that the tendency is in the wrong direction, the responsibility really rests with those who have the leisure, the intelligence and the ability to set things right. Of course, your welfare work is not identical with my own work as a trade unionist, but to me it seems that there could be nothing finer for the woman who has the leisure, the means and the opportunity, than to get outside of herself; to interest herself in other women less fortunately situated than herself.

I don't know that I could, and, indeed, I have not the time to indicate to you all the various phases which your welfare work may take on. I am sure that you will find out those for yourselves. You will find in this work more and more attractive features than you had ever expected. I don't know that I need to caution you on this point, because I think women sensible enough to take up this line of work are not given to too much emotionalism. But I have sometimes felt in reference to various reform movements, so-called, that I really would like to caution some of the women concerned against that emotionalism which degenerates into a fad or mere sentimentalism. But I don't think that caution is necessary to women who are level-headed enough to see that the work of self-help begins right at home, right at your own door-step, in the factory or the business in which you or your men folks are interested.

I don't think welfare work can go too far. I don't think it can do too much good or is likely to do too much. I will say this one thing on the part of the workers, that welfare work, no matter how generous and kindly in intention, should never deprive the workers of a certain independence which belongs to them. A clean, beautiful, well ventilated factory, with modern improvements, should not be made to take the place of good wages and reasonable hours. Wages should not be charged to the welfare account, so to speak. That has been done occasionally by those who were not wise in their method of going about it. In your study of economics, which I am certain you will soon undertake if you have not already done so, you will find yourselves agreeing with me, that the "prevailing rate" of wages is none too great for any worker, whatever his skill or trade, because the workers are entitled to have sufficient earnings to expend in a fair way of living—they wish to build themselves comfortable homes. They wish to educate their children. Finally, I should say, that welfare work should not be a bar to the trade organization of the workers. It should encourage and supplement the work of organization.

You will find when you come to investigate that there is not as much organization among working women as there should be. One reason for that is that girls who work do not expect to stay long in factory or shop. They expect to be married soon, and have homes of their own. They don't take the interest in organization that men do, who expect to stay in an industry during their whole life. I am sure, as your work progresses you will find the unions among the workers one of the most helpful elements. You will find organized workers the most appreciative, and the most ready to help in carrying out your good work.

I wish to personally assure you of my interest in the work you are so earnestly undertaking and I hope it will be quite as successful as you expect and that its influence for good will be felt in every industry in the country.

The next speaker introduced was Mr. Edward Gould, President of the Teamster's Union.

MR. GOULD: Madam Chairman and Ladies. I appreciate the liberty of coming and bringing to your attention the needs of the many teamsters that are so unfortunate as to follow that occupation in the city of Greater New York.

I believe with the previous speaker that the majority of rich ladies are kind-hearted. I want to say that I have no dislike to wealthy people—absolutely none. I am not an anarchist. I don't know whether I am even a socialist. I believe possibly I might be a Democrat, in the same sense in which George Washington meant it.

I have found in going through the city from time to time, in overhearing conversations, that rich people are possibly a little too prone to unjustly criticize the actions of some of our workmen. I believe that our one great need is consideration. If they would only stop to think and make an investigation as to whether there was not something that caused something that took place! I believe, before we should denounce the actions of any person or any body of people that we should find out whether there was oppression which would warrant rebellion. We have in the Greater New York something like 75,000 teamsters. We have over 30,000 organized. I don't have to come and tell you ladies when you can see the cab driver, but I don't know when you won't see him. You will see him all the time, no matter when you are out. You will meet the baker at 2 o'clock in the morning. I just saw one of their wagons on Fourth avenue. I don't know when they do sleep. But if you were around the extreme East or West Side where those stables are kept, you would find the men are obliged to report as early as five o'clock. I don't know that there are many stables that they don't have to report at before 6 in the morning, and they seldom ever get away before 7 or 8 o'clock at night.

Now, we have library buildings, and we all appreciate them. Let us work to the end that the poor man, who is not able to have the books in his home, will have sufficient time to make a call at the library and get a book, and to take advantage of those great institutions that are built up for our people.

I don't know, if we stop to think, how much we are dependent upon the teamsters. You notice them drawing the earth out of the cellars where our homes are built. They draw the brick and the stone to build those homes. They bring us our meat. They carry our clothes in large boxes down through the city along West street. You ladies who are accustomed to foreign travel have noticed on top of wagons those large boxes going along West street. They administer to your comfort. Think of the poor mail wagon driver who carries the pleasant letters—love letters and sometimes sad news—we had a strike of those poor fellows a few days ago. Well, I believe it was a couple of years ago. It seems such a short time when we look back. There was quite a howl because people were so inconvenienced in not getting their mail at the proper time. When I tell you that those men worked as long as fifteen or sixteen hours every day, including Sunday, I hope that that is a sufficient apology for the little inconvenience that you suffered during that time. The agreement that we reached with the employers at that time was to pay $2.25 for twelve hours' work with a two-horse team, and $1.65—the munificent sum of $1.65—for the privilege of working twelve hours a day for seven days with a one-horse team. Now, what kind of a home can a poor little family have where the income is only $1.65 a day for twelve hours' work? I don't believe that there is a lady sitting in this audience at the present time who would want a man to limit his home to eight or nine dollars a week and bring up two or three little children. For, how much can we expect of them? And the country is dependent upon the poor man's child as well as it is upon the rich.

We have formed the cab drivers' union, which affects the rich—I believe it is a luxury. It is one of the first things, one of the first crafts to suffer in bad times. I am sorry to say that we have four hundred or five hundred men idle at this time owing to the depression in trade. I heard a great many hard things said because those men had to strike five years ago. When we had our first strike, all we looked for was nine hours off—nine hours from the time we left the stable until we would report back again, making it absolutely fifteen hours' work a day. And all we looked for in compensation was $2 per day. We do appreciate the generosity of our patrons in that particular craft, but if it were not for their generosity I believe we would be working shorter hours and possibly getting a greater compensation. But I merely brought that to the attention of you ladies, that particular portion of our teamsters' craft, because that matter is now under arbitration (the final settlement of the recent strike having been referred to an arbitration committee, and that committee has not made its award yet), and all we looked for was twelve hours off and $2.50 per day. I believe there could have been a compromise on the wages, provided that we got the hours.

Now, when New York City has become so very crowded, we are forced to the suburbs. I believe that it is a good thing—that our wives and children ought to have been forced to the suburbs, but it takes an hour to get to our homes. A large percentage of our people work until after 12 or 1 o'clock at night, after the theatre and opera are out, to take the people home comfortably. The transportation is not as regular then as it is in the early hours of the evening, and it takes them generally an hour to get home at night, and an hour to get to work in the morning. With many I don't know how the children know their fathers at all. They are in bed when they leave the house in the morning, and they are in bed when they go home at night. How do they recognize their fathers?

Now, none of you ladies wants that condition to prevail. I believe the object is to try to improve it, and you can do a great deal in that respect. It's all right for a sympathetic lady to find fault with the poor driver trying to hurry his horses along the street, providing she is not waiting for meat for the dinner. That makes all the difference in the world. We find

a heavily laden truck this kind of weather, for instance, drawing, possibly, coal, and the team of horses struggling to get along, and the poor driver struggling, and sometimes he uses the whip more frequently than he should. That is because he doesn't know any better. I want to say that the majority of our people are fond of horses. They follow horses because they are fond of horses; it is not because they cannot lay brick or hew stone as well as a mechanic could—it is because they like horses. You can, from your own observation, see that the horse is insufficiently shod. That is not the fault of the driver. If you ask your employer to shoe his horses better, why, he would say, I would do nothing else than pay out my income for shoeing horses. Absolutely none of us wants to see a team of horses struggling with a heavy load.

Some of the officials connected with the New York Humane Society wrote me a communication saying they wanted to have a talk with me on a bill they had pending before the Legislature, and I met some of them and we had quite a talk. They said there was a bill pending before the Legislature at Albany seeking to make the employer responsible when horses are sent out in an unfit condition to work. I don't know how many of you ladies are subscribers to the American Society for the Prevention of Cruelty to Animals, or the New York Humane Society, but it seems pretty hard that we should have to seek redress through legislative measures to place the responsibility where it belongs. A driver is sent out with a horse having a sore back or a sore foot or a sore leg, and the driver is arrested and the driver is punished. It is only two weeks ago that a representative of our mail wagon drivers came to my home around 9 o'clock at night and told me that a man was arrested because the horse was working with a sore back. And I said, "Doesn't the employer take care of them?" And he said, "No." I went to the police station and bailed the man out. He had a wife and four children living out on Long Island, and you can imagine the wife's feelings, and the poor little children's feelings, with their father not coming home at night. They had been accustomed to see him come home every night, because, even though the home may be humble, no matter how humble it may be, there is love in the poorest of our homes equally as well as there is in the wealthiest ones. The following morning I went up to the court, and even then the poor driver did not have the sympathy of his employer. It became necessary to renew his bond to appear in Special Sessions. Now, I claim that the employer is the man who should be punished—not allowed to ask a driver to use a horse in an unfit condition. And I said so to those ladies when I was speaking to them. I said there is a limit of endurance to everybody's patience, and that possibly one day the limit would be reached that way.

Last Summer one of our men had to serve thirty days on the Island, because he was found driving a horse in an unfit condition. I took particular pains myself to make a personal investigation of the matter. I found that the horse had suffered from sores for some time; that it had been drawn to the attention of the employer, and that the driver was told that if he did not want to drive, some other person would. The Society for the Prevention of Cruelty to Animals carries on the prosecution of such cases, placing a penalty upon the poor, unfortunate driver. The result was that we went down to our organization and called a special meeting, and we had a resolution drafted that where a driver is arrested for other than cruel treatment, in the shape of flogging or abusing horses, the employer would be responsible, and that no member of our organization would work for him if he asked any driver to work a horse that was in an unfit condition.

We accomplished more with that particular employer than the Society for the Prevention of Cruelty to Animals had accomplished for the last fifteen or twenty years. That may be saying a good deal, ladies. I said to those people that perhaps some day we would call a mass meeting, or appoint a large committee and wait upon the Mayor, and object to being penalized where we were not responsible. I said, If the teamsters were to cease working as a body in the City of New York, under such circumstances, for forty-eight hours, it would awaken the public to a realization of the wrongs that were heaped upon them. And they said, "Mr. Gould, you would not do anything like that?" Well, now, if I should get three months on the Island for something that my employer is responsible for I don't know what I might do. I don't want to injure an employer, but it is necessary to bring our wrongs to the notice of the public, because that is the bad feature of the American people, they are disinterested until the matter touches themselves—sometimes until the shoe starts to pinch the other foot.

Now, you ladies can do a great deal. All we ask of you is not to condemn us until you are thoroughly conversant with the conditions which bring about a state of affairs, whatever it may be. I don't favor strikes myself. I like to avoid strikes as much as we can. But if necessary to protect our own people, even if they are poor, I favor a strike.

Our organization came into existence some four or five years ago. We have benevolent features. Recently I went over our books for the last four years, since the twelfth of July, 1903, and I find that we have paid out in sickness and in death benefits alone over $38,000. Even though the amounts were small, they assisted our families to a great extent.

It was only a few days ago that the papers told of a coal teamster with a heavy laden truck with three horses—presumably about ten tons of coal on the wagon—who was arrested on Fifth avenue and Thirty-fourth street or Thirty-third street, because he could not stop the team the minute the officer put out a finger. I want to say that I am law abiding. Most of our men are. We take pride in it. Some disinterested citizens who were in carriages on Fifth avenue—I presume they must have been responsible—rebelled against the treatment that was accorded that driver, and, notwithstanding their sympathy toward the driver, some of our higher police officials thought they were justified in approving the acts of the officer who arrested him and hurt him. He was hurt. He lay in bed two or three weeks after as the result of the treatment. I merely say that it is utterly impossible for a coal teamster to stop the horses with ten tons of coal suddenly. For one of your private coachmen to stop a spanking team, it only takes a second. That is what we want—consideration. I believe that the traffic rules have done a great deal for our teamsters, and I take pride in saying that organization among our men has accomplished quite a good deal also.

I hope to be accorded the privilege at some future time, after you have continued your work and have become interested in it, to be able to tell you a little more about some of our other teamsters.

When I was a good deal younger I used to go to Sunday School and I read quite some of that big book. It softens my labor quite a good deal when I think of it—that our Saviour was a carpenter, David was a shepherd. I could enumerate quite a number of famous people who were not rich in material goods. See how they are written up. See how they are read by everybody. So I am not dissatisfied that I am poor. I am not ashamed of the fact that I am a poor man, because I can refer to so many poor people who did such great things.

In this work, I want to call your attention to the command that our Saviour gave his Apostles when he told them to go into the byway, to go into the highway and preach the word of God. To help the poor people, and I claim that every man or woman, no matter how wealthy he may be, should feel a pride in doing something for the unfortunate, because we can read "Inasmuch as ye did it unto the least of these, ye did it unto me."

I thank you for your kind attention.

THE CHAIRMAN stated: We do not want to let Mr. Gould leave this platform until those present have had the opportunity to ask questions which may be suggested by what he said:

A MEMBER said: I would like to ask a question. What influence do you exert as an organization to prevent some of your members, chiefly cab drivers, from overcharging by taking advantage, perhaps, of the ignorance of what the municipal tariff is, and endeavoring to get an extra fare, I mean above the legitimate fare? What is the attitude of the organization toward curbing that tendency on the part of some of your cab drivers?

MR. GOULD replied: Madam Chairman, I would state that we don't encourage it by any means, and quite a number of the riding public don't understand it. You can take a cab at the Pennsylvania Railroad from the Pennsylvania Railroad Cab Company and ride to the Waldorf-Astoria for fifty cents. If you get into a Waldorf-Astoria cab the driver is obliged to turn in one dollar, whether you give it to him or not at the Twenty-third street ferry. Now, there is double the charge. The courts have decided thus far—and I don't know to what higher court it has gone—that the livery stables can charge what they like; that it is only the man on the street who is subject to the city rates, and that easily could be remedied if the riding public would acquaint themselves with the city rates, which always are and must be displayed inside of the cab.

We have various charges from various clubs. We find members of the Union Club or members of the Union League Club or members of the University Club can do their riding for fifty cents on the dollar. If I want to get a cab from the same stable, I am charged a good deal more. Yet the organization of cab drivers has absolutely no control over the matter. We have to bring back the price demanded by the employers, and every driver should either exhibit the rate card on being asked, or the riding public should telephone to the stable and get the rates for themselves. We are always willing to give the rates. The unfortunate condition is that disease of getting rich quick, from which none of us is immune. We don't encourage it, I assure you.

The closing address was made by Mr. Timothy Healy, President of the International Stationary Firemens' Union.

MR. HEALY: Lady Chairman and Ladies: It is indeed a pleasure to me to have the opportunity of appearing before you this afternoon and saying a few words relating to my trade, and to working men in general.

I want to say that it is a cause of gratification to me that you ladies are taking an interest in the work of the National Civic Federation. The working men and working women of the City of New York need the assistance of such people as yourselves. It is in your power to do a great deal of good. The National Civic Federation is doing great good all the time, and the working men of this country are beginning to appreciate its good work. I am glad that you are about to be a part and parcel of that great organization.

It takes time to bring working men to realize that an organization such as the National Civic Federation is for their good. When large employers and men in the different walks of life, especially in the upper walks of life, take hold of an institution like that, the working men are naturally suspicious, and they wonder why they are doing it. Is it a pull to control the working men for their own interests? That is what labor men thought at first, when the National Civic Federation was organized, and I might say that I felt a good deal that way myself until I got to know some of the men who were active in it. When I became acquainted with Mr. Easley and others and learned what they were doing to prevent labor disputes, I began to realize that there was something to it, and the more I got in touch with them the more I learned of the benefits resulting from the Federation's work.

It has been said, and truly that the unwritten history of the National Civic Federation is the most important. Now, I intend to lay before you a few things that need the attention of the employers and of the wealthy people of this city, if they intend to do anything in the interest of the working class. There is a great deal to be done, and it is a noble work that you are embarked in, and I hope you will be successful.

The stationary firemen, which craft I represent, are among the hardest working men there are in the City of New York, and in fact the condition is practically the same throughout the country. They are a class of men that we cannot get along without very well, though generally people hear very little of them.

The stationary firemen are employed down in the cellars and sub-cellars all over the City of New York, in apartment houses and great hotels, in office buildings, in factories and power plants and buildings of all kinds. These men have to work for 365 days in the year, never getting a day to themselves, and until quite recently all had to work twelve hours a day and twelve hours a night, week about. Many are still doing so, although the union has secured three eight-hour shifts in the majority of the plants. Now when a man has to work twelve hours a day, or twelve hours a night, whichever it may be, every day in the year and never knows what a Sunday or a holiday is, it is pretty hard. It takes a man nearly an hour to get to his place of business and get ready for his work, as he has to make a complete change of his clothing before relieving his man. At night it will take almost another hour to get home, making practically a fourteen-hour day, and that leaves him very little time for his family. In the places where these men are employed very often there are unhealthy and filthy conditions, bad sanitary arrangements. I have been down in buildings in New York and other cities, where the men have had to work for twelve hours in the Summer time with the temperature as high as 150 degrees. I took Miss Beeks down town a year ago last Summer. I wanted to show her one of the bad places, and we went into a corner where men had to get in and out to work, and the thermometer registered 173 degrees. Now, that is something awful. And those are conditions that in many instances can be changed very readily. Better ventilation is needed. In the new buildings going up we are endeavoring to have more room and to get more ventilation—have more doors and windows, and such like. But in many of the old buildings a change could be made at a comparatively small expense. Just a motor and a few fans would make a big improvement. I am very sorry to say that some of the largest estates in the City of New York have the worst conditions. Some of the large hotels have awful conditions for their men, and there is nobody to say a word for them except our organization, and it cannot reach all places. Where we have reached the employers we have induced them to make necessary changes, to improve the surroundings of the men and make them a little bit comfortable, at least.

There are a hundred and one other things done in a great hotel, for instance, laundry work, the men and women peel potatoes, clean silver, and such like.

in addition to the work of our craft. In some places there are good conditions and in some bad.

Take, for instance, the Hotel Belmont, where Mr. Belmont gave personal attention when the building was going up, and said he wanted the engine room and boiler room, where his men worked so hard, to be as well ventilated as possible. And really, it is a pleasure for a man to work in that plant, though it is sixty feet under ground. And instead of working twelve hours, as in many places, in the Belmont Hotel the stationary firemen have an eight-hour workday, thanks to Mr. Belmont. And I wish we had more Belmonts to take an interest in these particular things. There is a great difference in the working conditions in the large hotels in the city. In one owned by a large estate the men work twelve hours a day in a miserable hole and get 25 per cent less wages. They get $45 a month for this work, whereas in the Belmont Hotel the wages are $60 a month, that amount being really less than a man needs to support a family in New York. However, they have competent men at the Belmont, but at the other place they go to Castle Garden and get immigrants because they get them cheap, although the law requires that men who do this class of work shall be citizens and hold a license from the Police Department. That is the difference between a plant that is taken care of by the employer and one where there is nobody to bother about it.

We had the Legislature pass the law providing that every man who fires a boiler must stand an examination as to his qualifications, and that all men applying for such license shall be American citizens. We thought that under such a requirement the employers would get a better class of men, who would pay more attention to their work and would run the plants more safely than others without any restriction. What do we find? We find the big corporations, the big power and public plants ignoring this law. They ignore it to their shame. They do not want to employ American citizens. No, they would sooner go down to the Spanish and Italian steamboats and pay runners to bring immigrants to be placed in their plants. Thus they violate not only the State law in relation to the licenses, but also the immigration laws of the United States. They are willing to run the risk of the destruction of their property and of the lives of the men who work for them. The danger in having incompetent men is that either too much or too little water will be in the boilers. If the water gets too high, it goes over into the engine and is liable to blow out the cylinder head. If the water gets too low, it is liable to blow up the boilers, destroying property and killing everybody around; but many employers hire cheap men to work around the boilers who do not understand English and therefore cannot interpret the orders given to them by the engineers or others in charge. We have known instances where Italians and others did not know how to start or handle pumps used to feed the boilers. If anything happened to the pumps or the boilers the men generally lost thir heads, and the first thing they thought of was to get to a place of safety themselves. And you ladies, by talking to your husbands or brothers or fathers, as many of you no doubt have, connected with those corporations, may help to stop this abuse, because the heads of the corporations are not always informed of their own working conditions. They do not know the game. It is the people under them, those directly in charge, who are to blame.

I will just give you one of the reasons why they bring these people in. About three weeks ago a number of Italians waited on me and told me that in a certain railroad plant in the city they were abused. Those Italians had taken the places of American citizens who were discharged. The Italians were hired—not because they were any better men, but because they were cheaper. Here are depositions made by some Italians. One ———— makes the following statement: Says he resides at 633 Union street, Brooklyn. He worked for ———— (I am not going to read the name of the company) for three and one-half months since October 4, 1907. He paid the foreman $7—and named him—to get him employment at the power house, and after paying the money he was employed until Christmas, when the foreman asked him to contribute to a fund for the purpose of making the Chief Engineer a present, and told him that if he did not chip in he would be bounced. He did not chip in and he was bounced.

These unfortunate men, who cannot speak the English language, are hired in preference to American citizens because the foreman and superintendent cannot hold the latter up for five or ten dollars whenever they like. That is something that should be looked into.

Now, if those men join a labor union, where they get some protection, they are bounced. I have in my desk downtown thirty-seven affidavits from thirty-seven men, who were recently discharged in one plant in Philadelphia for becoming members of the union. The foreman went up to them and told them that they were members of the union. He found this out through their spy system. They spy on many of our unions. The corporations and the large employers of labor, or the people who are directly under them, hire spies to become members of the union and when they learn that an employe joins the union he is discharged at once. Now, it comes to a pretty state of affairs when men who have been giving faithful service—as these men had—are thus discharged. They had worked from three to twenty-two years for that company, some of them starting in as young men and working until they were bent and old, and they were getting the same wages when dismissed that they had been receiving for twenty years from that corporation, and were working twelve hours a day. The worst of it is, that when these particular men are at work before their roaring furnaces, they have not a shelter of any kind, and have no place to hang their clothes when they come in, and if their clothes get burned, as they often do, through sparks, they get no compensation for that. Now these are things that should be looked into, and they are conditions that make men very discontented. Such things drive men to Socialism. The trades union movement is opposed to Socialism. When we come before you ladies we talk more radically than we do to the members of our own unions. The good trades unionist is always conservative with his own people.

There are other conditions to be criticised. We have our city, state and national governments, which sometimes have worse conditions than the poorest private employer.

I made up my mind this afternoon that I would recite some of those things to you, because, as I have said before, I know that you ladies, many of you, are in a position if you take up this work, to do something. Take, for instance, in the city of New York in the hospitals. The poor girls go into those hospitals as nurses, and they have to work there twelve hours a day and twelve hours a night and relieve each other in shifts. Take a girl in a sick ward at night—she has a whole ward of children down with diphtheria, for instance, to look after. She has to be on her feet all night long. If she sits down to take a little nap or doze off to sleep one of these children is liable to cough up a tube and choke to death. This is the most trying kind of work, and many of the nurses go into consumption from it. There should be at least three shifts there —that is, eight hours on and sixteen hours off duty.

While talking of those institutions, I might say that in Bellevue Hospital, where the poor of our city, when they are sick, are taken, the abuses are such that something should be done. I have been looking it up in the last few days because I wanted to bring this matter to the attention of some of the authorities, though it is outside of my line of business. We find several hundred hospital helpers there working for $10 a month—$120 a year, with board and lodging. They must be able bodied men. Their work is to handle the sick, and to move from ward to ward; to take them off the ambulances as they come in, to help them out and help them around, and remove the dead when they die to the morgue, or wherever they may be sent. In looking this thing up I got a list that I want to bring to the attention of some of the authorities. Here are four lists, each containing seventy-five names. The highest pay of the able-bodied helpers on these lists is $120 a year. I find some getting $76 a year, and others getting $96 a year—all able-bodied men. Now, the point I am getting at is, what class of men can they be? Why, they are mostly worthless fellows that, though they are able-bodied (they have to be strong, able men), young men mostly, that were very little good to themselves nor anybody else, only to buy drink with every penny that they would get hold of. The consequence is that when they get their $10 a month they go out to the first saloon and drink, and, what is worse, put liquor in their pockets and they are drunk around the buildings. What kind of people are those to handle the poor unfortunate men or women who may be injured. They are not the proper kind. There should be men employed there that would get sufficient wages to induce them to think something of their positions.

I am sure that any of you ladies in hiring a man to do your work, to look after your horses or stable, or anything of that kind, would not hire a worthless loafer for $120 a year. You would pay a man $600 or $700 a year to take care of your horses. These men are not fit to take care of horses or take care of dogs, for that matter, and I am sure they are not proper ones to take care of the poor unfortunates in Bellevue or any other hospital.

It is getting late, and I notice that you want to get away. Now, in relation to welfare work. That can be looked at in different directions. I read in the papers the other day that Mr. Frank Bailey, vice-president of the Title Guarantee and Trust Company, suggested a movement among large money lending institutions whereby a mechanic or working man that is thrifty and has a lot or two somewhere, and wants to start a home, can raise a thousand or two or three thousand dollars. That is something that the money lending institutions never paid any attention to, and that I think would do a great deal of good. It would induce a man that has no other way in the world now of getting a home to start out and try to build up one for himself and his family. Every good mechanic and every good working man that is a good father and good husband has an ambition to start a home. He has an ambition to get away from the tenement house, because a man who has a large family cannot bring up his children as they should be brought up in the City of New York the way it is to-day. If a person has three or four or five or six in the family they can't get a flat—they can't get rooms anywhere. They have to get out and they are driven all around, and finally when they do locate it is in some place that is ill-kept and where a decent mechanic don't care to live. That has been my own case. I have six children, and I lived on Twenty-seventh street. The boys began to grow up and slide down the banister, and I had to move to the Bronx. Afterward I had to move from the Bronx to Yonkers and I am living there now. And I say, God help the poor family that has to live in a tenement house down town. It is a hard proposition, and I hope Mr. Bailey's idea will induce the big money-lending institutions to take up this kind of work.

We have here building and loan and banking associations where the poor men sometimes put in their savings, but what becomes of them? Why, the building loan and banking companies go into the hands of receivers and that is the last of the poor man's savings. Here is a book of a building loan and banking company that went into the hands of a receiver about five years ago. The ower of this book had an ambition to build a little home for himself and family. He was paying in $12.50 a month. In twelve years, then, he would have had a chance of getting a home. He was paying his assessments regularly—at least his wife was—and he went away to the Spanish-American war, and could not afford very well to pay then. But his wife managed to pay them into the building loan by hanging up the rent. Even if she went hungry she paid into the building loan. She paid in and paid in, and finally when he came back he found that it was going under. He went down to draw his money out, and there was $923.22 coming to him. They told him they could not pay him anything and that the institution was going into the hands of a receiver. Out of $923.22 this is all he has got to show for it (exhibiting credit book of the building loan association) and all he ever will have. There were 14,000 stockholders. Many of them were poor women who had two or three children in an institution, and were at work by the day scrubbing and washing to keep paying a few dollars into this building and loan association, hoping that the time would come when they would be able to take the children out, when they would get to be fifteen or sixteen years of age, and they would have these few dollars out of the building company to start up homes. Their few dollars went just the same as the others. And I want to tell you ladies that it was one of the saddest things I ever saw in my life, when the Board of Directors, those scoundrels, called a meeting downtown—to see those poor unfortunate men and women, young and old, crying and pulling their hair, because their few savings that they worked and bled for for years were swept away in one day and all their hopes for the future were blasted.

Then people wonder why is there Socialism and why is there anarchy. Really, I often wonder why we have not more. And I believe that we would have more of it if it was not for the labor organizations and the curb they are keeping upon their people.

I wish that you ladies had an opportunity, and I hope in the near future you will, of visiting the meetings of the trades unions of the laboring men in this city, and to see them as they are; to encourage those men by your presence. I will be glad at any time in my organization to have any of you visit our regular meeting. We meet on Saturday nights. It would be a great encouragement to those men to see that ladies such as yourselves are taking an interest in them.

Now, if this welfare work is going to do any good the employers' wives and the employers' daughters must take an interest in it; must get in touch with the men themselves—the working men. Must see where they are employed; must see where they live and how they live.

It would be a great lesson to you all if you would go down on the lower east and the lower west sides on a hot summer's night and see the mothers out there sitting on the stoop with their babies in their arms, and their poor little tots playing around them gasping with the heat. If you could only see the places where those poor unfortunate people have to live. I have known in the City of New York, and in the outskirts, one house of four rooms where there were two married couples—two men and their wives keeping roomers. It was a foreign settlement section. And how many boarders and roomers do you

suppose those two married couples kept, and lived there themselves? They kept seventeen. Seventeen and four are twenty-one people, living in four rooms. That is in the City of New York. They were not American, that's true, but they were here with us. I might say I am not an American born myself, for I was born and raised in Ireland, but when I came to this country I had the advantage, of course, of having the language of the country, and saw something of the ways of living in my old country that I did here. But with those poor unfortunate people brought in here and thrown in such places as that, it's something awful, and it should not be. There are hundreds of other houses almost as bad as the one described, although there is plenty of land in that section and it is up to the people they are employed by, who can well afford to build houses sufficient for them to live in if they want so to do. No, they are not bothering about those people. All they are bothering about is to roll up millions of dollars, as they are doing every year. Their business is a good paying business and they are rolling up that money all right.

Now I want to say, ladies, that the working men of America are not Socialists. The thinking man of America has all the faith in the world in the people that are higher up, as we say. You can look around you and see the men who are associated with the labor leaders and are close to them—such men as Mr. Seth Low, who is close to Mr. Gompers and Mr. Mitchell and the other leaders, and I am glad to say is a friend of mine. Mr. Belmont has worked hand in hand with those men. Dr. Nicholas Murray Butler and other men of high standing in this country have done so, and is there any reason in the world why some more of the men of that class should not get closer, also their wives and daughters, to the working men and the working women of this country?

To-day we have a very peculiar state of affairs. We are threatened in all directions with anarchy. We want to stamp out anarchy, and we want the millionaire and the multi-millionaire, the wives and the daughters and the entire family of those people to assist us. We will be heart and hand with you. We are all American citizens, and let us work together as American citizens to make this country greater and grander than it is—the greatest country in the world—but we can make it greater and grander, especially for the future generations. It is up to you to help us, and I hope you will be with us from now on.

MISS MARBURY made the following request: Mr. Healy, I wonder if you will do us a favor—another favor. We are laboring for good here this afternoon, and I wonder, as long as you are here, if you will go down in our engine room, where we have employes, and see whether the conditions down there are all right, or if there is anything that the ladies of this club can do to make our men more comfortable. I think I am only expressing the feeling of every one here in the club. This building was erected for us, as you know, and we women know nothing about these questions. We took the building as it came from the architects. We believe our men are comfortable, but we do not know, and if you will spare a few moments we shall take you down just to look around and see if the place is all right.

MR. HEALY replied: I will be pleased to do it, Madam. I will be very pleased.

The closing statement, made by THE CHAIRMAN, was: I think that is a splendid idea. Is there anything else we would like to ask Mr. Healy? If not, I suppose the meeting is about ready to adjourn. But I think we cannot do that without expressing our warmest thanks to the speakers. I think those who have spoken this afternoon have given us a wonderful treat, and something which none of us will ever forget. So all those in favor of passing a vote of thanks to them this afternoon will say aye.

(A vote of thanks was unanimously passed.)

NOTE: After inspecting the boiler plant of the Colony Club Mr. Healy reported that "it is a very nice, clean place, and the conditions of the men employed there are first class in every way. Of course the place is small, and the work to be performed is light, as the power to run the plant is taken from outside current. It cannot be compared with large power plants on the outside where one man has to shovel more coal in an hour than a man in the Colony Club would have to shovel in twenty-four hours."

Invitations to attend the meeting of the New York Woman's Committee of the National Civic Federation were extended to:

Mrs. J. Borden Harriman
Miss Anne Morgan
Mrs. Marion Story
Mrs. Harry Payne Whitney
Mrs. John G. Milburn
Mrs. Albert Herter
Mrs. Douglas Robinson
Mrs. Richard Irvin
Miss Florence Rhett
Miss Mabel Choate
Mrs. Otto Kahn
Mrs. V. Everit Macy
Mrs. Frank McN. Bacon
Mrs. Gordon K. Bell
Mrs. C. U. Carpenter
Mrs. D. W. Evans
Mrs. Orrin S. Goan
Mrs. Francis P. Kinnicutt
Mrs. Walter Maynard
Mrs. B. W. Morris
Mrs. William Rand, Jr.
Miss Caroline Shippen
Mrs. Benjamin Stern
Mrs. A. Thursby
Mrs. H. Morton
Miss Elisabeth Marbury
Mrs. Clarence H. Mackay
Mrs. Victor Sorchon
Mrs. Archibald Alexander
Mrs. Ralph Pulitzer.
Miss Mary Parsons
Mrs. F. H. Cabot
Mrs. J. A. Wright
Mrs. James Speyer
Miss C. V. R. Delafield
Miss Virginia Potter
Mrs. Edward Henderson
Mrs. Ernesto Fabbri
Miss Maude Adams
Mrs. Sidney Colgate
Mrs. Joseph Gilder
Mrs. J. M. Ellsworth
Mrs. Cadwalader Jones
Mrs. R. Fulton Cutting
Mrs. Walter James
Mrs. George Brewster
Mrs. Seth Low
Mrs. Wm. Jay Schieffelin
Miss Mary Harriman
Mrs. Malcolm Whitman
Miss Hewitt
Mrs. John Hammond
Mrs. G. LaFarge
Mrs. Arthur Page
Miss F. P. Gilman
Mrs. John Corbin
Mrs. Daniel Frohman
Mrs. Emma Eames Story
Mrs. H. Fairfield Osborn
Mrs. Arthur Dodge
Miss Whitney
Mrs. August Belmont, Jr.
Mrs. Henry C. Potter
Miss Helen Nichols
Mrs. Wm. Fellowes Morgan
Mrs. Julia K. West
Miss Janet Waring
Mrs. Mary Hatch Willard
Miss C. R. Lowell
Mrs. Carl de Gersdorff
Mrs. Charles Tiffany
Mrs. William Sheehan
Mrs. William C. Reick
Mrs. Gustav Schwab
Mrs. Henry Siegel
Mrs. Howard Brokaw
Mrs. Herman Straus
Mrs. Charles Scribner
Mrs. Walter P. Bliss
Mrs. Richard Aldrich
Miss Robb
Miss Viola Allen
Miss Daly
Mrs. C. L. Blair
Mrs. W. Oakman
Mrs. Dean Sage
Mrs. Norman Hapgood
Mrs. Mary Philbrook
Mrs. Paul Morton
Mrs. Langdon Geer
Mrs. George J. Gould
Mrs. Alf Hayman
Mrs. William Rice
Mrs. Charles A. Moore
Mrs. Charles A. Moore, Jr.
Mrs. John S. Huyler
Mrs. Foster Coates
Mrs. B. J. Greenhut
Mrs. Marcus M. Marks
Mrs. W. H. Marshall
Mrs. H. B. Thayer
Mrs. Elbridge Fowler
Mrs. L. C. Penfield
Miss Laurence
Mrs. Lazarus
Mrs. Stuart Duncan
Mrs. Nicholas Murray Butler
Mrs. Clement A. Griscom, Jr.
Mrs. Egerton Winthrop, Jr.

The New York branch divided the work immediately to be undertaken between two committees, which are actively engaged in pursuing their plans.

The Committee on the Needs of Workers in Specific Industries held its first meeting at the residence of the chairman, Mrs. J. Borden Harriman, Friday morning, March 13.

The following sub-committees were appointed, and are making extensive investigations with a view of securing information:

Committee on Conditions of Stationary Firemen and Hotel Employes, including not only hotel attendants and stationary firemen, but also laundry workers and metal (silver) polishers—Mrs. Frank McN. Bacon, chairman; Mrs. Ralph Pulitzer, Jr., Mrs. William Fellowes Morgan.

Committee on Traction Employes—Mrs. Clement Acton Griscom, Jr., chairman; Mrs. Orrin S. Goan, Mrs. James A. Wright.

Committee on Cigar Factories—Miss Caroline Shippen, chairman; Mrs. D. W. Evans, Miss F. P. Gilman.

The Committee on Welfare Work for Government Employes held its initial meeting at the headquarters of the Federation Friday afternoon, March 13, Mrs. Julia K. West, chairman, presiding.

It was decided that there should be the following visiting committees to secure information as to existing conditions:

Federal Employes—Custom House, Miss C. V. R. Delafield, chairman; Navy Yard, Mrs. F. H. Cabot, chairman; Governors Island, Mrs. John Corbin, chairman; Post Offices, Miss Anne Morgan, chairman.

Employes in State Institutions—Prisons, hospitals and charity institutions. Chairmen to be appointed.

Municipal Employes—Public schools, including such employes as firemen, engineers, teachers, janitors and scrubwomen, Miss C. R. Lowell, chairman; charity institutions and hospitals, including such employes as nurses, orderlies and other attendants, Mrs. Mary Hatch Willard, chairman; prisons, police stations, fire department. Chairmen to be appointed.

The members of the Committee on Welfare Work for Government Employes are: Mrs. J. K. West, Miss Anne Morgan, Mrs. F. H. Cabot, Miss Cornelia V. R. Delafield, Miss Lowell, Mrs. John Corbin, Mrs. Ernesto Fabbri, Mrs. E. C. Henderson, Mrs. F. P. Kinnicutt, Mrs. M. H. Willard, Mrs. William Rand, Jr., Mrs. Marcus M. Marks, Mrs. William R. Willcox, Mrs. Edward M. Morgan, Mrs. James S. Clarkson.

AMERICAN TEACHERS TO VISIT EUROPE.

(Continued from page 6.)

classes to the visits of teachers, and accord the latter the fullest opportunity of inspecting the work of the schools. The preliminary schedule includes about 250 different schools and colleges of all classes.

Other schools will be added to it from time to time, and teachers will be notified before sailing of the complete list. In case teachers desire to visit any particular school not mentioned upon the final list, the local committees will be glad to place themselves in communication with the authorities of such schools and secure permission to visit them.

Arrangements will be made by the school authorities to hold frequent conferences during the period of the teachers' visit for the teachers of the different localities. The teachers will be invited to attend these conferences, and will thus have an opportunity of meeting the corps of teachers and becoming familiar with the school problems which are under discussion in the United Kingdom. The visiting teachers will doubtless be expected to give some account of their own schools in the United States at such meetings.

Members of the local committee and other persons of social prominence in the several localities will be at home for afternoon tea, and will give a cordial welcome to the American teachers, who will be introduced through the local committees, and who will thus be afforded a glimpse of the home life of their English hosts.

Through the special arrangement for the transportation of the teachers and for their board while in England, the trip can be made at a very moderate expense to those who take part in it. Without making any allowance whatsoever for purchases while in England, it would appear that the cost from the time of leaving the United States to the time of arrival, calculating a stay of four week in England, can be brought within $110.00 by those who exercise the greatest economy. An allowance of $150.00 would permit the visitor to travel very comfortably, while $200.00 could be deemed a very liberal estimate of the expense. Travel from residence to and from the seaboard must be allowed for in addition to this estimate.

The Boards of Education in the United States through the superintendents of schools, and the boards of control of normal and industrial schools through their principals, have been invited to designate the teachers to whom the advantages offered by the National Civic Federation should be granted. The trip is one of such obvious professional benefit to the teachers that the educational authorities have been asked to continue the salaries of the teachers selected during their proposed absence from their home schools.

The action taken by the Board of Education of New York City is characteristic of the cordial reception whch the plan has generally received. At its session of March 11, 1908, it provided that permission be granted to not more than twenty—later increased to fifty—teachers in the schools of this city to visit the schools of England and the Continent under leave of absence with full pay for a period not to exceed six weeks, all such teachers to be required to file with the City Superintendent of Schools within two weeks after their return written reports of their observations.

Other cities have lengthened the term of absence to two months, recognizing that a shorter absence might in part, at least, defeat the object of the visit by unduly curtailing the time available for the inspection of schools on the other side. This consideration applies with especial force to all inland cities, since allowance must be made for the time necessary to reach the sailing ports and to make final arrangements respecting tickets. Among other cities which have already provided for the payment of teachers' salaries while absent on the visit are Chicago (twenty teachers), Pittsburg (ten), Cleveland (eight), Newark (six), Seattle (five) and Detroit (four), besides many smaller places providing for one or two teachers each. The Boards of Trustees of State Normal Schools are deeply interested and a considerable number of nominations have already been received from them. The hundreds of inquiries from individuals and from school authorities which have been received and the publicity which has been given the matter by the school journals testify to the widespread interest in the movement and guarantee a most successful issue.

The selection of teachers by the Boards of Education and other school authorities will insure the choice of proper persons to take part in the visit and can be made directly beneficial in the solution of local problems, to throw light on modifications of the school work which are under consideration.

Teachers not nominated directly by Boards of Education or boards controlling separate institutions must have the endorsement of their local superintendents or principals.

In case the number designated to take part in the visit should exceed the number of 500 it will be necessary to make an allotment, taking into consideration an equitable geographical distribution and the different types of schools represented.

At the present time, when the whole organization and conduct of our school system is under discussion, the National Civic Federation feels that in organizing this movement it is making an important contribution to the solution of present problems in the educational world.

SHALL THE ANTI-TRUST ACT BE AMENDED?

(Continued from page 5.)

(MR. GOMPERS, SPEAKING.)

his interests, seeking a redress of his injuries, of his feelings, of his wrongs, in his own way.

I contend, Mr. Chairman and gentlemen, for our organizations of labor that they are the greatest conservators of the public peace. In all the country where can you find the bona fide organizations of labor even participating in these demonstrations of a riotous character, such as we have seen in some of the cities. I do not want to add anything to their troubles, when men are unemployed and suffering as so many of them are suffering to-day. They are entitled to some little pity, some little consideration, despite their ignorance, despite their foolhardiness, despite the wickedness of one or two or more; but is it not true that even in our present, our awful present industrial situation, when there are hundreds and thousands of workmen and workwomen who are walking the streets of our country idle, without the opportunity of earning their livelihood, I ask you where in the whole world you could find an equal number of men unemployed, and the general tranquility and the safety of life and property to obtain as it obtains in our own country. It is true that the influences of American ideas and ideals have contributed much, but what about the organizations of labor that have instilled self-respect and mutual dependence between workmen?

Mr. Chairman and gentlemen, we are appreciative of the liberties as citizens which we enjoy. But there can not be differentiated from that liberty the right to the exercise of our normal activities as wage-earners. To guarantee to the workman academic rights, which he does not want, and deny him the rights to which he is entitled and which are of advantage to him, is to insult his intelligence as well as his manhood. Modern industrial conditions can not be changed. They are not going back. You can not turn the wheels of industry back, and you would not dare do it if you could. And the reason why the law is not enforced in so far as other industries are concerned, is because of the recognition that you would have to force industry back fifty years to comply with the terms of the present law. Industry is not going to turn back. A law is made for the government of men, but it is not a fetish before which you must bow and scrape before you even look at the words and letters which construct the law. A law is made to further the interests or the convenience or the rights of a people, and when that law has failed to perform its purpose, or where it is clearly a law that has no standing in our day, if one or the other must go, industry can not go. The law must be either amended or ended.

I do not know whether you are aware of it, gentlemen, but since the decision of the Supreme Court of the United States was handed down, seventy-five workmen in New Orleans have been indicted under the Sherman Anti-Trust law, and the indictment charges them with conspiracy in ordering a strike.

Mr. Alexander: Under the State law?

Mr. Gompers: No, sir; under the Federal Sherman Anti-Trust law.

Mr. Sterling: Was it anything connected with the strike in regard to the destruction of property?

Mr. Gompers: Not even an allegation of it.

Mr. Sterling: It was perfectly peaceable?

Mr. Gompers: A perfectly peaceable strike. There was not an allegation of violence.

Mr. Malby: Have you a copy of the indictment here?

Mr. Gompers: No, sir. A certain company—they were boat owners, I believe—was cutting under the wages of the seamen. I think that is the way it was.

The Chairman: Longshoremen.

Mr. Gompers: Perhaps that may be so. I believe now they were stevedores.

The Chairman: They are longshoremen.

Mr. Alexander: Roustabouts they are called down there.

Mr. Gompers: No. Stevedores are longshoremen. A certain firm objected or refused to pay wages. The men quit. They came to a dispute and the strike was on. The Cotton Trades Council, I think it was—the workmen in the cotton industry—decided that the other workmen should also strike for the reason that if the wages of these men in the first instance were reduced it would involve a reduction of wages of all the others, and they all quit work. The employer, after considering their conditions, conceded the demands of the men, that is, for a restoration of wages. Then all the men returned to work. The boats went out with their cargoes, and when they were out a day or so the employer went before the Grand Jury of the New Orleans Circuit Court—the Federal Grand Jury, and procured an indictment against seventy-five of the men who had participated in the council in which that strike was inaugurated; and this, I say, was under the Sherman Anti-Trust law. This case is to be heard in the courts.

Mr. Malby: There was nothing in it but a strike?

Mr. Gompers: That is all.

Mr. Malby: There was no boycott; just simply a strike? There was no picketing?

Mr. Gompers: That was not alleged. I do not think the picketing comes under the Sherman Anti-Trust law. But combination in restraint of trade, that is what it was.

The Chairman: I think the indictment charged a conspiracy in restraint of foreign and interstate trade, these people being engaged in both foreign and interstate trade.

Mr. Gompers: Yes.

Mr. Caulfield: Has not the prosecution of those cases been ordered suspended by the Department of Justice?

Mr. Gompers: I have no knowledge upon that subject. Mr. Keefe, has that been ordered?

Mr. Keefe: Yes; the prosecution was withheld. Those were instructions from the Law Department, I presume.

The Chairman: I do not think that exactly states it right. I have a letter from the Attorney General covering the whole case. There was some question about the validity of the indictment. The Department of Justice is examining into it to ascertain whether the proceedings are regular, and has not issued any affirmative instructions that tend to either impede or promote the progress of the judicial proceedings.

Mr. Keefe: The instructions were to withhold the prosecution of the case.

The Chairman: I do not get that impression from the Attorney General's letter. Of course, you may be right about it, but I see nothing in the letter of the Attorney General to indicate other than that the Department of Justice is considering the matter.

Mr. Gompers: Well, there is no question but what they were indicted. That is the statement I made.

The Chairman: You are correct about that.

Mr. Gompers: As to whether they will be prosecuted, of course none of us can say, but they are liable to prosecution under the indictment unless it is nolle prossed.

The Chairman: I am not advised as to the details. Whether they proceed depends altogether upon the facts that exist and the charge under the indictment.

Mr. Gompers: Addressing myself for a few minutes to the bill itself, let me say, as I have already said, that I give the fullest support I can. I am authorized to say that—for the purpose that the bill has in view, in so far as to corporations owning capital stock and common carriers, but so far as labor organizations are concerned we are averse to the registration of the labor organizations.

The Chairman: May I inquire right there, please. The labor organizations are not incorporated organizations, they are simply voluntary associations?

Mr. Gompers: Yes, sir; voluntary associations. Most of them are unincorporated. Some are incorporated, but most of them are not.

The Chairman: Is your American Federation of Labor an incorporated or voluntary association?

Mr. Gompers: It is a voluntary association of associations.

The Chairman: That is, the most of them are also voluntary associations?

Mr. Gompers: Yes, sir.

The Chairman: And you do not think these associations should be subjected to this provision in relation to registration, as I understand you?

Mr. Gompers: Yes, sir; I think we ought not to be required to register.

The Chairman: That proposition under the bill is to register in order to get what might be termed immunity under the act.

Mr. Gompers: Yes, sir.

The Chairman: And you do not think your associations ought to be required to register in order to get immunity?

Mr. Gompers: I think we ought to be placed in a position at least as the organizations of labor were before the Sherman Anti-Trust law was enacted.

The Chairman: Is it your view that the purpose of the legislation is to relieve the Federation of Labor, for instance, of the embarrassments of the Sherman Anti-Trust law?

Mr. Gompers: Not only the American Federation, but the local associations or organizations.

The Chairman: Is it your idea that is the purpose of the legislation, to relieve the organizations of employes from the operation of the Sherman Anti-Trust law?

Mr. Gompers: I can not tell you, sir; but I have my doubts.

The Chairman: If that is not the purpose, are you in sympathy with it?

Mr. Gompers: I want to explain that if I may?

The Chairman: Certainly.

Mr. Gompers: And say that taking as a basis the amendment to the Sherman Anti-Trust law when it was still in a formative state, and to which I referred earlier in my remarks—the provision that passed the Senate—taking that as a basis, labor has prepared this and wants to offer it as an amendment to the pending bill. First, the provision to eliminate from the bill those parts which refer to organizations and corporations not for profit and without capital stock, and then to have these amendments, and in these two amendments the representative of the farmers' organization or union is by instruction giving us his aid and support.

The Chairman: Who is the head of the farmers?

Mr. Gompers: Mr. Barnett, of the Farmers' American Society of Equity, and Mr. Barrett, of the American Farmers' Union. I can not speak for the Farmers' Union other than that having communicated with them, through their representatives, and giving them a statement of what we apprehended and what we asked, the Secretary sent a telegram stating that our efforts have the hearty approval of his organization and their support in every way.

The Chairman: Are these organizations you speak of differentiated from what we know as the Grange?

Mr. Gompers: They are part of the Grange, most of them.

The Chairman: Are they affiliated with the American Federation of Labor—that is, the two you speak of?

Mr. Gompers: No, sir; except as we may combine on general interests. We exchange fraternal delegates to each other's conventions and mass meetings, and at conferences of all sorts we have either a representative of labor there in theirs, or they have a representative of the farmers in our conferences.

The Chairman: And while in a general way you work in harmony for common purposes, you are not so allied that your Federation exercises any control over them?

Mr. Gompers: No, sir.

The Chairman: What is the address of these two gentlemen, please?

Mr. Gompers: Mr. C. M. Barnett is President of the Farmers' American Society of Equity, and his headquarters are in the Clayton Building, Indianapolis, Ind. I have not Mr. Barrett's address with me; it is somewhere in Georgia. I should say that in reply to the notification to that society of farmers that this hearing was to take place to-day, their Secretary said that Mr. Barnett could not be here, but that Mr. Nelson, a member of their executive board, would be authorized to act as their representative before this committee to-day.

The Chairman: Mr. Nelson is here, I suppose?

Mr. Gompers: I think he is.

The Chairman: What is that organization composed of—practical farmers?

Mr. Gompers: Yes, sir.

The Chairman: Or of people simply interested in agriculture? Is it composed of practical operating farmers or farm laborers?

Mr. Gompers: Operating farmers. If you will permit me to read the further amendment you will observe what they ask, which we have given our adherence to, and they have given theirs to our proposition. It is this:

"That nothing in said act or in this act is intended, nor shall any provision thereof be enforced so as to apply to organizations or associations not for profit or without capital stock; nor to the members of such organizations or associations. That nothing in said act, or in this act, is intended, nor shall any provision thereof hereafter be enforced so as to apply to any arrangements, agreements or combinations among persons engaged in agriculture or horticulture, made with a view of enhancing the price of their own agricultural or horticultural products."

Now, I want to read for information from the British Trades Dispute act. It will not occupy more than two or three minutes. The act was passed by Parliament in December, 1906:

"1. It shall be lawful for any person or persons acting either on their own behalf or on behalf of a trade union or other association of individuals, registered or unregistered, in contemplation of or during the continuance of any trade dispute, to attend for any of the following purposes at or near a house or place where a person resides or works, or carries on his business, or happens to be (1) for the purpose of peacefully obtaining or communicating information; (2) for the purpose of peacefully persuading any person to work or abstain from working.

"2. An agreement or combination by two or more persons to do or procure to be done any act in contemplation or furtherance of a trade dispute shall not be ground for an action, if such act when committed by one person would not be ground for an action.

"3. An action shall not be brought against a trade union or other association aforesaid for the recovery of damages sustained by any person or persons by reason of the action of a member or members of such trade union or other association aforesaid."

The Chairman: Have you the full act?

Mr. Gompers: These are the three sections, and then there is the enacting clause.

The Chairman: What connection does that have with the act of, I think, 1873, passed by Parliament?

Mr. Gompers: The law of 1875, I think it was, was rendered practically nugatory by the Taff-Vale decision which so intensified the feeling of British workmen and the British public generally that it resulted in the Trades Dispute act.

The Chairman: Does this operate to repeal the act of 1875, as you understand it?

Mr. Gompers: It affirmatively takes its place and wipes out the effect of the Taff-Vale decision.

The Chairman: Have you a citation so that we can get the case to which you refer:

Mr. Gompers: You know, Mr. Littlefield, I am not a lawyer.

The Chairman: I thought perhaps you had a citation of the case—where it was reported.

Mr. Gompers: No; but I can get it. Mr. Low has—

The Chairman: Has Mr. Low got it?

Mr. Low: I have a copy of the act.

The Chairman: No; I wanted the citation of the case, so that we could look the case up.

Mr. Gompers: I am of opinion there would be little difficulty in obtaining it. Surely, you have ample facilities to obtain it. The Library of Congress certainly has a compilation of laws upon that subject. I am satisfied it has.

The Chairman: Very well; if you think we can find it without any trouble in such a compilation.

Mr. Gompers: I have here some citations of decisions and opinions in several courts in the matter of strikes which I should like to submit.

The Chairman: And make them a part of your remarks without reading?

Mr. Gompers: Yes, sir.

The Chairman: You may do so.

At this point a number of citations were inserted in the record.

Mr. Gompers: In conclusion, let me say that in my judgment, speaking not only as President of the American Federation of Labor and as a representative of workmen, but as an American citizen, I believe firmly that there is no question before this Congress possibly, nothing equal in importance to this question which can arise in a very long time. It ought not to be deferred until some other time; it ought not to be postponed until a hereafter. The workmen of the country feel that they have been outraged, that their interests have been invaded. I could not interpret to you in words the feeling or reflect their sentiments or views, even if I should attempt to do so, and no matter what time I might take in so doing. The men of labor of this country feel outraged, I repeat; they feel that they have been robbed; they feel that they have been shorn of the only protection that they have—their organization, the right to combine, the right to associate, the right to help each other, the right to help bear each other's responsibilities and burdens; the right to protect themselves from greed, from the rapacious. For in truth we must bear this in mind. We have not any hesitancy in saying that the large majority of employers are fairly inclined, but it is equally to their protection as it is to the protection of the men who labor that we organize and have all the fullest rights of our normal activities as workmen and citizens in order that we may compel the man who is always nibbling at the wages of workmen, that we can protect the fair-minded employers from the nibbling wage cutting policy and niggardliness of the unfair and antagonistic employer.

In the interest of men of labor, the women of labor, of American manhood and womanhood and citizenship I make this appeal to you gentlemen of the Judiciary Committee, that we can not wait much longer for relief; and if I judge the temper of the American workmen accurately, and I think I do, they are going to hold to a strict accountability the men or parties whoever and whichever they may be who fail to fairly respond to this urgent appeal.

The Chairman: Now, Mr. Gompers, a word. Would this amendment you suggest, if it became a law, authorize the prosecution of such a boycott as was attempted in the Danbury hatters case, which was in violation of the Sherman Anti-Trust law? Is that the purpose?

Mr. Gompers: One of the purposes; yes, sir. That case was brought under the Sherman Anti-Trust law.

The Chairman: Yes. And the purpose of the amendment you have offered is to relieve you from the operation of the Sherman Anti-Trust law as construed by the court in that case?

Mr. Gompers: Yes, sir.

The Chairman: And to authorize that kind of an interstate boycott?

Mr. Gompers: Yes, sir.

The Chairman: Do you, as the representative of organized labor, favor the boycott, both as an interstate and a local proposition?

Mr. Gompers: I do, sir.

The Chairman: And your organization stands for that?

Mr. Gompers: It does, sir.

The Chairman: You filed a petition of intervention in the Danbury hatters case on the ground that it was one of the fundamental purposes of the organization, and for that reason you had a vital——

Mr. Gompers: Your assumption is wrong. It is not the fundamental purpose of the organization. It is only one of the means.

The Chairman: I may be wrong about that. I was simply speaking on the basis of the expressions contained in your petition, which in part reads as follows:

" * * * and that a decision herein in favor of the plaintiff in error would seriously obstruct and hinder the said American Federation of Labor, petitioner, in carrying out the purposes for which it was organized, and destroy, at least to some extent, its usefulness to its members, and would likewise and in like manner injure said members."

* * * * * * *

"First. That the constitution of said American Federation of Labor, petitioner, makes special provision for the prosecution of boycotts, so called, when instituted by a constituent or affiliated organization, as is described in the complaint filed in the District Court by the plaintiff in error herein, through the agency and pursuant to the approval of the executive council of petitioner; but what are alleged in said complaint to be boycotts are in reality legal and proper proceedings set on foot and carried on in order to accomplish lawful ends of your petitioner and the said affiliated or constituent associations."

I suppose that accurately states the attitude of your organization?

Mr. Gompers: Yes, sir; but that is not one of the fundamental principles.

The Chairman: Well, your constitution provides for the prosecution of boycotts, does it not?

Mr. Gompers: No, sir.

The Chairman: But this petition, signed by the American Federation of Labor, Samuel Gompers and Frank Morrison, by T. C. Spelling, attorney, says: "First, That the constitution of said American Federation of Labor, petitioner, makes special provision for the prosecution of boycotts," I know nothing about it except what I see here.

Mr. Gompers: The constitution makes provision for the selection of a committee on boycotts, and also regulates the manner, or, rather, restricts the number of boycotts which an organization can apply for endorsement, and it also restricts the central bodies from endorsing certain boycotts.

Your questions make it necessary for me to say just a word more, if I may.

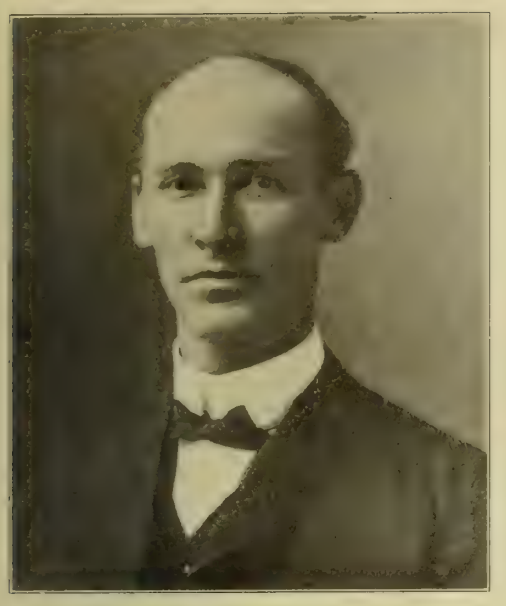
The Chairman: Certainly.

Mr. Gompers: You must bear in mind that in the case in point, the hatters, their organization has had a continuous history. There has been a continuous history of the organized hatters for over five hundred years. From the old-time guilds they have their records. There is that esprit de corps, there is that feeling of mutuality, of the old-time chapel, as it was called in the printing trade, which also obtains among the hatters. They have had, and have, agreements with seventy of the largest hat manufacturers in America. They meet every year and agree upon wages, hours and conditions of employment. They got into a dispute with Mr. Loewe; the merits of it I shall not attempt to discuss. But they contended for conditions of employment, conditions of labor, wages, etc., whatever they were, which obtained throughout the trade among the workmen employed in the other factories. To these Mr. Loewe objected. They came to a disagreement. Whatever the merits were or the demerits were, I shall not attempt to discuss, but they came to a disagreement. It was necessary that the men in the trade—the hatters—must fight in order to maintain that scale of wages. Otherwise how could they expect these other seventy manufacturers to pay the scale, to pay decent wages which would give the men an American standard of living? It was a matter of self-defense. They had to fight. They will fight, and I will help them to fight, if I can. Any set of workmen or workwomen in this country who want help in protecting their interests or advancing their rights, I shall, so long as God gives me life, try to help them to the very best of whatever little ability I may have; and whatever that may involve, too. And I want to say that in my fifty-eight years of life I have been a law-abiding citizen. There is no man who can ever point to any act in my whole life that reflects to my discredit as a man and as a citizen. I want to assure you on my word of honor that so long as I live I will never buy a Loewe hat or a Bucks stove or range until these gentlemen come into organized labor and grant us conditions of fairness. Then they will get our support and help. Until then, you may call it by any other name—boycott or no boycott—but I won't buy your hats anyhow.

MR. A. B. GARRETSON, President of the Order of Railway Conductors, made the following statement:

The decisions which have already been made under the Sherman Act have brought men who desire to be law-abiding citizens into a peculiar situation. While we believed for very many years that the terms of that act had no bearing upon men placed as we were, members of labor unions, it has developed of late that it has control of our acts embodied in it as well as the acts of others.

I want to say to you that our organizations believe in the original intent, as they understand it, of the restraining legislation known as the Sherman law. They believe in proper regulation and supervision of combinations of that character, but they do not believe in the unreasonable restriction of the effort on the part of modern men to adjust themselves to modern development whether it be commercial, industrial or otherwise.



We, of the railway service, stand in possibly a little different relation to many of these questions to what the wage workers in other respects do, because we become subject to a class of legislation that does not apply to others. There has grown up now interstate commerce legislation, and we being an integral part in the handling of interstate commerce, it has been made apparent, to the public at least if not to ourselves, that investigation and publicity are a part of our fate, whether we desire it or not. Therefore we are reasonably willing to accept for ourselves precisely the same condition of publicity and of regulation that our employers or other commercial bodies are subjected to under the act. We favor the original act in that it provides for reasonable regulation and for the punishment of illegitimate combination. On the other hand we favor the amendment to the law as here presented in the sense that it makes possible legitimate combination. We are not sticklers over what might or might not be decided to be legitimate object or reasonable restraint of trade. We hold something of the view that it will always depend in a degree upon the tribunal which determines, and upon the character of men forming the tribunal. The idea involved in it is precisely the same, I suppose, as under the old English trial procedure. If you consult Jeffreys and Sir Matthew Hale on what constituted treason you will always find there is greater diversity of opinion among men as to what will constitute reasonable and unreasonable restraint.

Mr. Low: I would like to ask Mr. Garretson if I am not right in believing that among the ranks of labor there is a very great fear as to whether the right to form unions, the right to combine, the right to strike, and the right to make trade agreements is not endangered under the Sherman law as it stands?

Mr. Garretson: That feeling is almost absolutely universal among the men that I represent. Here is a condition that I come in contact with in business circles as well as in labor circles. Our dealings lie altogether with the managing officials of railway companies, men who are as thoroughly masters of their business as any on the continent, men who receive the highest wage on account of such ability that is paid in the country. Those men are as badly at sea as we ourselves as to what does or does not place them in violation of the law, if the law in regard to combinations applies alike to them and to us.

Mr. Garretson cited an instance in which an agreement had recently been reached with the mediation of the Interstate Commerce Commission in regard to wages on railways in the southeastern part of the country. Friendly relations were continued and business was not interrupted, nor was the public confidence destroyed by a great industrial dispute. And yet under the opinion which had been handed down there is no doubt in the minds of many that both the companies and the unions were subject to punishment under the terms of the law in question.

By a line of questions the Chairman endeavored to bring out the fact that if this agreement had not been reached a strike would have occurred, and that if the strike had occurred by virtue of a previous agreement to strike in such a case, that it would be considered a conspiracy or agreement in restraint of trade.

A. B. GARRETTSON.

THEODORE MARBURG.

J. W. JENKS.

Summing up, the Chairman expressed his personal opinion that a strike independent of a preliminary agreement beyond all question is authorized and lawful, but that strike which is the result of a combination or agreement in restraint of interstate trade and commerce is an unlawful strike.

MR. THEODORE MARBURG characterized the bill as one of regulation as against ruin. Around us we find financial institutions ruined, railroads unable to make needed improvements or improve present facilities. We find industry depressed and the laboring man out of employment.

For the cause we must turn in part to the law. The fine imposed on the Standard Oil Company appears largely in the nature of a revenge. The mistaken attitude of the public as expressed through both the Federal Government and the State Governments against the railroads has also contributed. We need better service, not hostile legislation for our railroads. The law which gives the Interstate Commerce Commission the power to actually fix rates has injured the roads. They are no longer profitable. It may be admitted that the Interstate Commerce Commission has been very conservative, but the legislation vesting such wide powers in it has had a baneful effect in stimulating crude and ill-advised legislation by the States. All this has shaken confidence. It was a merit of the Aldrich financial bill that it intended to restore confidence in railway bonds.

This bill provides for the correction of certain evils. It permits pooling among railroads. In so doing it corrects the Interstate Commerce Act.

It goes further. It exempts from the operation of the Sherman Anti-Trust Act, in so far as proceedings by the United States may lie, reasonable combinations, strikes and lockouts. It provides that persons injured by acts coming under the prohibition of the Sherman law shall recover simple instead of triple damages.

Most important is the provision which provides registration. We are getting down now to what we have been talking about for some years. This law prescribes registration as a condition precedent to the enjoyment of the benefits of the present bill. This to my mind is the most valuable feature of this measure. Under this clause the President can investigate the organization of corporations; that is to say, whether it is one corporation or whether it is a combination. He can investigate its financial condition so as to protect the public from losses.

Too much stress cannot be laid upon the advantages which will accrue to the public from the publicity which will result from this measure. Its scope is very wide. Since State lines had been broken down by the telephone, telegraph and the railroad, there are very few big industries existing to-day whose operations are strictly confined to State limits. The problems I have been referring to are problems of interstate commerce. If the investigation could be extended to unfair methods, we could open the door to potential competition. Then potential competition would become real.

At the recent Trust Conference in Chicago, in October, the demand for a revision of the Sherman Anti-Trust law was heard on all sides. I think I am correct in saying that the business sense of this country is in favor of the modification of the Sherman Anti-Trust law. As to what this modification should be was not, it is true, decided by the Conference.

Addressing himself to the provisions of the act referring to employes, etc., Mr. Marburg said this means that the modification relates only to the Sherman Anti-Trust law, that it in no way protects the rights of labor under the common law, nor any other statute law whether Federal or State. It means that men should be permitted to combine and strike or permitted to combine and have trade agreements. Now economists are a unit in feeling that the trade agreement is the most powerful instrument for peace in the industrial world. It anticipates the trouble. There should certainly be nothing in the law to prohibit the trade agreement. We do not say that the present law prohibits trade agreements or prohibits the strike; but we see in the actual indictment of laboring men for striking the probability that it does.

April 6th, Morning Session.

At the opening of the hearing Mr. Low presented a list of the persons who had been consulted in the preparation of the bill, as follows:

Nicholas Murray Butler, Albert Shaw, Talcott Williams, J. W. Jenks, E. H. Gary, Samuel Mather, Marcus M. Marks, Henry L. Higginson, Robert Mather, Isaac N. Seligman, James Speyer, W. A. Clark, August Belmont, Francis Lynde Stetson, Victor Morawetz, J. H. Ralston, Samuel Gompers, John Mitchell, D. J. Keefe, James O'Connell, P. H. Morrissey and D. L. Cease.

He also filed a supplementary statement in regard to the bill, which, for convenience, has already been printed with his principal statement.

PROFESSOR J. W. JENKS, of Cornell University, continued the argument in favor of the bill. After giving some account of the labor expended and the interests consulted in the preparation of the draft, he proceeded to take up the bill section by section, and interpreted it.

He called attention to the fact that the object of the first section is to provide for publicity. The reasons for placing the framing of questions in the hands of the President were two. It was felt that the act would be cumbersome if the specific questions to be asked were enumerated in the act, and it was felt further that under conditions which might arise in the future it might be desirable to introduce new questions not specifically provided in the law itself. These conclusions were reached after efforts had been made to formulate a statement of the information which should be obtained.

The sub-committee desired that the suggestions referred to which had not been incorporated in the act should be discussed in order that the general scope of the provision as understood by the framers of the bill could be placed in clearer light. Before taking up these questions, the Chairman called attention to the fact that the information to be asked for should be such as was related specifically to interstate commerce, and requested that in each case the connection between the information desired and interstate commerce be clearly set forth.

Mr. Jenks: Of course, we have no means of knowing that these questions are just the class which the President would ask. They are those that personally I should be willing to take the responsibility of inserting in the act. They are concerning corporations, as follows:

Its name, State of incorporation (if incorporated), and location of principal office, together with a true copy of its charter or articles of incorporation (if incorporated), or of association, and a true copy of all special or private acts (if any) under which it was organized or constituted or continued, or a reference thereto, as published in the official laws of the State in which any such acts have been passed.

Second—The names of its officers, directors and standing committees, if any, with residences.

Third—A complete copy of its by-laws. It is under the by-laws, of course, that it will commit these offenses or will carry on its business in the proper way.

If such corporation or association shall be one having a capital stock, its statement shall include the following additional data:

The nature of its business—that seems directly pertinent, if it is to be engaged in interstate commerce—a description of the different classes of its stock, if any.

Further, I should say, a description of the different classes of its stock, if any, with respective amounts authorized and outstanding, and the terms, privileges, restrictions and conditions of each class separately, and also a description of its funded debt, and the several issues thereof, and the respective amounts thereof issued and outstanding.

A statement of the amounts of its stock held by other corporations, specifying such corporations, and the amounts held by them respectively.

A statement of the amount of stock in other corporations held by it, stating the names of such corporations and the separate amounts of stock held therein.

A copy of the balance sheets and of the income account, and of all reports to stockholders of the corporation for the two preceding years.

Similar information as to any other corporation more than one-half of whose capital stock is held by it.

The Chairman: How do the preferred stock and the common stock and the bonds have any real or substantial relation to interstate commerce?

Mr. Jenks: The second section of the Sherman Act has to do very strongly with the effort to monopolize and with monopolizing traffic. The power to obtain a monopolistic control of interstate commerce depends very largely upon the size of a corporation, upon the way in which that corporation is organized legally, upon the way in which its stocks and bonds stand relative the one to the other, and upon its relations with the other corporations which are engaged in similar lines of business. And it seems to me that under those circumstances the connection is direct enough so that we are warranted in getting that information in order to enable us to deal directly with the questions of interstate commerce that come up.

The Chairman: On the theory which you have just been stating, how do you get the connection with interstate commerce unless you are able to show relations with other capitalizations?

Mr. Jenks: When you get your complete statement then you have your relation with the interstate commerce.

The Chairman: Do you think a court would compel a corporation to file a return that on its face did not disclose any power of the court to compel it to be done, on the hypothesis that later new conditions might be disclosed that would compel them to file it?

Mr. Jenks: So far as this bill is concerned, there is no thought of bringing any compulsion whatever upon any corporation to register if it does not wish to do so.

Mr. Low: Any corporation doing interstate commerce which has stock of various kinds seeks the money of the public as investors for the purpose of doing interstate commerce. Is it not a perfectly legitimate thing to ask that corporation, if it wants to do interstate commerce on the basis of all sorts

of stock and bonds, for the benefit of the investor whose money is to be engaged in interstate commerce, to state the conditions upon which that money is to be used in interstate commerce?

The Chairman: That comes right down to the question as to whether, under our power to regulate commerce, we have any power to protect the investing public as a part of the regulation of commerce. I will ask Professor Jenks to tell us what he thinks about that. Under the power to regulate commerce, have we any power to so regulate corporations as to protect the investing public? And if so, what connection has the security-investing public with interstate commerce?

Mr. Jenks: I am very glad Mr. Low spoke of that. I should say that under the power to regulate commerce the United States Government does have a perfect right to invite corporations that are engaged in interstate commerce to answer any questions that will serve the public welfare.

The Chairman: Oh, but that is not quite it, is it—"invite"?

Mr. Jenks: "Invite"? Certainly.

The Chairman: No; my question is, do we have any power, under the power to regulate commerce, to so regulate it as to protect the security or value of the investing public's investments? Is that a part of our power to regulate commerce?

Mr. Jenks: I should say that it is part of your power to regulate commerce or to make any other law. I think it is entirely within your power, and I think, moreover, it is part of your duty, in passing laws to regulate interstate commerce or to do anything else, to keep in mind distinctly and fully the public welfare. If you can secure that welfare easily and well and legally and properly by suggesting that in their reports they shall furnish certain information that will be of benefit to the investing public and to others, it is perfectly proper and legal and wise for you to do it.

The Chairman: So far as I can judge, the information that you have suggested is everything that a State Legislature could require of a corporation chartered by the State. Is it your conception of the legal situation that Congress has the same power with reference to requiring reports from corporations engaged in interstate commerce that a State has in relation to a State corporation that it charters?

Mr. Jenks: No, I think not; but I think there is this distinction that should be made in connection with what I have just said; and that is that Congress, in my judgment, does have the power to prescribe the conditions. You will remember that this is not a compulsory thing; this is a permissive thing. It simply says: "If you, the corporation, wish to do this interstate commerce"—and they are not restricting it to that, either—"and wish, furthermore, to get special privileges that we are willing to grant under certain conditions, you may have those privileges if you willingly come and give us this information."

Mr. Low called attention to a bill introduced in 1905 by Mr. Littlefield calling for substantially similar information. Commenting upon it Mr. Littlefield said that the time he introduced the bill he had had no doubt of its propriety, but the subsequent decision in the Howard case, which expressly held that you cannot regulate corporations because they are engaged in interstate commerce, but only as to the things which relate to interstate commerce, had modified his views.

Mr. Washburn: Why is it important to inquire into the individual financial condition of each one of the corporations when the only act of theirs on which the Sherman act can operate is the combination itself?

Mr. Jenks: In a great many cases it is not important either one way or the other; but on the other hand it might also be that these corporations are such that by virtue of this agreement they are acquiring a monopolistic power, and under these circumstances it is of extreme importance that the Government should know how they are put together, how they are getting that monopolistic power, and how they are exercising it.

Mr. Sterling: If that be true, can there be any serious question, then, about the Federal Government having power to impose any condition on interstate corporations that will enable it to intelligently regulate the commerce in which they are engaged?

Mr. Jenks: That was the contention that I myself was making, exactly as you are stating it; but it is a little bit different from saying that the Congress has the same power over interstate commerce and over corporations that may be engaged in interstate commerce, that the State Legislatures have over corporations engaged in intra-state commerce; and it was the distinction that I understood the Chairman was making. I myself intended to take, and I thought did take, exactly your position—that Congress could practically impose any conditions it pleased in reference to the regulation of interstate commerce; but not necessarily that it had the same power over corporations engaged in interstate commerce that the State had which itself created those corporations.

Mr. Malby: Professor, there cannot be any question but that in the case of a corporation which is created by a State itself, receiving its corporate existence and receiving all its rights and privileges from the State itself, that State may require from that corporation any kind of a report it pleases?

Mr. Jenks: Certainly.

Mr. Malby: But the distinction between that case and the one in which the corporation is engaged in interstate commerce, where the charter in every case is granted by a statute, is that our inquiry, under the decisions of the Supreme Court, is limited to those acts which go exclusively to the interstate commerce.

Mr. Jenks: Provided you are compelling it. If, on the other hand, you wish to say: "If you will give us this still further information that we perhaps would not have the power to compel you to give, we will grant you certain other immunities and privileges," I conceive that you have the right to accept that.

Mr. Malby: Can we compel by indirection a corporation to furnish information which we could not compel it to furnish by direction?

Mr. Jenks: I believe that Congress does have a right to secure the public welfare, which in this case would be the securing of the information by offering certain privileges to those who wish to accept them. It is a very common and practically universal form of legislation in all the States and under all conditions everywhere.

This is not a compulsory act, it is a permissive act. These are certain things that are in the interest of the public that we would like to have carried out. We say to them, "If you will furnish this information, if you wish to come under this law, we will grant you certain immunities. You take your choice. It is perfectly immaterial."

The Chairman: Should we enact legislation to compel the production of information that is not Federal in its character? I will put it that way. That covers the whole ground. That is, should we, as a matter of policy, enact legislation, Professor, for the purpose of compelling the production of information that is not Federal in its character?

Mr. Jenks: Personally, I should be inclined to say that we ought not to compel the production of information that is not Federal in its character, but there is no compulsion here.

The Chairman: Do we not practically do it if we say that we will give the corporation immunity from crime if it will furnish it?

Mr. Jenks: Certainly; you grant the immunity provided they are willing to do that; and they take their choice. I do not think it is right to call that compulsion.

Mr. Low: Mr. Chairman, I do not think we do grant immunity from crime in the ordinary sense.

The Chairman: Why not?

Mr. Low: What we do say is: "Upon that condition you can ascertain what the attitude of the prosecuting arm of the Government is going to be—whether they are going to attack you for this thing which you have done or want to do, or whether they are not;" and that is all that the bill covers. This bill of ours does not change the legal status of any action done under the Sherman Anti-Trust Act, but it does say——

The Chairman: It does not change the legal status?

Mr. Low: I do not think so, of anything done.

The Chairman: Does it not make combinations reasonable that are now unreasonable under the strict construction of law? And if it does not, what does it accomplish?

Mr. Low: I think it simply gives an opportunity to the executive arm of the Government, represented by the Department of Commerce and Labor, to say whether it is going to attack that combination or not under the Sherman law. That is all it does; and it says that quickly, instead of leaving it uncertain for a long period of time. If, in the brief period that may be fixed by the bill, it does not say that the thing is in unreasonable restraint of trade, it can still attack at any time in the future if it changes its mind, if conditions show that it has been mistaken; but then it can only attack on the ground that the thing is in unreasonable restraint of trade.

April 6th, Afternoon Session.

Mr. Jenks continued his statement, with a consideration of the second part of the section which had to do with the registration of corporations and associations not for profit.

It was not, he said, the purpose of the committee to confine this to incorporated organizations, but that it should apply to all organizations whether incorporated or not.

The Chairman asked whether the power which was vested in the Commissioner of Corporations under the first section was executive or judicial power, and asked further whether it was competent for Congress by legislation to vest in the executive branch of the government any judicial powers.

Mr. Jenks: I am very familiar with the question and also with the difficulty. The difficulty of the answer comes largely on this account, that both those words, executive and judicial, are used with a great variety and number of shades of meaning. If I say yes, you can cite any number of examples where we have separated the powers, and if I say no, you can cite any number of instances where you know perfectly well both powers are exercised by the same body or person.

Speaking on the reasons for not requiring corporations and associations not for profit to file their contracts and agreements, Mr. Jenks said:

The agreements that are made primarily by the trades unions, trade agreements, if you like, between them and their employers, the agreements that they make among themselves, so far as their organization is concerned, are agreements that have to do primarily with them as individuals, with their liberty to act as individuals, and not primarily with property. It seems, therefore, that it is entirely proper and right to make a distinction between organizations that may be attempting, we will say, to monopolize capital, to monopolize the power of capital in many ways, and those that are dealing with their power to work, simply; with their personal power and not with the power to handle capital of others.

One class of corporations is conducted for profit and has capital stock, and the other is not for profit, and it has no capital stock. This second class of corporations or associations comprise various kinds. There are some such examples as the Associated Press, which furnishes a convenient way of handling their business all the way through, and there are others, such as are represented by these gentlemen here to-day, which are organized for carrying into effect objects in which they are interested, which are not for profit, directly. There are others, like the farmers' organizations, for carrying on the work that they think is wise and just, and to promote their legitimate interests, and there are several others, such as I am connected with. All of these are not for profit.

The Chairman: I understood you to say that there is a difference in the kind or effect of the contract. Will you give me an instance of a contract of the kind you mention?

Mr. Jenks: I should say contracts made between employers and employes with reference to conditions of labor and wages of labor, and matters of that kind, even though those contracts do affect, more or less directly—rather less directly than more—interstate commerce, are contracts that are so essentially different in their nature that they should be treated in a different way from those between two or three different railroads or two or three great manufacturing establishments with reference to the limitation that they shall place upon their output, or the way that they shall distribute their goods among the different states.

I wish to take up section 7 with reference to triple damages. I had supposed that when the Sherman act was passed, that provision for triple damages was imposed largely on account of the popular apprehension that there was very grave danger, such as there is in connection with these great corporations, and it was thought that if threefold damages were imposed, it would tend to check the growth of these great corporations. The suggestion was made to remove this provision for triple damages and simply provide for recovery of the damages sustained and the costs of suit, including a reasonable attorney's fee. This takes away punitive damages. Such damages are imposed, of course, under certain circumstances, under the common law; but there is then some case of flagrant or outrageous fraud, or there is some apparent intent on the part of the person who is committing the injury to hurt, beyond a mere matter of money damage, the person that is damaged.

The Chairman: Is it not predicated in the main on the theory that the injury is malicious?

Mr. Jenks: That is it, that the injury is malicious. Now, so far as the provision here is concerned, I will say that generally speaking the imposition of punitive damages under ordinary circumstances where there is no malicious intent would be wrong, and is not good policy. Now, under the Sherman law people may make contracts, usually in their own interests, with no particular thought of hurting anybody else, and at the same time they may hurt other people, and if so they would be mulcted in triple damages. It seems to me they should pay the actual damages, but there is no reason why they should have punitive damages imposed upon them. There might be cases where that is true, but ordinarily not.

The Chairman: Are you in favor of their being allowed to conspire and combine, to secure their rights, to destroy the business of another person?

Mr. Jenks: I am not in favor of their being allowed to conspire. Not to combine, if the word "combine" is to be pushed to the extent of injuring other people wilfully. It is possible that in such a case as the Danbury hat case the primary purpose of the

laborers was not a malicious injury of others, but the securing of their own rights, even though the injury was done. With the same frankness, I think that the employers, in the action they take in many cases, are simply endeavoring to obtain their own ends and to secure their own rights, even though there may be irreparable and very great injury done to the laborers. I think we ought to recognize in these disputes between employers and employes that there is often very great feeling. The prime purpose is to secure their own rights, and they are careless of the others. We ought to be rather cautious about imputing malicious intent to either side.

The question was asked as to the reasons for striking out the provision for triple damages. On behalf of the committee, Mr. Jenks expressed the opinion that these triple damages might be an inducement to vexatious litigation. The opponents of the bill felt that without the triple damages private individuals would not be moved to secure the enforcement of the law, because of the costs involved. With the triple damages they had ample margin to pay the considerable costs of litigation in suits of this character. On behalf of the committee it was urged that simple damages were a reversion to the rules of the common law. While it was pointed out that the common law admitted punitive damages, it was contended that such punitive damages were only allowed in exceptional cases not parallel to the case in point.

In explanation of the so-called immunity provisions of the bill, Mr. Jenks said that it was very desirable at the present time to remove from business men the apprehension of attack under this Sherman act for agreements that they might have made or might make, that they thought to be reasonable. So the provision has been made here that no suit or prosecution under the first six sections of the act would be begun under any contract or combination, unless the same be in restraint of trade. We felt that so far as the Federal government itself was concerned, that should take effect immediately, so that unless the suits had been begun the people might feel that any contracts they might have made before, even though they were in restraint of trade, if they were reasonable, should stand. So far as private individuals were concerned, we felt that the situation was quite different. Private individuals may have been injured, and they should have the right to recover damages for an injury. Moreover, it is quite probable that it would be unconstitutional, even if it were desirable to attempt to cut off the right of private individuals from getting damages, now. As I say, it was not considered desirable to do that anyway, and it would have been unconstitutional, probably, if it had been attempted. It was thought the wise thing to do to provide a statute of limitations which might be short, so that there might not be too much apprehension or too long a time for attacks along this line, but at the same time long enough so that all just causes could be brought and pushed through to a conclusion; so that a provision was made that if this act was passed the Federal government should not bring any suits unless they were prepared to prove that the contracts or agreements were unreasonable. So far as private contracts and agreements were concerned, they could bring suit in a year. I think that covers practically all of the points in the bill. We recognize fully that the bill is by no means a perfect bill. A great many of us have been working on it, and we believed that it was the best we could do. We believe that it is a practicable bill, although there may be minor amendments to be made here. We have tried to provide for what is reasonable and practicable, to secure a considerable amount of publicity, the more the better, because we think that is a remedial action, and we do believe that the amendments of this nature to the Sherman act are very sadly needed, and there is perhaps no other action which could be taken by Congress which would so greatly improve business conditions at the present time as this. We think, in addition to that, that it would be a bill that would promote justice among business men and workingmen.

A discussion at some length ensued as to whether under the bill unincorporated bodies which were registered were obliged to file with the Commissioner of Corporations copies of their agreements, thereby submitting to that officer the question of the reasonableness of such agreements. It was pointed out that there was no such obligation. There was a privilege to file such agreements in case the association so desired, in which case they submitted themselves to the rules set forth in the bill. But there is no intention in the bill to create a compulsory record of such agreements.

MR. SAMUEL GOMPERS made a further statement, saying:

I want just to call attention to the fact that as one of the representatives of the labor organizations who have appeared before the committee, I have stated that we desired the clear distinction made as between the organizations that have capital stock and are organized for profit, the organizations of the men who deal in products of labor and the distribution of those products, and the other associations of men and women who own and control no wealth, who are organized not for profit, those associations which have no capital stock, and whose only object in association is the protection of themselves, their lives, their labor power. That distinction should be clearly and distinctively drawn; and I said that our position is that in so far as the bill applies to the corporations and associations and common carriers, the associations and corporations that deal in the products of labor and distribute the products of labor, the bill is necessary. And so far I am in hearty accord with its purpose. In so far as it refers to the labor organizations which you refer to as associations not for profit, and without capital stock, I ask that those features be entirely eliminated from the bill, and the amendments which I submitted to the committee take the place of them throughout.

In so far as the restraints of trade are concerned. If I may answer for myself in regard to that, it may be suitable to the corporations for profit and owning capital stock. It is unsuitable to the labor organizations, for this reason if for no other, that it would immediately establish compulsory arbitration. The decision of the United States Supreme Court held that the labor organizations come under the provisions of the Sherman anti-trust act. If, then, the contracts and agreements and the activities of the labor organizations are subject to the review of either the Commissioner of Corporations or the courts as to the reasonableness or the unreasonableness of an agreement, the matter assumes immediately the position of compulsory arbitration. The Commissioner determines the reasonableness or unreasonableness of an agreement with employers, and finally becomes the arbiter of what the conditions shall be.

I want to present just a thought or two upon the subject of the boycott. May I say that I do not believe that I would intentionally hurt any man or woman, or child, or beast, or reptile, only in self-defense. I say that so that you may understand that I am not one of those men who run amuck, and aim to hurt and injure. I know this, that never in my whole life, my private life, or in connection with the labor movement, has any act of mine been governed and controlled or initiated from motives of malice, nor has personal feeling entered into it. I believe in the boycott. I believe in the right of the boycott.

After all, what is the boycott, not in the sense in which some people construe it, of personal attack, of unlawful threats, of intimidation of a character that is unlawful and improper. But the threat to do a certain thing is perfectly proper to indulge in if the doing of the thing itself is not improper nor unlawful. I hold that no man has any vested right in my patronage or the patronage of any other man, and when I speak of the boycott I speak of it exclusively in the sense of the bestowal or the withholding of patronage. No man has any vested right in the patronage of another.

There are conceptions to-day as to the rights of men that were wholly different in time gone by. The conception of the rights of men will be broader as time goes on. At one time a strike was a criminal act, punishable by imprisonment, by branding, by hanging. A different concept has come over the minds of people as time went on, and it will so continue. The workingmen of to-day are, generally speaking, in the enjoyment of greater rights than they had twenty, fifty or one hundred or more years back. Perhaps the decision of the Supreme Court of the United States has thrown them back; and it undoubtedly has. It has shorn from them rights which we believed were ours. But the Supreme Court decisions have been changed and modified, and I am in hopes; I am optimistic. I not only hope, but I firmly believe, I am firmly persuaded and convinced, that the normal activities of the working people of our country are going to be accorded to them, and to be regarded as absolutely normal and right. There is no purpose in the labor organizations either to destroy industry or commerce, not even of one man. It is a mistake to believe that our purposes are different. If Professor Jenks's construction of the Hepburn bill is correct we shall find it necessary to have introduced in Congress the amendment to the Sherman Anti-Trust law, which I submitted Saturday, as a separate bill.

After arrangements had been made for a further meeting of the committee in order to hear the objectors to the bill, MR. GEORGE F. MONAHAN, of Detroit, made the following statement:

Mr. Chairman and Gentlemen: I desire simply to be recorded as being here representing the National Founders' Association. The organization itself comprises some 500 firms and industries located in the various parts of the United States, and employs in various capacities considerably over a quarter of a million of men. We feel very seriously on the subject of this measure, and although I came prepared with a brief and ready to discuss the legal features of the matter somewhat at length, I believe my mission may be at least partially completed at this time, if further time is not afforded a week from now for further discussion of this matter, by stating in brief the proposition involved. Believing as we do that the Loewe decision, recently rendered by the Supreme Court of the United States, is in consonance with what the law should be, and that the law as it now is, under the Sherman Anti-Trust act, in so far as it relates to labor unions, is just precisely what is necessary, we emphatically protest before this committee against any modification of that law, such as is contemplated in this act. We believe, as do the gentlemen who have spoken in reference to this matter and their desire to still continue the opposition that they feel against the boycott, that their desire was not to diminish the force of this bill, so far as the boycott is concerned. We believe that their opposition in that regard, though not well taken under the verbiage which they have asked, is sincere. We believe, however, that the bill, as it is, is a substantial modification of the law as it is, and that it will afford to labor rights which labor should not have, particularly with reference to the so-called secondary boycott.

The committee then adjourned until Thursday, April 16.

The text of the bill follows:

H. R. 19745
IN THE HOUSE OF REPRESENTATIVES
March 23, 1908.

Mr. Hepburn introduced the following bill, which was referred to the Committee on the Judiciary and ordered to be printed:

A BILL

To regulate commerce among the several States or with foreign nations, and to amend the act approved July second, eighteen hundred and ninety, entitled "An act to protect trade and commerce against unlawful restraints and monopolies."

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

That section seven of the act approved July second, eighteen hundred and ninety, entitled "an act to protect trade and commerce against unlawful restraints and monopolies" be, and the same is hereby amended so as to read as follows:

"Sec. 7. That any person who shall be injured in his business or property by any other person or corporation by reason of anything forbidden or declared to be unlawful by this act may sue therefor in any circuit court of the United States in the district in which the defendant resides or is found, without respect to the amount in controversy, and shall recover the damages by him sustained and the costs of suit, including a reasonable attorney's fee."

Sec. 2. That in any suit for damages under section seven of the said act approved July second, eighteen hundred and ninety, based upon a right of action accruing prior to the passage of this act, the plaintiff shall be entitled to recover only the damages by him sustained and the costs of suit, including a reasonable attorney's fee; and no suit for damages under said section seven of the said act, based upon a right of action accruing prior to the passage of this act, shall be maintained unless the same shall be commenced within one year after the passage of this act.

Sec. 3. Nothing in said act approved July second, eighteen hundred and ninety, or in this act, is intended, nor shall any provision thereof hereafter be enforced, so as to interfere with or to restrict any right of employees to strike for any purpose not unlawful at common law, or to combine or to contract with each other or with employers for the purpose of obtaining from employers peaceably or by any means not unlawful at common law satisfactory terms for their labor or satisfactory conditions of employment, or so as to interfere with or to restrict any right of employers for any purpose not unlawful at common law to discharge all or any of their employees or to combine or to contract with each other or with employees for the purpose of obtaining labor on satisfactory terms peaceably or by any means not unlawful at common law.

Sec. 4. That the said act approved July second, eighteen hundred and ninety, is hereby further amended by adding at the end of said act the following sections:

Sec. 9. That any corporation or association which may be subject to this act, but not subject to the act approved February fourth, eighteen hundred and eighty-seven, entitled "An act to regulate commerce," or the acts amendatory thereof or supplemental thereto, shall be entitled to the benefits and immunities in this act hereinafter given, if and when it shall register as herein provided, and shall comply with the requirements of this act, hereinafter set forth, but not otherwise.

"Such registration, by a corporation or association for profit, and having capital stock, may be effected by filing with the Commissioner of Corporations a written application therefor, together with a written statement setting forth such information concerning the organization of such corporation or association,

its financial condition, its interstate contracts, and its corporate proceedings, as may be prescribed by general regulations from time to time to be made by the President pursuant to this act; and such registration by a corporation or association not for profit and without capital stock may be effected by filing with the Commissioner of Corporations a written application therefor, together with a written statement setting forth, first, its charter or agreement of association and by-laws; second, the place of its principal office, and, third, the names of its directors or managing officers and standing committees, if any, with their residences.

"Thereupon the Commissioner of Corporations shall register such corporation or association under this act. In case any corporation or association so registered shall refuse or shall fail at any time to file the statements or to give the information required under this act, or to comply with the requirements of this act, or in case information furnished by it shall be false in any material particular, the Commissioner of Corporations shall have power to cancel the registration of such corporation or association after thirty days' notice in writing to such corporation or association. Any corporation or association aggrieved by such action of the Commissioner of Corporations may apply to the Supreme Court of the District of Columbia, in a suit or proceeding in equity, for review of such action and such relief in the premises as may be proper, and said court shall have jurisdiction to hear and determine such application and to affirm, reverse or modify such action of said Commissioner, subject to appeal as in other causes in equity.

"Sec. 10. That the President shall have power to make, alter and revoke, and from time to time, in his discretion, he shall make, alter and revoke, regulations prescribing what facts shall be set forth in the statements to be filed with the Commissioner of Corporations by corporations and associations for profit and having capital stock applying for registration under this act, and what information thereafter shall be furnished by such corporations and associations so registered, and he may prescribe the manner of registration and of cancellation of registration.

"Nothing in this act shall require the filing of contracts or agreements of corporations or associations not for profit or without capital stock, and such corporations and associations while registered hereunder, and the members thereof, shall be entitled to all the benefits and immunities given by this act, excepting such as are given by section eleven and section twelve, without filing such contracts or agreements; but from time to time every such corporation or association shall file with the Commissioner of Corporations, when and as called for by him, a revised statement giving, as of a date specified by him, such information as is required to be given at the time of original registration under section nine of this act.

"Sec. 11. That any corporation or association registered under this act, and any person, not a common carrier under the provisions of said act approved February fourth, eighteen hundred and eighty-seven, or the acts amendatory thereof or supplemental thereto, being a party to a contract or combination hereafter made, other than a contract or combination with a common carrier filed under section twelve of this act, may file with the Commissioner of Corporations a copy thereof, if the same be in writing, or if not in writing, a statement setting forth the terms and conditions thereof, together with a notice that such filing is made for the purpose of obtaining the benefit of the provisions of this section.

No prosecution, suit or proceeding by the United States shall be begun under the first six sections of this act for or on account of any such contract or combination hereafter made of which a copy or written statement shall have been filed as aforesaid, or for or on account of any acts done in performance thereof by or in behalf of such a corporation, association or person, unless such contract or combination shall be in unreasonable restraint of trade or commerce as defined in section three of this act, or shall constitute a conspiracy in violation of section one or of section three of this act, or shall be in violation of section two of this act. If in the opinion of the Commissioner of Corporations any such contract or combination, of which a copy or a written statement shall have been filed as aforesaid shall be in unreasonable restraint of trade or commerce as defined in section three of this act, or shall constitute a conspiracy in violation of section one or of section three of this act, or shall be in violation of section two of this act, said Commissioner shall be authorized and empowered and it shall be his duty to enter an order to that effect, which order shall set forth briefly the grounds upon which it is based. Any such order may be made by the Commissioner upon his own motion and without notice or hearing within thirty days from the date of the filing of such contract or written statement. After the expiration of such thirty days no such order shall be made by the Commissioner except after notice to the party or parties who filed such contract or written statement and after giving such party or parties an opportunity to be heard, and such order shall take effect upon a date therein to be specified not less than ten days after the filing thereof, but any person aggrieved by such action of the Commissioner of Corporations, or the United States in case of his non-action, may apply to the Interstate Commerce Commission for a rehearing of the case, and said Commission (with which the Commissioner of Corporations is hereby authorized to sit for the purpose of such rehearing with the powers and duties of a member) is hereby authorized and directed after due motion to rehear such case and thereupon to enter such order in the case as seems to it proper, subject as in other instances to appeal to the courts as hereinafter provided. If any party or parties to any such contract or combination of which a copy or a written statement shall have been filed as aforesaid shall do any act in performance of such contract or in pursuance of such combination after the Commissioner of Corporations or the Interstate Commerce Commission shall have entered an order as aforesaid, such party or parties, unless such order of the Commissioner on the rehearing hereinbefore provided shall have been replaced by a new order or such order shall have been suspended or set aside by order of the court as herein provided, shall be deemed guilty of a misdemeanor and on conviction thereof shall be punished by fine not exceeding five thousand dollars or by imprisonment not exceeding one year, or both said punishments; and the United States may institute and maintain proceedings in equity under section four of this act to prevent and restrain the performance of such contract and the continuance of such combination and any action pursuant thereto in violation of this act.

No corporation or association authorized to register under section nine of this act shall be entitled to the benefit of this section if it shall have failed so to register or if the registration of such corporation or association shall have been cancelled; and the United States may institute, maintain or prosecute a suit, proceeding or prosecution under the first six sections of said act for or on account of any such contract or combination hereafter made, of which a copy or written statement shall not have been filed as aforesaid, or as to which an order shall have been entered as above provided.

Any party affected by any such order entered by the Commission may institute and maintain a suit to enjoin, set aside, annul or suspend such order in the Supreme Court of the District of Columbia, and jurisdiction is hereby given to such Court to hear and determine such suits and to grant such relief; but no interlocutory order or decree, enjoining, setting aside, annulling or suspending any such order of the Commission shall be granted except after not less than five days' notice to the Commission. The provisions of "An Act to expedite the hearing and determination of suits in equity, and so forth," approved February eleventh, nineteen hundred and three, shall be, and are hereby, made applicable to all such suits, including the hearing on an application for a preliminary injunction. An appeal my be taken from any interlocutory order or decree granting or continuing an injunction in any suit, but shall lie only to the Supreme Court of the United States: Provided, That the appeal must be taken within thirty days from the entry of such order or decree, and it shall take precedence in the Appellate Court over all other causes, except causes of like character and criminal causes.

No corporation or association for profit or having capital stock, and registered under this Act, that hereafter shall make a combination or consolidation with any other corporation or association, shall be entitled to continue its registration under this Act, unless without delay it shall file with the Commissioner of Corporations, pursuant and subject to the provisions of this section, a statement setting forth the terms and conditions of such combination or consolidation, together with a notice as hereinabove provided.

Sec. 12. That any common carrier under the provisions of the said Act approved February fourth, eighteen hundred and eighty-seven, or the Acts amendatory thereof or supplemental thereto, being a party to a contract or combination in the nature of a traffic agreement, but not including pooling of freight or earnings hereafter made, as provided by Sec. 5 of said Act approved February fourth, eighteen hundred and eighty-seven, or any other party to such contract or combination, may file with the Interstate Commerce Commission a copy thereof, if the same be in writing, or if not in writing, a statement setting forth the terms and conditions thereof, together with a notice that such filing is made for the purpose of obtaining the benefit of the provisions of this section.

No prosecution, suit or proceeding by the United States shall be begun under the first six sections of this Act or on account of any such contract or combination hereafter made of which a copy or written statement shall have been filed as aforesaid, or for or on account of any acts done in performance thereof by or in behalf of such corporation, association or person, unless such contract or combination shall be in unreasonable restraint of trade or commence as defined in section three of this Act, or shall constitute a conspiracy in violation of section one or of section three of this Act, or shall be in violation of section two of this Act. If in the opinion of the Interstate Commerce Commission any such contract or combination of which a copy or a written statement shall have been filed as aforesaid shall be in unreasonable restraint of trade or commerce as defined in section three of this Act, or shall constitute a conspiracy in violation of section one or of section three of this Act, or shall be in violation of section two of this Act, said Commission shall be authorized and empowered and it shall be its duty to enter an order to that effect, which order shall set forth briefly the grounds upon which it is based. Any such order may be made by the Commission, upon its own motion and without notice or hearing, within thirty days from the date of the filing of such contract or written statement. After the expiration of such thirty days no such order shall be made by the Commission except after notice to the party or parties who filed such contract or written statement and after giving such party or parties an opportunity to be heard, and such order shall take effect upon a date therein to be specified not less than ten days after the filing thereof; but any person aggrieved by such action of the Interstate Commerce Commission, or the United States in case of its non-action, may apply to the Supreme Court of the District of Columbia for review of the case; and said Court is hereby authorized and directed to hear and determine such application and to affirm, reverse or modify such action, or in case of its failure to act to enter such order in the case as seems to it proper, subject as in other instances to the provisions of section eleven and to appeal to the Supreme Court of the United States as herein provided.

If any party or parties to any such contract or combination of which a copy or a written statement shall have been filed as aforesaid shall do any act in performance of such contract or in pursuance of such combination after the Interstate Commerce Commission shall have entered an order as aforesaid, such party or parties, unless such order of the Commission shall have been enjoined, annulled or suspended by a decree or order of a Court as herein provided, shall be deemed guilty of a misdemeanor and on conviction thereof shall be punished by fine not exceeding five thousand dollars or by imprisonment not exceeding one year, or both said punishments in the discretion of the Courts; and the United States may institute and maintain proceedings in equity under section four of this act to prevent and restrain the performance of such contract and the continuance of such combination and any action pursuant thereto in violation of this Act.

No corporation or association authorized to register under section nine of this Act shall be entitled to the benefits of this section if it shall have failed so to register, or if the registration of such corporation or association shall have been cancelled; and the United States may institute, maintain or prosecute a suit, proceeding or prosecution under the first six sections of said Act for or on account of any such contract or combination hereafter made, of which a copy or written statement shall not have been filed as aforesaid, or as to which an order shall have been entered as above provided.

Sec. 5. That no suit or prosecution by the United States under the first six sections of the said Act approved July second, eighteen hundred and ninety, shall hereafter be begun for or on account of any contract or combination made prior to the passage of this Act, or any action thereunder, unless the same be in unreasonable restraint of trade or commerce among the several States or with foreign nations; and no suit or prosecution by the United States under the first six sections of the said Act approved July second, eighteen hundred and ninety, shall be begun after one year from the passage of this Act for or on account of any contract or combination made prior to the passage of this Act, or any action thereunder; but no corporation or association authorized to register under section nine of the said Act approved July second, eighteen hundred and ninety, as amended, shall be entitled to the benefit of the provisions of this section, if it shall have failed so to register, or if the registration of such corporation or association shall have been cancelled before the expiration of one year after such registration, exclusive of period, if any, during which such cancellation shall have been stayed by an order of the Interstate Commerce Commission or an order or decree of court subsequently vacated or set aside. Anything herein contained to the contrary notwithstanding, all actions and proceedings now or heretofore, pending under or by virtue of any provisions of the said Act approved July second, eighteen hundred and ninety, may be prosecuted and may be defended to final effect; and all judgments and decrees heretofore or hereafter made in any such actions or proceedings my be enforced in the same manner as though this Act had not been passed.

Vol. III. NEW YORK, MARCH, 1909. No. 6

AN EVENT TRULY AMERICAN IN SPIRIT

THE NINTH ANNUAL DINNER OF THE NATIONAL CIVIC FEDERATION—NINE HUNDRED GUESTS AT THE HOTEL ASTOR JOIN IN A MANIFESTATION OF CIVIC FRATERNITY

THE most striking feature of the ninth annual dinner of the National Civic Federation, December 15th, 1908, was the presence of President-elect and Mrs. Taft as the guests of honor. The occasion was one of special interest and inspiration, one long to be remembered by every one who had the good fortune to be present.

Nine hundred guests had assembled in the banquet hall when the first bars of "Hail to the Chief," played by the orchestra, announced the entrance of Mr. and Mrs. Taft. There was spontaneous and hearty applause as the man who is to stand at the nation's head during the next four years walked to his place, escorted by Mr. John Hays Hammond, chairman of the Reception Committee. The entire assembly rose and gave hearty greeting, and finally, as a conclusion to its enthusiastic reception of the guests of honor, sang "America," accompanying the music played by the orchestra.

The scene was brilliant with color, light and animation, when, the ovation ended, the guests sat down to the tables which filled the spacious rooms. There was scarcely space for passage between the decorated tables, but the crowding together only

HON. WILLIAM HOWARD TAFT,
Chairman Public Employes' Committee of the Welfare Department, The National Civic Federation.

MRS. WILLIAM HOWARD TAFT,
Chairman Committee on Welfare Work for Government Employes of the Woman's Department, The National Civic Federation.

made the occasion the more informal, the more interesting to the guests of the Civic Federation.

The New York daily press characterized the dinner as a "love feast between capital and labor," and the idea thus expressed was strongly impressed upon observant people among those present long before the speaking began. There was little to indicate to the eye of a stranger that in this gathering capitalists and masters of finance, women and men of the world of fashion, as well as scholars, writers, journalists, clergymen and other makers of public opinion sat at table with representatives of labor in its organized branches. It looked like any other great public dinner where men and women meet each other on grounds of good-fellowship and understanding, but when one knew the personalities of the guests who talked together around those tables it became far more interesting than any usual social gathering.

At the table presided over by President Low sat William Howard Taft, President-elect of the United States, and among those at the same table were Judge and Mrs. Alton B. Parker, Mr. Samuel Gompers, Mr. August Belmont, Mrs. Andrew Carnegie, Mr. A. B. Garretson, President of the Brotherhood of Railway Conductors, and Hon. Melville E. Ingalls, of the Big Four Railway.

Mr. Andrew Carnegie, Mrs. William Howard Taft, Mr. John Mitchell and Dr. Lyman Abbott formed a notable quartet at another table, where they sat with Mr. and Mrs. John Hays Hammond.

Mr. Herman Ridder, president of the American Newspaper Publishers' Association, and Mr. James M. Lynch, president of the International Typographical Union, with the president of the Paper Makers' Union, were in amiable conversation at one table; Mr. and Mrs. J. Borden Harriman, Mr. and Mrs. Philip Lydig, well-known members of the fashionable world, had with them Mr. James Duncan, general secretary of the Granite Cutters' International Association of America, and Mr. John Golden, president of the United Textile Workers.

Mr. George W. Perkins, a director of the United States Steel Corporation, and Mrs. Perkins were seated at the same table with Mr. P. J. McArdle, president of the Amalgamated Association of Iron, Steel and Tin Workers. While Mr. A. C. Bedford, director of the Standard Oil Company, had Mr. and Mrs. Timothy Healy for neighbors, Mr. Healy being president of the International Brotherhood of Stationary Firemen.

Mr. and Mrs. John D. Rockefeller, Jr., were at a table near that where Mr. and Mrs. Frank B. Kellogg sat with an interesting group of New York labor leaders, including President Coakley, of the Central Federated Union, and Mrs. Coakley, and the veteran labor leader Joseph R. Buchanan and Mrs. Buchanan. Mr. Kellogg had lately been prosecuting the Government's inquiry into the Standard Oil Company.

Mr. Samuel Untermeyer, the corporation lawyer, and his wife found it interesting to talk across the table with Mr. John D. Crimmins, of the Metropolitan Street Railway, and the Rev. Thomas R. Slicer, while Mr. Milo R. Maltbie, of the Public Service Commission, and Mr. Louis B. Gawtry, of the Consolidated Gas Company, were comfortably seated near each other and both were in most amiable state of mind, so far as could be observed.

Another interesting group was that including Mrs. Horace Brock, the newly elected chairman of the Woman's Department; Miss Anne Morgan, Miss Elizabeth Marbury; Mr. Daniel J. Keefe, of the Longshoremen's Union, and Charles A. Coffin, president of the General Electric Company; Mrs. Archibald Alexander, chairman of the New York and New Jersey Section Woman's Department; Mr. Henry W. Taft and Mr. Frank H. Hitchcock.

It was a gathering truly American in the best sense of the word. Representatives of every walk in active, healthful life, of every shade of political opinion were to be found among the men and women in the crowded rooms. The company seemed to enjoy the stimulating effects of the meeting between the ultra-fashionable and the radical, employers and employees, men of wealth and men of wages, social magnates, who touched elbows with the men of labor. Millionaires were in close contact with men who denounce from pulpit and forum the acceptance by religious or educational institutions of "tainted money," and the wives and daughters of the men of this representative company seemed to enjoy the occasion more than any one else.

Every part of the country was represented, and there were guests from across the seas. The presence of a Japanese lady in the full dress of her native country excited general interest. Major and Mrs. A. E. Piorkowski were guests, the Major being the well-known representative of the Krupp Company, of Germany. Another guest was Mr. Ernest Aves, special investigator on behalf of his Britannic Majesty's Government, Board of Trade, London, England.

At one table sat Mr. and Mrs. William H. Crocker and Mr. and Mrs. William H. Bourne, of California, and Mr. and Mrs. Arthur Lee, of West Virginia. From the South were Mr. and Mrs. B. Frank Mebane and Mrs. W. T. Harris, of North Carolina.

Among the guests from the Middle West was Mr. Charles S. Case, president of the Cleveland Chamber of Commerce. From Pennsylvania, Mr. J. W. Kinnear, representing the Pittsburg Chamber of Commerce, and Mr. Mahlon W. Kline, representing the Philadelphia Trades League. Mr. E. A. Filene, of the Boston Merchants' Association, was one of the New England guests.

New York City was represented by men and women of every interest in life—scholars, clergymen, lawyers, men of letters, journalists, men of business and affairs, women of fashion, as well as women thoroughly immersed in earnest, practical work. It was an assemblage unique in its make-up, and one as cordial and hospitable to ideas as could well be gathered together anywhere in the world.

The souvenirs of the occasion called forth much pleased comment. They were ice cream boxes, the covers of which, in raised figures of white upon red, presented a design by Homer Davenport, showing Uncle Sam supported by Labor and Capital.

The Reception Committee was as follows: John Hays Hammond, chairman; William R. Willcox, Benedict J. Greenhut, Marcus M. Marks, V. Everit Macy, John A. Sleicher, J. B. Reynolds, J. H. Stoddard, C. A. Griscom, Jr., E. T. Hargrove, C. U. Carpenter, John H. Stahl, Charles A. Moore, Jr., Rev. James E. Freeman, Orrin S. Goan, M. E. Ingalls, Jr., Rev. Charles Stelzle, Charles R. Towson, Thomas W. Slocum, Sereno S. Pratt, Otto M. Eidlitz, Timothy Healy, Herman Robinson, B. A. Larger, J. P. Archibald, A. J. Boulton, Joseph R. Buchanan, A. MacS. Gaillard, James P. Holland, William A. Coakley, Frank Cramer, E. A. Moffett, Joseph Healy, James Beers, J. J. Jennings, D. L. Cease.

The after-dinner speeches were all extemporaneous, and all were characterized by the utmost good feeling. The audience was quick to appreciate every point raised, receiving with laughter and applause especially the sallies of Mr. Carnegie and Mr. Taft, both of these being at their best in the informality of after-dinner talk, and both evidently feeling themselves to be among congenial and appreciative friends.

Mr. Low started the speech-making by proposing three cheers for Mr. and Mrs. Taft; these were given with a will. After the chairman had finished his address he introduced Mr. John Mitchell, who spoke upon the work of his department of the Federation. Mr. Mitchell was received with great enthusiasm by an assemblage which listened to him with much interest and apparent sympathy for most that he had to say.

Mr. Gompers aroused intense enthusiasm at the beginning of his talk, when he said, with convincing earnestness, "there might be left some impression upon the mind of some one that Mr. Taft is going to be less the President of Samuel Gompers than of any other man. Well, he won't be!" And when Mr. Taft's response to Mr. Gompers came the entire audience applauded vigorously, anticipating the gratifying reception, by the country, of the making of peace between the President-elect and his opponent during the recent campaign. Mr. Taft's words in announcing his attitude toward the labor leaders who had been against his election were cordial and convincing.

"It has been very pleasant," he said, "for me to meet here at this board Mr. Mitchell, Mr. Gompers and other labor leaders. I trust they know, and I know they do know, that whatever may have happened as regards any citizen of this country is all wiped out as far as my conduct as President of the United States is concerned, and I want to thank Mr. Gompers for his statement that I will be as much his President as that of any other man."

Mr. Melville E. Ingalls evoked considerable applause by his onslaught upon the Sherman law, and his expressions upon this subject were of special value because they brought forth an important declaration later, made by Mr. Taft in his address when he touched upon the Sherman law: "Probably it does need amendment," he said, "but even the amendments need not be extensive. It is more important to enforce it than to repeal it."

When Mr. Taft was introduced the entire audience arose and gave him a tremendous ovation. His speech was listened to with great attention and the assembly gave many expressions of pleasure and approval as he progressed, his opinion as to the Sherman law and its value being received with the most earnest applause that was given during the whole evening. He recommended to the Civic Federation the consideration of a National Employers' Liability law, and, as will be seen by those who read his entire speech, which follows, gave cogent reasons for his interest in such legislation. Something not to be overlooked is the opinion of the President-elect of the purpose of the Civic Federation, which he gave as follows:

"The Civic Federation, if I understand its purpose, is to enable those who represent labor and those who represent capital, and those who represent the public and are affected by the operation of both, to come together for the purpose of learning how they differ and where they agree." He continued: "Most of the quarrels, most of the controversies in the world, have arisen because the parties to them did not understand what the other one contended for, exactly; and where they meet on terms of equality for a discussion like this, and step by step can follow through the controversy, they usually find, or they frequently find, that they don't disagree at all, and they usually find that they agree on many points and differ on very few."

A complete report of the speeches of the evening follows:

MR. LOW'S OPENING REMARKS.

The Chairman: Ladies and Gentlemen—The good wine at this banquet is going to be kept for the last. The National Civic Federation is greatly honored by the presence here to-night of the President-elect and Mrs. Taft. I propose three cheers for Mr. and Mrs. Taft.

I have never had a speech of mine punctuated by so much music before. The way in which you have greeted our distinguished guests confirms me in the hope that the honor they have conferred upon us this evening will be to every one of us what the touch of the sword is on the shoulder of the newly made knight, filling us with the inspiration of *noblesse oblige* to do more than ever to develop and maintain good relations between capital and labor, and in the whole domain of industry and commerce.

I suppose that there is no other country in the world where such a dinner as this could be held, at which workmen and their wives and capitalists and their wives mingle at every table throughout the room, with the ruler-that-is-to-be of the nation and his wife all meeting on the same democratic footing.

I emphasize this because if the National Civic Federation had done nothing more than this it would have justified its right to be; for, after all, it is in the power of the democratic spirit that the great economic questions of our time and country are to be met and settled; for that spirit, if I interpret it aright, recognizes freely the essential brotherhood of man, and it also believes with all its heart that nothing is ever settled until it is settled right, and that in every just settlement the interests of the weak as well as of the strong, the interests of the strong as well as of the weak must be considered.

The National Civic Federation differs from most organizations in one vital characteristic. Most organizations have a membership that believes not only in the common object, but which has similar interests. The National Civic Federation has a membership with a common object, certainly, but with very different interests, and that is why it can speak with such a unique voice on many of the great questions with which it concerns itself.

We all believe in industrial peace and industrial progress, but sometimes when we come to convert that general belief into the precise act we are reminded of the great Bunsby in "Dombey and Son," who, you will remember, always rounded up his opinions with this statement: "The point of this is in the application." We all agree on the general principles, but we do not always agree on the application of them, because it is clear that in every industrial and commercial enterprise there are three parties concerned—the employers, the workmen and the public; and in these days of vast enterprises, dominated everywhere and always by the spirit of organization, it is easy to understand how it is that each one of these parties is able to perceive its own interests a little more clearly than it can perceive the interests of others. But the National Civic Federation, by uniting in its membership representatives of all these parties, is in a position to do—and I think it does do—a kind of service that no other organization in the country is capable of doing, for it brings together for mutual discussion men of these different interests, so that each is able to see and to recognize the other's point of view.

My observation is that nothing removes prejudice about a man, in most instances, better than meeting him. I think nothing broadens a man's outlook more than hearing the other side presented with great ability; and I am very certain that nothing removes difficulties better than doing away with misunderstanding; and it is the aim of the National Civic Federation to accomplish those results.

We have at our general meetings, at our private conferences, almost in every case, men who are large employers of labor and men who are workmen, and men who, like myself, are neither one nor the other in the technical sense. If you have been to any of our meetings you must have noticed that every question is debated from the point of view of the employers, and also from the point of view of the workmen, and if anybody can be found who is neither one nor the other, from that point of view too.

The Civic Federation aims to bring men together who are tending toward misunderstanding and strife. We never try to impose our own views on anybody. We never try to bring about a conference between employer and employe unless we are asked to do so by one side or the other; and yet just because our membership is what it is we are often able to prevent industrial strife simply because we make it easy for contestants to meet each other.

I think I shall yield to the temptation of giving an illustration on that point, which I have used before, and which some of you may have heard, but it illustrates it so dramatically that I think it will bear repetition even for those who have heard it.

I was at my farm one day, in Westchester County, forty miles north of New York, when the telephone bell rang and I found myself talking with a banker in Philadelphia. He said to me: "Our firm are the Eastern representatives of the street railway system of a certain city on the Mississippi, and we are threatened with a strike; we are afraid the men will go out before anything can be done. Can you not telegraph Mr. Mahon, head of the Street Railway Men's Union, in Detroit, and ask him to delay matters?" I said: "What can I say? Can I say that you will arbitrate?" "Well," the banker replied, "I do not want to commit myself quite so far as that at the very outset." "Well," I said, "may I say that I think we can bring about arbitration?" He said: "Yes, you may say that." I telegraphed thereupon to Mr. Mahon. Being in the country, I called up the office of the Federation by telephone, and dictated a telegram, which was immediately sent to Detroit to Mr. Mahon, reading something like this: "I am very sorry to hear that a strike is probable in such and such a city. Can you not prevent it until the National Civic Federation has had a chance to see what it can do?" By evening I had his reply by telegram: "You may be sure that no strike will take place until the National Civic Federation has had a chance to see what it can do. If arbitration is offered on fair terms it will be accepted." I believe I had said: "I thought we could bring about arbitration." I want you to notice how frank that was—the cards were laid down on the table—"If arbitration is offered on fair terms it will be accepted." The next morning I called up my Philadelphia friend by telephone again, for he had given me his number, and I read him the reply from Detroit; and, after discussing with him, I sent a second dispatch that the people in the East would instruct their representatives in the West to confer with the men and to reach an agreement, if possible. If not, they would offer to arbitrate; and I added: "If you have any more trouble please let me know."

I never heard again from the subject until about two weeks later. I was in the office of the Civic Federation when I found a letter from both sides, thanking us for our good offices and saying that the trouble was entirely adjusted. Now, I think that is a pretty good story up to this point, and it interests me because you notice I never saw anybody. I talked through a "hole in the wall" once or twice, sent a telegram and received a telegram, but no human beings met. In that delicate adjustment it was simply the fact that the Civic Federation, as I said, is what it is—that it was made easy for those two people to get together; for they did not know how to get together, and when they got together the thing was settled. They settled it themselves.

Now, the other day that question came up the second time, and this time from the side of the men. Mr. Mahon telegraphed (we do not see people, I should say, in these modern days). Mr. Mahon telegraphed: "We are in trouble out here. Can you help us out as you did the other time?" I communicated with the banker at once by telegraph, of course, and the matter was adjusted again without the slightest embarrassment to anybody. So that twice in the same city the Civic Federation, simply by being what it is, prevented the disorganization of traffic that follows the tying up of a city railway system.

I shall not stop to-night to discuss the work of the Federation in all its branches. I simply want to emphasize as I close that which I suggested at the beginning—that it is the democratic spirit pervading the organization which finds expression in all its work; the notion that we Americans have that we can trust one another; that belief that is innate in us when we come right down to it that the other man means to be fair; and the sort of sneaking idea that when we do not agree it is because we do not quite understand the other man's point of view. At any rate, it is in that spirit that we attempt our work; and more and more, I should say, as the years go by, we are able to make it effective.

I will now call on a man to speak to you who has recently left the ranks of labor in order to take up the work of the Trade Agreement Department of the National Civic Federation; a man who, having served labor with great efficiency, will serve hereafter both labor and capital equally well, and in serving both will serve our whole country—Mr. John Mitchell.

A GOOD COUNTRY TO LIVE IN.

Mr. Mitchell—When the members of the National Civic Federation and their guests assembled in this hall one year ago the country was in the throes of a financial and industrial panic. In a brief address delivered on that occasion the suggestion was made, and afterward elucidated and emphasized by Mr. Gompers, that a resumption of normal activity would not be accelerated by wage reductions or industrial disturbances. Subsequent events have demonstrated the wisdom of that suggestion, as is evidenced by the fact that we are emerging from the shadow which hung over us at that time.

The experience of the past year seems to indicate that the old theory of wage reductions being a panacea for industrial depressions has given way to the more advanced and eminently more humane idea that the evils and hardships of an industrial recession can best be cured, or their effects minimized, by maintaining, so far as possible, the purchasing and consuming power of the people. However, whatever difference of opinion there may be as to the soundness of this philosophy, the forces of labor and capital are to be congratulated upon their patience and forbearance during this trying period.

It is a matter of general comment that we are recovering our industrial and financial equilibrium more speedily and more rationally than we have after any of the great panics preceding the one through which we have just passed.

And in connection with this subject it may not be amiss to emphasize the oft repeated statement that there is no fundamental antagonism between labor and capital. Capital is, in large measure, the product of labor, and there can be, or at least there should be, no conflict between him who creates and the thing he creates. In the final analysis the problem is in the distribution of wealth; there always has been, and possibly there always will be, a difference of opinion as to the equitable distribution of wealth. But I am optimistic enough to believe that as time goes on the men of both labor and capital will, to a greater and greater extent, adjust their relations amicably and honorably, and without recourse to the strike or lockout, and the thought has been revolving itself in my mind all through this evening that such gatherings as this must make for a better relationship between the forces of labor and capital.

After all, this is a pretty good country in which to live; other countries may have adopted some measures in the interest of labor which are more advantageous than those existing in our own country, but the problem is more difficult here, because of our complex civilization. I have an abiding faith in the humanity and in the business sagacity of the American workman and the American employer, and I am confident that a basis of harmonious co-operation will be established between them. This assemblage tonight, while in some respects a social affair, is nevertheless indicative of that broad spirit of democracy which permeates our American atmosphere, and, while immediate results may not be discernible, such gatherings as this must, in the end, make for a wider view, a broader tolerance, and a closer sympathy between these indispensable elements in the development of our national destiny.

As Mr. Low, the chairman, has said, I have given up my duties in other fields to devote my time to the work of the National Civic Federation. In severing my official connection with the organization of my trade it was with the hope that in this field I might be helpful in straightening out some of the difficulties between workmen and employers. But, my friends, unless time demonstrates that I can be of real usefulness in reconciling some of the differences between labor and capital, I shall go back to the trade whence I came. I do not believe that there is an irreconcilable conflict between labor and capital; I believe that if workmen and capitalists will strive earnestly and conscientiously they can solve this problem.

The Chairman: I am now going to have the pleasure of presenting to you as the next speaker a gentleman who used to be a captain of industry. If there be such a thing, I suppose that he would be correctly described now as a captain of peace. I like to quote these lines of James Russell Lowell, when, speaking of the poets, he says: "For I believed the poets; it is they who gather wisdom from the central deep, and, listening to the inner flow of things, speak to the ages out of eternity." In this week, when we have been celebrating the three hundredth anniversary of Milton, we must recall that splendid line in which he wrote: "Peace hath her victories, no less renowned than war." I introduce to you Mr. Andrew Carnegie.

FOR PEACE BETWEEN CAPITAL AND LABOR.

Mr. Carnegie—Mr. Chairman, President and Mrs. President-elect—they were elected on the same ticket.

I thank you, Mr. Chairman, for pronouncing me a "man of peace," but I want you all to understand that there is no phase of the peace question in which I take a deeper interest than in that peace which is coming between capital and labor.

I see the future clearly. Capital is to employ itself by and by. There will be capitalists and laborers, but every laborer will have a minimum wage, and he will be a shareholder and a participator in the profits. Alas, this is not my text this evening.

My text is a new one—it is "Old Age Pensions," a subject upon which I have never said a word and have thought very little, but I could not help, while in Britain, watching most closely the new measure which has passed Parliament, and I read a good deal about that. Now, speaking about our own country. In my opinion, we are in that happy position that we can postpone that question and give our attention to things of great and immediate importance. I do not think it necessary for the Government to take up the subject. In our land it is much easier for the saving, sober workman to make a competence for old age than it is in the crowded lands of Europe.

There are two systems now in Europe; the German, that is a contributory system, which requires a man himself to contribute in his youth toward the pension he is to receive in his old age. I think that is a most salutary feature. It gives a man that feeling of independence and true manhood that he is doing for himself, and when he has contributed to his pension, and the time comes to get it, it is not another's money he is getting—it is his own. I would not sacrifice the manly, independent spirit of the American for a great deal.

The British system is not contributory. It resembles a charity, given to all without their participation, and I cannot think that it has as stimulating an effect upon the young man as the German.

There is a third plan—because in this country of ours we are never far behind—in which I have been deeply interested, and that is the Massachusetts insurance plan. That is wholly contributory and the State Government has nothing to do with it. The banks and savings banks of Massachusetts are now permitted to issue insurance policies, and these are kept sacred from the banking department under strict supervision of the State, and there is no danger that the man who insures himself will not receive his pension at the time stated. I rather like the American plan, although it is premature to decide upon any plan. We should wait and watch. Another objection to either of the two plans, and one which favors the American in my mind, is this: It is all very well for the little island of Britain to legislate for that island, or for Germany even—which is only as large as one of our larger States—to legislate, but a pension fund requires such supervision, such constant watchfulness over the individual; it must follow him where he goes; it must watch him in his old age; it must know all about him, and in this continent of ours consider this difficulty. Suppose a man born in Massachusetts, or suppose he is so fortunate as to be born in Ohio—some men achieve greatness, some men are born great, and some fortunate men are born in Ohio—take the average life of the American born in the East, he is in Texas in youth trying to do something there, and in the South next, and in the North, anywhere, everywhere. How few of our citizens really live their old age where they were born! These are few, so that one national system would be so difficult that I am inclined to believe that the State and not the general government would be the best organization for taking up the pension system. So that for these reasons, and for others, I move a postponement of the subject for the second term of Mr. Taft.

Now I hope you will permit me to say one word about Mr. Low's speech and about this man Mitchell. Mr. Low is quite right—the Civic Federation is doing a great work, and is continually proving that you only hate those that you do not know. Employer and employed have only to get together and know each other well. I have had some experience with labor, and I'll tell you this: the more I knew of labor the higher my estimate of labor rose. If you are only fair with workingmen and like them you will find the majority of them will like you and be with you without fail in everything that is fair. Now Mr. Mitchell has associated himself with our Federation. He is going to be a great force for peace, because the men he worked with as a workman respect him as a laboring man, and we who have known him for years in the Federation respect him for his manhood, his kindly nature, his brain, his sympathies, his heart. We all have faith in John Mitchell.

I thank you for listening to what I have had to say. Pardon me for straying from my text and believe me when I say, the longer I am connected with the Civic Federation the higher I rate its importance, the more valuable I think its work, and I predict for it a great and beneficent future in hastening the reconciliation and finally the successful co-operation of labor and capital.

The Chairman: It is very astonishing what an idea the average American has about Ohio, Mr. Taft. I remember that when I was for the time being the

Mayor of this city I was the guest of the Ohio Society, and the president of the society told me that there were at that time about twenty-five thousand men, born in Ohio, living in the city of New York, and I told him that I felt sure that that was an understatement, because there were forty-five thousand places on the city payroll alone.

It sometimes happens in the Civic Federation that there arises a difference of opinion upon political questions and upon questions involving great measures of public policy. I think I have heard of such differences taking place outside of the Federation in our American life. But in the Federation we do not break apart because of such differences; we rather agree to disagree where we must, in the full belief that just because of our differences our influence is all the greater as to the things upon which we can agree, when we do agree.

Now, it may interest you to know that Mr. Gompers and I have agreed to try to convert each other in the columns of the *American Federationist;* but to-night we are here, side by side, united in the single purpose of doing honor to Mr. and Mrs. Taft, not only as the President-elect, and his wife, of the people of the United States, but also because of the personal service which they have given to this Federation in days gone by, and the interest which they feel and which they acknowledge by being with us this evening.

I take great pleasure in introducing Mr. Gompers, the President of the American Federation of Labor.

MR. TAFT TO BE MR. GOMPERS' PRESIDENT, TOO.

Mr. Gompers: Ladies and Gentlemen—By the manner in which the President—our honored President of the Civic Federation—introduced me to you, there might be left some impression upon the mind of some one that Mr. Taft is going to be less the President of Samuel Gompers than of any other man. Well, he won't be. I am sure that Mr. Taft has the satisfaction of having differed from me. I want to state just as clearly that I have had the honor of differing from him. The differences have been fought out upon our American plan, and the decision has been reached, and every law-abiding, liberty-loving American citizen yields obedience to the decision rendered. When the matter shall present itself in the field of legislation or administration, I entertain the hope that I may have as my joint contestants for a mental discussion the President-elect, Mr. Taft, and the President of the Civic Federation, Mr. Low. After all, it is one in which we are vitally interested. I would not enter into a contest in which I did not honestly believe. At this meeting —meetings of this character around the festive board —surely we are not looking for points of disagreement and to their discussion. We are here to try, if we can, to find points of contact, points of agreement, and I shall leave any controversial matter for a more appropriate time.

I just want to add this one thought, or rather this one expression, in connection with this particular feature—to say that every sincere American hopes, from the bottom of his heart, that the administration of Mr. Taft may be pre-eminently successful and conduce to the welfare of the people of our common country. And he may rest assured that every effort that the men of organized labor can make to help toward the attainment of that purpose will be cordially and promptly given. If we shall happen to disagree, we shall endeavor to contest our respective grounds in such way that at last the best may be accomplished.

My friend and colleague, Mr. John Mitchell, stole my thunder. Happily we are not, or rather fortunate for him that we are not—stopping at the same hotel, otherwise I might suspect him of having stolen my manuscript, which, by the way, I did not possess. We think largely on parallel lines, and I am really gratified at having heard him present the thought, which is a reminder of a statement made by both him and myself at our last banquet a year ago, which, when uttered, I am sure—I am sure—was not so very cordially received.

But I want to say a word or two upon a feature of constructive, economic, industrial legislation. I sometimes am in doubt whether, after all, there must not occur a readjustment of our ideas in regard to the jurisdiction of our State governments and their relations to the Federal government in dealing with industrial legislation. Last March a gentleman participating in the conference at the White House, when the subject of the conservation of our national resources was discussed, made use of a phrase which has become quite famous, and was quoted a little more than a week ago by no less a gentleman than the honored guest of the evening, Mr. Taft, at the Belasco Theatre, when in presenting the question as to where, between the jurisdiction of our State governments and the jurisdiction of our Federal government—to use another quotation—"the malefactors escape." And I want to use the illustration that in the "twilight zone" of Federal and State jurisdiction it is most difficult to have constructive legislation enforced that shall deal with the industrial affairs of our working people. My experience in appearing before the committees of State legislatures—to urge reformatory or constructive legislation in the interest of the workers—has been to be told that after all this industry or commerce is interstate rather than intra-state, and hence jurisdiction of the Federal government applies, and then in appearing before the committees of Congress upon exactly the same proposition, to be told that these are matters that are not conceded by the States, and hence are under the State jurisdiction, and between the two it is a case of the shuttlecock between the battledoors.

I would not want any man or any woman here to imagine for a moment that I am a Federalist, in the popular conception of that term. I am wedded to no one thing that stands in the way as an obstacle to the progress of our people. Surely, I am not in favor of the concentration of power so recently urged, not even in so good a man as Mr. Taft. May I suggest this one thought, and I shall be done? After all, we realize that upon our material welfare much of our progress will depend, but let us not, I pray, devote our entire thought to material things to the exclusion of fundamental principles. May we not take a retrospective view and take some of the lessons taught by the seers, the forefathers and the patriarchs of the early days of our Republic? May it not be well for us to consider also some of the phases involving the fundamental principles of human justice—the liberty of the people of our country?

I shall not now attempt to dwell upon or discuss the thought that I have in mind, resting content by the mere statement of it. Yesterday, in the meeting of the Civic Federation, I took the opportunity, in a rather more fairly comprehensive manner, of presenting the thought that I have upon that subject, and I also, in the report which I had the honor to submit to the American Federation of Labor at its recent convention in November, presented it in fuller terms and in greater detail. If there be any here who are sufficiently interested in trying to fathom the enigma which I have presented to-night, if they will communicate with me I will send them in print the views I entertain upon this subject.

Now, just this word in regard to the Civic Federation itself. Yesterday I said that I was perhaps the oldest member of the Civic Federation present. I did one gentleman an injustice in that statement, though unintentionally. I refer to the genius of the National Civic Federation, Mr. Ralph M. Easley. I have tried to give him much of what I could to advance the object and the purpose of the Civic Federation.

I have been brought up to have a rather high conception of Americanism, of American ideals, and of American fair play—to fight your battle fair and square, and then, even for a time, but honestly and faithfully, yielding and abiding by the results.

On the rostrum of the National Civic Federation men strongly differ quite frequently, but after a full discussion, though we may not convert each other, we entertain respect for each other and each other's judgment and character. We yield nothing in our Civic Federation other than what our own judgment dictates. It is a magnificent institution, and, as has been well said, could not be duplicated in any other country on earth. It is an honor to be a member; it is an honor to participate in these proceedings; it is an honor to be selected as one to assist our chief, the President of the National Civic Federation, in the effort to make the highest purpose and object a success, and with that hope and that thought, I thank you for your attention to what I have had to say.

The Chairman: Mr. Gompers has called your attention to questions that are arising in regard to that "twilight zone" as it affects the laborers of the country; and in the hope that it may help some to think on that line and on kindred lines more deeply, without any reference to the fact of whether we are Federalists or not, I would like to call your attention to three things that have recently come to my own knowledge. There are five federal systems in the world—Switzerland, Germany, Mexico, Brazil and ourselves; and ours is the only one that does not put the entire subject of commerce under the general government. I suppose that that is because our Federation was established before the railroad was thought of. The others, having come into being later, were able to foresee what was likely to take place, and have provided for the solution of commercial questions by putting them all under the general control.

Last Spring I made some effort to ascertain what, in the opinion of competent men, is the proportion at the present time between interstate commerce and State commerce in the United States, and whether I asked men from New Jersey or Illinois or Rhode Island, the answer was uniformly that interstate commerce was from ninety to ninety-five per cent of the whole; and while it is true that our general government can regulate interstate commerce, it cannot regulate the agents that do it, because these are created by the States and are controlled by the States. On the other hand, the States can regulate the agents that do interstate commerce, but they cannot regulate the interstate commerce that is done, because that is under Federal control; the result being that neither the national sovereignty nor the State sovereign can regulate in this country both interstate commerce and the agent that does it.

I do not wonder, under such circumstances, that we have a "twilight zone." Let me illustrate by an incident that came to my knowledge in Indiana when I was campaigning. I found there that there had been some controversy as to demurrage. Some firm, it had been thought, was charged excessive demurrage by a railroad; and the question was whether that would come before the State Railroad Commission, that question, or whether it would be under the Interstate Commerce Commission. Those who claimed the latter said that the demurrage arose on goods shipped from another State; those who claimed the former said that the demurrage arose entirely in the State of Indiana, and that therefore it was a local question. I believe that that question has been definitely before both commissions for many months, and nobody knows yet, as the laws stand, whether that is a State or a national question. I do not wonder that this whole question of the relation of the State to the nation, and of the nation to the State is attracting more and more attention from thoughtful men as the years go by, because the conditions have so changed since our constitution was formed that it may yet be necessary to have constitutional amendments upon that subject before the nation is very many years older. I speak only as a layman, and I do not know much about the law, but I think I have stated correctly the particular points to which I have referred.

I want to introduce to you now a man who has always been active in the work of the Civic Federation. No one has done more for its support than he, and we owe to him almost personally that splendid report on the question of municipal ownership of public utilities that is hailed as a textbook wherever that question is studied—Mr. August Belmont.

CIVIC FEDERATION'S CONFIDENTIAL WORK.

Mr. Belmont: Ladies and Gentlemen—But fifteen minutes ago I understood from our President that I was not going to be called upon, and even had I prepared to say anything to you I could not have well supplemented all that has been said by him and by the other members of the Federation on the subject of its usefulness. No greater honor has fallen to me than when I was the President of the National Civic Federation, and when I resigned the office to my successor I felt that I could have no greater interest in the future than to retain my connection with the Federation and promote its interests to the best of my ability.

It has often occurred to me that we who are here from one year to the other attending to its duties and its meetings alone understand what the real work of the Federation is, and therefore cannot fail to see how important an organization it is and how much it does for the welfare of both capital and labor, and consequently the interests of our common country. However, it is not well understood throughout the country, and I presume the reason is that, differing from all other organizations, it does not indulge in strife, and its contests are not brought to the attention of the public at large. The very relation of its most important work is largely confidential. What the President related to you with reference to a strike occurring in the West, occurs constantly, and the same results have been obtained. You will notice that he did not even give you the name of the corporation or the bankers between whom the difficulty existed, because, as the mediator, it is necessary that this organization should observe secrecy always. It cannot plume itself on what it has done. It cannot appeal for support by relating its accomplishments, as other organizations do; therefore it is a pleasure to see these gatherings grow, and I do hope that the members will disseminate thoroughly and in detail, and widely, the results of these meetings, so that it may be learned what this Federation does, what it claims to receive support upon, for support it must have. It must have means to administer its affairs, and it depends entirely upon the voluntary contributions of those who have promoted its existence.

The Chairman: I want now to ask you to listen to a little from the railroad world; and I want to introduce to you a man who, as chairman of the commission, made that most valuable report to which I referred a moment ago on the "Municipal Ownership of Public Utilities." I remember to have read an estimate of that work and of the value of it in the London Times not very long ago, and it spoke of it in terms that did the friends of that commission a

great deal of good, which I shall not try to recapitulate, lest I make Mr. Ingalls blush more. I now propose to introduce to you Mr. Melville E. Ingalls.

GLAD TO SEE DIFFERENCES SETTLED.

Mr. Ingalls: Ladies and Gentlemen—I think it will be very easy to find a jury in this gathering who would indict Mr. Low for injury. Here is our President-elect waiting. You all came here to hear him, and yet Mr. Low is putting up us muckers, as you might call us, who do not know much about the subject and have no eloquence, and just take up time. I suppose he wants to get you real hungry for the feast!

My text this evening will refer to what some of you who heard or read the Chairman's address yesterday, and also read or listened to Mr. Gompers's speech, will remember—his criticism of "the Sherman law." I am glad to see to-night that the President-elect and Mr. Gompers have settled, because I really expected to see Mr. Gompers behind the bars very soon if he should continue to violate this Sherman law by projecting these combinations among the unions. Really, my friends, I think that the best thing the Civic Federation can do at this time is to take up and urge the repeal of what is known as the Sherman law. Mr. Low undertook to do it three months ago and he invited me down to Washington, but when I looked at his bill I could not support it. Instead of wiping the thing out, he undertook to amend it so that it would not apply to anyone but college professors and ministers of the gospel. Everybody else was exempt.

That law was passed twenty years ago. It was passed in deference to political sentiment and demands, and changes since have altogether altered the situation. It was passed at that time when they thought nobody would enforce it.

There is not a more useless thing for a country to have upon its statute books than a law which cannot be enforced, and which nobody supposes is wanted to be enforced. Therefore I say the time has come to take a new departure and wipe it off and commence over again. I have stated this many times when I have had a chance and I am glad to say that the repeal or the change of it has been approved by almost every one in the land, among others the present President of the United States, who has in several messages and speeches stated it ought to be changed.

It is impossible for a man to be honest and conduct a successful competitive business to-day without landing in the penitentiary if that law is enforced. Now, my friends, let us wipe it out. We do not need it to control the railways. You have your Hepburn bill. Leave it there. Change it if you please. Add to it. Put more power in the hands of the Interstate Commerce Commission. Make them the great body and let them take care of the railroads. Then when you come to the business corporations, the industrial corporations, establish a large Bureau of Commerce and give them the power to turn the limelight on those concerns, and you will have no troubles. Examine the Board of Trade act of Great Britain, and you will find that that great industrial country has found a way to control those corporations without bringing their managers into the criminal courts. Mr. Gompers could then work out his labor union combinations without being indicted and branded as a criminal.

You may think this is all talk, but it is not, and as I said one year ago in this place, and I say it again to-night, I believe that every man who organizes a labor union puts himself in danger of the penitentiary under the Sherman law. If any two men agree on rates from here to Washington, they are liable to go to the penitentiary. If any two men agree on prices in manufacturing, it cannot be done now in this dawn of peace and good will. Let us wipe this off the statute books and put a different law upon the books which shall meet the country's needs.

We are just about to change our President. We have a gentleman here who soon comes into power—a man we all love, Republicans and Democrats alike. There has not been for years such an era of good feeling. It reminds one of the plain old man who came to New York and told his friend Silas that one Bill Wilkins up in the country was dead. "Dead!" says the friend; "what complaint?" "No complaint," was the answer, "every one is satisfied." That is exactly where we are to-day.

Now, my friends, in this era of peace and good will; at this time, when we are recovering from business depression, when we want to enlarge our agreements, and take possession of the commerce of the world, when we want the sails of our steamers and ships on every sea, when we want new business, in God's name do not keep upon your statute books a law which prevents it! Let this Civic Federation start. It is composed of men to whom cannot be attributed a selfish motive. Let them propose that this law shall be wiped out. There is intelligence enough in this country to control the situation.

When Mr. Low spoke of the agricultural interests in his bill, I did not quite understand what he meant, and I must tell you this story to show you how this law works. About that time I went out to California and interviewed in Southern California various gentlemen, and I said: "You seem to be very prosperous out here." They said: "Oh, yes. Since we have organized and control the shipment of these fruits East we have made money and are a happy people." I said: "Don't you know every one of these organizations is against the law and subjects you to imprisonment?" The fellow said: "Oh, yes; but there are not enough men to build jails to hold us!"

You cannot tell me it is for the interest of this great country of ours to keep such a law as that upon its statute books. I said yesterday that this great country would avoid strikes and would avoid all troubles between capital and labor if it would make, as I think Mr. Carnegie said to-night, every man a capitalist and every man a laborer. Start your profit sharing. Possibly Mr. Mitchell and Mr. Gompers may have to change their jobs a little, but they would soon adapt themselves to the new condition of affairs. We would then go on as a hundred million of happy people. But you cannot do it unless you radically change your legislation.

The question has been fought out and we are all satisfied, and now let us start—start with a new ideal. Let us have the proper legislation. Let us take from the experience of our cousins over the water, who are the greatest merchants of the world, who have gone all through this and have worked it out in the last fifty years. Let us favor, so far as we can, profit sharing between our railways and our industries and their employes. Let us wipe out the Sherman law and put in its place something that will strengthen, like the English Board of Trade act, the examination and control of our corporations. Let us strengthen the interstate law. Let us make, as was said in the speech of acceptance of the President-elect, a great body of that commission. Let us give them more power and fill them up with the best men in the land. We will then, indeed, have an industrial business which will make this country the first and foremost country in the land, and enable us to do things which we can in no other way.

The Chairman: It seems to me, ladies and gentlemen, that there are few things in the world more touching than the genuine democrat's grief at the present situation. To come to that Sherman act: I do not want to be held responsible for all the things Mr. Ingalls said I did. He proposes to us that we imitate the practice of Great Britain. Now, Great Britain has an omnipotent Parliament, and they pass bills for the whole of it.

I spent two days of nearly ten hours each before the House Judiciary Committee last Spring, when the sole question under consideration was whether the United States Government had the right to ask a corporation created by the State, doing interstate commerce, what its capital was, what its bonds were, and all that. When Mr. Littlefield, the chairman, had proceeded a certain distance I arose, with his consent, and said: "Mr. Chairman, I hold in my hand a bill introduced by a Mr. Littlefield, of Maine, only last year, unanimously reported by the Judiciary Committee of the House, asking those very questions." Mr. Littlefield admitted that it was a fair parliamentary hit, but he said: "I am obliged to say that until last year I thought there was no doubt about Congress having that power, but in view of the most recent decisions of the United States Supreme Court, I have changed my mind. I do not believe it has that power."

Now, I don't know whether Mr. Littlefield is right or wrong. I have no doubt there are others who think Congress has that power, but it brings up again the question of how to deal with such matters as that when the twilight zone between State and Nation is so large, and really so indistinct.

I want to introduce now, as the last speaker but one a gentleman who reminded us yesterday of a conference that was held in Chicago in the early months of 1907, at which there were represented all of the railroad systems west of the Mississippi, except four roads, covering 190,000 miles of track, and of those four three sent word to the conference that they would accept whatever decision was reached. On the other side were representatives of all the railroad employes—the engineers, firemen, conductors and the trainmen. They represented so great a capacity to interrupt trade west of the Mississippi that the railroad men said at once that if they were to go out they would make no effort to fill their places, because they knew it could not be done. With that admitted power in their hands, after listening to the discussion of the questions at issue, the representatives of the Brotherhood made concessions at the suggestion of the Government officials who served under the Erdman act as arbitrators or conciliators, and abandoned things that their Brotherhoods had voted to stand for. In doing so they not only recognized the importance to the country of not paralyzing traffic on that immense scale, but they recognized that their ability to persuade their constituents grew out of the fact that they had trade agreements with the railroads all over the land. Ninety-nine per cent of all the railroads in the country are conducted under trade agreements, and it is because the men who work for the roads by that relationship have learned something of the railroad business on the operating side—that they were able to see not only the justice but the necessity of making concessions in that far-reaching controversy. I have great pleasure in introducing to you one of the men who represented the Brotherhoods there, Mr. A. B. Garretson, President of the Brotherhood of Railway Conductors.

ORGANIZED LABOR INCULCATES CIVIC DUTY.

Mr. Garretson: Ladies and Gentlemen—I wonder how many of you ever thought of whether or not membership in a labor organization unfits a man for the duties of citizenship. Men who have for years been connected with the labor movement were used to assertions of that kind being made in days gone by, but they are not often reasserted in these later times.

I noticed a statement some time since made before a government commission by a man who occupied a commanding place in the commercial world in the region where his residence and interests were held, which was: "Labor organizations are to-day the greatest menace to the Government that exists inside or outside the pale of our national domain, and their influence for disruption and disorganization of society is far more dangerous than would be the hostile array on our borders of the armies of the entire world combined." I believe that the average citizen would find that a rather difficult statement to subscribe to, especially after attending a conference of the Civic Federation and the events that follow it. The representatives of other interests are surely equally guilty under a law based on such premises as is the average walking delegate under the Sherman act for combining.

When you consider as to the truth or falsity of a statement of this character, it is rather a good plan to make comparisons of that which has been with that which is. It has been written that the only way to judge the present and the future is by the past, and it would be worth a man's careful study to know what tendencies have developed from organization among the individuals of the working class in days gone by. If you go back far enough, you find out that the very essence of effort on the part of those men who endeavored to subvert the liberties of the body of the people lay in the hindering of the members of the community from coming into contact with each other, whereby they could exchange mutual opinions or agree upon any combined action, because it was asserted on their behalf that such association and interchange of ideas stimulated self-respect and self-consciousness, and that the results thereof would be inimical to the interests of those who had in view retaining within their own hands the agencies of government. Therefore, associations of the people were forbidden, banquets of trades and crafts proscribed, gatherings which were not attended by representatives of the tyrants in themselves constituted as serious an offense as two men agreeing what is to be the fare from here to Washington, which has been referred to by a former speaker, because such agreement, if not immoral, was at least illegal, if the interpretation placed upon the Sherman act is correct. I don't believe it is. I am not posing as an unconvicted criminal.

Take the period of the domination of the Roman emperors and you find that the collegia, supposed to have been combinations of tradesmen, were suppressed because they offered a means of inter-communication among the people, and, true to the precepts of the tyrant, Tarquin thus dealt with them, depriving the common people of any opportunity to conspire against his rule. Under Augustus, he who truly set aside the Roman republic and established the domination of the emperors, who did more to subvert the liberties of the Roman people than all who preceded or followed him, the edict went forth from Macænas, favorite minister of the emperor, that no oathbound organization should be allowed to exist wherever the Roman eagles marched. Under Charlemagne, who stood as one of the earliest representatives of universal dominion, membership in an oathbound organization was punishable by death, and during his reign more than three hundred men were executed therefor, but instances multiply wherein men whose avowed object was to gather into their own control all the elements of power studied to deprive men of the common class of the opportunity for an interchange of ideas which it was believed would lead to a community of purpose that would displace the wielder of despotic power and set up instead a government that should be, in greater or lesser degree, by, of and

for the people. Therefore, it is by a man with an ulterior object in view, government, social or commercial, that the associations of working men are viewed with condemnation, and, by the law of opposites, if men who are actuated by improper motives are so bitterly opposed to the existence of combinations among those who, for one of the reasons named, they desire to exploit, this would stand as a reasonable proof that such associations do bring about results that are desirable to the great body, not only of those who toil, but to those who direct their labor.

If you come down to the period of the Middle Ages, the time when might was nearer right than possibly at any other time in the history of the world of which we have an accurate record, when learning was eclipsed and the spirit of equality at its lowest ebb, what do we find? Where was the spirit of liberty maintained? Through the whole Frankish-Germanic region there sprang up the "Fehm Gericht," or Fehmic courts, which for scores of years remained the only barrier to the rapacity of the robber barons and kept alive during the darkness of that period the principle that the humble man was heir to a portion of the fruits of toil and had at least the right to live and love.

In every country that is lauded to-day for its maintenance of the rights of man the association of the humbler sort was either tolerated or encouraged. Every land that cradled the early races that are denominated the Anglo-Saxon recognized in their system of polity the gathering of the people for the purpose of expressing their will in regard to their own local self-government. The Folkmote of the early Saxon is a fair example of what contributed to the after developments of the characteristics that wrenched Magna Charta from the unwilling Norman King, and the continuation and development of that spirit is what has made the Lion of St. George and the Stars and Stripes the emblem of power and freedom wherever they are thrown to the breezes.

Many men have said that the guild was only the precursor of the union, but of this there is no real evidence, but the spirit that created the guild is the same that underlies and accounts for the existence of not only the trades union but of the democratic form of government. I suppose that few men have had more intimate knowledge of the men that compose labor unions than myself, and if I wanted to find men who were ready to sacrifice every interest for the upholding of the flag I would not go into other channels. The thing that makes the man the best citizen is the teaching of the average labor union of the present day.

How many men are there who do not wear upon their breasts the emblem of a labor union who ever have taken the trouble to determine what the actual teachings of a labor union are. The labor union takes a man when he is embarking on the sea of life, at a time when his views are unformed, when he is untrained, inefficient as a citizen, as well as a tradesman whose whole energies heretofore have been concentrated on gaining a knowledge of the craft which he has chosen to pursue, which will render him fit to enter into the race for maintenance for himself and the family that he possesses or hopes to possess. In connection with the development of his craftmanship it is made apparent to him that his best interests would be served by associating himself with others likewise engaged. When he wakes to the fact that membership in a union representing that craft is a thing to be desired, and when such membership is perfected, what does he therein learn? By contact with his fellows he becomes cognizant of those things which he comes to believe are his inherent right. Dwelling upon these questions widens his mind until ideas before non-existent come to him. He advances them among his fellows and, in an effort to defend them and to impress them upon his associates, his horizon is widened and his power to gain a hearing added to. He is taught that which is to be done should be done by himself, and that all responsibility should not be placed upon others. He likewise absorbs the knowledge that rights alone cannot be acquired, but with them go duties and responsibilities. He schools himself, and his associates unconsciously with him, in the principles of government applied at first to the union, but he just as unconsciously applies his methods of thought and training to the duties of citizenship with which he is confronted outside of his union connections, and before it is realized he has been transformed from the unthinking, unlettered unit into the thinking, reasoning citizen. It is true that in a majority of instances this evolution has weakened his party affiliations. He has shaken himself loose from the shackles of party domination, asks neither employer nor associates how he shall vote, but makes up his mind for himself and, when it is made up, votes accordingly.

No other agency abroad in the land to-day exercises so potent an influence in the creation of good citizenship as these organizations, for the simple reason that our methods are upright and the number of men affected is greater than reached through any other channel. Strip the mind of prejudice and judge of this question as you would other matters of like import, and see what conclusions would be reached.

Contrast the status of union labor with its status at the beginning of the period which memory spans. Then membership in a labor union was a reproach. The unionist of that period stood in a similar estimation in the community in which he lived to that in which the suspected criminal does in the present day. He was believed to be one who advocated subversion of the principles of good government. The community regarded him with suspicion; the law with condemnation; the courts with an eye to punishment; and his employers with a certainty of dismissal. To-day he has won his way regardless of the handicap then existing until, in his community, he has the support and the sympathy of a large majority of those around him. From the law he has full recognition; from the courts the right to be heard; from his employers the respect that always comes to him who contends manfully for that which is reasonably conceded to be his right, and this has been brought to him, not from an outside influence or force, but by the effort of himself and his associates alone. These are all questions worthy the investigation of every one who has an interest in the Civic Federation.

I am a believer in the Federation because I believe that its influence militates for good to the country at large. I believe that, regardless of membership in a labor union, I have as much devotion to the flag that flutters over us as has any other man, whatever the position he occupies.

No man ever really knows what the flag means to him until he has passed from under its protection. Let him live and labor abroad, and then he learns something of what the Stars and Stripes are emblematic of. There was a time in my own career when I had an able-bodied belief that I was deficient in patriotism. I don't know whether I had lost it in transit or whether it had never been transmitted, but it was one of the things that I did not have on my inventory, according to my own belief, but a sojourn of a year in a foreign country, when my eyes were never able to greet its heaven-kissed colors, taught me something of what the flag meant to those who had died for its adoption or had lived maimed for its protection when imperiled. Let a man be deprived for a continued period of all those things which the banner represents, let him realize by contrast that which is guaranteed to the man who dwells beneath its divine folds, then is when he knows the sensation which brings the unbidden tear to the eye and denies the ability to speak, and when he will feel, as others have felt upon the return to the land beneath it, that he could kneel and kiss the ground upon which its shadow falls, and, instead of that feeling being lessened by years of membership and training in a labor union, I believe that it is intensified thereby.

The Chairman: We want to make public acknowledgment of the organization this year of the Woman's Branch of the Civic Federation, and to express to Mrs. Brock, the president of that branch, our best wishes, and to assure her of the cordial co-operation of The National Civic Federation in every possible way.

I now have the pleasure of telling you that Mr. Taft, the President designate of the United States, will speak to you.

CAMPAIGN DIFFERENCES ALL WIPED OUT.

Mr. Taft: Mr. President, Ladies and Gentlemen—Mr. Andrew Carnegie was introduced as a captain of industry. I did not have the pleasure of knowing him then; therefore I think he belongs to me, or to my class—that of an itinerant preacher. I have spoken with him now twice behind a Methodist pulpit, and this inclosure looks not unlike something ecclesiastic.

It is a great pleasure to be here in this company. Looking about, I see possibly some gentlemen that before the election it would not have been right for me to be closely associated with, but with the mixture that is here the association is entirely safe.

The Civic Federation, if I understand its purpose, is to enable those who represent labor, and those who represent capital, and those who represent the public and are affected by the operation of both, to come together for the purpose of learning how they differ and where they agree.

Most of the quarrels, most of the controversies in the world, have arisen because the parties to them did not understand what the other one contended for exactly; and when they meet on terms of equality for a discussion like this, and step by step can follow through the controversy, they usually, or they frequently, find that they do not disagree at all, and they usually find that they agree on many points and differ on very few. Now, when that association is accompanied by the presence of ladies, and by that flow of souls that accompanies a good dinner, the opportunities and the desire to agree on those points that are not material brings about a condition much to be desired in all dealings between men.

Time was, as the last speaker has most eloquently said, when everybody who employed labor was opposed to the labor union, when it was regarded as a menace. That time, I am glad to say, has largely passed away, and the man to-day who objects to the organization of labor should be relegated to the last century. It has done marvels for labor, and will doubtless do more; and what it will do for labor more is in the very particular pointed out by the last speaker. It will, I doubt not, avoid the reduction to a dead level of all workingmen, whether shiftless or earnest in their work, and will, by the force of public opinion in the union itself, enable the men in the union to feel that there may be inequalities among them, brought about by the difference in energy, by the difference in application to labor, and that it shall not prove to have that effect of levelling down, but shall encourage to level up, and that those who lead in energy may have the leadership.

There was a time, on the other hand, when those who led labor in the interest of labor thought that the introduction of machinery was against the interest of labor, and many a tragedy and many a controversy arose over that, but by careful consideration and discussion that, too, has been eliminated and ceases to be a cause of contention between the two.

And then we have the combination of labor. The trade agreement has sometimes presented an opportunity for controversy, but I believe now that all are agreed that it is wise and makes for industrial peace. The truth is that the time has come when the employer who says, "I deal alone with my own labor, and I do not recognize a general interest in what is done with respect to my labor," is far behind the times and does not recognize what exists—what must exist for the benefit of labor, and what those who are charged with general policies must hope always to encourage, to wit: Organization of labor on the one hand; the recognition that it is for the time being a class to be represented by leaders, and on the other hand, that capitalists, too, may combine in the same way in order that the two powerful elements may meet on a level ground—may meet where they are neither at arm's length and neither at the mercy of the other.

Now, I feel some hesitation and embarrassment in getting up to take up some of the subjects that have been mentioned to-night. I am sworn—or expect to be sworn, if I live—to uphold the constitution of the United States, and I think, in anticipation of that obligation, I ought to rally to the defence of that poor, battered, old instrument under to-night's discussion. I agree that our system of government is a complicated one; I agree that even so great a statesman as Mr. Gladstone, when he came to describe us in his paper, "Kin Across the Sea," gave up any attempt to explain the conflicting jurisdiction of the Federal courts and the State courts in many respects, and yet it was 1776 when we began, and the constitution was adopted and put in force in 1789, and we have gotten along pretty well with that constitution. It is true that we have had at times questions of doubts in reference to its construction, and it is true that some of those questions of doubt led to perhaps the bloodiest civil war ever fought, and yet we have gotten along and we do have an efficient government. It is proper, until it is settled by the Supreme Court of the United States, to refer to a "twilight zone" of jurisdiction, in which there is doubt as to the State or Federal power, but as we look back in the past we can see many problems that at the time seemed quite as difficult of solution as the one with respect to commerce now and the one with respect to the conservation of our resources. Now, I think we can depend upon the acumen, upon the patriotism and upon the general understanding of the Supreme Court of the United States, of Congress, so to construe that constitution as to give the Government of the United States power to carry out within its jurisdiction those reforms that are necessary as the needs of our civilization advance, and to ascribe to the States that power given them by the constitution, which they, in turn, within their jurisdiction, may use to carry out such reforms.

I do not believe that the constitution is to be perverted in its construction, but what I mean is that when you examine that wonderful instrument you will find that the men who made it made it short, made it comprehensive, made it simple in order that it might open to enable us to carry out what the future has in store for this Government, and what they could not foresee except in the most hazy outline.

I am not either quite ready to part with the anti-trust act, the Sherman act. I quite agree that it probably needs amendment; but I venture to think that the amendments need not be extensive, and that it is more important to enforce it than to repeal it. One difficulty in reference to legislation like that is

loose statements and sketchy impressionist pictures without a close study of the language of the statute itself, and without understanding the meaning of words and the necessity there is for making definite what is a crime, what is an offense, and what is something to be controlled by the equitable process of the court. It is a work for lawyers with an intimate knowledge of business—of business necessities, and of the evil that every business man must recognize which has come to us, growing out of the combination of capital. I agree that the combinations of capital are absolutely necessary to the progress of the business world, but I also insist that those combinations may be used, or rather may be abused to the detriment of the public, and we must have on the statute books something to prevent and punish those abuses.

Now, as I was telling Judge Parker that at Yale, when a minister comes up there to preach a sermon before the boys, he asks President Hadley how long he can speak, and the president tells him this: that he has full opportunity to speak as long as he chooses, but that there is a tradition in the college, handed down from Abraham Pearson, the first president, that no souls are saved after twenty minutes. And therefore I do not propose to-night to go further into a discussion or a construction of the Sherman anti-trust law, lest I should lose the opportunity for conversion.

But now there is one additional suggestion I should like to make. It has been exceedingly agreeable to me to meet here at this board Mr. Mitchell, Mr. Gompers and other leaders of labor. I trust that they know, but I hope I don't attribute to myself unwarrantedly, that what happened in the campaign before the election, so far as my conduct is concerned with reference to any citizen of the United States, as President of the United States is wiped out as if it never was. And I thank Mr. Gompers for saying that I am his President as much as I am anybody's President.

In the next Congress, and in the Congress that succeeds that, there will doubtless arise, as there ought to arise, suggestions with reference to legislation especially directed to the assistance of labor. I have in my own mind a number of questions that ought to be considered, and might very well be considered in the Civic Federation. One of them is as to an employer's liability act. I cannot stop to-night, but I may say, incidentally, that in my judgment one of the greatest dangers to this Republic is the delays, and therefore the injustices, of our administration of justice, civil and criminal. If, by a reasonable employer's liability act, both in the Federal and in the State government, we could remove from the courts nine-tenths of those suits brought for the recovery of damages and settle a just award under some provision for arbitration and an administrative, but quasi-judicial tribunal, we could not only help the poor laboring men who suffer the accidents to a quick recovery of needed damages—for in such cases the old rule that "he who gives quickly gives twice," applies—if we could do that we not only would confer a great benefit on labor on the one hand, but we would remove from the courts a great burden of litigation that would allow them to carry on other litigation expeditiously, and not be clogged as they now are, so that justice does not fail to be done by reason of wrong decision, but by delay in reaching a right decision.

I want to testify, as Mr. Gompers did, to the efficiency of Mr. Ralph M. Easley. I hope he is as persistent in the good works of this Civic Federation as he is in making those whom he wishes to speak and work in it uncomfortable, and I assume, from what Mr. Gompers says, that he is; certainly he is indispensable to the success of this Federation.

And now, I thank you for your attention. I thank those who were good enough to say something pleasant about the incoming administration for what they have said, for I am glad to get it now. I have heard of the man who went into office with a majority and went out with unanimity.

The Chairman: Good-night.

NINTH ANNUAL MEETING, NATIONAL CIVIC FEDERATION

PRESIDENT LOW'S ANNUAL ADDRESS—BENEFITS OF TRADE AGREEMENTS UNDISPUTED

THE National Civic Federation's Trade Agreement Conference took place in the assembly rooms of the Hotel Astor at 2 o'clock Monday, December 14. The meeting was opened by Hon. Seth Low, president of The National Civic Federation, who read his annual address.

At the conclusion of his address Mr. Low introduced Mr. John Mitchell, chairman of the Trade Agreement Department of the Federation. Mr. Mitchell addressed the assembly and then introduced the following speakers in the discussion of the subject of the day, The Trade Agreement:

Louis B. Schram, of New York, chairman Conciliation Committee National Brewers' Association.

James Duncan, of Quincy, Mass., secretary of the Granite Cutters' Association of America.

Otto M. Eidlitz, of New York, Building Trades Employers' Association.

James O'Connell, Washington, D. C., president International Association of Machinists.

G. W. Traer, president of the Illinois Coal Operators' Association.

Melville E. Ingalls, of Cincinnati, Ohio, chairman Board of Directors Big Four Railroad.

A. B. Garretson, of Cedar Rapids, Iowa, president Order of Railway Conductors.

F. A. Acland, of Ottawa, Deputy Minister of Labor of Canada.

August Belmont, of New York, president August Belmont Company.

John Hays Hammond, of Gloucester, Mass., mining engineer.

James M. Lynch, of Indianapolis, president International Typographical Union.

Herman Ridder, of New York, president American Newspaper Publishers' Association.

Samuel Gompers, of Washington, D. C., president American Federation of Labor.

The addresses at the Conference on Trade Agreement will be published in a special report of the annual meeting issued by The National Civic Federation.

MR. LOW ON THE TRADE AGREEMENT.

To the Members of The National Civic Federation:

The year just closed has been an active year for the Federation, and in several directions I have the pleasure to report substantial progress.

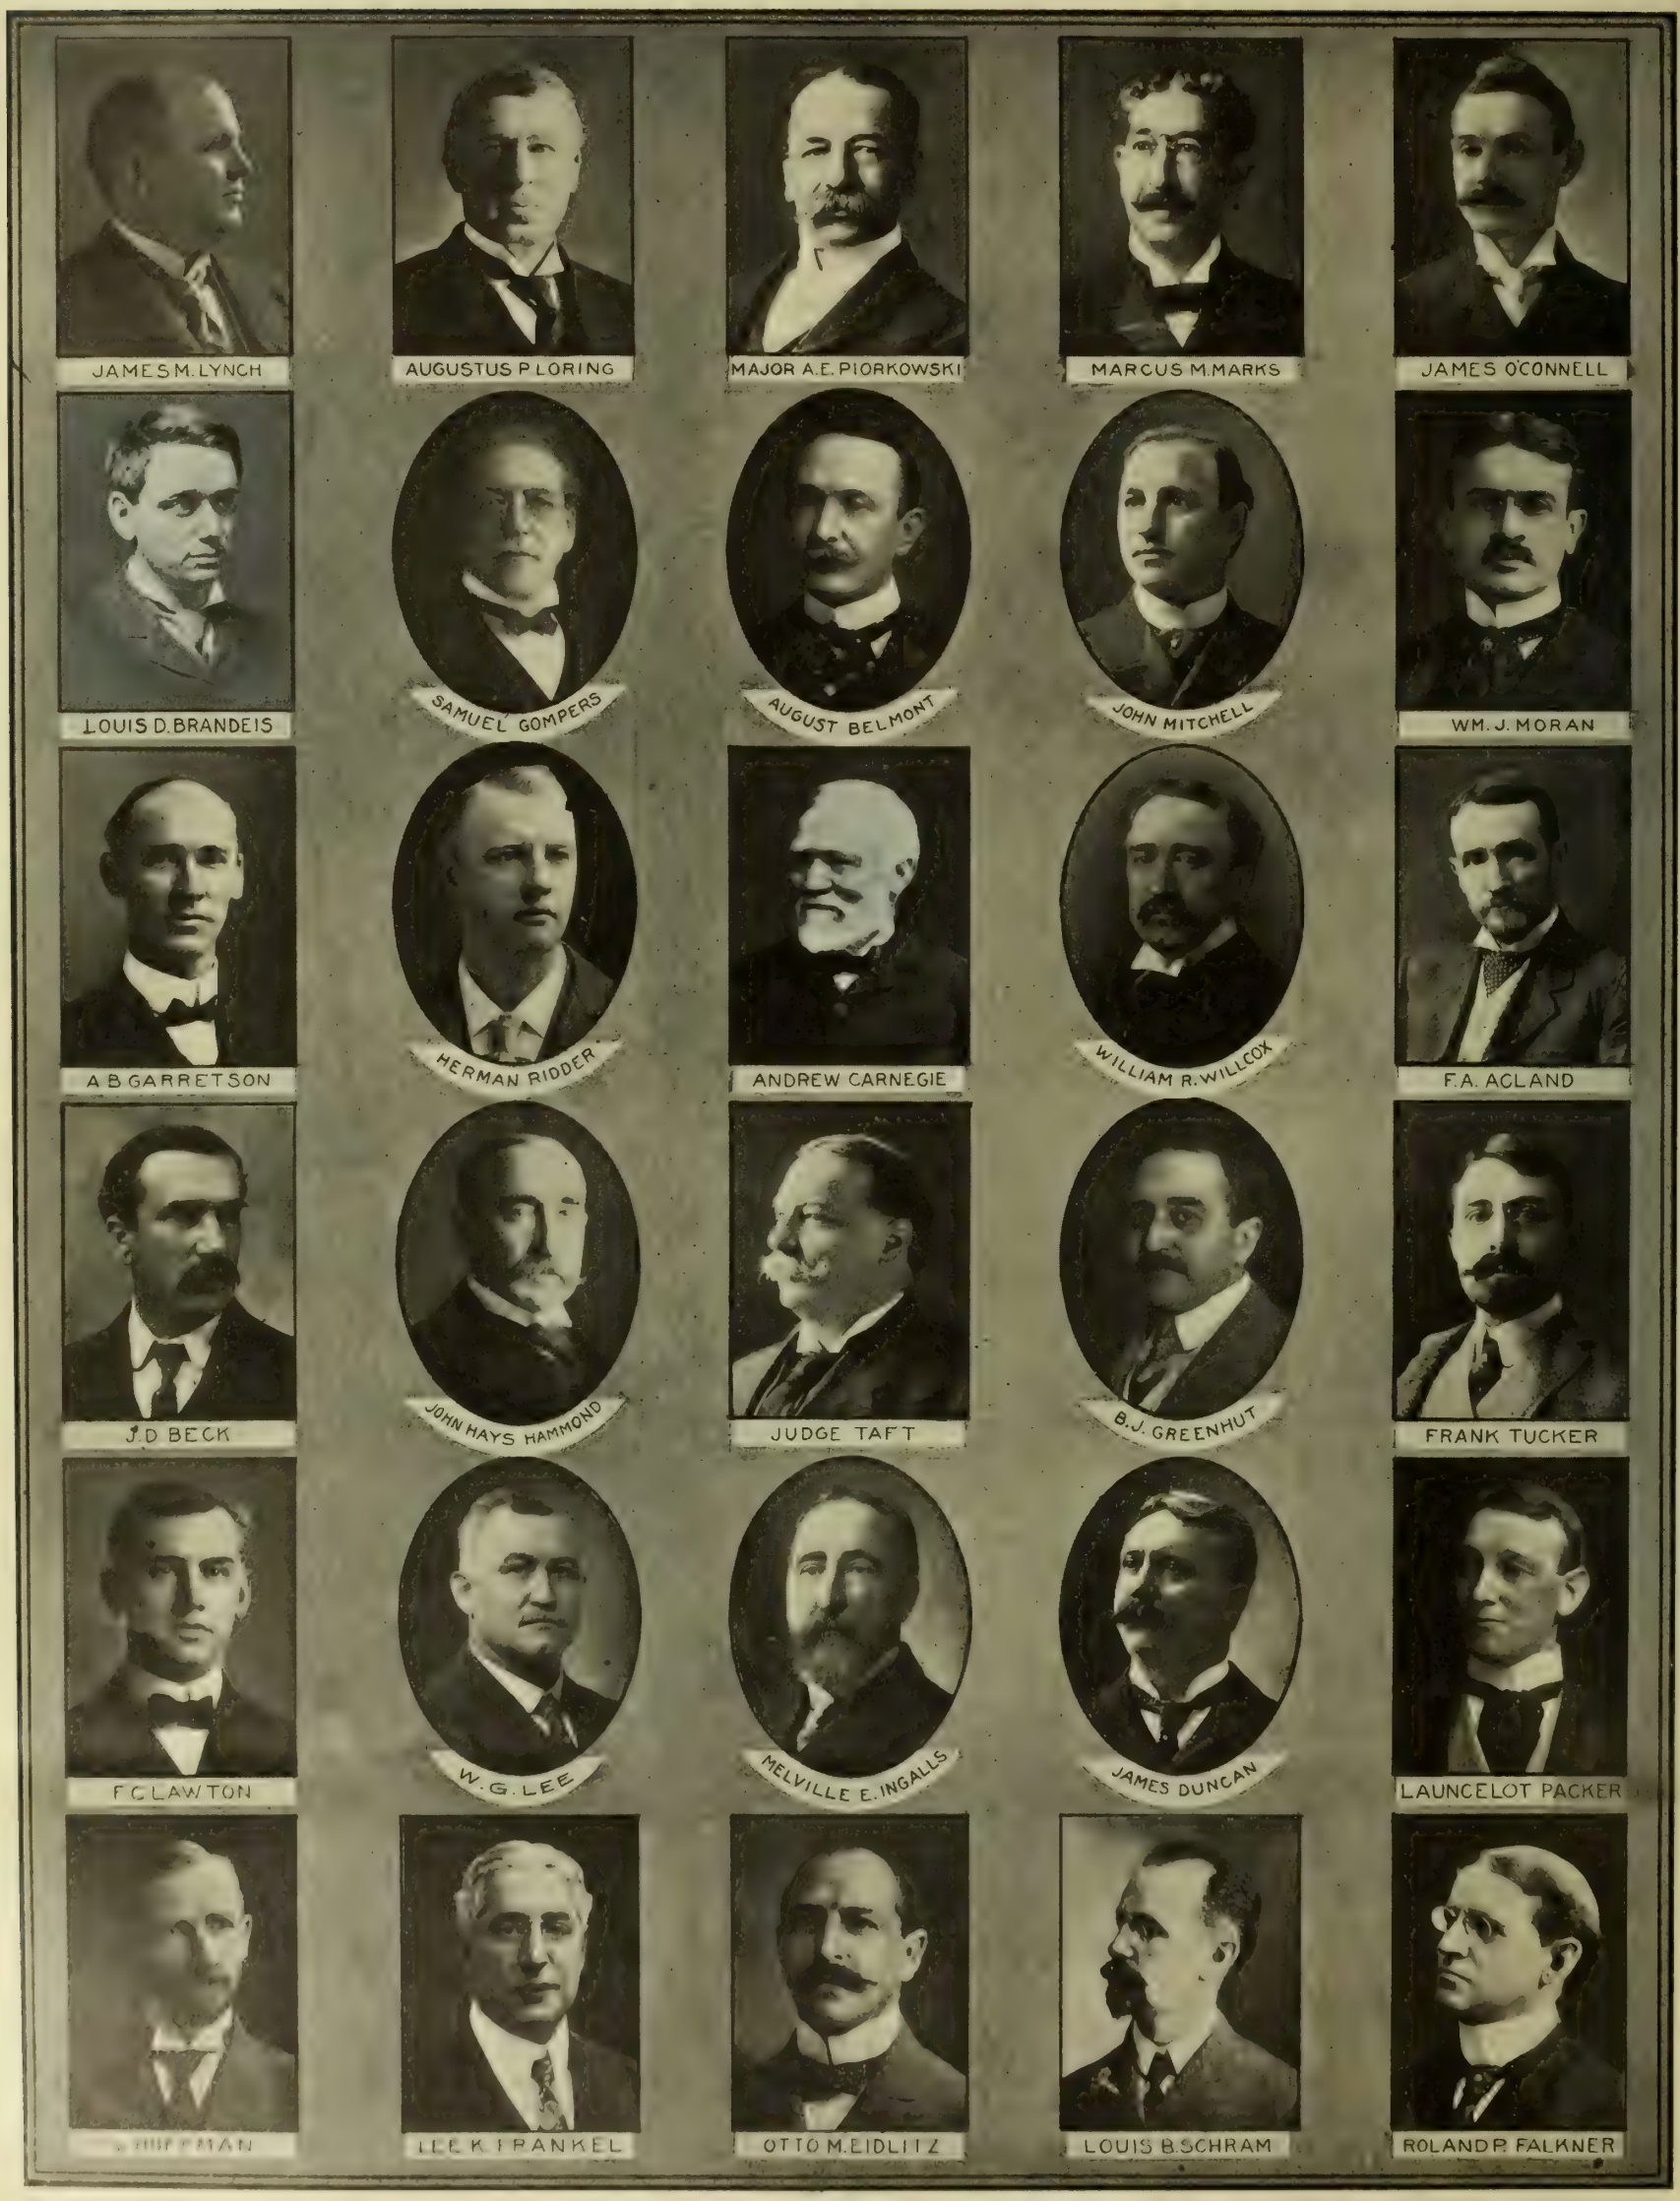
It has been our good fortune during the year to associate Mr. John Mitchell with the active work of the Federation, as the Chairman of its Trades Agreement Department. Mr. Mitchell entered upon his duties on August 1, and we have already had many opportunities to perceive the advantage to our work likely to result from his permanent connection with it. Through correspondence with labor unions and with the employers who have trade agreements with labor unions, he is building up an exceedingly strong department, the influence of which ought to be very helpfully felt in furthering the use of the trade agreement as a means for promoting industrial peace and progress.

There are still some, though they are fewer in number than they used to be, who maintain that the relation of the employer to the employe is an individual one, and who therefore will not deal with men as members of an organization in matters relating to their employment. I read in the paper the other day that there are 89,000 stockholders in the Pennsylvania Railroad Company. No one contends that these people organize into a company in order to fight labor. They organize because they have to in order to work together, and, as a result of organizing, they are represented in every use made of their capital by their officers. Can any one seriously contend that these 89,000 stockholders, speaking through their officers, are justified in saying to their 160,000 employes, We insist upon dealing with you, man by man; we will not recognize your organization. Is it not rather clear, that the 160,000 employes, so far as their interests are common, must unite if they are to have anything at all to say as to the conditions upon which they will work, and, if they unite, they must have an organization and they must be represented by their officers?

And is it not further clear that they are justified in organizing along the lines of their trade, if they wish to do so, rather than in groups as they happen to be employed at any given moment? It is sometimes said that labor organizes because capital organizes. That, I think, is a very superficial statement. It is a misleading statement, because it obscures a much more fundamental truth. And it is an unfortunate statement, because it immediately suggests antagonism to capital as the motive behind all organizations of labor. One might as well say that the sun goes around the earth because it seems to do so. But the fact is that the earth goes around the sun because it has to do so. Labor organizes for the same reason that capital does, and for no other; and both organize, because without organization neither can enjoy the benefits that come from combined action. That is the reason why this nation of freemen organizes into political parties, and that is the reason why capital organizes and why labor organizes.

Take another illustration: The United States Steel Corporation employs, in round numbers, 200,000 men. Of this vast army of workmen about 44,000, nearly all of them representatives of organized labor, own stock in the corporation. In their capacity as stockholders, these 44,000 workmen are represented by the officers of the corporation. Can it be contended that they are any the less free, or have any less right, to be represented, in their capacity as workmen, by the chosen representatives of their trade organization? And when the two attributes of holding stock and taking employment are thus united in the same persons, will any one any longer contend that these men, as workmen, organize for the purpose of antagonizing themselves as capitalists?

Now it is out of conditions that have produced a situation like this that the so-called "trade agreement" has sprung. In its simplest statement, a trade agreement is an agreement between organized stockholders and organized workmen, both acting through their chosen representatives, to determine, for the period of the agreement, the general terms of employment of the various classes of workingmen concerned. That each side tries to make the best bargain it can, goes without saying. That conditions favor sometimes one side and sometimes the other is equally true. That each side tends, when it has in its turn the upper hand, to push the other too hard is not improbable. But just as certainly as a pendulum, after swinging from one side to the other, tends to rest in a position of equilibrium, so such trade agreements tend to relieve the trade to which they apply of the extreme swing from conditions favoring capital to conditions favoring labor, and *vice versa*, which so often spells disaster to capital and labor alike. In other words, trade agreements that are revisable from time to time certainly make for industrial peace, and they ought as certainly to make for industrial progress. In the meanwhile they are constantly educating everybody concerned into a realization of the fundamental importance of keeping faith.



But someone will ask, in view of the decision of the United States Supreme Court in the hatters' case, Are not trade agreements forbidden by the Sherman Anti-Trust law? I am not a lawyer, and I claim for my opinion no weight that does not attach to it on the surface. But my opinion is that a trade agreement that does not issue in restraint of inter-State trade lies altogether outside of the Sherman Anti-Trust law. In other words, a trade agreement that is unconnected with any attempt to affect the sale or disposition of merchandise, it would seem to me, must lie as much outside of the scope of the Anti-Trust law, whose sole object is to make restraint of inter-State trade illegal, as manufacturing itself has been decided by the Supreme Court to lie. It is quite conceivable that a trade agreement might concern itself with the use of particular materials, and by so doing it might easily come within the scope of the Sherman Anti-Trust law; but if a trade agreement confines itself to its legitimate object of determining the conditions of employment to prevail in a certain trade or employ, it is not conceivable that such a trade agreement could be condemned under this act. The National Civic Federation believes that the trade agreement is the best method yet devised, in this age of universal organization, for promoting alike industrial peace, industrial well-being and industrial progress. For this reason the Federation proposes to do everything in its power to promote the use of the trade agreement in a constantly widening field.

WELFARE DEPARTMENT.

Hon. William R. Willcox, chairman of the Public Service Commission for the First District of the State of New York, has become Chairman of our Welfare Department, the Hon. William H. Taft being chairman of the Public Employes' Welfare Committee, and Mr. Charles A. Moore, chairman of the Industrial Employes' Welfare Committee.

During the past year inquiries from employers have been most numerous in relation to mutual benefit funds, indicating that industrial insurance is one of the problems pressing for solution.

Many manufacturers have asked for suggestions upon plans for providing pure drinking water, emergency hospitals, employes' periodicals, baths for molders, boarding houses, industrial training, factory lunch places, playgrounds for children of employes, machinery safeguards, prizes to employes for suggestions in running factories or offices, and inventions, and there have been innumerable requests for information in a general way involving all of the phases of welfare work. One of the successes has been the introduction of the visiting nurse in one of

SPEAKERS AT THE NINTH ANNUAL MEETING.

the Southern cotton mill villages. The benefits resulting have stimulated other cotton mill presidents to introduce hospital work. One of our experts has planned a recreation building and boarding house for young women, in connection with a cotton mill in New England, and has earned expressions of gratitude from an employer in Illinois, where a coffee house has been erected and put into operation on a self-supporting basis. Assistance has been rendered by our architect in consultation over plans for a new building, in which every known device for the physical comfort and recreation of employes will be provided by a publishing company in Pennsylvania.

Welfare work has been given further impetus by the distribution of our own illustrated literature, and by the furnishing of material and photographs for magazines, Sunday newspapers and trades union journals.

Lectures upon welfare work have been given in various parts of the country. One, with illustrations, before an employers' association in Kentucky, resulted in the formation of a committee on welfare work, composed of manufacturers, the purpose being to employ an expert, who will investigate the needs of employes of the various companies composing the membership of that organization, and make recommendations. A public service corporation in Massachusetts called in its superintendents and foremen from twenty-five constituent companies, in order to listen to addresses by two of our members, the object being to gain their co-operation in installing the welfare work which the president of the company is about to undertake.

A meeting, attended by many public officials, was held in Washington in May, for the express purpose of stimulating interest in welfare work for public employes. At this time the President received our members, and definitely and emphatically expressed himself in favor of the Government becoming an ideal employer.

At that time there was also organized the woman's branch of the Welfare Department, which has been very active in New York, and is rapidly extending its work throughout the United States.

The ladies interested in this movement have taken hold of their work with great vigor, and have appointed the following National Standing Committees:

Committee on Welfare Work for Industrial Employes.

Committee on Welfare Work for Government Employes.

Committee on Industrial Economics.

The whole country is to be congratulated that, precisely as the President-elect has been the chairman of the Committee on Welfare in its relation to the public service, so Mrs. Taft has been the chairman of the same committee in the Woman's Department. Mrs. Taft's interest has been active and personal, and the example she has set will doubtless be an inspiration to every one connected with this work at any point. The work of the year has been largely that of organization, but it is not too much to hope that future years will record a story of great progress along the lines in which the Woman's Department is interested.

INDUSTRIAL ECONOMICS DEPARTMENT.

One of the significant movements of the year was the visit of American teachers to the schools of the United Kingdom. Through the good offices of President Nicholas Murray Butler, chairman of the Industrial Economics Department, the International Mercantile Marine Company offered very favorable transportation rates to teachers who might be certified by the National Civic Federation.

TEACHERS' VISIT TO EUROPE.

The selection of teachers to participate in the visit was made by those qualified to judge of educational capacity, and no teacher was sent unless nominated or endorsed by the educational authorities where he or she taught. The plan was everywhere received with enthusiasm. Leading educators lent us their aid as an advisory committee. City school boards, in many cases, authorized the payment of salaries of teachers absent on the visit, and in a few cases paid their expenses. Upwards of three hundred teachers have already availed themselves of this opportunity, and more will go in January. Mr. Alfred Mosely, of London, to whom our thanks and the thanks of the teachers are heartily due, has acted as advisor in England, and has established an efficient system for the reception and entertainment of the teachers. Those who have already returned have expressed themselves in most grateful thanks for the opportunities which have been afforded, and have shown a most sincere appreciation of the arrangements made here and abroad for their comfort. There can be little doubt that this visit will be of the highest value to the educational world, and will contribute in a modest way to better understanding, esteem and good feeling between the two great English-speaking peoples.

CONCILIATION COMMITTEE.

The Conciliation Committee of the Federation has been called upon, as usual, to do what it could to avert misunderstandings and strikes in various industries, and, in some cases, it has been successful, and in others not. In a general way, it may be said that the economic conditions prevailing throughout the year have tended to make labor controversies less frequent than usual.

[The continuation of Mr. Low's address, that portion in which he dealt with the Sherman Anti-Trust Act, and the efforts for its amendment, will be found on page 13.]

WELFARE DEPARTMENT ANNUAL MEETING

SUBJECTS DISCUSSED: WAGE-EARNERS' SICK, ACCIDENT AND DEATH INSURANCE, PENSIONS, EMPLOYERS' LIABILITY AND SALARY LOAN EVIL

ON Tuesday, the Welfare Department held two sessions, Mr. William R. Willcox, chairman of the Welfare Department, opening the morning meeting with a brief address and introducing the speakers. In the afternoon, Mr. Samuel Gompers presided, and the meeting was closed by President Seth Low.

SPEAKERS AND SUBJECTS.

Wm. R. Willcox, Chairman, "Insurance for the Wageworker."

Lee K. Frankel, of the Sage Foundation Fund, New York, "Facts in Connection with Workingmen's Insurance in the United States and Europe."

Louis D. Brandeis, attorney at law, Boston, "The Massachusetts Savings Bank Plan for Annuities."

Marcus M. Marks, Chairman New York Merchants' Associated Committee on Postal Affairs, "Postal Savings Banks."

James O'Connell, President International Association of Machinists, "Insurance Fund of the Machinists' Union."

Haley Fiske, Vice-President of the Metropolitan Life Insurance Company, New York, "Industrial Insurance by Private Companies."

Major A. E. Piorkowski, representing the Friedrich Krupp Company, Essen, Germany, "Employes' Mutual Benefit Association of the Krupp Company."

Frederick L. Hoffman, Statistician, the Prudential Insurance Company of America, "Relation Between the Cost and Benefit of Private Insurance."

Dr. Roland P. Falkner, "Retirement Fund for Government Employes," and "Accidents of Industry."

Augustus P. Loring, President Plymouth Cordage Company, Boston, Mass., "Pension Funds of Individual Employers."

J. D. Beck, Commissioner of Labor and Statistics of Wisconsin, "The Burden of Compensation."

William J. Moran, attorney at law, New York, "Unbinding the Eyes of Justice."

John Mitchell, "Shall Industry Bear the Cost of Industrial Accidents?"

F. A. Acland, of the Department of Labor, Ottawa, Canada, "The Labor Laws of Canada."

Frank H. Tucker, of the Provident Loan Society, New York, "Salary Loan Evils."

Benedict J. Greenhut, of Siegel Cooper Co., New York, "Employes' Association Lending Plan."

H. S. Dennison, of Dennison Manufacturing Company, South Framingham, Mass., "Employes' Savings and Loan Fund."

F. C. Lawton, of the Gorham Manufacturing Company, Providence, R. I., "Mutual Loan Association."

Launcelot Packer, attorney at law, Washington, D. C., "The English Compensation Act."

At the close of the sessions the following resolution was passed:

Whereas, Industrial insurance is a matter of serious importance to the wage-workers of the country, and the facts relative to the subject are not readily available in a form by which the various methods may be compared, to the enlightenment of those to be insured;

Be it resolved, That this Conference recommends that a commission be appointed under the auspices of the Welfare Department of The National Civic Federation to investigate and report upon industrial insurance in this country—that is, insurance for the wage-earner—provided principally by:

1. Mutual benefit funds contributed to by employer and employees;
2. Trades Union funds, and fraternal lodges;
3. Liability (indemnity) insurance companies;
4. Private insurance companies, such as the Metropolitan, the Prudential and the John Hancock companies; and
5. The savings bank plan of Massachusetts.

The addresses made at the Welfare Meeting will be published in a special report of the annual meeting issued by the National Civic Federation.

ANNUAL ELECTION—NOMINATIONS.
